THE SOUTHERN WORKMAN

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH

VOL. I. HAMPTON, VA., JANUARY, 1872. NO. 1.

Hampton and its Surroundings.

THE SIXTH PLACE OF ENGLISH CIVILIZATION IN NORTH AMERICA.

When the doughty Capt. John Smith in 1607 was on his exploring voyage up the Potomac in search of a fit place for a settlement, he was met by five natives of the country, who invited his party to their town Kecoughtan, feasted them with cakes made of Indian corn, and regaled them with tobacco and a dance. On the site of this Indian village stands the town of Hampton. It was founded three years after the visit of Captain Smith, and is said to be the oldest continuous English settlement in North America. Its topography is very striking. It lies at the head of Hampton Creek, a short arm of the Bay, in full view of Hampton Roads, and on the little peninsula between the Roads and the Chesapeake, within three miles of its extreme point, called by the colonists, Old Point Comfort. It is a place of historic interest, and has perhaps suffered more from the devastations of war than any other town in the country. It was attacked during the war of the Revolution in 1775, and successfully defended by the bravery of its inhabitants. It was again attacked by the British fleet in 1813, after their defeat before Norfolk; and, after a gallant defence, was captured by an overwhelming force, when the town was given up to unrestrained pillage. The troops, composed largely of French renegade prisoners, accustomed to plunder and murder in Spain, were let loose upon the wretched inhabitants of Hampton without restraint; and the barbarities perpetrated by them, are a lasting disgrace to the British Nation.

With the facts connected with the burning of Hampton, in August, 1861, most of our readers are familiar. It was said to have been fired by order of General Magruder on the evacuation of the place by his troops. Whether caused by accident or design, the destruction of the beautiful town was complete, the old Court-House being almost the only building left standing. It is now being rapidly rebuilt, but as the new buildings are of wood, and there is no organized fire department, it will require the utmost vigilance on the part of her citizens, to prevent a similar disaster in the future.

THE EPISCOPAL CHURCH.

The ancient edifice known as St. John's Church is said to be the oldest house of worship in Virginia. The church building, called in the old records "The New Church at Kecoughtan," to distinguish it from an older church which stood on Pembroke Farm, a mile distant, was built in 1660. This older church seems to have been kept up for many years for funeral purposes, like the old church at Blandford, after Petersburg was settled. The building had long ago disappeared, and even the graves of a century's dead were forgotten by all of the present generation. To the Rev. Dr. McCabe, fifteen years ago rector of this Parish, is due the discovery of the exact location of the old church as verified by the tombs, which had disappeared under the soil. Clearing up the surface earth, there was revealed, where it had been hidden for generations, the handsome slab which covers the body of "John Neville, Esqr., Vice-Admiral of His Majesty's fleet in the West Indies, who died on board the *Cumbridge* in Hampton Roads, in 1697." This Admiral Neville was an ancestor of Lord Napier, late British Minister at Washington, who once visited Pembroke grave-yard, and here in the woods of Virginia read the modest epitaph of an ancestor who died a century before he was born. The venerable edifice in Hampton, the solid walls of which, built of English brick, having withstood so many conflagrations and assaults, alone remained standing after the burning of the town, has again been put in complete repair. This hallowed spot, with its scarred monuments, its ancient gravestones, and its sacred memories, is an object of great interest to all.

Three Commodores of the United States Navy were born in Hampton. These were Lewis Warrington, a grandson of a worthy rector of the Parish, who, in 1814 while in command of the *Peacock*, captured the *Epervier*. The other two were the two brothers, James and Samuel Barron, who distinguished themselves in the first attack upon Hampton in 1775.

On the right bank of Hampton Creek is the fine old estate, still known by its ancient name of "Little England," the landing-place of the Royal Governors, as they came one after the other to their colonial dominions, or to embark on their return-voyage home. There began the main highway of the Colony, leading to the Capitol, Williamsburg, thirty-five miles distant.

The present population of Hampton is estimated at 2500, of which 650 are whites. It has 6 schools, 3 churches, a hotel, about 50 stores and shops, a steam planing and grist-mill, and a marine railway. There are 5 doctors and 3 lawyers.

There is daily communication between Hampton and Norfolk by the steamer *Mystic*, Capt. Schermerhorn.

Before the war, Hampton was a popular watering-place; and its cool sea breezes and facilities for salt water bathing, made it an attractive summer resort for families from the interior of the state. Though it is now rapidly rising from its ashes, it is still but the wreck of its former self, and stands as a sad monument of the ravages of war. It will be many years before it recovers its former prosperity. Its past is full of historic renown, whose glorious and hallowed memories are imperishable. Let us hope that it has before it an equally brilliant future.

THE NORMAL AND AGRICULTURAL INSTITUTE.

On the peninsula which forms the opposite shore of the creek, and which is connected with the town by a bridge, stands the Normal and Agricultural Institute, which occupies the fine estate of 125 acres, formerly known as the "Wood Farm." During the war, it was the site of a large Union Hospital called Camp Hamilton, where fifteen thousand sick and wounded soldiers were treated at one time. On these premises stood until recently, a building which was used as a hospital by the French troops in the war of the Revolution. The illustration on this page gives a good representation of the principal buildings of our school, which is on the manual labor principle, and is open to all, without distinction of color. The farm and printing-office give employment to the young men, while the young women are taught needle-work, the use of the various sewing-machines, house-work, etc. There is a carpenter's shop, a shoe-maker's shop, and a butcher's shop on the premises. A plantation of 3000 fruit trees has been set out, and the farm supplied with choice varieties of stock of various kinds. There are now one hundred and twelve students in the school, most of them working their way, receiving a wide range of instruction in English and scientific branches, and being fitted to go out as teachers. All the graduates are now teaching in this and neighboring states, and applications for treble the number have been made by school superintendents to the principal.

This school was established in 1868, under the auspices of the American Missionary Association, for the purpose of preparing youth of the South for the organizing and instructing schools in the Southern States. Two years ago, a Charter of Incorporation was obtained from the State of Virginia, in accordance with which, the school was put into the hands of the following trustees:

Rev. George Whipple, New York, President.

Col. R. W. Hughes, Virginia, and Alexander Hyde, Massachusetts, Vice-Presidents.

S. C. Armstrong, Virginia, Secretary.

J. F. B. Marshall, Boston, Treasurer.

T. K. Fessenden, Connecticut, Financial Secretary.

Gen. O. O. Howard, Washington.

Rev. M. E. Strieby, New York.

Hon. James A. Garfield, Member of Congress, Ohio.

Rev. E. P. Smith, Minnesota.

Hon. John F. Lewis, U. S. Senator, Virginia.

Hon. B. G. Northrup, Secretary of Connecticut State Board of Education, New Haven.

Samuel Holmes, New York.

Anthony Kimber, Philadelphia.

Edgar Ketchum, New York.

Rev. E. M. Cravath, Brooklyn, New York.

H. C. Percy, Cashier Freedman's Bank, Norfolk, Virginia.

The school is supported by voluntary contributions from societies and individuals at the North, the American Missionary Association, Freedmen's Bureau, having contributed the funds for its establishment, and the former still being one of its chief supporters. Rev. T. K. Fessenden engaged in the work of soliciting funds for its endowment, and making satisfactory progress.

The trustees have made an application for a share of the Agricultural College Land Scrip, granted by Congress to the several states. Virginia's share of this Scrip is 300,000 acres; and as this is the only Agricultural school in the State where colored students are admitted, it would seem to be entitled to that proportion of the Scrip which the colored population bears to the white, or about two-fifths. The matter will probably be decided by the Assembly at its present session.

Young Women's Department, with Industrial and Dining Rooms. Teachers' Residence. Hampton Creek. Barn and Store House. Young Men's Department, with Assembly and Recitation Rooms.

Hampton Normal and Agricultural Institute.

THE NATIONAL CEMETERY.

is a large inclosure neatly fenced and handsomely laid out. Here repose the mortal remains of about six thousand of our Union dead. A shaft of Northern granite, appropriately surrounded by a barrier of musket-barrels with fixed bayonets, and parrot guns, has been erected in honor of the heroes who sleep beneath. It is a conspicuous landmark to all vessels approaching the Roads. Here, too, lies the body of the faithful hospital nurse, Alexander, a Swiss woman, who died in the service, and at her own request was buried with her "boys," to whose comfort her unselfish life was devoted. Bethesda Chapel, a neat and simple structure, is attached to the premises. It is at present used by the Normal School Church as a place of worship. The pastor, Rev. Richard Tolman, with his family, resides in the parsonage, connected with the chapel. The cemetery is in charge of Mr. Browning, a retired army veteran, who occupies the Gate-keepers Lodge, where may be found the record of the graves, and a book for the names of visitors.

[We are compelled by lack of space to reserve till our next issue the remainder of this article, comprising sketches of Fortress Monroe, The National Asylum for disabled Volunteer Soldiers (Southern Branch), etc., etc.]

Virginia Schools.

The very able report of Dr. W. H. Ruffner, State Supt. Public Instruction, is just received. We extract the following:—

Total enrolled in Public Schools in 99 counties, including cities	150,469
Total number in Public and Private Schools	159,841
Number of colored children	23,000
The present value of the land, buildings, stock and other property, besides invested funds is about	$112,000.

In a future number we hope to give the readers of the "Southern Workman" a more detailed account of this Institute and its methods. It is the design of the trustees to make it an institution in which not only Hampton, but the State, may well take pride.

Number of whites over 21 who could not write in 1870	67,997
Number of colored over 21 who could not write in 1870	207,595
	275,592

According to the Census, nearly one quarter of the population cannot write.

Dr. Ruffner estimates the really illiterate population of Virginia at over one half of the whole number.

Cost of teaching the public schools of the State for 1870–71, $450,000. This does not include cost of houses or furniture.

He refers to the "difficulty, often impossibility of procuring qualified teachers for colored schools. This difficulty will soon be overcome. Juster views concerning the honorable character of the work of educating the colored people, are becoming more prevalent every day. Many of the teachers of colored schools during the past year were persons of the highest social standing."

Virginia is fortunate in her School Superintendent, and is the most advanced and energetic of all the Southern States in respect to popular education. Upon her public school system rests her only hope of escape from the terrible burdens that now oppress her.

THE Southern Workman.

ISSUED MONTHLY.

S. C. ARMSTRONG, *Editorial Manager.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will contain not less than three illustrations, will furnish a variety of choice reading, will tell what is going on in the world, and will aim to please and profit both old and young.

All are invited, the young especially, to ask by letter questions on any subject upon which they crave information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State, to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, JANUARY, 1872.

TO ALL the friends of honest industry from Virginia to Louisiana, the "Southern Workman" to-day offers a hearty greeting. Open your doors to him; welcome him for the first time now in this merry Christmas season, you working men and women, upon whom the future of this great, beautiful, Southern country depends, and we who thus ask for him a place at your tables, a corner by your fires, pledge ourselves that before the year rolls round again, he shall become to you a valuable ally, a trusty, worthy adviser, a dear friend.

A great work lies before us all,—a work such as God has never yet given into a people's hands—and now is our time to study with earnest purpose how best to do it. Come, then, Southern Workmen—come from your bright Virginia, your sunny palmetto land, your Carolina pine-forests, your Florida orange-groves; come with us, and we will show you what other men and women are doing in countries near and far. We will go into neat New England school-houses, where children are trained to industry and energy, we will go to great Western farms where endless fields of corn and wheat bend under the breath of the prairie winds; we will cross the sea into English mills and factories, and French poultry-yards and fruit-gardens; and from all these we will learn to make our own work strong, lasting, and successful.

There are those among us who have known what it is to live under a great black cloud, when no man could call his home his own, when women had no heart to make their children truthful and industrious, or their houses clean and inviting; but that time is past, thank God, and with the new days we take new courage, and feel in our hearts and say to each other, that whatever is worth doing at all, is worth doing well; and with the help of our Great Deliverer, we mean to do what He has set before us, so that all men shall see that we are in earnest, and shall accordingly respect us and our work.

Fellow-workmen, every where, give us to-day the right hand of fellowship, for we must fight shoulder to shoulder, with no gap in the ranks. In our daily living, in our churches, in our politics, we must work together, must feel ourselves to be citizens of one country, children of one Father, and in unity of spirit must face the difficulties before us. Together we must fight intemperance, dishonesty, laziness—those vices which drag us down lower than the beasts; together, we must oppose political corruption and unfaithfulness; together we must build up homes all over this Southern land—homes whose foundations shall be laid in honesty, sobriety, industry, cleanliness, and intelligent Christian faith. Do not pause to look back, except in glad thanksgiving for the mercy which has set us free, but look forever forward—look at the rich land waiting for our strong hands to make it yield tenfold, look at the great rivers running to the sea, waiting for us to make them into highways of commerce, look at the grand forests, the sunny plains, the fruitful valleys, and remember that unto us it is given to make this dear land blossom as the rose, unto us it is appointed to make it a country which men shall delight to honor, and God shall not fail to bless. How magnificent a future lies before you, Southern Workmen. Do you not grow stronger by the very thought of it? Do you not with us cry shame upon the men who would sell this birth-right for a mess of pottage, who would barter this glorious opportunity for lives of sinful uselessness? Yes, we can hear from cabin, and cottage, and school, and church, the swelling chorus of your voices, and you say—"We will learn with humble hearts all these things whereof we have been so ignorant, we will let no chance escape us, there shall be no falling back, no idling by the way, our progress shall be sure and steady; and strong in numbers and purpose, we will carry our whole country with us."

Come, then, you many clergymen and farmers, mechanics and teachers, fathers and mothers, husbands and wives, old and young, enlist under our banner, and let this Christmas sun shine upon the beginning of our onward march. Eighteen hundred years ago, do you remember, it shone upon a Little Child as to-day it shines on our own dear little children, and it is He who is to be our Leader. In His strength we are going to try to do His work, we are going to try to raise up intelligent men and women, and happy children; we are going to try to make our homes the best places in the world, and our country the common home of all of us. Come, we say, and help us.

To vote ignorantly is worse than not to vote at all, for, beside the moral responsibility of citizenship, the fact that carelessness in political matters roots at once, and in a practical shape upon the voter, makes it the duty of every man to understand clearly why, and for what he votes.

The ballot is both his weapon of attack, and barrier of defence; but in either form it will serve him only as he knows how to use it. An honest man, who means to be an honest citizen as well, will permit himself neither to be bribed nor humbugged, but will look with his own eyes at questions which are put before him, and will vote always according to the best light he can get, in the full consciousness that his own future and the future of his government depend more or less upon his political action.

THE work of this world has got to be done just as much by the women as by the men, and in home life especially, the influence of the wives and mothers is probably even greater than the former of the husbands and fathers. If men are the head-workers, women are the hand-workers, and it is necessary to the health and happiness of a family that the one duty should be performed as essentially as the other. So much indeed depends upon the care and thoughtfulness of women, that many a man makes his way in life only by the help of his wife's energy and prudence; *for it is an old proverb that* "A woman earthwise out at the window, faster than a man can bring in at the door." A girl who will train herself thoroughly in any kind of work, need never fear but that, married or unmarried, she can make a place for herself in the world. There is ample room everywhere for industrious, organic women.

THE poor man who has paid rent in any of the large cities for four years, has thus spent from *four to six hundred* dollars.

If he could have bought a house on easy terms four years ago, his rent money would have paid for it.

While working for his landlord, he has been unable to educate his children.

High rents have prevented many men from laying up suitable provision for old age or sickness.

He who has saved even one hundred dollars, cannot usually buy to advantage, because of

1st. The expense of making sure of his title.

2nd. The first payment on a house and lot is generally over one hundred dollars. On a vacant lot, the sum required would be so large that nothing would be left to build with.

3rd. Neither land, lumber, nor workmen can be had cheaply on a small scale.

Intelligent and humane men who have capital can find no more worthy, safe, or profitable use of their money than in buying large lots, cutting them up, erecting cheap and good houses to be sold to mechanics and laborers, whose wages will enable them to make small monthly payments, until they shall finally own their own houses.

Mr. F. Richardson, of Norfolk, late Farm Manager of this Institute, has undertaken to aid those who wish to stop losing rent money, and apply it to a purchase. Already a score of neat cottages for laborers and mechanics of all classes have been built, and the operation has been highly satisfactory to all concerned.

The colored citizens are moving out of the lanes and alleys of Wilmington, N. C., and are going into houses of their own, on the new street in the Eastern part of the city. A company of gentlemen have just begun the erection of three hundred of these houses, which are to be paid for in monthly instalments in four or five years. These instalments are in some instances not more than present rent.

High rents are a curse upon our industrial class; and those who help the poor man save his rent money, are his best friends.

Here is a field for Northern capital. Mr. F. Richardson says that these monthly payments are prompt, and that to escape interest many are paying in less time than the agreements require.

THERE was manifested in Congress, last session, a disposition to distribute public lands among the Southern States for school purposes.

The claims of Virginia on the Federal Government for her share of land are old but valid, and of great strength.

She surrendered to Government in 1780 the territory now comprising the States of Ohio, Indiana, Illinois, Michigan and Wisconsin, on "condition that the lands so ceded should be considered as a common fund for the use and benefit of all the States," (Virginia included.)

In 1867, 189,219,586 acres had been given for roads and canals, 91,403,272 acres for schools and colleges—altogether, 422,848 *square miles*—more land than in all Great Britain, Denmark, France, Spain, and Portugal together. A large portion of this immense grant was given by Virginia to the United States; and until the recent donation for Agricultural Colleges, she had not received the first acre for her own use. "Surely, there is something especially due to the 'Mother of States,' who bestowed her magnificent domain upon the General Government in the time of necessity."

The Legislature now in session should memorialize Congress for not less than five million acres of public land, in order to put the public school system of the State, now starting vigorously and under terrible obstacles into life, upon a permanent foundation.

In the time of her prostration, bleeding, desolated, impoverished by war as she is, let her appeal be heard, and "a more perfect union" will surely follow.

To every church which shall send us one hundred one dollar subscriptions for "The Southern Workman," we will send a beautiful *communion* set costing twenty-five dollars.

We will give a handsome Bible costing thirteen dollars to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars *in cash* for every one hundred one dollar subscriptions; or $18.75 for seventy-five subscriptions; or $12.50 for every fifty subscriptions.

In these cases the papers are to be sent in *one bundle to one address* to be distributed by an agent to be appointed by the church.

We are under obligations to Harper & Brothers of New York for our picture of Abraham Lincoln, and to Mr. Houghton of the Riverside Press of Cambridge, Mass, for the picture from "Mother Goose."

Messrs. J. R. Osgood, John L. Shorey and H. O. Houghton of Boston, and the Harper Brothers of New York have been extremely kind and liberal in furnishing us electroplates of their choicest pictures, which will appear in successive numbers of this paper.

A bundle of handsomely illustrated Sunday-school papers should be sent each month to every Sunday School in the South.

Superintendents, by writing to this office can learn how and where to obtain the best and cheapest papers in the country.

NorFolk.

THE COLORED CHURCHES IN NORFOLK.

The Bute-street Methodist is the largest, and when completed, will be the finest colored church in the city. The frescoed ceilings and interior finish are exceedingly neat and tasteful. Rev. J. B. Hamilton, is Pastor, and H. C. Perry, the Sunday School Superintendent. Membership, about 1,000, Sunday School, 300.

The Bute-street Baptist Church, is now served by Rev. Leonard Block, late from New Haven, Ct. Pastor, and Mr. Josias Frazier, Sunday School Superintendent.

The Catharine-street Baptist, Rev. Thomas Henson, Pastor, and James E. Fuller, Sunday School Superintendent, is reported to be in a flourishing condition, with an active and earnest membership.

The recent repairs to their church edifice, render it quite attractive, and the well known ability of their Pastor assures a very large attendance of the people.

The Protestant Methodist on Soot Street, Rev. Wm. Lewis, Elder, and Rev. Joshua E. Lovitt, Pastor, is also prospering finely. Mr. L'Hommedieu is their efficient Sunday School Superintendent. At their recent Christmas-tree-celebration, he and his Northern friends caused the free distribution among the poorer members of some $400 worth of clothing and household supplies.

The James-street Chapel, Rev. J. D. S. Hall, Pastor, under the auspices of the Northern Methodist Church, is also doing a good work among the people in that portion of the city.

In Portsmouth, the Zion Baptist Church, Rev. E. G. Corprew, Pastor, is erecting a large and commodious church building, which, when completed, will prove an ornament to the city. The church now worships in the basement.

Rev. John F. Lane, is Pastor at the North-street Methodist Church, which under his faithful ministry is holding its ancient reputation for good work.

The Ebenezer Baptist Church, Rev. J. W. Godwin, Pastor, has purchased, and now worship in the building formerly known as the Webster Institute.

Petersburg.

PUBLIC SCHOOLS.

Petersburg enjoys the distinguished honor of having been the first city in the State to establish a thorough system of public schools. Two years before the establishment of the State system, this city, through the personal efforts of Senator R. G. Greene, established the present public schools on a more efficient and systematic plan than was ever before known in the South.

Number of white schools, four; number of colored, five; number of teachers employed, twenty-six; total number of pupils, fourteen hundred, about equally divided between the races. These are connected with the system a High School for each race, where are taught the higher mathematics, the classics, and the sciences.

Maj. Giles B. Cooke, late of the Confederate army, who for two years was at the head of the colored schools in this public school system, has this year established a private school of a high order for colored pupils. He is receiving the patronage and support of most of the best colored citizens of Petersburg, and his school is a model of discipline. All the elements which go to make up a good school may be found here.

CHURCHES.

First African Baptist, Rev. Thos. D. Smith, Pastor, number of members, 2,987. Gilfield, Baptist, Rev. Henry Williams, Jr., Pastor, number of members, 2,162. Third Baptist, Rev. John P. Wills, Pastor, number of members, 315. Shiloh, Baptist, Rev. Ephraim Ryals, Pastor, number of members, 13. St. Stephen's Episcopal, Rev. J. S. Atwell, Pastor, number of members, 60. Union-street Methodist, Rev. John V. Givens, Pastor, number of members, 375. Petersburg has also, "The People's Savings Bank," started by Hon. James D. Platt, and other prominent Republicans of this city, for the purpose, among other things, of encouraging and aiding the colored people in efforts to practice that economy so necessary to their success and happiness in life.

Domestic and Foreign News.

Senator Sumner is vigorously pressing his Civil Rights Bill, the passage of which, he is striving to make a condition of general amnesty.

A resolution calling on the President to recognize Cuba as a belligerent, has been introduced into the House.

Mr. Hoar's resolution, calling for the appointment of a commission to investigate the labor question, has passed the House.

The KuKlux organization is being broken up. The recent trials have resulted in numerous convictions, and some of the leaders have forfeited their bail and fled the country. Others have confessed their guilt, and exposed the secrets of their nefarious conspiracy against the liberty of the people. Hon. Waverly Johnson, the eminent counsel engaged for the defence of the accused, and who was incredulous as to the existance of any such organization, has expressed his deep horror at the testimony. He says "the outrages proved, have been shocking to humanity: they admit neither of justification nor excuse. They violate every obligation which law and nature impose upon men. These men appear to have been alike insensible to the obligations of humanity and religion; but the day will come however, if it has not already arrived, when they will deeply lament it."

The United States, England, Brazil, and now Siam, have joined hands in defence of freedom. The remarkably progressive Kings of Siam, have published an edict that after January 1st next, all sorts of slavery shall cease in their kingdom, forevermore.

The Legislature of Virginia is now discussing the public debt of the State. There is some talk of repudiation.

A debt, whether public or private, is a sacred obligation; to refuse to pay, is to sacrifice honor, and to become an outcast from the financial world. Virginia is too poor to repudiate.

The Prince of Wales, whose death was hourly expected a few weeks ago, is now out of danger; and the English merchants, who had bought up all the mourning goods in the kingdom, and in France also, "in expectation of a rise," are ruined. Sir Charles Dilke, the leader of the Republican movement in England, has made a speech at Birmingham, which has excited general attention from its moderation of tone, and careful statement of facts.

The efforts of the Orleans Princes to obtain seats in the Assembly have at last been successful. The government seems to be in a critical condition, and hangs to as a slender thread of M. Thiers' life. He is now seventy-two years old, and eighty years old, and his vigor, and personal power over the French Assembly is wonderful. Should a crisis be precipitated, the party would probably be an appeal to the army, the sympathies of which are said to be quite as likely to be with the late emperor as anywhere else. Great complaints are made by the French, of outrages committed by the German troops who are still occupying French territory.

German affairs are quiet, with the exception of an expedition said to be putting down Spanish Brazil. Occasionally redress for alleged outrages, but possibly, it is surmised, with the intention of seizing the empire, and making it a German India. Whatever a powerful state like Prussia desires to do with a weak state like Brazil, can be done with entire impunity, in the present condition of European politics.

Some excitement in Madrid has been occasioned by a rumor that Great Britain and the United States intended to interfere in behalf of Cuba. There seems to have been no other ground for this rumor than the intimation in President Grant's message. There can be no doubt, however, but that the present condition of affairs in Cuba, will not be much longer tolerated by our government, which has large interests at stake.

The Geneva Commission for the settlement of our claims upon England, has held its first meeting, and elected the Italian representative as its president. The English press has been many days excited over a report that the United States intended to claim an immense indemnity, larger, even, than the Florentine existed of France.

Agricultural.

[From The American Agriculturist.]

Stock Running at Large.—The practice of allowing stock—cows, hogs, and sheep—to wander about the public roads is a troublesome and very wasteful one. A great portion of the value of the feed of an animal properly fed and kept in yards is returned in the shape of manure; but if stock is allowed to roam at large, all the manure dropped by them becomes the acquisite of some long-headed farmer who keeps the road-drains and gutters open on to his farm, so that he receives all the wash after every rain. A very noticeable cause of the poverty of the stock met with in districts where this custom is observed, is the promiscuous mixing up occasioned by allowing animals of both genders to run unchecked. In such localities, a farmer cannot tell when he can expect a calf or a litter of pigs, and often they come at most unseasonable times, and of very undesirable parentage. Thus, without order or system in this particular, and from want of care generally, the stock become next to worthless, and is hardly worth the feed it consumes. Besides, it is very unfair to others who keep better stock and keep them in pastures. Wandering stock is generally unruly, and will occasionally get into other fields than their owners' at times when their presence can do mischief which their owners' cannot repair. It would be better for all concerned that no stock of any kind should be allowed to run at large. In well-ordered and prosperous communities, this practice is considered the reverse of proper or profitable.

Preserving Eggs in Winter.—Eggs may be kept perfectly good from October to March in the following manner: A piece of lime as large as a quart-dipper, is put into five gallons of water, and salt added until an egg will float. This is strained and put into a clean keg, into which a loose head is made to fit easily; a knob is fitted to the head for a handle. The eggs are put, as they are gathered, into the liquid, and the loose head put over on them to keep them below the surface. The keg should be kept in a cool place in the cellar. The liquor will not freeze except at a lower temperature than freezing point. Eggs thus preserved will sell readily as "limed eggs" until fresh eggs come, and are almost as good as fresh ones.

Thorough Cultivation is always profitable on all land that is cultivated at all. This is true, whether we adopt high farming or slow farming; whether we live east or west, on high-priced or low-priced land. If we work it at all, we must cultivate it thoroughly.

If you have never kept a Diary, now is the time to commence. Nothing is more interesting and useful than a well-kept record of everything done on the farm, state of the weather, condition of the stock, and what you are feeding, etc.

Animals must receive constant and regular attention. They cannot be neglected for a single day. Be careful to give them abundance of fresh water, and avoid as much as possible compelling them to drink water that is full of melting snow or ice. Provide some kind of shelter for all animals.

The Colver Theological Institute, at Richmond, Va.

Rev. Charles H. Corey, Principal; four assistant teachers.

Motto of Students: "Help from God and self-help, the best help."

Motto of the School: "Thoroughness, Promptitude, and Disciplined Energy."

Supported by the Baptist Home Mission Society.

Fifty dollars supports a student for the school year. This barely pays for bread and meat. Over seventy men were in attendance last year. The colored brethren of Virginia are helping nobly, and eminent white men of the State are in cordial cooperation with the teachers.

The students have collected in Richmond over $1,000, for repairing the building, which was for many years the fashionable hotel of the city.

The students are preparing for missionary work in the United States and Africa. One of them recently took a high prize at Freshman examination in a Northern college. During the summer and winter vacations, nearly one thousand were gathered into churches, or converted through the labors of the students.

The course of study embraces English and classical studies.

Students have but two meals a day—breakfast at 8 A. M.; dinner at 2 P. M. No supper.

These young men are in earnest, and deserve to be helped. What better use can be made of fifty dollars than educating a colored youth at the Colver Institute?

The teachers are capable, self-sacrificing, and have given their lives to their work.

Sustain them; their building is old, and needs repairing.

We most heartily commend this fine Institute to all our readers. Our Baptist brethren deserve all praise for their labors in this State on behalf of the Freedmen.

The Normal School Bells,

BY A STUDENT OF THE INSTITUTE.

Hampton, Virginia, 1871.

In the assembly room there is one small bell which sits upon the teacher's desk, and a large hand bell just out side of the door. The small one serves the purpose of the room, while the other is used principally for calling the school together, after recess in the fore-noon.

On the side of the walk near the door and rostrum, there are six cranks to each of which a bell in each recitation room is connected by a wire. By this means a class may be called, from each or every room by a person in the assembly room.

Up in the cupola of the old building hangs a large bell (known as the endless bell by its constant ringing.)

There are many other bells about the place, as in the dining room and halls, whose purposes need not be told, but for the endless bell, —

It rings us to bed
To rest each head;
It bids us awake
And a meal to take,

It rings us to work
And not to shirk;
It bids us to rest
When much oppressed.

It rings us to school
To observe the rule;
And calls us away
At noon each day.

It rings us to dine
By giving a sign;
And bids us to sup
From the earthen cup.

It rings us to study,
Saying: "Be ye ready
On the coming day
Your lessons to say."

It rings us to prayers,
And thus declares
That each should go,
Humble and low.

It rings us to church
Our hearts to search,
In order to see
How frail we be.

It rings us to plays
On holidays;
Also for singing
The bell's heard ringing.

It's notes are higher
When it cries out fire!
Alarming to all
Within its call!

It rings, it swings!
For irregular things
Too tedious to tell
Of the endless bell.

The Two Dogs.

In San Francisco there are two dogs familiarly known as Black and Bruno, who are always together, and manifest the greatest fondness for each other. They are homeless and homeless, so far as ownership goes, living on what they pick up, or is given them. The crumbs thrown away a table are saved for the travellers, being always repaid by the gratitude they express in so many different ways.

But none so loved the dogs as the little girl Lilla, who every morning at the window watched their coming. At one time Bruno was missing; Black only coming, and it was noticed that the larger part of his food he carried away in his mouth, seeming always in great haste.

One day Lilla was on the sidewalk playing with her brothers, when they told her she must go into the house, as they were going to the mall for a game of ball. But Lilla, instead, almost involuntarily followed at a distance, but at last growing tired, sat down on the steps of a strange house, and commenced crying bitterly. Soon several persons gathered round, anxious to know who she was, and where she belonged; but in her confusion she could tell neither.

As an officer was about to carry her away, a large black dog came rushing through the crowd, and in the gentlest manner commenced licking her hands and face, and taking her sleeve as near the hand as possible, commenced pulling her along; and she, with old Black at her side, seemed quite at ease, and quietly walked on. Reaching her house, he walked up the high stoop, and gave a low whine at the door; and that not being answered, he fixed his eyes on the bell-knob, and after hesitating a few seconds, raised himself on his hind feet, and taking the knob in his mouth, gave it a gentle pull, which was immediately answered, for Lilla was already missed, and a hurried search had commenced. This being done, he walked modestly down the steps and soon disappeared round the corner. The next morning when he came as usual, he was treated to an extra breakfast of beefsteak and milk. The latter he ate, but the former he carried away. Lilla's brother followed to see where he went; and through the back streets, across the wharves, down a low path under a bridge, in a hole dug in the earth, lay old Bruno, lame and sick; and to him Black gave the meat, watching patiently to see him eat it. The news became current, and many watched the dogs, and learned that for many weeks Black had fed Bruno, which he continued to do until he was able to travel as formerly. And I need not add that Lilla still prepares a breakfast for her favorites.

Attend to your Insurance.—See that it is not run out, and that the companies are sound.

Children's Department.

The Fox and the Crow.

A Crow had snatched a goodly piece of cheese out of a window, and flew with it into a high tree, intent on enjoying her prize. A Fox spied the dainty morsel, and thus he planned his approaches. "O Crow," said he, "how beautiful are thy wings, how bright thine eye! how graceful thy neck! thy breast is the breast of an eagle! thy claws—I beg pardon—thy talons, are a match for all the beasts of the field. O! that such a bird should be dumb, and want only a voice." The Crow, pleased with the flattery, and chuckling to think how she would surprise the Fox with her caw, opened her mouth:—down dropped the cheese! which the Fox snapping up, observed, as he walked away, "That whatever he had remarked of her beauty, he had said nothing yet of her brains."

Men seldom flatter without some privateend in view; and they who listen to such music may expect to have to pay the piper.

The Lion and the Fox.

A Fox agreed to wait upon a Lion in the capacity of a servant. Each for a time performed the part belonging to his station; the Fox used to point out the prey, and the Lion fell upon it and seized it. But the Fox, beginning to think himself as good a beast as his master, begged to be allowed to hunt the game instead of finding it. His request was granted, but as he was in the act of making a descent upon a herd, the huntsmen came out upon him, and he was himself made the prize.

Keep to your place, and your place will keep you.

A country lad says his Uncle Ben made a scarecrow so very frightful that one of the black feathered thieves actually went and brought back all the corn he had stolen during several days.

Old Mother Hubbard
Went to the cupboard,
To get her poor dog a bone;
But when she came there,
The cupboard was bare,
And so the poor dog had none.

She went to the baker's
To buy him some bread;
But when she came back,
The poor dog was dead.

She went to the joiner's
To buy him a coffin;
But when she came back,
The poor dog was laughing.

She took a clean dish
To get him some trips;
But when she came back,
He was smoking his pipe.

She went to the fishmonger's
To buy him some fish;
And when she came back,
He was licking the dish.

She went to the tavern
For white wine and red;
But when she came back,
The dog stood on his head.

She went to the hatter's
To buy him a hat;
But when she came back,
He was feeding the cat.

She went to the barber's
To buy him a wig;
But when she came back,
He was dancing a jig.

She went to the tailor's
To buy him a coat;
But when she came back,
He was riding a goat.

She went to the cobbler's
To buy him some shoes;
But when she came back,
He was reading the news.

The dame made a curtsey,
The dog made a bow;
The dame said, Your servant,
The dog said, Bow, wow.

A rival of a certain great lawyer sought to humiliate him publicly by saying: "You blacked my father's boots once." "Yes," replied the lawyer, unabashed, "and I did it *well*."

Hey! diddle, diddle,
The cat and the fiddle,
The cow jumped over the moon;
The little dog laughed
To see such sport,
And the dish ran away with the spoon.

"Hey, there: g'up!" says the boy on donkey back.
Here we go: we'll race with any wheelbarrow on the road; g'up donkey, or I'll pull your ears." Whack! and his stick came down. And this was what the donkey thought:—
"What fun! how warm that stick feels. I wonder how it would do to throw my heels up. No, I'll wait till Dick is out of the way for what can these poor boys do with their thin skin. If they only had but a good thick hide just like me!"

The Little Irish Sweep.

Some years ago, an effort was made to collect all the chimney-sweepers in the city of Dublin, for the purpose of education. Among others came a little fellow, who was asked if he knew his letters.

"O, yes," was the reply.
"Do you spell?"
"O, yes," was again the answer.
"Do you read?"
"O, yes."
"And what book did you learn from?"
"O, I never had a book in my life yet."
"And who was your schoolmaster?"
"O, I never was at school."
Here was a singular case; a boy could read and spell without a book or a master. But what was the fact? Why, another little sweep, a little older than himself, had taught him to read by showing him the letters over the shop-doors which they passed in their daily rounds.

Wit and Wisdom.

A young fellow who wanted some money, went to a man and asked him to advance him five pounds. "Why!" said he, "I don't know you." "That is why I came here," answered the other, "for those who know me won't lend me five shillings."

A jury fellow, seeing in the street an old woman who drove some asses, said, "Adieu, mother of asses." "Master adieu, my son," answered she. The man felt his ears grow as he walked along.

An Irish soldier once returning from battle in the night, marching a little way behind his companion, called out to him, "Hallo, Pat, I have taken a prisoner." "Bring him along then, bring him along." "He won't come." "Why then come yourself." "*He won't let me.*"

One day a girl, about five years old, heard a preacher praying most lustily, till the roof rang with the strength of his applications. Turning to her mother, and beckoning the maternal ear to a speaking distance, she whispered: "Mother, don't you think that if he lived nearer to God, he wouldn't have to talk so loud?"

A tradesman pressing one of his customers for payment of a bill, the latter said, "You treed not be in such a hurry; I am not going to run away." "But," says the creditor, "I am."

A man, who had built himself a new house, praised the conveniences of it, and above all said, how remarkably light it was, "For," said he, "the morning sun shines upon it all day."

Quin used to apply a story to the then ministry. A master of a brig calls out "Who is there?" A boy answered, "Will, sir."—"What are you doing?" "Nothing, sir." "Is Tom there?" "Yes," says Tom. "What are you doing, Tom?" "Helping Will, sir."

Simeony asked why B stood before C. "Because," said his friend, "a man must B before he can C."

"It is a solemn thing to be married," said Aunt Rachel, a solemn spinster to her niece. "It's a good deal more solemn not to be," said the merry girl.

"Who's there?" said a patrol to a passing fiddler one dark night. "It's I, patrol, don't be afraid," hardly replied an old woman.

A man went to borrow an ass of a neighbour, who said the ass was from home. Meanwhile the animal chanced to bray, upon which the borrower exclaimed, "How! did you not tell me the ass was abroad?" The other replied, in a passion, "Do you prefer the ass's word to mine."

A man having asked for soap, a hog dish was brought in, and only one pea in it. He rose, and began to muttrem. His companion asking what was the matter, he answered, "I am going to swim after that peas."

SAYINGS OF JOSH. BILLINGS.

The only thing which makes a male so highly respectable is the great accuracy of his kickings.

I have known people to have so little character, that they had no failings.

If you have got a horse you ask two hundred dollars for, and are offered seventy-five dollars for him, always sell him, don't spoil a good horse trade for one hundred and twenty-five dollars.

To make a goose good eating, bring her up tenderly.

A little boy defines snoring, as "letting off sleep."

You cannot convert sinners by preaching the gospel to them at half price. Any sinner who is anxious to get his religion in that way is satisfied with a poor article.

Revenge sometimes sleeps, but vanity always keeps one eye open.

The only human being on the face of this earth that I really envy, is a laughing Christian.

Man of little authority are like men of little strength—always anxious to lift something.

There are two kinds of men that I don't care to meet when I am in a great hurry: men that I owe, and men that want to owe me.

A CARD.—We acknowledge with pleasure the many manifestations of good feeling toward our enterprise which we have received from citizens of Hampton and Newport News. We are especially indebted to Col. G. K. Phillips, Gen. W. H. Peck, Hon. Wm. Tempie, Mr. H. Clay Ivers, Dr. W. R. Wright, and Mr. W. J. Hodges, for interesting items which we have embodied in the sketch of "Hampton and its Surroundings," the first number of which appears in this issue.—Ed.

FOR SALE.

A neat little Farm of 63 acres.—3 acres in wood and pasture. Convenient to market. $30 worth of produce sold last year from 3 acres, with single horse cultivation. Price $600. Terms easy. Address Box 33 Hampton, Va.

THE
NORMAL SCHOOL PRESS
BOOK & JOB
PRINTING
ESTABLISHMENT,
HAMPTON, VA.,

Has been fitted up with complete stock of Type and Machinery suitable for Book, Job, and News paper Printing of every description.

Orders are respectfully solicited from Merchants, Mechanics, Agents, and business men generally.

The advantages possessed by this establishment over all others enable us to do first class work at greatly reduced rates.

Persons heading orders from a distance may feel assured that their orders will be promptly attended to.

Send orders to Normal School Press, Hampton, Va.

FORT MONROE,
Old Point Comfort, Va.
GENERAL FORWARDING,
FIRE & LIFE
INSURANCE
Agency.

Adams Express Company.

GREAT EASTERN, WESTERN, AND SOUTHERN EXPRESS.

Forwarders of
PACKAGES, VALUABLES, BOOKS, MONEY, & MERCHANDISE,
At low Rates, with promptness and care.

BALTIMORE
Steam Packet
Company.
For Baltimore, Md., and all points North, South, East, and West.

One of the Company's Steamers leaves Norfolk, Va., at 5 o'clock, P. M. and Portsmouth, Va., on the arrival of the Evening passenger and Mail Train of the Seaboard and Roanoke Railroad, at 7 o'clock, P. M., daily (Sundays excepted), touching at Fort Monroe, Old Point Comfort, Va. about 8 o'clock, P. M. One of the Company's Steamers leaves Baltimore, foot of Cockeet Street, daily (Sundays excepted) at 4 o'clock, P. M., touching at Fort Monroe, Old Point Comfort, Va., about 4 o'clock, A. M., going South.

Cabin and Steerage Tickets to and from Liverpool and Queenstown and all parts of Europe at lowest rates, via Cunard Line, the British and North American Royal Mail Steamships.

Special attention given to the execution of Commercial Protests, Acknowledgments, Mortgages, Leases, Deeds, Powers of Attorney, and all other Notarial business at lowest rates, by

H. PHOEBUS,
Office Atlantic Fire Insurance Company,
Agent and Notary Public.

The Strains the Angels Sing.

BY E. H. SEARS.

It came upon the midnight clear,
That glorious song of old,
From angels bending near the earth,
To touch their harps of gold;
"Peace to the earth; good will to men,
From heaven's all gracious King!"
The world in solemn stillness lay,
To hear the angels sing.

Still thro' the cloven skies they come,
With peaceful wings unfurled;
And still their heavenly music floats
O'er all the weary world.
Above its sad and lowly plains,
They bend on heavenly wing,
And ever, o'er its Babel sounds,
The blessed angels sing.

Yet with the woes of sin and strife,
The world has suffered long;
Beneath the angel strains have rolled
Two thousand years of wrong!
And men at war with men, hear not
The love song which they bring;
Oh hush the noise ye men of strife!
And hear the angels sing.

And ye beneath life's crushing load,
Whose forms are bending low;
Who toil along the climbing way,
With painful steps and slow;
Look now—for glad and golden hours
Come swiftly on the wing;
Oh rest beside the weary road,
And hear the angels sing.

For lo! the days are hastening on,
By prophet-bards foretold,
When, with the ever-circling years,
Comes round the age of gold;
When peace shall, over all the earth,
Its ancient splendors fling,
And the whole world send back the song,
Which now the angels sing.

Selections.

"Love thy neighbor as thyself," says Christianity: there is no exception.

The angel that led the choir over the fields of Bethlehem was named Love. Take away love from Christianity, and you have taken away its life: love, not alone to the just and the holy, but to the sinner; to the pale Magdalene, to whom no one but the King of men and of angels will deign to speak, to the poor publican, and the hated leper, and the raving maniac.

The hand of our God is not known by its parsimony. He does not force on us what we will not accept, but His bounty is limited only by our trust in it. Ask large enough!

"Ask large enough I and He, besought,
Will grant thy full demand."

In express terms, the Christian revelation declares all nations of the earth to be of one blood; it pronounces all men equally the subjects of one King; it makes the value of a soul infinite, and shows no difference between the worth of that of a beggar and that of a prince. Look into the stable at Bethlehem, on that night when crowned age and humble shepherd knelt by the cradle of that Babe who was their common King; do you not see, in that spectacle, the bond of an essential equality uniting all ranks, and making the regal purple and the peasant's russet faint and temporary distinctions? Well might Coleridge say, that the fairest flower he ever saw climbing round a poor man's window, was not so beautiful in his eyes as the Bible which he saw lying within—the Bible, which exhibits the divine Founder of Christianity preaching to the poor, companying with publicans and sinners, bringing into the bosoms of harlots the healing light of divine love, and which holds forth to every man the prospect of being a king and priest to God.

"Beware of unjust gains," says an Eastern sage; "for it is the nature of such, not only to take flight themselves, but to bear off all the rest with them." "Do not think" 'tis set down in the book of Kabus, a compendium of Persian practical wisdom. "Do not think even a good use of what has been ill acquired can make it thine. It will assuredly leave thee, and only thy sin will remain to thee."

Affectation and hypocrisy! To how much light satire and spleen, to how much deep distrust and dark misanthropy, have they given rise! How have they given to human life, in which such momentous interests are involved, the appearance of a masquerade and a farce! Has any one, then, principle? Let him abide by it. Would he be any one seem to be anything? Let him be that thing. This is the freest and safest way, and quite as easy as to preserve a state of forced and dangerous concealment.

Abraham Lincoln.

We can offer to our readers no more appropriate portrait for the first number of the "Southern Workman," than that of our reverd martyr President. Himself a Southern workman, earning his bread and his education by the sturdy blows of his axe, his early life was a good illustration of the idea of self-help, which is one of the leading features of our Normal School.

A large class of our readers, for whose benefit and instruction this paper is designed, do not need to be told how much most of them owe to the great and good *President*. Few of them, however, know much about the early life and character of the *man*. At the students' Debating club of the Normal School a few weeks since, the question for discussion was whether President Lincoln was entitled to the credit of the "Emancipation Proclamation?" Every one knows that President Lincoln was taught by experience. "I claim not to have controlled events," he said, "I confess plainly that events have controlled me."

The following extract from one of his speeches delivered two years before the beginning of the war, will show that he was even at that time, in full sympathy with the working man, and a fearless champion of free labor:—

"Our Government was not established that one man might do with himself as he pleases, and with another man too. . . . I, say, that whereas God Almighty has given every man one mouth to be fed, and one pair of hands adapted to furnish food for that mouth, if anything can be proved to be the will of Heaven, it is proved by this fact, that that mouth is to be fed by those hands, without being interfered with by any other man, who has also his mouth to feed and his hands to labor with. I hold, if the Almighty had ever made a set of men that should do all the eating and none of the work, he would have made them with mouths only, and no hands; and if he had ever made another class, that he had intended should do all the work and none of the eating, he would have made them without mouths and all hands."

On his journey to Washington, in 1861, when rumors of a plot against his life were current, at a meeting in Independence hall, Philadelphia, he used these remarkable words:—

"I have often inquired of myself, what great principle or idea it was, that kept this confederacy so long together. It was something in the Declaration of Independence, giving liberty, not only to the people of this country, but hope to the world for all future time. It was that which gave promise, that in due time the weights should be lifted from the shoulders of all men, and that all should have an equal chance. Now, my friends, can this country be saved upon this basis? If it can, I will consider myself one of the happiest men in the world if I can help to save it. But if this country cannot be saved without giving up that principle, I was about to say I would rather be assassinated upon the spot than to surrender it."

I think we may find in the above extracts a satisfactory answer to the question of the debating club. His love of peace was only excelled by his devotion to the Union; and his earnest words in his first inaugural, with which we close this brief notice, is one of the most beautiful and touching passages in our language. It breathes the spirit of faith, hope, and love, and every true heart in the country, no matter on which side arrayed in the late fratricidal strife, will now respond most fervently to its noble and pathetic appeal.

"I am loath to close. We are not enemies, but *friends*. We must *not* be enemies. Though passion may have *strained*, it must not *break* our bonds of affection. THE MYSTIC CHORDS OF MEMORY, STRETCHING FROM EVERY BATTLE-FIELD AND PATRIOT GRAVE TO EVERY LIVING HEART AND HEARTH-STONE ALL OVER THIS BROAD LAND, WILL YET SWELL THE CHORUS OF THE UNION, WHEN AGAIN TOUCHED, AS SURELY THEY WILL BE, BY THE BETTER ANGELS OF OUR NATURE."

Prayer and Potatoes.

A SERMON BY REV. J. T. PETTEE.

"If a brother or sister be naked and destitute of daily food, and one of you say unto them, Depart in peace, be ye warmed and filled, notwithstanding ye give them not those things which are needful for the body, what doth it profit?"—*James* ii. 15, 16.

An old lady sat in her old arm-chair
With wrinkled visage and disheveled hair
And hunger-worn features;
For days and for weeks her only fare,
As she sat there in her old arm-chair,
Had been potatoes.

But now they were gone; of bad or good
Not one was left for the old lady's food
Of those potatoes;
And she sighed and said, "What shall I do?
Where shall I send, and to whom shall I go
For more potatoes?"

And she thought of the deacon over the way,
The deacon so ready to worship and pray,
Whose cellar was full of potatoes;
How *honorable* the name of a Christian;—o nmae borrowed from no fellow-mortal, from no prince or potentato *of* earth; but derived from Him, whose nnne is above every name, Lord of lords, and King of kings. Accordingly, the apostle James in addressing Christians, speaks of it as "that worthy name by which ye are called." That worthy name—infinitely more worthy than any mere worbldly distinction, any title of earthly king or queen, is the name of Christian. However lightly nny nny esteem it now, the time is coming when there is not one but that would give more to be a Christian, than for all the honors which the world can be, stow. A Christian,—he is indeed.

"The noblest creature seen below,
Ordained to fill a throne above!
God gives him all he can bestow—
His kingdom of eternal love!

"My soul is ravished at the thought—
Methinks from earth I see him rise;
Angels congratulate his lot,
And shout him welcome to the skies."

Who then would not aspire to this highest, this sublimest of all distinctions infinitely transcending every other—that of a Christian.

As the devout Pnyson lay upon his dying bed, catching some glimpse of the glories of the upper world, he said "If men only knew the honor thnt awnited them, the glory that was in reserve for them, in Christ, they would go about the streets crying out, 'I am a Christian, I nm a Christian,' that others might rejoice with them in the honor of which they were so soon to partake."

The widow's heart leaped *up for joy*;
Her face was haggard and wan no more.
"*Now*," said the deacon, "*Shall we pray?*"
"*Yes*," said the widow, "*Now you may.*"
And he kneeled him down on the sanded floor,
Where he had poured his goodly store;
And such a prayer the deacon prayed
As never before his lips essayed;
Na longer embarrassed, but free and full
He poured out the voice of a liberal soul;
And the widow responded aloud, "*Amen!*"
But said no more of *potatoes*.

And would *you* who hear this simple tale,
Pray for the poor, and praying, "*presoil*;"
Then preface your prayers with alms and good deeds;
Search out the poor, their wants and needs;
Pray for peace, and grace, and spiritual food;
For wisdom, and guidance; for all these are good;
But don't forget the potatoes.

Of this poem—a fragment of a Charity Sermon, preached in Dorchester, Mass, some twelve years ago—John G. Whittier wrote:—"It is more valuable than some epics. I am not sure but it is more to the Master's purpose than any learned, theological tome which has been published since it was written."

You will always notice one thing: the devil never offers to go into partnership with a busy man; but you will often see him offer to join the lazy, and furnish all the capitol.

Temperance.

There is no folly like the folly of the drunkard, the man who puts an enemy into his mouth that steals away his brains; and we pray you who have fallen, you who are tempted, to stop now, at this very moment, and think reasonably of this matter of intemperance.

Do you know what liquor does to you? Do you know that putting rum and whisky and gin into your stomachs is like putting grains of sand between the delicate springs and wheels of your watch, only that it is a hundred times more foolish, for by-and-by you may get another watch, but can never hope for another stomach, or another brain.

You know, for it is a terribly common experience to many of you, that it makes you idiots or maniacs for hours or perhaps days, but do you realize the sum total of what it cost you? Your time is money; and every hour wasted in drinking, and in idleness which drinking produces, is just so much hard cash taken out of your pockets. And you not only pay for your "sprees" and daily drinks in dollars and cents, but what is worse, you pay for them in character and position, in health of body and mind, in the love and respect of your fellow-men,—all these you forfeit when you begin to take the fatal glass, and what do you get in return? Ask the first drunkard you meet, what sort of a bargain he made when he sold himself to the whiskey-devil, and then stop and count the cost before you follow him in the path which leads to poverty, to crime, to miserable, hopeless death.

God made you in His likeness to be men, pure in soul and body, clean and honest in your daily life; and when you poison your blood with liquor, maldening your brains and hardening your hearts, do you for a moment fancy that you can escape His justice? Ask yourself then, before you form the first dangerous habit, "Is it worth it?" Drink costs you everything,—money, health, happiness, life—and gives you in return, the uncertain pleasure of a moment. As a matter of common sense then, is there anything more foolish than a drunkard's folly?

The Work Done Inside.

One of my friends is a very earnest, shrewd man, who seems to know how to do the best thing at the right time. One day he was passing a gin-shop in Manchester, England, when he saw a drunken man lying on the ground. The poor fellow had evidently been turned out of doors when all his money was gone. In a moment my friend hastened across the street, and entering a grocer's shop, addressing the master, said: "Will you oblige me with the largest sheet of paper you have?"

"What, my friend? What's the matter?"

"O, you shall see in a minute or two. Please let it be the very largest sheet you have."

The sheet of paper was soon procured.

"Now will you lend me a piece of chalk?" said my friend.

"Why, what are you going to do?"

"You shall see presently." He then quickly printed, in large letters:

"Specimen of the work done inside."

He then fastened the paper over the drunken man, and retired a short distance. In a few moments several passengers stopped and read aloud, "Specimen of the work done inside."

In a very short time a crowd assembled, and the publican hearing the noise and laughter outside, came out to see what it was all about. He eagerly beat down and read the inscription on the paper, and then demanded in an angry voice, "Who did that?"

"Which?" asked my friend, who now joined the crowd. "If you mean what is on the paper, I did that; but if you mean the man, you did that! This morning when he arose he was sober—when he walked down this street, on his way to work, he was sober—when he went into your gin-shop he was sober, and now he is what you made him. Is it not a true specimen of the work done inside?"

FREEDMAN'S
SAVINGS & TRUST
Company.

A National Savings Bank.

ESTABLISHED MARCH, 1865.

Chartered by the Government of the United States.

Deposits of five cents or any larger amounts received.

SIX PER CENT. INTEREST

paid on sums of five dollars or more. *All deposits payable on demand, with interest due.*

All accounts *strictly private and confidential.*

PRINCIPAL OFFICE,

WASHINGTON, D. C.

FARM FOR SALE.

A Farm of one hundred and twenty acres, situated on

HAMPTON RIVER,

Opposite the Normal School, and National Military Asylum; one of the finest farms in this Water, Virginia. A fine Oyster Grove in the room to plant ten thousand bushels of Oysters. On the place is a large brick house in good repair, and like out-buildings. The land is new and cultivated. A great variety of Fruit in abundance, and three acres of Asparagus, just the right age to cut well. For further particulars apply to or address ALFRED CLICK, Adjutant General's office Washington, D. C., or the subscriber on the premises. DANIEL F. CLICK,
Hampton, Va.

jy14

Drugs, Drugs.

GEORGE BOOKER,
HAMPTON, VA.

Having refitted his store and secured the services, of an experienced and competent druggist, is prepared to furnish prescriptions at all hours. Having just received a large assortment of the purest drugs, is prepared to offer great advantages to the trade.

A RARE CHANCE.

The undersigned offers to sell out his entire stock of Stoves, Tinware, and set of Tinman's Tools, on reasonable terms.

There being no other Tin Shop in the place and a constant run of good business, this offers to an enterprising young man an excellent opportunity to secure a fine outfit and plenty of good customers, in one of the most attractive and healthful locations in Virginia.

E. E. WOODWARD.

HAMPTON, VA., Jan. 2, 1867. jan26

FARM FOR SALE.

A Truck Farm of thirty-five acres, with neat and convenient house and out-buildings, one mile from Fort Monroe, and beautifully situated on

HAMPTON ROADS,

At the mouth of Hampton Creek. It has convenient for shipping by steamer which makes daily trips, passing within a few feet of the shore. It has a fine location for a store, and for oyster trade; and it is a beautiful location for a summer residence, or hotel. If the purchaser prefers and desires so much land, a part of the land, with the house would be sold. Address

Hampton, Va.

THE SOUTHERN WORKMAN

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. I. HAMPTON, VA., FEBRUARY, 1872. NO. 2.

The Fatherland.

Where is the true man's fatherland?
Is it where he by chance is born?
Doth not the yearning spirit scorn
In such scant borders to be spanned?
O yes! his fatherland must be
As the blue heaven, wide and free!

Where'er a human heart doth wear
Joy's myrtle-wreath or sorrow's gyves,
Where'er a human spirit strives
After a life more true and fair,
There is the true man's birthplace grand,
His is a world-wide fatherland!

Where'er a single slave doth pine,
Where'er one man may help another,—
Thank God for such a birthright, brother,—
That spot of earth is thine and mine!
There is the true man's birthplace grand,
His is a world-wide fatherland!—LOWELL.

WASHINGTON'S BIRTHDAY IN NEW YORK—THE SEVENTH REGIMENT MARCHING DOWN BROADWAY.

Hampton and its Surroundings.

II.

THE NATIONAL MILITARY ASYLUM.

The Southern Branch of the National Military Asylum for Disabled Volunteers occupies a fine position on the shore of the peninsula fronting the Roads, and adjoining the Normal School premises, from which it is separated by a small creek. These asylums were established by Congress for the benefit of disabled volunteer soldiers. They are supported by military fines, forfeitures, unclaimed bounties, and moneys due deceased officers and soldiers, as well as by private donations. Up to last March, the treasurer of this fund had received four and a half million dollars, and had paid out a little over four million four hundred dollars.

There are now four branches in operation: the Central, at Dayton, Ohio; The Northwestern, at Milwaukee, Wisconsin; The Eastern, at Augusta, Maine; and the Southern, at Hampton. This last branch was opened in February, 1871, and was designed for colored soldiers and consumptives who require a mild climate.

The Board of Managers in selecting a location for the Southern Branch Asylum have done well, not only on account of its healthfulness, but for the beauty of its location, and the cheapness of living.

The buildings present an imposing appearance. The main edifice, was known before the war as the Chesapeake Female College. It is of five stories, with a portico inclosed by massive pillars along its whole length of two hundred feet. It is surmounted by a cupola, from which can be obtained a fine view of this magnificent harbor, which has been pronounced second only in beauty to the Bay of Naples. During the war, it was occupied as a military hospital, to which purpose, indeed, the whole of this peninsula was devoted, forming one vast military hospital Camp. The building is well adapted to its purpose, and has been tastefully fitted up. The first floor contains kitchen, dining-room, store-room, etc. The second is occupied by the chapel, dispensary, officers' quarters and offices; and the stories above by the inmates. Several additional buildings have been erected on the premises, by the Board of Managers, among which are workshops, bakery, cigar factory, soap factory, and a large and well arranged hospital, with a capacity of 40 beds. There are also two cottages on the premises, one of which is occupied by the Deputy Governor in charge of the Asylum. There are now nearly 800 inmates, about fifty of whom are in the hospital, a large proportion of the latter are suffering from pulmonary diseases. No one has died during the past year of any disease contracted at the Asylum. About one seventh of the whole number in the Asylum are colored soldiers. No distinction is made on account of color or race. All eat at the same table, and as far as they are competent, are employed in the same duties. Such of the men as are able to work get regular wages, which with their pensions and other allowances make them comfortably off, and enable some of them to lay up money.

As yet, there is no Amusement Hall. This is a want that should be supplied, for all invalids need to be entertained, and made to forget their troubles as far as possible. The chapel is now used as a reading-room, where many of the leading newspapers of the country may be found. A school has been organized, but thus far has not been very successful. Only about ten of the inmates attend; of this number all but two are colored. The bill of fare is excellent, the food of good quality and sufficient variety. The average cost of rations during 1871 was 26.9-10 cents per day.

In providing with such liberality for the comfort of its disabled soldiers, the Government has only done its duty. This is all we can do for those who, in the service of their country have lost what money cannot restore, and for which all the comfort and even luxury which can be furnished them, is but a poor equivalent. It is a question, however, whether the establishment of these large and expensive asylums is the best method of showing the Nation's gratitude, or of providing for the comfort of its disabled soldiers. The experience of older nations is valuable on this point. The magnificent and famous Greenwich Hospital, erected by England at incredible expense, where over 3000 pensioners, and 6000 out-pensioners were supported at one time, is now declared, after an experience of three-quarters of a century, to be a failure; and if we are correctly informed, has been broken up, and the pensioners supported at less expense and with more comfort at their own homes.

Human nature is the same everywhere; and the aggregation of many invalids into one household, where they have a daily, unvarying routine, without outside interests or associates, and where they are deprived of the gentle ministrations of woman, cannot but have a benumbing and demoralizing influence. Nothing but the most wise and considerate management of these large asylums, and the unremitting efforts of those in charge, can prevent these deplorable results. The officers of these institutions have committed to them a sacred trust; and the utmost care should be exercised by Government in their selection. They should be men whose integrity is unimpeachable, whose loyalty is above suspicion; and when-ever practicable, those only should be chosen who have served and suffered in the same glorious cause, and whose single aim should be to promote the comfort and happiness of these disabled veterans, who are entrusted to their care.

[A sketch of Fortress Monroe will appear in our next issue, bringing to a close the article on "Hampton and its Surroundings."]

Gohl gives a ready passport at any gate except heaven's.

Washington's Birthday.

On the 22nd of February, 1732, was born George Washington, the most illustrious citizen of Virginia. He was from the first a noble boy, perfectly truthful, brave and manly, full of life, and leading his playmates in their sports, as he afterwards led his countrymen in their struggles for freedom. Though not naturally fond of books, he did his school work faithfully. At school he learned surveying, and he spent much of his time, when he was between sixteen and nineteen, in mapping out the wild and unsettled parts of Virginia,—work which made him well acquainted with the country, and with the character and manner of the Indians.

The French in those days owned Canada, and claimed all the country west of the Alleghanies. There was not a white settlement in all that region; but the fur trade was profitable, and the English were determined not to yield an inch of the ground. Washington was sent to the Ohio, in 1753, by the Governor of Virginia, to try to make terms with the French and Indians. In this dangerous business he showed such courage and good management that, from that time, he had the confidence of all Virginia. As the French would not listen to his proposals, war soon began. In this war, which lasted till 1759, he saw his first military service, and gained a still higher reputation among his countrymen. Early in that year he was married to Mrs. Martha Custis, and went home to Mt. Vernon. There he spent most of his time till 1775; but he had still many public duties, for he was Judge of the County Court, and a member of the Virginia legislature, and was consulted by everybody who had a project for the general good.

At this time, the English Parliament began to impose taxes on the Americans. The colonies were determined not to submit to taxation, except by their own legislatures; and they resisted in various ways. The quarrel grew warmer every year; and at last, on the 5th of September, 1774, a General Congress met at Philadelphia. Washington was of course one of its members. This Congress published a Declaration of Rights, and appealed to the king and people of England to respect the liberty of the Americans. As the English kept on in their oppressive course, the people began to arm themselves, and that winter, Washington reviewed many companies of Virginia militia, who wished to put themselves under his command.

The second General Congress met in the following May. While Washington was preparing to go to Philadelphia to attend its sessions, he heard of a battle which had taken place at Lexington, Mass, April 19, 1775, between the British troops and some Massachusetts militia. Congress, seeing that war had already begun, at once formed a constitution for the confederate colonies, took measures to raise an army, and appointed Washington Commander-in-chief. Only those who have carefully studied the history of the trying years which followed, know how well he deserved this honor. If he had been less brave or less prudent, if he could have been disheartened by any difficulties, or if he had been less able to command the confidence of his countrymen, our independence could not have been secured.

After peace was made in 1783, he resigned his commission and wished to retire to private life. But the people could not spare him. Under the first constitution, Congress had not power to carry on the government, and it was necessary to form a new one. Washington was made president of the convention called for this purpose. This convention met in 1786. It was hard to persuade some of the states to accept the new constitution; but at last it was done, and in 1789 Washington became the first President of the United States. His election was not contested, for he had won such love and reverence from his fellow-citizens that they could think of no one else as their leader.

He was President of our country for eight years, and did for us what no one else could have done so well, in securing the success of the new government, which the people had not yet learned fully to love and appreciate. He would not consent to serve for a third term, but went home to Mt. Vernon, where about two years after, he died, Dec. 4th, 1799. His country grieved for him as for a father; and even the English, against whom he had fought, paid him funeral honors at his death.

THE SOUTHERN WORKMAN.

THE
Southern Workman,
ISSUED MONTHLY.

S. C. ARMSTRONG, *Editorial Manager.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will contain not less than three illustrations, will furnish a variety of choice reading, will tell what is going on in the world, and will allow no pleasure and profit both old and young.

All are invited, the young especially, to ask by letter questions on any subject upon which they wish information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

If *The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.*

To every church which shall send us one hundred one dollar subscriptions for "The Southern Workman," we will send a beautiful communion set costing twenty-five dollars.

We will give a handsome Bible costing three dollars to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars *in cash* for every one hundred one dollar subscriptions; or $12.75 for twenty-five subscriptions; or $3.50 for every fifty subscribers.

In these cases the papers are to be sent in *one bundle to one address* to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters, and we give notice that in fall, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, FEBRUARY, 1873.

As the family comes before the state in order of time, as the state can exist only as families exist, and is, in short, only a combination of families, it follows that the education of the individual is the corner-stone upon which the nation must build; the work which above all others, it is for the nation's advantage should be well done. We must have honest and sensible fathers and mothers before we can have an honest and sensible government; we must have men and women intelligent enough to understand the reasonableness of right doing, before we need look for statesmen who will frame their codes after the pattern which the Great Ruler has set; and it is education, and education alone, which will give us the citizens whom the country needs.

Not only must we seek instruction for ourselves, but we must see to it that our children and neighbors and fellow-voters do not go untaught; for the surest protection for our lives and property, the surest guarantee of our liberties as workingmen, lies in the intelligence of the people among whom we live; and common schools and academies have an influence on the life of the nation, so direct that it may be shown in figures which he who runs may read. For example, the Commissioner of Education at Washington published, in the year 1870, a series of questions in regard to the relation of education to the productiveness of labor, of which he sent three thousand copies to such working men and employers throughout the country as were likely to give solid opinions upon the subject. Nothing could be more interesting than the answers received, and it is only to be regretted that they could not have had wider circulation. Our space will not admit of quotations from them, but the result of the investigation is summed up by the Commissioner in the following words, which are sufficient for our present purpose:

"From the testimony thus given by various classes, from all sections, and among many industries, it is clear that the worth of a common school education to the common laboring man, is universally conceded, that his value to the community at large is positively increased, and his power as a producer, of adding to the common stock of wealth is materially enhanced by the education which he receives in the common school. The increase of wages which he will receive is put at various figures, averaging near 25 per cent, and this increase of value arises, 1st. from the fact of his being more readily instructed in the duties of his work; 3d. that he needs less supervision; 3rd. that he does his work to better advantage, and therefore produces more in a given time; 4th, that he is less likely to join in unreasonable and unreasonable strikes; 5th, is more industrious; 6th, is less dissipated; and, lastly; is less liable to become an expense to the commonwealth through poverty or crime."

Valuable as the whole of this testimony is, the last point alone furnishes an argument in favor of universal education so powerful that we need scarcely look for any other proof of our duty in this matter. If we want to get rid of our prisons and reformatories, we must build schoolhouses, and, more than that, we must see that they are filled. The nation pays dearly for all these thieves, and drunkards, and paupers; and nation means you and me. If we choose, we can train these miserable brothers and sisters of ours to know that virtue is a better thing than vice; that it is better to be sober than to be drunk, to be honest than to steal, and it is in our schools that the work must, in the main, be done.

Teach the little children to read and write; give them the elements of a simple education, and the state will be saved a long bill for gaols and penitentiaries. The statistics of crime show beyond question that a large proportion of the criminals and paupers who prey upon society, have failed in their youth to receive the education which would have enabled them to earn an honest livelihood and to appreciate their own power for good and evil; and, as this class, whose members consume without producing, is by far the most costly class in the community, the liberal education of the masses not only increases the ability of all industrious working men, but also decreases their expenses by lessening the number of non-producing vagabonds and paupers, for whose support, they, as citizens, are directly taxed. Purely as a matter of economy, we may be well assured that, to quote once more from the Commissioner of Education, "The community receives an ample return for whatever of money it invests in the education of its citizens;" and it is for the citizens to see not only that ample funds are provided for this purpose, but also that those funds are so applied as to enrich the community as well by labor saved, as by labor gained.

The fine portrait of Hon. Charles Sumner in this issue, and the picture of Broadway and the famous Seventh Regiment are contributions from J. R. Osgood, of Boston, and the Harper Brothers, of New York.

The picture on our third page is a copy of one of the many beautiful illustrations in the "Nursery," published by John L. Shorey, of Boston.

We have received files of the "Lighthouse," a very fresh and bright weekly paper, published in Wilmington, N. C., by Miss Amy M. Bradley. It is devoted to education and general information, and has a high and pure tone. The publication of the compositions of students of the "Tilton Normal School" give it peculiar interest. It is well worth the price, $2.00 per one half year. We bespeak for the "Lighthouse" the support of all who are ready to help a worthy and sensible cause.

The colored people of Suffolk, Va., have a "Seven Wise Men Society," over which Mr. Robert A. Lee has been installed as President, and Miss Mary A. Keling, Secretary. His inaugural address has been sent to us for publication, which want of space forbids, but we extract a sentence to indicate its spirit. "Liberty" says Mr. Lee, "cannot be maintained by an ignorant and vicious community; so let us rally and unite in our little town, and bring about a better state of society. Let not the young be hindered from aiding so good a cause."

Whoever subscribes for this paper aids the only printing establishment in the South, and one of the very few in the United States where colored boys are taught the art of printing. Most of the type-setting of this paper, and all the press work is done by students of the Hampton Normal School, who thus pay the cost of their education. Five young colored men are learning the printing business, besides taking a regular course of study. Help those who help themselves.

The Jubilee Singers

Of Fisk University, Nashville, Tennessee, have been singing for several weeks in New York, Brooklin and vicinity, and have been most cordially welcomed by the pastors and churches. They have sung at the weekly meetings of social worship, in the Sabbath schools, have held praise meetings in place of the preaching service on Sabbath evening, have assisted in the meetings of the Association, and in all these ways have aided spiritual feasts of those who have heard them. They are being felt by the churches as a spiritual power, warming and quickening religious worship.

North Carolina.

THE CITY OF WILMINGTON.

Wilmington is improving rapidly. An old citizen has said that it has grown more within two years than in any ten years of its previous history. Many new and handsome houses have been erected; the streets are kept in excellent order; new ones are being laid out and lined with dwellings, and the place has an aspect of thrift, a beauty of situation, and a charm of climate that render it one of the most delightful cities of the land. Order and law are well observed, and nowhere are life and property better protected.

CHURCHES.

There are six colored churches, mostly well constructed and finished, and some have very large congregations; there is a steady and most gratifying improvement in the order of worship, and in the demand for an intelligent ministry.

SCHOOLS.

For some years the leading citizens have co-operated with Northern benevolent societies in educating the children of both races. Schools for whites have been under the charge and superintendence of Miss Amy M. Bradley, and her work has had a most gratifying result. Commencing with an attendance of but three little children in the face of great prejudice and some opposition, she has triumphed over every difficulty; and already nearly seventeen hundred children have been brought into the system of schools over which she presides.

The Normal School building, now in course of erection at a cost of nearly $30,000, will be an ornament to the city, and represents the largest and most efficient single effort that has been made for popular education for poor whites of the South. It will be a source of power, and through its graduates, will send streams of healing and helpful influence all over the State.

Miss Bradley, its Principal, has proved that the illiterate whites will respond nobly to intelligent efforts in their behalf, and has by her magical power led them up to a pitch of enthusiasm for their country, and for the old flag they once fought against, that justifies the highest hopes and heartiest efforts in their behalf.

The American Missionary Association, through its agent, the Rev. Henry B. Blake, has expended upwards of twenty-five thousand dollars in behalf of colored schools, with the best results. They have been adopted by the State, although a large part of the expense is borne by Northern friends. A system of free schools will soon be established, and the good work which Miss Bradley and her assistants, will pass into perpetual operation, and vindicate the wisdom of the great labor and expense he undertook.

GENERAL INFORMATION.

Half the offices of the city are filled, and in most cases, well filled by colored men; and all mechanics are regarded as a matter of course.

A correspondent informs us that there is an abundance of fine timber, suitable for furniture, and that the opening for a cabinet-maker is excellent, owing to the demand for furniture in the newly erected houses.

Good lands in some parts of the country are offered to all classes at fair prices, to be paid for in money and labor, so that any industrious man, of any color, may, if he will, in a few years, have a farm of his own.

The way is opening to occupy many central points in North Carolina with good common schools; public sentiment is in their favor. The Legislature has recently passed a school law authorizing limited taxation in behalf of education, and we hope the day is not distant when every child of North Carolina may enter the doors of a free school, and the disgrace of an ignorant, degraded class in her population be forever removed from the "Pine Tree" State.

Richmond Letter.

EUTOR SOUTHERN WORKMAN:

Dear Sir,—In pursuance of your kind invitation, I send you a few lines from the Capital. I might say much of Richmond, as a city—of what it is, and especially of what it hopes to be. But I will reserve all this for a future time, and say a few words about

THE COLORED CHURCHES.

Strong and influential as these churches are in this city, there are not enough of them. Why? A colored population of about 30,000, we have not church sittings for one sixth of that number. If, some fine day, one half of the population should think of going to church, there would be twice as many people crowding the outside of the churches as could get in. The "mother of churches" is the "First Baptist," or as we sometimes call it, "Dr. Ould Africa," Rev. J. H. Holmes, Pastor. With a membership of more than *four thousand*, this pulpit is a post of power and responsibility, equal to any other in this land; and to fill that pulpit, which is worthy of a larger and handsomer place of worship, and I believe they are making arrangements to build at not distant day.

Second Baptist, Rev. William Troy, Pastor. This is another large and prosperous church, the eldest daughter of the "Old African." They had a substantial and comfortable place of worship, which was burned down by the torch of an incendiary, in April, 1865, for the crime of holding meetings in it to arrange for celebrating the first anniversary of their practical emancipation. They have had six years of the severest struggle for sacrifice, and have happy to add, *triumph*; for they have a large, substantial and handsome sanctuary supplied with completion; which, when completed, will have cost them $30,000. The church is exceedingly fortunate in having Rev. Mr. Troy for its leader in this heavy enterprise, as well as in its spiritual affairs. He is a man of large figure, of great natural powers, improved by education and by travel in this and in foreign lands, and is a graceful and effective speaker.

Ebenezer Baptist Church, Rev. Richard Wells, Pastor, is fortunate in having the best house of worship; really a handsome and commodious one, but not large enough for the crowds who flock to it every Sabbath.

I learn that they will soon enlarge and otherwise improve it. This speaks well for the success of the minister, who presents a remarkable instance of a man grown to manhood entirely without education, kept down by slavery, and yet, by steady and patient toil during the last six years, who has risen to a position of first rate influence, and commands universal respect, not only as a godly man and faithful minister, but as a man of good judgment and intelligence out of the pulpit, and of very decided ability and force in it. He always speaks to interest his hearers, whatever may be the theme.

These three churches are a great power in this city. Besides these are some three or four other Baptist churches concerning which I have less definite knowledge; and also, three or four Methodist churches; but I cannot speak of them in this letter, or I shall take up too much of your space. I may speak of these in my next.

I will close by saying that the churches and schools are the hope of the working men of South and North.

Our fine Normal School on 12th Street, near the Davis Mansion, is doing thorough work in preparing teachers for future usefulness. It invites inspectors.

Yours truly,

R. M. M.

RICHMOND, VA., *Feb.* 10, 1873.

Hampton Letter.

MR. WORKMAN: On your first appearance you paid me a visit. I was glad to see you. Thank you for coming. I like your looks; you seem to be neat and somely. Especially, do I like your *sense*, Workman. Yes, I like that word; I like its meaning. It conveys the idea of one who can work, and does work, and is not ashamed to work. Such are the men to make a country. Then I like your *hand* name *Southern*. The great want of the South is workmen. I hope you will prove yourself one of them, and not only work yourself, but by your example, stir up others to work. Remember the Bible says "If any will not work, neither shall he eat."

Many look upon work as the evil, and try by all means to shun it. They set their wits to work to save their hands. This is a grave mistake. Good old Ben. Franklin never wrote any thing truer than this "*People who set out to live by their wits are very apt to fail for want of stock.*" Wit is very good, but it is not money, but it is not the only thing by itself. Work, instead of being an evil, is a great blessing to society. It is not, as many suppose, a curse sent upon the earth as a consequence of sin. Before sin was known on earth, God put man in the beautiful garden of Eden; and for what purpose? To lie down in the shade? to eat the fruit? to enjoy himself in idleness? No! but to "dress it and to keep it." How could that be done without work? No, no! Be a workman, a true workman, a constant workman, say a "Southern workman." Nothing but work has made the North what it is, and nothing but work will make the South what it ought to be.

All kinds of workmen are necessary. We want work in the field and in the garden; in the shop and in the office; in the dairy and in the kitchen; in the school and in the pulpit. In fact, wherever human beings are to live, there is work to be done; and somebody must do it.

Most of the readers of the "*Southern Workman*," have, all their lives, (till within the last few years) been working for others. Now they are working for themselves and families. Surely they will not now be afraid or ashamed to work for their own. If you are a mechanic, a farmer, a cook, or a boot-black, work on your business; follow your trade. If by your industry and intelligence, you get something better, then work at that. All truly great and good men have been working men. Many of them worked with their hands before they worked with their minds.

But it is not enough to be workmen. Try to be *good* workmen. Whatever you do, do it well. "Act well your part; there all the honor lies." A great man who had paid his way through college by blacking the boots of his fellow-students, was once introduced to a man, who thought he was a great deal wiser and was rich. The rich man at once recognized him, as his college boot-black, and thinking to mortify him in company said, "Oh yes, I remember you very well, black my boots at college." "Well," said the truly great man, "did I not black them well?" Now *Workmen*, take the hint. Do your work well, and you never need be ashamed of your occupation.

ERODUHTAN.

The Shoe and Leather Manufacture.

The hides and skins tanned in the United States each year are worth $86,530,000. 80,000 men are employed in making these into leather, which, when made, is worth $124,760,000. 131,000 persons pay their living by making boots and shoes, which are worth, when made, $246,250,000; and 19,000 persons are employed in making harnesses, trunks, machine-belts and other manufactures of leather, which are worth $63,300,000.

Thus the whole value of the manufactures of leather each year is $260,550,000, giving employment to 190,000 persons. Take from this sum the cost of the hides and skins and of the other materials used, cloth, paper, wood, metal etc., $86,950,000, and we find that the manufacture of leather goods is worth to the country each year, $222,600,000. This is more than any other branch of industry is worth excepting agriculture, which amounts to $3,288,900,000; and railway service, $360,000,000. The iron made in the United States, when ready for use, is worth $120,000,000. The cotton cloth is worth $71,500,000 more than the raw cotton used; and the woolen cloth is worth $66,000,000 more than the wool used.

In the year 1870 about ninety million pairs of boots and shoes were made in the United States. Of these, fifty-five million pairs were made in Massachusetts, and thirteen million pairs in other parts of New England. Thus it appears that boot and shoe making is the leading branch of manufacture in this country, and that New England is the centre of the business.

There are in Boston three hundred and eighty-four wholesale boot and shoe stores, nearly all of them kept by men who have factories scattered through New England. Almost each town has its own class of goods. Lynn manufacturers make mostly women's shoes, and many of them with cloth tops. Haverhill, too, makes women's shoes, but of a different sort. Marblehead turns out great quantities of children's shoes, while in Reading there are several factories that make nothing but infants' and dolls' shoes—hardly larger than those worn by the "Puss in boots." In Worcester and neighboring towns are made a large share of the men's heavy boots which are sold. Natick and North Brookfield and Dover, N. H. make stout brogans, the most of which are sold to buyers from the Southern States. In the cities of New York and Philadelphia great quantities of high-priced boots and shoes for both men and women are manufactured.

Agricultural.

SMALL FARMERS BUY OR RENT LAND.

The southern workman finds his circumstances as follows: 1st. An abundance of productive land which can be rented for one or two dollars a acre. 2d. No knowledge of that system of farming which would make such land pay a good return to the owner. 3d. A scarcity of capital that would make such knowledge available.

Under these conditions there is no question more vital to the prosperity of the industrial classes of the South than this: *How to make the best use of the money they can command.*

In the old countries of Europe, many of the most prosperous farmers are not owners of the soil. Their whole capital is devoted to active business operations; they would not purchase land if they could, because they can make more by investing their capital in stock, seed, and tools.

The southern workman can purchase land very cheaply, but it seems to us he might well stop to consider, before making all his capital upon land. Would he not assume an unnecessary burden? Opportunities to buy are likely to increase, and land to become cheaper in the South; but when it does so, it will become clearer by and by. The farms are too large for the new system of labor, and the owners must sell.

But no landholder whether *Northern* or *Southern*, is anxious to sell to a man who has so little money that he cannot afford to improve his purchase and make it add to the value of the neighborhood. There are the first things needed is money; not only for purchase but for active operations.

It becomes a most important question, for those of the industrial class who have small means and desire an agriculture for support, whether to rent land at low rates and apply their capital to making money *out of* the land, or to buy at once paying by degrees and depositing their money *in the land*.

In both cases the ultimate aim is one and the same, to own land; the question is as to the best method of making money in order to buy to the best advantage. We invite discussion upon this important point.

FARMERS' CLUBS.—In every township of every Southern State, there ought to be a Farmers' Club. The club is to the farmer a school; he finds out the views of his neighbors; he learns that somebody else's way of farming pays better than his own; he may get a hint in an hour's discussion that will save or make for him a hundred dollars a year.

Southern farming is too much a repetition of what has been done before. Men follow blindly the old customs.

Farmers! you never will be rich except by using your brains as much as your hands. Read all you can about your own agriculture; see what the best farmers about you are doing; get the best way of all is to form a farmers' club that shall meet, say once a month, discuss freely the mistakes and successes of the past year, the chances of the next year's market, and the best crops to raise, and how to cultivate them to the best advantage.

POULTRY.—Most of our readers keep fowls and know something of the right treatment of poultry; but we give the following rules intended especially for poultry in confined situations, which, if carefully observed will add greatly to the profits of the hen-yard.

1st. Their quarters should be above ground, light and perfectly clean, airy and well sheltered from cold winds.

2d. Give them a variety of food; at break of day a warm mess of meats and meal; at noon meat of any kind with a little tallow chopped fine; at night whole corn.

3d. Keep by them all the time pure water, sharded lime, pounded oyster shells, coal, ashes, sand, dry and moist gravel, and once in a while cayenne pepper and salt in their morning meal.

4th. Don't keep hens over except choice fowls to breed from. Secure large lively hens of whatever breed, and change stock every year. Good farmers love their hens, keep their houses clean, and in return receive larger profits from their poultry than from anything else the farm produces. Although the large range for poultry on many Southern farms renders these rules unnecessary, yet we have deemed it well to indicate as above the most approved methods of the most successful poultry fanciers.

SALT all animals at least once a week. Get rock salt and let them have access to it at all times.

PENS should have warm, dry, well ventilated pens; abundance of clean straw; food three times a day, and their pens should be kept clean. It is a great mistake and poor economy, to let pigs wallow in filth.

COWS should also, be kept clean. A dirty cow is a disgrace to a farmer, and a direct loss.

FEED your farm well, and it will feed you; manure heavily for heavy crops.

There is only one road to profitable farming; it lies over a huge manure pile. Southern farms are exhausted by constant cultivation without fertilizing. Settle down to farming in one place; if you rent, rent for five years; buy if you are able, and then go to work to strengthen and improve the soil. One-year leases are ruinous to the farmer, to the owner, and to the land.

Domestic and Foreign News.

FRANCE has gone through with another "crisis," and fortunately came out of it with safety. The latest excitement was caused by the resignation of the President, M. Thiers, and all the Cabinet, because of the rejection by the Assembly of the tariff measures proposed by the Government. The Assembly refused to accept their resignations, and passed a vote of confidence in the administration, when they consented to retain their offices. France has not yet learned what a republic really is, and that freedom to criticise and vote against government measures, is among the prerogatives of its citizens.

A favorable sign for France is the report of a bill in the Assembly providing that all offences of the press shall be tried by a jury.

The new French conscription bill provides that every child between six and thirteen years of age must be sent to school.

IN ENGLAND great excitement prevails on account of the American claims presented before the Geneva Conference. This conference, now in session at Geneva, Switzerland, meets in accordance with an agreement made by England and the United States, for the settlement of the matters in dispute between the two countries. Among these disputed questions is our right to claim damages of England for the losses occasioned during the late war by Alabama and other rebel cruisers, which were fitted out in British ports to prey upon our commerce. Our Government claims that England is responsible not only for the value of the American ships and cargoes destroyed by these rebel cruisers, but also for the so called indirect or consequential damages, such as the expense of fitting out vessels of war to capture them privateers, and for the loss to our commerce which the fear of these cruisers occasioned. The London papers claim that the question of *indirect* damages cannot be entertained for a moment, and call upon the English Government to withdraw from the conference unless the claim is withdrawn. The agreement of these two powerful nations by which is called the Treaty of Washington, to refer the questions in dispute between them to arbitration rather than to the "trial by battle," was considered a great triumph of civilization. Its failure now would be most deplorable, and we have faith to believe that some means for a settlement of adjustments of the present difficulty may be agreed upon.

THREE thousand pounds ($15,000) have been subscribed in London in aid of an expedition to search for the distinguished traveller and missionary in Africa, Dr. Livingstone, who went on an exploring expedition into the interior of Africa, and has not been heard from for some two years.

THREE thousand soldiers, have sailed from Spain to reinforce the army in Cuba.

MR. Roberts has been inaugurated as President of Liberia. We presume this is the same Roberts who was the first President of that republic, and who has distinguished himself in her service.

SPAIN seems to be rapidly getting into foreign and domestic difficulties. She has recently stopped and searched an American vessel on the high seas; and now we have an English steamer on the charge of carrying goods contraband of war. At home a strong Republican party has been formed, and the imported King Amadeus is beginning to realize the truth of the old proverb "Uneasy lies the head that wears a crown."

THE emancipation movement is gathering force in Brazil. It appears probable that the present law, which only provides for gradual emancipation, will be so amended as to hasten the freedom of the slaves. Meanwhile, the people, from whom the enrollment must be taken by some of the religious orders, are organizing for the immediate liberation of the slaves, and the education of their children.

THE arrival of the Japanese Embassy on their official visit to this country and the other powers with whom they have treaties, is of great significance. It is composed of men of the highest rank and ability, headed by the Prime Minister of the Empire. They were received by Hon. C. E. Delong, United States Minister to Japan. In a speech made by San Francisco, which was received with appropriate honors, Prince Iwakura, the Prime Minister, said it was a recognized fact in Japan that their prosperity had greatly increased since the conclusion of the treaty between their country and the United States. The progress of the embassy toward the East has been suddenly interrupted by the serious snow blockade on the Pacific Railroad. It has brought the train to a stand in Utah. They are now thinking of returning to San Francisco, and coming to New York via Panama by steamer.

IN Congress, the bill which passed the House of Representatives, granting a general amnesty except to members of Congress and officers of the army and navy, who joined in the secession movement, failed in the Senate by a single vote. Senator Sumner's civil rights bill was added to the amnesty bill in the Senate by the casting vote of the Vice President, but the bill thus amended was lost. It is to be hoped that the amnesty bill may finally become a law.

THE snow has blockaded all through travel on the Pacific Railroad, and caused much suffering among the passengers, as well as many losses to baggage men having transactions with California.

THE SOUTHERN WORKMAN.

Sunday Services.

First Baptist (white), Rev. George P. Adams, King Street. Services at 11 A. M. and 7.30 P. M.

First Baptist (colored), Rev. Wm. Taylor. Services at 10.30 A. M., 3 and 7 P. M.

Zion Church, Baptist (colored), Rev. Wm. Thornton, Butler School House, Old Point Road. Services at 10. 30 A. M., 3 and 7 P. M.

Second Baptist (colored), Rev. John Smith, Queen Street. Services at 10.30 A. M., 3 and 7 P. M.

St. John's Church, Episcopal (white), Rev. J. J. Norwood, Queen Street. Services at 11 A. M. and 7.30 P. M.

Methodist Episcopal, South (white), Rev. H. C. Cheatham, Queen Street. Services at 11 A. M., and 7.30 P. M.

Little Bethlehem Meth. Episcopal (col'd), Rev. James T. Morris. Services at 11 A. M., and 8 P. M.

Bethesda Chapel, Rev. Richard Tolman, in National Cemetery. Service at 11 A. M., Sunday School at 3 P. M.

St. Mary's Catholic, Old Point, supplied from Norfolk. Services at 10.30 A.M., and 3.30 P. M.

Centurion, Episcopal, Fortress Monroe, Rev. M. L. Cheves. Services at 11 A. M., and 7 P. M.

Mill Creek Methodist Episcopal, Rev. J. S. Beyer. Services at 11 A. M., and 7 P. M.

Hampton Normal School,

RECORD OF GRADUATES.—CLASS OF '71.

Miss Sarah Brown is teaching in Willmington, N. C., under the direction of Rev. H. B. Blake.

Miss Jane Bullard is teaching in Charlestown, West Virginia.

Miss Julia Gibbs is teaching in Columbia, S. C.

Miss Nancy Ellison is employed in a public school in Staunton, Va. Miss Eliza Jackson is similarly engaged at Swoops Depot, six miles distant. The former writes:

"I am quite pleasantly situated in Staunton, having a delightful view of the mountains whenever I look out. I am living between the Blue Ridge and Alleghany ranges. I am teaching with a colored lady from Boston. We get along finely. The people are kind, and the scholars are quite good."

The latter says: "I enjoy looking at my scholars on the ice pond very much. I never saw an ice pond before this winter. I have been tempted several times to try skating, but my heart fails when I get to the pond.

I have very nice board for $10,00 per month. I get $30,00 per month. I have a room all to myself, and everything comfortable."

Edward Bowman is in Kempsville, not far from Norfolk, teaching school.

D. A. Elliet writes in good spirits from Bridgewater, Rockingham County. He says: "I like out here very much. I think this is the finest part of Virginia. I have a very nice boarding-place. Bridgewater is a small village of an old style, having a main street, and a back street, and a water street. My boat-house is on the river about fifteen rods off, and my school-house is just across North River. I go across in a boat every day. My school numbers 23, and the whole school 110, and has three teachers. I like all the people in town, so far, for they seem to be the best people in the world.

The air here is noted for the prolongation of life."

James Fields is doing good service in the educational cause as Principal of the "Lincoln School," Hampton.

Joseph Gilles is in Suffolk, in extreme Southwestern Virginia, teaching a public school.

Calvin Johnson, who has for many months been Assistant teacher in the "Butler School" at Hampton, has just entered the Law Department of Howard University, in the charge of Prof. John M. Langston, the well-known orator.

William C. Lee has a large school in Carrsville, Virginia, which will shortly become an academy requiring three or four assistants.

We have not heard from Harrison Lewis for several months, and cannot report definitely with regard to him.

George W. Lattanar is employed as teacher of a private school in Lancaster County.

Caleb Nelson has been employed in Charlotte County public schools since last summer.

Henry Clay Layne has been appointed teacher of a free school in Salem, Roanoke County, Virginia.

George L. Taylor assists in the Lincoln School at Hampton.

Elliott Tolman is in Boston in a large wholesale store.

Walter R. Wilkins and Samuel C. Winslow are students at Oberlin College, Ohio.

Merritt R. Wallace writes from James City County: "My school up to February 1st, numbered 41 children. On that day the Board of Trustees reduced my salary to $20,00 per month. The Clerk of the Board assured me it was not for anything on my part as teacher, but because I am the only colored teacher in this County, and two members of the Board being opposed to public education, are trying to keep me out. Had it not been for colored friends, and for our worthy County Superintendent, Colonel James H. Allen, I could not have kept the school up to this time."

Graduates, and absent undergraduates, as well as teachers generally, are requested to send to this paper accounts of their work and of the region they live in.

To insure life and property is the duty of every man whose death is likely to leave his family in distress, or the loss of whose buildings would be a great calamity.

An intelligent man needs not to be urged to provide by insurance against misfortune. But through the neglect of ignorant and perhaps well meaning men, thousands of children are to-day in wretchedness, because their fathers neglected to insure their lives and property. *Insure! Insure!! Insure!!!*

A Noble Boy.

THE following touching story is a beautiful gem:

About nine o'clock in the morning, a little boy in Paris, of twelve years of age, whose jacket and apron of white cloth distinctly indicated that he followed the profession of pastry-cook, was returning from market with an open basket on his head, containing butter and eggs.

When he had reached the vicinity of the church of St. Eustache, the little fellow, who could only with difficulty make his way through the crowd, was violently jostled by a stranger who was passing, so that his basket tipped, and fell to the ground with its contents. The poor lad, when he saw his eggs all broken, and his butter tumbled in the gutter, began to cry bitterly, and wring his hands.

A person who happened to be in the crowd that gathered around the little fellow, drew a ten sou piece, a small coin, from his pocket, and giving it to the boy, asked the rest who stood grouped around him to do the same, to make up the loss occasioned by this accident. Influenced by his example, every one present eagerly complied, and very speedily the boy's apron contained a respectable collection of coppers and silver. When all had contributed, our young hero, whose distress had vanished in a moment as though by enchantment, wurmly thanked his new benefactors for their kindness, and forthwith proceeded to count the sum he had received, which amounted to no less than twenty-two francs and thirty-five centimes, about five dollars. But, instead of quietly putting this sum in his pocket, he reckoned up how much what he had lost was worth, and as it amounted only to fourteen francs, about two dollars and a half, he appropriated no more than that sum; and then, observing in the group that surrounded him, a poor woman in rags, the gallant little fellow walked right to her, and placed the remainder in her hand. Certainly it would have been impossible to show himself more deserving of public generosity, or to acknowledge it in a handsomer manner. The boy's noble conduct was greeted with the applause of the crowd, who were delighted to find such delicacy and propriety in one so young.

Yes And No.

BY ALICE CARET.

My dear little children,
I think I may guess
That you have learned early
The way to say yes.
Now that is a good word,
Kept strictly for use,
But bad as it can be
To lie around loose!
All sorts of disasters
Behind it will press
So be careful, my little ones,
How you say, yes!

And there is another word,
That you can spell,
I'll dare say, but maybe
Can't use very well;
It a ill keep you from debt,
And will keep you from stink,
And will help you to stand
When you're ready to sink.
My lad, have it ready,
Wherever you go,
And, in time of need, speak It
Out manfully, No!

Animals Love Man.

It is perfectly natural that man should have unfriendly feelings toward wild beasts, and that the instinct of self-preservation should lead him to destroy them. But it is shocking that useful and domestic animals should trouble and fly at his approach, or that they should suffer and perish through his cruelty. We believe, with the bishop of Chalons, that "it is a crime, and a sign of a wicked heart, to take pleasure in tormenting animals, and making them suffer. It is, indeed, unchristian." Almost all domestic animals are naturally affectionate; they love man, become attached to him, and show their feelings in ways which are often intelligent and instructive. If, instead of training animals by cruelty and abuse, man would treat them kindly and affectionately, he would be like the monarchs of the golden age, the king of nature, adored by his subjects.

A DOG'S HELP IN THE WISCONSIN FIRES.—During the terrible storm of fire that swept away the beautiful village of Peshtego, Wm. Shepherd, with his little boy, took refuge in a swamp a little distance from the village, they were followed by a little spaniel dog. Shortly after, the party were joined by Mr. Burns, who was nearly destitute of clothing. Shepherd, generously took off his coat and gave it to Mr. Burns. As they stood there, he expressed a desire for a hat, when the dog started for the burning village—but attempts to call him back proving unavailing—and in about fifteen minutes he returned with a hat in his mouth, which he laid at Mr. Burns' feet. This is a fact; you can draw your own conclusions.

A WATCHMAN in a mill at Perryville has made friends with a large rat and his numerous family. At the midnight lunch hour the watchmen gives a light rap on the wall, which brings out the rats to share his hospitality, and, after finishing their meal, the pets play around their benefactor in the most sportive, trusting manner.

Children's Department.

GREETING TO THE CHILDREN:

Dear Children,—When we began the New Year with the "Southern Workman" we did not forget the children, and we hope to find a place for them in every number, as they already have a place in our hearts, homes, and good wishes. If we do not give you a fresh plum cake every month, as you deserve, we will do what we can for you by picking out a few plums from Mother Goose's pudding and other nursery *sauces*, as we have been kindly allowed to do; so that the smallest child may welcome our paper, and feel sure that he will find something in it just suited to his needs.

One little four year old girl likes so much "Uncle Charles'" story of "The Milkman's Dog and Horse," that I am sure you will like it too:

The other day I heard a true story of a good horse and a good dog. They belong to a man in the State of Maine who deals in milk. Some of his milk this man gets from a house half a mile off from where he lives himself. Every day just before sunset, he harnesses his horse to a wagon or cart, puts in his cans for the milk, and lays the reins

THE HORSE WHO COULD PUMP.

where they can be got with ease by the driver.

Then he calls his dog; and the dog jumps in and takes the reins in his mouth, while the horse trots on to the house where the milk is to be got. Then a man comes out and fills the cans, and turns the horse round the way he ought to go to get home. The good dog sits holding the reins, while the good horse trots off, and does not stop till he gets home.

They have never yet met with any mishap. Is it not a good dog? and is it not a good horse too? — *The Nursery.*

The Horse who could Pump.

I have heard of a cat who could lift the latch of a door; but I can tell you of a filly who could pump.

What I tell you now is true. A friend of mine had a horse who, when the trough was not full, would take hold of the handle of the pump with his teeth, and move it up and down, till there was as much water as he would like to drink.

Once, on a hot day in June, when he had had his drink, the cows came up, and cried, "Moo," "Moo;" which meant, "O! we wish we had some water!"

Then the good horse went to work, and pumped for them, up and down, up and down; and they all had a good drink, and were glad. — *The Nursery.*

The Farmer and his Sons.

A farmer being on the point of death, and wishing to show his sons the way to success in farming, called them to him, and said "My children, I am now departing from this life, but all that I have to leave you, you will find in the vineyard." The sons, supposing that he referred to some hidden treasure, as soon as the old man was dead, set to work with their spades and ploughs and every implement that was at hand, and turned up the soil over and over again. They found indeed no treasure; but the vines, strengthened and improved by this thorough tillage, yielded a finer vintage than they had ever yielded before, and more than repaid the young husbandmen for all their trouble. So truly is industry in itself a treasure. — *Æsop.*

Schlaraffen Land.

(POOL'S PARADISE.)

Translated from the German for the "Southern Workman."

All lazy people can understand
This tale of the wonderful Schlaraffen Land;
It lies three miles behind Christmas Day;
And if you there would find your way,
You are told that the road that you must take
Leads through the heart of a mountain of cake,
Which is three miles thick, and as good as can be,
You must eat it all, and then you'll see,
That very minute you'll surely stand
Safe in this wonderful Schlaraffen Land.
Though fool and dolt think you'll find waiting there,
At first I think you'll do nothing but stare;
For, if you'll believe what's been told to me,
Every house in that queer country
Is thatched with pancakes; while all the doors
And window-shutters and even the floors
Are made of gingerbread, the very best kind;
And if you'll look still further you'll find
That every house has a neat little hedge
Of crisp brown sausages set on edge.
The brooks all flow with the reddest of wine,
Which runs into your mouth when you're ready to dine;
And instead of cotton on the pine trees grow
What the people there call units of dough.
The willows are laden with nice hot rolls,
To be eaten with milk; but you need no bowls,
For a fountain springs at the root of each tree
Of milk as sweet as milk can be.
When the rolls are done they drop into that,
And on the brink you may eat and chat.
The ponds are full of all sorts of fish,
Cooked and seasoned, and ready for dish;
And the foolish things swim so near to shore
You may catch it as one handful of dozen or more.
Then through the air, believe me, please,
Fly roasted pigeons, and ducks and geese.
You needn't work your dinner to win,
Just open your mouth, and they'll fly straight in.

The pigs are fat, and cooked to perfection,
And they run through the streets prepared for dissection,
Each with a carving-knife stuck in its back,
That whoever wants may cut him a snack.
(But be sure to return the knife to its place,
Or the pig will think it a very hard case.)
Instead of stones there are nuggets of cheese
Lying about among the trees.
The people who live in this wonderful land,
You'll agree with me, are oddly planned;
They grow on trees against the wall,
And when they are ripe, why, then they fall;
Each one drops into a pair of boots
Of just the size and color that suits.
Besides this they have a fountain
Springing just at the foot of the mountain,
Where all may bathe who are ugly and old,
And come out fair, and young, and bold.
Their customs all are most careless and easy,
Such as are suited best to the lazy:
For example—the crew that wildest flies,
Is the one that wins when they shoot for a prize.
And in running a race, the boy who is last,
Comes in ahead, which is singular taste.
These people spend most of their time in sleeping,
Which, to be sure is only in keeping
With all the rest that they do and say;
For they never have their nightgowns through the day,
And are paid a dollar for every hour,
When instead of working they sleep and snore.
Whoso gambles his gold as any,
Is rewarded with that which he lost in play.
And he who refuses his debts to pay,
Gets at the end of a year and a day,
Back from his creditor twice the sum
That he borrowed at first, a pretty plum!
Every time one takes a drink
The cup's a shilling, only think!
And for the very biggest of stories told
The teller receives a crown of gold.
They live, as you see, without rhyme or reason;
And wit and wisdom are never in season;
And he who seeks to be honest and true
Is driven away without more ado;
While a boy, who to labor should put his hand,
May never hope to reach Schlaraffen Land.
Those who are idle and will not learn
Here the likes of honest corn;
And he who is chosen as laziest of all
Is crowned King in this realm of sloth.
All who are rough, and rude, and wild,
In this land are princes styled;
And those who in smiling themselves delight,
Come in under the head of knight;
While those who simply eat, sleep and drink,
Why, they are made into counts, I think.
Now I have told you what you may do,
If you can cast the mountain through.
Whoever wants such a life to lead,
Had better pack up his things with speed,
And hasten away to Schlaraffen Land;
For it is the only land on earth
Where a boy can earn what he isn't worth.

The King and the Ants.

BY JOHN G. WHITTIER.

According to Jewish tradition, King Solomon, who was wise beyond all other men, knew the language of animals, and could talk with the beasts of the field, and the birds of the air. A story is told of him which is in this wise:

One day the King rode out of Jerusalem with a great retinue. A certain hill lay directly in his path, and Solomon heard its little people talking.

"Here comes the great King," he heard one of them say. "His flatterers call him wise, and just, and merciful but he is about to ride over us, and crush us without heeding our sufferings."

And Solomon told the Queen of Sheba, who rode with him, what the ant said.

And the Queen made answer: "He is an insolent creature, O, King! It is better fate than he deserves, to be trodden under our feet!"

But Solomon said: "It is the part of wisdom to learn of the lowest and weakest." And he commanded his train to turn aside and spare the ant-hill.

Then all the courtiers marvelled greatly, and the Queen of Sheba bowed her head and made obeisance to Solomon.

"Now know I the secret of thy wisdom. Thou listenest as patiently to the reproaches of the humble as to the flatteries of the great."

POST OFFICE BULLETIN.

HAMPTON, VA.

BENNON WHITING, Postmaster.

Mails leave Hampton daily except Sunday at 4 o'clock P. M., arrive daily except Sunday at 7.30 A. M. Yorktown mail leaves Hampton Wednesday and Saturday at 5 o'clock A. M.; arrives at Hampton at 8 P. M.

OLD POINT COMFORT, VA.

(*Winter Arrangement*).

E. C. RAINBRIDGE, Postmaster.
W. E. WRIGHT, Assistant Postmaster.

OFFICE HOURS, from 7 o'clock A. M., to 6 P. M. Sunday from 1 to 3 o'clock, A. M.

ARRIVAL AND DEPARTURE OF MAILS.

NORTH.

Baltimore, Washington, Philadelphia, New York, and Boston (including all Northern, Eastern, and Western mails), via Bay Line Steamers, arrive daily except M. at 4 P. M.

New York, per Old Dominion Steamship Co. and Merchants' Banks, arrive (Mondays only), at 6 o'clock A. M.

Washington, D. C., per Lady of the Lake, arrive Tuesday, Thursdays, and Saturdays, at 1 o'clock A. M., closes at 5.30 P. M.

Hampton, arrives daily except Sunday at 8 o'clock P. M., closes at 6.15 A. M. Except Sunday.

SOUTH.

Norfolk, Portsmouth, and Richmond (including all Southern mails), per Bay Line Steamers, (passing at 5.30 A. M. going South, and 8.30 P. M. going (North), arrive daily except Sundays at 8.30 P. M., closes at 3 P. M.

Office Adams Express Company,
Agent and Notary Public.

Set Me Free.

Set me free! Set you free,
That I may my Jesus see;
For my soul longs to embrace
All the glories of His grace,
Promised by His love to me.

Holy Light! Holy Light,
Sun that breaks through darkest night!
How long, O my God, how long
E'er I join the sacred throng,
And behold Thy radiant might?

Songs of praise! Songs of praise
Chanted through eternal days;
Had I wings, now would I rise
Swift above these darkening skies,
Up to Zion's shining rays.

Soon or late! Soon or late
I shall reach the golden gate;
Lord, my God! and shall I fear,
When at length the hour draws near,
And without I stand and wait?

Paradise! Paradise!
Shall we to thy glories rise?
Will the blessing prove no dreaming?
Is the truth beyond the seeming?
Bring us, Lord, to Paradise!

Selections.

Spurgeon.

THE GREAT BAPTIST PREACHER.

Rev. C. H. Spurgeon, the distinguished Baptist preacher of London, is remarkable for the earnestness, the point and power, with which he proclaims the gospel to the thousands who gather in his immense Tabernacle. Instead of wasting his strength in talking about mere general truths, which reach nobody and stir nobody—like those sportsmen whose business is to fire, and not to hit—he aims directly at the hearts and consciences of men, here piercing like a sword, and there smiting like a thunderbolt; striving to rouse men from the lethargy of sin, and so lead them to Christ, and make them living epistles of His gospel.

Some idea of the quaintness of his style, the aptness of his illustrations, and the secret of his success, may be formed from the following selections:

PRECAUTION—*its force and main consideration.*" I had tried to drive certain long brass-headed nails into a wall, but had never succeeded except in turning up their points, and rendering them useless. When a tradesman came who understood his work, I noticed that he filed off all the points of the nails, the very points upon whose sharpness I had relied; and when he had quite blunted them, he drove them in as far as he pleased. With some consciences our fine points in preaching are worse than useless. Our keen distinctions and nice discriminations are thrown away on many; they need to be encountered with sheer force and blunt honesty. The truth must be hammered into them by main strength, and we know from whom to seek the needed power.

CONVERSIONS (*Sudden*)—*not all Genuine.* Fish sometimes leap out of the water with great energy, but it would be foolish to conclude that they have left the liquid element forever; in a moment they are swimming again as if they had never forsaken the stream; indeed, it was but a fly that tempted them aloft, or a sudden freak; the water is still their home, sweet home. When we see long-accustomed sinners making a sudden leap at religion, we may not make too sure that they are converts; perhaps some gain allures them, or sudden excitement stirs them, and if so, they will be back again at their old sins.

TRANSFORMATIONS OF GRACE. A short time ago the manufacturers of lighting-gas were puzzled to know how to dispose of the coal-tar left in the retorts. A more useless, nauseous substance was hardly known to exist. Chemistry came to the rescue, and today not less than thirty-six marketable articles are produced from this black, vile, sticky slime—solvents, oils, salts, colours, flavours. You eat a bit of delicious confectionary, happily unconscious that the exquisite taste which you enjoy so keenly comes from coal-tar; you buy at the druggist's a tiny phial of what is labelled "Otto of Roses," little dreaming that the delicious perfume is wafted, not from the "fields of Araby," but from the foul gas retort.

Christianity is a moral chemistry. Well were it for nations if it held a higher place among their social economies. Tar-saving is all well enough, but soul-saving is better. Grace transforms a villain into an honest man, a harlot into a holy woman, a thief into a saint. Where fetid exhalations of vice alone ascended, prayer and praise are to be found; where moral miasmata had their lair, righteousness and temperance pitch their tent. Every sort of good thing is produced by godliness, and that too in hearts once reeking with all manner of foulness. Should not this stay every persecuting hand, hush every railing tongue, and incite every sanctified spirit to continued and increasing energy?

I LIKE to see a man renewed all over, from head to foot. It is delightful to meet your hearty Christian, who, when he gave his heart to Jesus, meant it, and devoted his whole body, soul, and spirit to the good Lord who had bought him with His blood. Some of you have only got a little finger converted, just enough to wear the ring of profession, and look respectable; but oh! to have hand and foot, lungs, heart, voice, and soul, all saturated with the Spirit's influence, and consecrated to the cause of God! We have a few such men, full of the Holy Ghost, but, alas, we have too many other converts, who are rather tinctured with grace than saturated with it.

WE will not urge all of you to give yourselves up to mission work, but to serve God more and more in connection with your daily calling. I have heard that a woman who has a mission makes a poor wife and a bad mother. This is very possible, and at the same time very lamentable; but the mission I would urge is not of this sort. Dirty rooms, slatternly gowns, and children with unwashed faces are swift witnesses against the sincerity of those who keep other vineyards and neglect their own. I have no faith in that woman who talks of grace and glory abroad, and uses no soap and water at home. Let the buttons be on the shirts, let the children's socks be mended, let the roast mutton be done to a turn, let the house be as neat as a new pin, and the home as happy as a home can be. Serve God, by doing common actions in a heavenly spirit, and then, if your daily calling only leaves you cracks and crevices of time, fill these up with holy service.

Charles Sumner.

THE desire to see distinguished people, and to know about them, is universal, and within proper limits is commendable. Men and women who have become famous for their talents or their virtues, and through whose labors the world has been benefited, are worth seeing and knowing. Our own lives are made purer and better, and our best ambitions are stimulated, by a knowledge of such persons. We like to know how such people look, and if they live so far away that we cannot see them, we enjoy seeing their portraits. In former times, pictures were too costly luxuries for any but rich people to indulge in, and even they could seldom get good likenesses, especially on paper. But now, by the great improvements in photography and engraving, the most correct and lifelike portraits are within the reach of all. We propose to give in each number of the "Southern Workman" a picture of some eminent person, with a brief sketch of his or her character. The portrait of Abraham Lincoln which we gave in our last number, was not a satisfactory likeness, but it was the best we could procure. In this paper we give an excellent picture of the distinguished Massachusetts Senator, Charles Sumner, whose life has been one continued battle for human freedom and human rights. No two men have done more for the cause of universal liberty than Lincoln and Sumner; and though their circumstances of birth and education were as different as were their temperaments and methods, their lives and talents were devoted to the same great end. Mr. Sumner was born in Boston, in 1811. He received a liberal education, and was admitted to the bar in 1834, where he soon attained a larger share of practice than any other lawyer so young in the profession. He early took an open and decided stand against the extension of slavery, and though averse to public life, was induced in 1850, after repeated refusals, to accept the nomination to Congress as this issue, and was chosen United States Senator as successor to Daniel Webster. This honorable position he has held from that to the present time, and during the whole of this long period he has been the firm, aggressive and uncompromising champion of human liberty and equal rights. Entering the Senate-chamber at a time when the slave power was dominant in the councils of the nation, he has lived to see universal freedom proclaimed throughout the republic, and the highest offices of the state thrown open to the honorable ambition of every citizen, without distinction of race, or color, or previous condition.

HON. CHARLES SUMNER.

No man has done more to bring about this result than Senator Sumner, who, when slavery was in the height of its power, and it was dangerous to assail it, did not hesitate to risk life and popularity in the cause to which he had devoted his great talents and abilities. In the Senate, during the dissensions resulting from the secession of the Slave States, he earnestly opposed all concession to or compromise with slavery, and early proposed emancipation as the speediest mode of bringing the war to a close. He is now vigorously pressing his Civil Rights bill, which secures equal privileges to all classes, without distinction of color or race, on railroads, steamboats or other public conveyances, and at hotels and public places of amusement.

Senator Sumner has many enemies, but his eminent abilities, incorruptible integrity, and unselfish devotion to principle, are admitted by his most bitter opponents. He is a statesman of whom the whole country may well be proud. The lines of Whittier, with which the volumes of his speeches and writings now being published are introduced, fitly describe his character:

"Believe me still, as I have ever been,
The steadfast lover of my fellow-men;
My weakness, love of holy liberty;
My crime, the wish that all mankind were free;
Free, not by blood; redeemed, but not by crime;
Each fetter broken, but in God's own time."

Temperance.

IT was a saying of Guthrie: "If you want to keep a dead man, put him in whiskey; if you want to kill a living man, put the whiskey into him."

A MODERN PHILOSOPHER.—Two men will start together in life, the one keeping his head cool with water, the other muddling his with liquor. At the end of ten years, the former will have achieved success, the latter will be dropping into a drunkard's grave; but just before he drops, you will hear him say: "Stonishing what difference 'er is in life. That fellow started same's I did, an' every thing he touched turned to gol', and everything I touched turned to ashes. Stonishing what a difference 'er is in life."

MODERATE DRINKING.—Let no man say, when he thinks of the drunkard, broken in health, and spoiled in intellect, "I can never so fall." *He* once thought as little of falling in earlier years. The promise of his youth was as bright as yours, and even after he began his downward course, he was as unsuspicious as the firmest around him, and would reject, as indignantly, the admonition to beware of intemperance. The danger of the vice lies in its almost imperceptible approach. Few who perish by it, have realized its first excess. Youth does not suspect drunkenness in the sparkling beverage, which quickens all susceptibilities of joy. The invalid does not see it in the cordial which gives new tone to his debilitated organs. The man of thought and genius detects no palsying poison in the draught which seems a spring of inspiration to intellect and imagination. The lover of social pleasure little dreams that the glass which animates conversation, will sink him too low for the intercourse in which he now delights. Intemperance comes with noiseless steps and binds the first cords too light to be felt. This truth of mournful experience should be treasured by all, and should influence the arrangements and habits of social and domestic life in every class of the community.—*Dr. Channing.*

FREEDMAN'S SAVINGS & TRUST Company.

A National Savings Bank.

LAND FOR SALE

On the Peninsula.

I have for sale 1200 acres of land between Wilhamsburg and Fort Monroe, Virginia. This section of the Country is fully and accurately described in the language of Captain John Smith, the founder of the first permanent settlement of the white race on this continent, as "Within is a country that may boast the goodness of the most pleasant, fertile, temperate, for large and pleasant navigable rivers, heaven and earth never agreed better to frame a place for man's habitation, were it fully manured and inhabited by industrious people. There are mountains, hils, plaines, valleyes, rivers, and brookes, all running most pleasantly into a faire bay, compassed but for the mouth with fruitful and delightsome land.—CAPTAIN JOHN SMITH."

WILLIAM S. HOWARD,
Hampton, Va.

FARM FOR SALE.

A Truck Farm of thirty-five acres, with neat and convenient house and out-buildings, one mile from Fort Monroe, and beautifully situated on

HAMPTON ROADS,

At the mouth of Hampton Creek. It has convenient for shipping by steamer which marked daily at the door, owing to it's being a few feet of the shore. It has a fine location for a store, and for oyster trade; and it is a beautiful location for a summer residence or hotel. If the purchaser should not desire so much land, a part of the land, with the house would be sold. Address

D. B. WHITE,
Hampton, Va.

FOR SALE.

A neat little Farm of 18 acres.—8 acres in wood and pasture. Convenient to market. $50 worth of produce sold last year from 2 acres, with single horse cultivation. Price $400. Terms easy. Address Box 23 Hampton, Va.

THE

NORMAL SCHOOL PRESS

BOOK & JOB

PRINTING

ESTABLISHMENT,

HAMPTON, VA.,

Has been fitted up with a complete stock of Type and Machinery suitable for Book, Job, and Newspaper Printing of every description.

Orders are respectfully solicited from Merchants, Mechanics, Agents, and business men generally.

The advantages possessed by this establishment over all others enable us to do first class work at greatly reduced rates.

Persons sending orders from a distance may feel assured that their orders will be promptly attended to.

Send orders to Normal School Press, Hampton, Va.

THE SOUTHERN WORKMAN.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. I. HAMPTON, VA., MARCH, 1872. NO. 3.

Harpers Ferry.

Harpers Ferry is in Jefferson County, at the confluence of the Potomac and Shenandoah rivers, on a point just opposite the gap through which the united waters pass the Blue Ridge on their way to the ocean. The Ridge here is about 1200 feet in height, showing bare, precipitous cliffs on each side the river. The town is principally built on two streets stretching along a narrow shelf, between the base of the bluff and the rivers, meeting at the point at nearly a right angle, and named respectively Potomac and Shenandoah Streets. As the population of the town increased, villages and scattered residences occupied the plateau on the bluff, about 400 feet above the stream. It is distant from Richmond 173 miles, from Washington 57 miles by turnpike, and from Baltimore about 80 miles by rail. Here the Baltimore and Ohio Railroad crosses the Potomac by a magnificent covered bridge 900 feet long, and passes along Potomac Street westward, its track lying 40 feet above the river. The Winchester and Potomac Railroad has its northern terminus in the town.

Before the war, the town, including the village of Bolivar, on the heights, contained a population of about 3000, nine-tenths of whom were whites. At the breaking out of the war, nearly all the inhabitants left their homes, some casting their lot with the Confederacy, and about an equal number with the Federal Government. On the restoration of peace, few returned. Many colored people, however, who came at various times with the army from Southern Virginia, have remained, so that the proportion is materially changed. The population in 1869 was estimated at 1600 whites and 400 blacks.

The magnificent scenery of this locality has been immortalized by Jefferson in a beautiful description said to have been written on a remarkable rock commanding a view of both rivers and their junction. The rock itself is a wonderful freak of nature, and is regarded with veneration by the inhabitants, not only for this, but for a tradition among them, that seated on it, Jefferson wrote his "Notes on Virginia." It is therefore called "Jefferson's Rock." On one side of the town the Maryland Heights, and on the other the Loudoun Heights tower 1200 feet above, like guardian giants defending the entrance to the noble valley of Virginia. Between these mainarts the two rivers unite.

Of this scenery Jefferson said that a sight of it was worth a voyage across the Atlantic; a much more formidable undertaking in his time than now. It is supposed by some that the whole valley of Virginia was at one time a vast sea, and that during some convulsion of nature the imprisoned waters found an outlet at this place.

In 1794, during the administration of Washington, the place was chosen as the site of a national Armory. It is said that the great Father of his Country suggested the location, having visited the place in person. The water power is said to be one of the finest in the world. The land for the Government works was purchased from the heirs of Mr. Harper, a former proprietor, from which the place takes its name. Here was established one of the largest arsenals in the United States, and also a factory of arms of corresponding magnitude. The former, at the breaking out of the rebellion, was said to contain 95,000 stands of arms; and the latter, when in full operation, turned out 25,000 yearly.

Harper's Ferry is a memorable spot in the nation's history. It was here, as is well known, that the brave old Puritan, John Brown, made his rash attempt to excite an insurrection of the slaves, and put a forcible end to slavery. The tragic story is familiar to all our readers. The sanguinary drama, ending with the execution of this remarkable man, whose indomitable courage, self-sacrificing devotion to principle, and deep religious faith, elicited the admiration of his bitterest enemies, created intense excitement all over the land. Brown's design was very generally condemned; but the lofty consecration of his life to what he believed to be his duty, created a profound respect for his memory; and when the secession of the Slave States brought civil war, thousands of men, who condemned his acts, and justified his execution, afterwards marched into battle, and laid down their lives for the Union, shouting his name as their battle cry.

The writer of the "Annals of Harpers Ferry," to whom we are indebted for much of the information contained in this sketch, and who was an eye-witness of the "Brown Raid," says, "It is difficult at this time, to do justice to the character of this remarkable man; but no doubt, the future historians of the country, who will write when the passions that excite us have subsided, will class him with the Scotch Covenanters of the seventeenth century. It has always struck the writer, that John Brown very closely resembled John Balfour of Burley, whose character is so finely portrayed in Scott's 'Old Mortality.' The same strong will and iron nerve, the same fanaticism characterized these two men; and it must be said of both, that while no sane person could approve of their actions, their bitterest enemies cannot deny a tribute of respect to their unflinching courage."

The intense excitement created all over the land by this invasion and its results, culminated in the election of Lincoln, the secession of the Slave States, and the civil war.

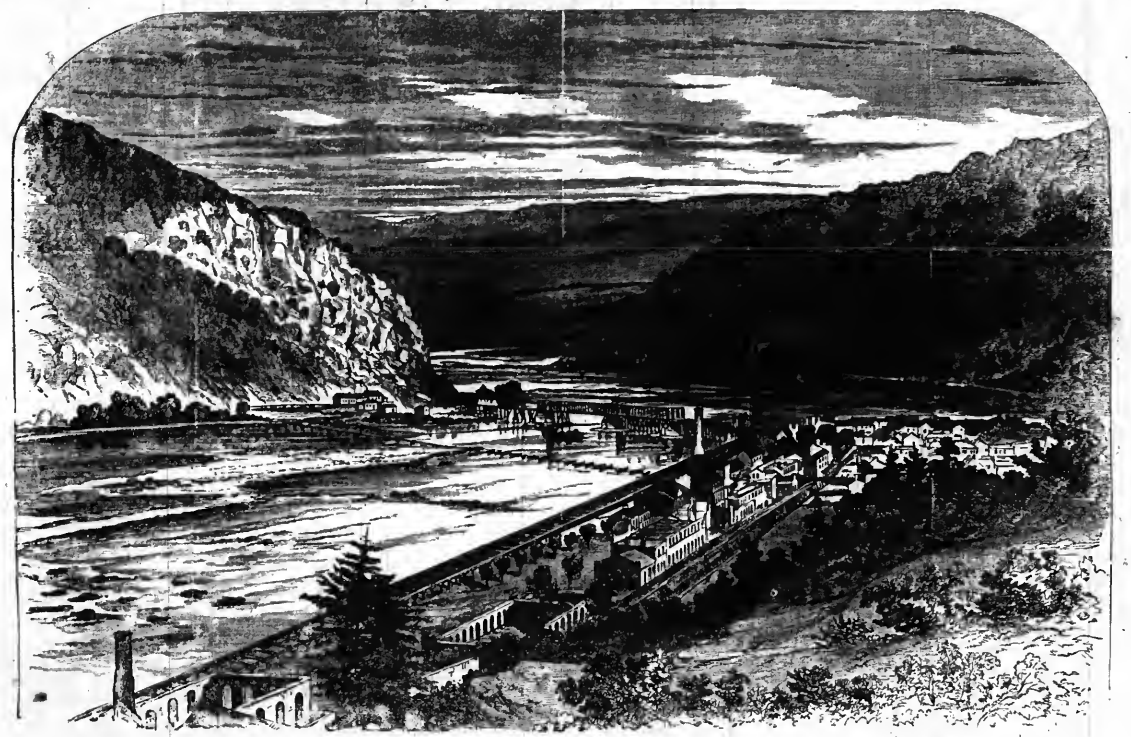
Harpers Ferry, which was the scene of the first act in the terrible drama, was afterwards the theatre of many another part of the fratricidal strife.

DESTRUCTION OF THE ARSENAL.

On the secession of Virginia, April 17th, 1861, the Confederates promptly marched on Harpers Ferry to seize the Arsenal with its supply of arms, of immense value in the approaching struggle. The forces reached Harpers Ferry at midnight of April 18th. The Arsenal was defended by a company of forty-two United States troops, under command of Lieutenant Roger Jones. The Government knew that the post was in danger; but having no means of reinforcing it, had ordered Lieutenant Jones, in the event of an attack in force, to destroy the Arsenal and all other Government property. The peril came sooner than it was expected. But the Commander was watchful, and he received information on the 17th, the very day on which the Ordinance of Secession was passed with closed doors, that preparations were making at Winchester and in the surrounding country, for an attack upon him with an overwhelming force. Jones immediately prepared the work of destruction by piling the arms in heaps, and surrounding them with combustible matter, and by ruining the workshops and laying trains. He was not an hour too soon. About nine o'clock in the evening of the 18th, the Confederate force moved swiftly and silently upon the Ferry; but they were not able to surprise its little garrison. They were challenged by sentry after sentry, until they began to apprehend that more formidable preparations for resistance had been made than they were able to encounter, and concluded to halt, while they sent on a flag of truce, to obtain information from the townspeople. While the force was awaiting the return of the flag, a sudden flash from the Armory, followed by others in quick succession, with heavy explosions, announced the destruction of the valuable war material which it was their object to capture. Within three minutes from the time of firing the trains, the Arsenal and the arms it contained, were destroyed. Early in the year 1867, John Storer, Esq., a wealthy and philanthropic citizen of Sanford, Maine, offered to give ten thousand dollars to found a school, which might eventually become a college, at which youth might be educated without distinction of race or color, provided the friends of the colored people in the Free Baptist denomination, would raise an equal amount. The proposition was accepted, the terms were met, and quite an additional sum of money was raised. Harpers Ferry was selected as the location. A Normal School was opened in October, 1868, and has been continued in successful operation, with a constantly increasing patronage until the present time. In the meantime, a charter, granting full college powers has been obtained from the Legislature of West Virginia. The United States Government has made donations in money and lands to the school; but the Corporation is still in need of funds to maintain a competent Board of Instruction, to aid indigent students, and to prosecute successfully its plans for the future. In addition to the liberal gift of Mr. Storer, he left by his will one thousand dollars to lay the foundation of a library. He also secured for the institution an annual grant of books from the American Tract Society, of Boston; other donations of books have been made. The charge for tuition to students in the regular course is $3 per term, or $9 per year; for room rent $3 per term. Board in good families or at the boarding-house $2 per week. The charges for tuition and room rent, in the case of indigent students may be abated. The school has numbered 160 during the last year, and has sent out 20 teachers. The buildings are well adapted to their purpose and contain over 80 good rooms. A large majority of the students board themselves, though there is a boarding-house connected with the school for such as desire to avail themselves of it. Most of the students pay their own board and buy their books. The principal, Rev. N. C. Brackett writes: "Our location is a remarkably beautiful and healthy one; no malaria ever troubles us. We are overcoming the prejudices of the white people." It is the design that this Institution shall ultimately become a college, in accordance with its charter powers. It will however, for the present, be a Normal School or Academy, as it is believed that in that way, it will best meet the wants of the colored people, for whose benefit it is especially designed.

How striking the fact that the U. S. Arsenal, which supplied the weapons that connect men with barbarism, has given place to "Storer College," which supplies teachers of Christian truth.

Professor Brackett and his teachers hold a splendid position — the gates of Western Virginia; and at Harpers Ferry, where John Brown struck a blow that startled the nation and began the war, they have founded an institution upon the principles of peace, destined, we believe, to redeem thousands from ignorance and degradation; and to become for multitudes a golden gateway to the higher life. Success to "Storer College."



HARPERS FERRY.

STORER COLLEGE.

It is refreshing to turn from these scenes of bloodshed and civil strife, to the peaceful triumph of civilization.

He who sends the storm steers the vessel.

THE Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, *Editorial Manager.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will contain not less than three illustrations, will furnish a variety of choice reading, will tell what is going on in the world, and will aim to please and profit both old and young.

All are invited, the young especially, to ask by letter, questions on any subject upon which they wish information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

To every church which shall send us one hundred new dollar subscriptions for "The Southern Workman," we will send a beautiful communion set, costing twenty-five dollars.

We will give a handsome Bible costing thirteen dollars to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars *to each* for every one hundred new dollar subscriptions; or $18.75 for seventy-five subscriptions; or $15.50 for every fifty subscriptions.

In these cases the papers are to be sent in *one bundle to one address* to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly, give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager,*

Hampton, Va.

The Southern Workman.

HAMPTON, MARCH, 1872.

It is now seventy odd years since John Howard, one of God's own workmen, introduced the idea of reformatory discipline into the prisons of Europe — prisons which until his day had been too foul for description — wherein men and women, crowded into close neighborhood with every form of vice, learned only to make their last days worse than their first. Filled with righteous horror at the sufferings of these unfortunates, who had no ability to plead for themselves, this great-hearted Englishman devoted his life and fortune to their service; and while he struck heavy blows at the injustice which, treated with equal and shameful cruelty, children who had stolen a loaf of bread, and hardened men convicted of murder, he insisted always and chiefly upon the fact that a prison should be a place not so much for punishing criminals as for reforming them. He said, in his plain, fearless way, what the world at large is now finding to be entirely true, that to shut up human beings for two or ten or twenty years at the expense of the commonwealth, and at the end of that time to turn them once more loose upon the world, with no means of support, with their faculties weakened by disuse, their hearts hardened by long months of solitude and unkindness, was poor economy, and poorer Christianity. He saw clearly enough that a great change must come in men's minds before prison discipline could be made in any degree successful, and he knew that he should not live to see it; but he toiled on to the end, and we to-day are beginning to reap the harvest which he sprung from the seed sown by his brave hands. For out of this work began by one man, has grown our whole modern theory of "Reform Schools," which, imperfect as it is, offers good hope for the future.

In the very dawn of the revolution in the treatment of prisoners, it was seen that separation was essential to individual reform. That is, that the constant association of the young offenders, who were comparatively new to crime, with the older prisoners, to whom every form of vice was familiar, was certain to corrupt the former, and greatly lessen their chances of becoming honest citizens. Therefore, while it was wise to keep all prisoners occupied at some handicraft which should prevent idleness, relieve the government in some measure of their support, and enable them at the expiration of their imprisonment to make themselves useful members of society, it was especially best to give a good, practical education to those young enough to receive it, and for that purpose to establish separate and carefully regulated schools in connection with the prisons. Experiments made with such schools, in the early part of the present century, demonstrated their practicability; and in 1848, the first Reform School in America was established at Westborough, Massachusetts. It was for boys only; and its later reports show that during the first ten years of its existence, it sent back into the world, 1,653 youths, of whom four-fifths were, as time has proved, permanently reformed.

Now it is easy to see what the gain to society must be from such an institution as this; and indeed, the whole matter of profit and loss may be put into a nutshell, so simple are the facts from which we have to reason. On the one hand, we can cling to our old barbarous prison system, which punishes only, and therefore sends out more criminals than it takes in; and, on the other, we can at a slightly increased expense connect with our prisons such correctional training, such kindly, practical instruction, as shall give us the above quoted large proportion of offenders redeemed from their sins.

Which of these two plans will be least expensive in the long run? Reform Schools cost money, undoubtedly; but, as a matter of fact, what are the few thousands required to keep them in activity, in comparison to the cost of a murderer, a thief, a gambler, or a drunkard? The history of our prisons shows that their inmates are dismissed only to commit fresh crimes, and to return to fresh punishments, and that this round of offence, conviction, imprisonment and dismissal, goes on in a large majority of cases until no other life is possible. Reform Schools break up this terrible routine in its beginning. They take the offender while he is young enough to be powerfully affected by the influences with which they surround him; and they do in very earnest seek to reform him. That, when they have proper facilities, they succeed in this work, is well established, and results go to show that they pay better interest on the sums invested in them, than does our standing army of magistrates, sheriffs, policemen, etc., and the institutions which it represents. In short, it is cheaper for us to reform our criminals than it is to imprison, or even to hang them, the latter being truly the worst use to which we can put our fellow-creatures.

But whether or not these arguments convince us of the economical value of Reform Schools, there is another side to the subject which we shall do well to keep always before us; for, after all, it is not only, or chiefly of the direct gain to the nation that we should think. We want to look into these prisons of ours, as John Howard looked into them, as Christ looks into them; and to feel always that souls are better worth saving than money. We can save the souls if we will, for we can make sure that there is no police court or prison in the land from which the young criminals are not sent to some suitable school, and we have nobody to blame but ourselves if this great work is not honestly and quickly done. The fallen creatures whom we eye askance, shutting our ears to the voice of their complaint, are not the only sinners; we also sin, in that we have left undone that which we ought to have done; and if at last, we are looking for a better way, we can find it nowhere more surely, than through the open doors of these Reform Schools, which fulfil their promise of success, because they are practical and economical, and best of all, because they are Christ-like.

It is proposed to organize a State Educational Association in North Carolina.

More than half the children in the state have never been in school. The state has a tax for schools, but much of the money remains unused for the want of competent teachers; and much more is wasted on incompetent ones.

The association will be composed of some leading citizens of the state, and the actual workers in the educational field; will have very little machinery, and have no money except for active work. It will aim by mutual assistance among its members to secure the best grading and instruction in the schools. The great work will be to bring good teachers who are wanted for the work among the people, who are starved for the elements of knowledge. We predict for the society a course of great usefulness.

The friends of temperance, especially in large cities, will be interested in the Hostess letter. The plan of cheap Coffee Rooms has there proved a most successful temperance movement on the part of Southern laboring men. Will not some friend of the Southern laboring class establish a Coffee Room in Richmond, or Norfolk, or Petersburg, or Wilmington, or Charleston, and give the experiment a fair trial?

Already the "Southern Workman," although not over two months old, has found its way into over one hundred Northern, and *five hundred* Southern homes, and is taken in eighteen different states. The welcome from all quarters has been most cordial. Those who need it the most, appear to like it best. All interested in the prosperity of paper like this, representing self-help, industrial training, practical education, printed by colored students as a means of saying their way, may feel that its prospects of success, and of large usefulness could hardly be more encouraging.

Our list of contributors is reinforced by Mr. Henry W. Blake, late Assistant Editor of the Williams College "Quarterly"; who has devoted himself to the educational work in North Carolina, in which his father the Rev. H. M. Blake, of Wilmington, has been so zealous and able a pioneer.

For the picture of Harpers Ferry in this number, we are indebted to the Harper Brothers of New York; for the portrait of Professor Agassiz to J. R. Osgood of Boston; and for the "Wrangling Goats," to John L. Shorey, of Boston.

North Carolina.

At present, prosperity smiles on Wilmington, the metropolis of the state. The city has twice the number of houses, and twice the population it had on the close of the war. Improvements are going on everywhere, in the way of new buildings, new sidewalks, extensions of gas pipes and the horse rail-road. The city government, as administered by Hon. Silas N. Martin, Mayor, and W. P. Canaday, Marshal, is in excellent repute. The effective police force, mostly colored, renders Wilmington one of the most orderly towns in the country. The fire department, also largely composed of colored companies, has improved greatly of late.

The high price of naval stores makes business very lively in Wilmington. It is said that men can engage in making turpentine at a profit of one hundred and twenty-five per cent.; that is, for every dollar a man spends in that business, either in money or work, he can receive, on selling the cargo, two dollars and twenty-five cents. Men often bring down the river on a raft, a cargo that is worth $1000. Some of these men cannot write their names, even; and when they get the money, they know no better than to let it lie idle between the boards of their cabins.

The United States is trying to improve the harbor of Wilmington, so that, larger ships can ride at anchor there. Congress has appropriated money for that purpose; and an engineer is constructing works at the mouth of the Cape Fear River, to the hope of making the harbor deeper.

The Wilmington, Charlotte, and Rutherford Railroad is being rapidly extended westward; and when connection shall be established with Tennessee and the West, it is expected Wilmington will ultimately become a large city.

All about the streets of the city you will see hand-bills headed, "Secure you a Home." That is what the rich and poor are doing. Here and there the builders are putting the finishing touches to some elegant house. In another place a large frame is up, and many workmen are busy plying the saw and hammer, in the winter sunshine.

Where one such house is being built, five small ones, with three or four rooms below, a loft above, and a piazza outside, are going up, to become homes for southern workmen. Such homes make any town look cheerful; but also for the old black cabins, that we see being done, what shall we say of these? Why don't the men and women who live in them strike out into the country, where land is cheap, and labor scarce? How much better it would be for them, than to live in such hovels, and stand at the street corners, much of the time, because the city is so full of workmen. A planter near the city hired twenty-five men to go into the country to work, this winter, and not one of them has been willing to start, as yet. Men are offered $20 per month to work on the new railroad.

Some of the white churches in the city are imposing in outward appearance and beautiful within. The Baptist and Presbyterian churches are especially so. There is considerable religious interest in the churches of both races, at present.

An effort is being made to induce Congress to authorize the building of a new edifice for the Custom House and Post Office. Such a building is much needed.

The College of Physicians and Surgeons, is putting up a block opposite the City Hall. A very fine brick school-house is in process of building on Ann Street, for the Tileston Normal School, under the direction of Miss Amy M. Bradley. It will probably be the finest building for school purposes ever seen in North Carolina. In the next number of this paper we intend to publish some account of the various Free School enterprises in the state, and the prominent workers therein; also of the new School Law just passed by the Legislature.

The Colored Churches of Wilmington.

We propose to speak of each of these churches, mentioning but one or two in each number, beginning with the largest. The sacrifices the people have made to build these churches are greatly to their credit.

These churches have most of them been built by the small, weekly contributions of the people; although some of the members have given what in far richer communities would be called large sums. One man gave, for one of them, the profits of his business for an entire year, $800.

St. Steven's, or, as it is commonly called, Red Cross, is the largest church in the state. It has 1,922 members; and is the mother church of New York for the whole country. Its pastor is Rev. J. W. Morris, a gentleman many years ago. His idea was that these four denominations, Methodist, Baptist, Episcopalian and Presbyterian, should each build a church on a corner of the square, and that they should all unite in building the house in the centre. For a long time the ground was used for a grave-yard, but now two churches, a Methodist and Baptist, have been built there, also the school-house, in which some 250 children are taught. The Red Cross church will seat some 1500 persons. It is tastefully finished inside. The motto over the pulpit is, "The Lord of Hosts is with us." The building was begun in 1866, and is not quite finished as yet. The cost is said to be $8000. This church belongs to the African Methodist Episcopal Conference, Bishop A. W Wayman.

The Sunday-school at Red Cross is a most strenuous efforts to obtain a real live, interesting library. The Preachers' Meeting, which is held every Tuesday, P. M., at the Mission House, on Seventh St., is quite an institution. Rev. H. H. Hall is the preacher for the purpose of reading and explaining the Scriptures, and discussing theological questions. Each member is expected to give some account of the sermon he preached last, so that all may have the benefit of his ideas. All the preachers in the region are cordially invited to attend.

We hear of strange doings at Raleigh. The last Legislature does not seem to have been the most harmonious body of men. The majority evidently never expected to return to seats in the Capitol. They were very shrewd in their generation when they reduced the salaries of the Governor and most of the other state officers, supposing that the days of their rule were numbered in North Carolina. But the Republicans must live on whatever salaries they chose to vote them, for the next four years. But the Legislature was not so black as some have painted them, after all.

Correspondence.

We take the liberty of publishing a part of a letter received from the principal of a large colored school in Warrenton, N. C. She represents the Friends' Freedmen's Aid Society, of Philadelphia; and has had long experience and good success in her work, both in Virginia and North Carolina.

"I was so delighted with the paper 'The Southern Workman,' that I went to work at once trying to get the people interested in it, and *enough* interested to subscribe for it. It is just the thing that is needed. This very question has been perplexing me for some time: how in their utter dearth of literary matter, the people are to keep fresh and make available their newfound knowledge. Political food, though good in its place, is not good for 'steady diet,' and but little else is furnished in the local papers.

"Our school is doing well, and embraces 108 smart well-to-do, studious children. Around Warrenton, the colored people are industrious, thrifty, and generally contented; and the relations between them and their old masters more than usually amicable. The country has four colored, to every white inhabitant; and the former being absolutely free in peace, it is easily done; for they have things very much in their own hands. Knowing that many of the white men are more fitted to hold responsible positions than a newly-freed slave could be, they have elected white men to fill nearly all the offices; and being sensible and reasonable in every respect, order and quiet is the result."

The New England Freedman's Aid Society, is represented in Beaufort S. C., by an able corps of teachers. One who has been longest in the field writes as follows:

"The more our boys advance in school, the more dissatisfied they become with the old, poor manner of living. They are eager to get out into the world, hoping to find something better.

"It is difficult to say what would most benefit the freed people. Whisky and (not awaking to the fact that books (excepting the Bible) are intended to convey information, and are for instruction. I think they have regarded them as 'Helps to the Teacher.'

"Subscribing for a paper, and getting it regularly, will do as much to arouse a taste for reading as anything else. I hope your paper will succeed, and receive the hearty support it deserves. The ladies associated with me express an interest in your plan, and a desire to render any assistance in their power."

Boston Letter.

THE HOLLY TREE COFFEE ROOMS

have become an institution here, and the story of their establishment and success is a pleasant one to tell. Notwithstanding temperance leagues and alliances, temperance societies, laws, lectures, sermons, political parties and conventions; intemperance not only continues to exist, but it shows no sign of decay; It still sends its victims to prisons and insane asylums; it still kills men, women and children; it still fills homes with wretched that should be happy; it still wastes money that should produce comfort and prosperity; it still makes filthy and indecent streets and houses that should be clean, and orderly; it still makes miserable, ignorant beggars of children who should be happy, well-dressed and at school. And just because it still does all this, we know that there are many people who are not reached by societies and lectures and sermons and laws; a great many people too, who do not desire to do wrong, but who are weak, and cannot, or what amounte to the same thing, *think* they cannot, resist the light, the warmth, the society, the excitement of the grog-shops; who go in for just one drink, or a bite of something," and do not know when they come out; but only know that home after they find themselves in a gutter, in a police station, or in a wretched room, sick and unfit for work, unfit for anything that a man ought to do or to be. How to help these people, was the question which a Boston lady answered when she established the first Holly Tree Coffee Room. On a public street, in the midst of work-shops and grog-shops, where nights were noisy and policemen were in force, she hired, and had fitted up a good-sized room on the lower floor, large windows and a door half-glass, admitted light and scene; a low partition divided the room into dining-room and kitchen; the tables were clean, the floor clean, the windows were clean, and bright branches of holly were set up in them, and on the broad sills lay illustrated newspapers and a few books. On the walls hung a picture of Charles Dickens, whose charming story had suggested the name "Holly Tree," and a dozen or more couplets printed in large letters; and telling that —

"Hot coffee drinks
Is better than gin."

or

"If you drink hot coffee
You'll save your cash,
If you drink hot whiskey
You 'll go to smash."

and other facts of the same practical kind. The food was good, the prices low, (how it will pay to be honest and by and by), and the room attractive, though without anything costly or stylish. Its novelty, first drew customers, its cheapness, neatness and cleanliness kept them and added to their numbers. Many a young man found himself better and his afternoon work easier after a lunch at the Holly Tree, than after a drink at the bar-room, and it did not cost so much either; so by degrees the people who did not want to be led into temptation, and were glad to follow something that led out of temptation, left the grog-shops altogether; some of these shops were closed for want of custom; the neighborhood became quiet, policemen were sent to other parts of the city; a decided change was made in the midst of the 'flirt; children were better dressed, and instead of slinking out of sight with bottles hid in their rags, and muttered curses in their mouths, they went with a hop, skip and jump, singing the jingling temperance rhymes they had learned from the Holly Tree walls, to buy bread and butter, pies, meat and coffee, with the money that 'father' no longer spent in making a beast of himself. In a little while a second eating house of this kind was established; then a third. Now five are in operation, and a sixth is soon to be opened. These are in different parts of the city, where they are most needed, and are all doing well. One or two of them are for "ladies," and the girls who go there for their meals behave like ladies. These eating-houses are not a charity, making constant demands for money, that they may go on and do good; they are self-supporting, and are owned and worked by those who have charge of them are people of intelligence and character, who are paid fairly for their work, and who believe in their work besides, and feel a pride in the reputation of their "Coffee Rooms." In each of these establishments are the holly and green wreaths at Christmas; in each hang the pictures of Charles Dickens and his good and well-known men; in each are the wise and homely rhymes which make you laugh, and cling to your memory. And that you may see the surprising cheapness of the charges, I send you a bill of fare, from one where I dined with some friends last week, and where I found every thing of the cleanest; prompt and pleasant attendance, and well cooked food. The bread was excellent. Three good, sweet slices with butter are given for five cents; and the three nice, light, sweet doughnuts for the same price, would almost make a luncheon by themselves.

The lady to whom the credit of this admirable work is due, continues her interest in it, and makes sure that in the selection of keepers for these temperance restaurants, the right men and women shall be found.

BILL OF FARE.

Agricultural.

We give our space for agricultural matter, this month, to the following article on Trees, by a resident of Hampton.

We advocate trees; we believe every roadside should be planted with them. Every town should bury a tax for the care of ornamental trees along the streets. Trees, we would almost say, are next to schools in importance. They are beautiful; and whoever loves the beautiful cannot love the bad.

In Stockbridge, Massachusetts, and other Northern towns, they have societies composed of the best citizens, who see that trees are planted by the side walks and taken care of. There are no finer trees than can be found in our native forests; and every Southern town, and every workman's freehold should be adorned with large and graceful maples, or rich evergreens.

KINDS OF PLANTING TREES.

Some of the finest ornamental trees are found in our Southern forests, and may be had for only the labor of digging; and now is a favorable season for obtaining and transplanting both the deciduous and evergreen kinds.

The wild cherry, in good soil, grows sometimes to the height of one hundred feet, and gives a proportionately broad and dense shade. This makes it, with the white ash, a splendid, popular, and the maple, very desirable for planting on extensive grounds.

Among the hardiest and best of ornamental trees are the ailanthus, ash, horse-chestnut, rock-maple, sugar-maple, sycamore, beech, elm, white pine, Norway spruce, hemlock, fir, and, not among the least, the Paulownia imperialis, of Japan, the following description of which is taken from a recently published circular. "Some of the leaves are forty-seven inches in circumference. It shows flower the third year from planting. The flowers are very beautiful, and grow in large clusters, sometimes to the number of one hundred and twenty in one bunch. They are as fragrant as the white lily, and remain in bloom from two to three weeks. For ornamenting yards or cemeteries, nothing can be more attractive than a specimen or two of this noble tree. It is not uncommon for it to make a growth of twenty feet in one season."

To succeed in planting trees, it is necessary to know the peculiar habit of each variety, and the situation in which it thrives best. Those must be chosen which suit the soil and location of the ground to be transmuted. Taste and judgment are also required in the arrangement of the trees, to secure the most picturesque effects, and the greatest comfort for those whose dwellings they shade.

In planting, the holes dug should be at least a foot wider every way than the roots to be planted, and of sufficient depth to set them about two inches deeper than they formerly stood. Except in a great emergency, trees should never be planted when the soil is wet or pasty; a moist and friable soil, neither too wet nor too dry, is indispensable in complete success. Firmly trusting or ramming the soil is of great utility in facilitating the early rooting of the trees.

It is an error to water trees profusely at time of planting. I have known many decided failures from this cause alone. It is better to cover the ground for a few feet with a mulch of straw or other light material; and for reasons which there is no time to discuss now, whatever manure is used with the planting of trees or shrubs of all kinds, *the surface of the soil* is the proper place for it.

J. M. S.

Domestic and Foreign News.

The great snow-blockade on the Pacific Railroad, which has caused such serious interruption to travel, and so much suffering among the passengers, has, at last, been overcome, and the road is declared by the authorities to be open. The first train will again render the road in connection with the Central Pacific Railroad, across the Pacific Railroad, across to the people, than has been given by these obstructions.

The Jubilee Singers, which was so long detained in Utah by the snow blockade, are now in Washington.

Nine nations thought of Illinois, of the U. S. sufficiently to send delegates to the Temperance Convention at Chicago.

Judge Daniel Pierce, of Illinois, of the U. S. Supreme Court, died on the 19th inst., at the residence of his father-in-law, in Bedford, Indiana.

Prof. Agassiz, who has arrived with his scientific party at San Francisco, on his return from Brazil, is to spend a few days in that wide-awake city, and then go East, and builds a steamer to be used in the Amazon.

In June, a great musical Jubilee was held in Boston, to celebrate the restoration of peace between the United States and Great Britain. Over ten thousand singers, and one thousand performers participated in the grand chorus. Now it is proposed to have another musical Festival, to celebrate the International Peace and Arbitration settlement of the question between the United States and the French Empire. The will be a chorus of ten thousand singers, with two thousand performers, and an immense audience is expected to be present. Invitations are sent to the principal cities of Europe, to hold one hundred thousand people in readiness to attend the Festival. The Peace Jubilee is a grand institution. She represents the United States of America, as one of the leading Powers of Europe, in the matter of the settlement of disputes between nations, to be sent to arbitration, instead of the old method of their prosecution by governments, to the bloody arbitrament of war. To N. P. S. Gilman, of Boston, the enterprise is due. He was the first to suggest the Festival, and is the manager of the grandest public enterprise in history.

The Peace Jubilee is a very special business of publication at present. The movement for the Jubilees at the present time. The movement for the Jubilees in honor of Grant, are very much given to in the Republican party in the regular Democratic party, and in the Democratic party in the Republican party, and in the Democratic party in the Republican party. Grant is the favorite candidate everywhere and even he seems to be receiving a large support. But the latter there is a large number of Democrats, and there are even a number of Republicans among the rest, who are opposed to the nomination of Grant. These, are, however, very few, and the chances are that the Republican party will be united. Greeley has a strong party, and the vast majority of the administration party will be on the side of Grant. Greeley is the favorite candidate of the Democratic party, and the Democratic party will be united. It is better to be sure than sorry. If any one doubts what party is free from dissension, let him drive away the reference.

Gerrit Smith is dead. He was a general thanksgiving was held in England on the occasion of the recovery of the Prince of Wales. In London there was a magnificent display, and a grand procession, was a magnificent display, and a grand procession, by which the Queen and Prince, and the Princess of the recovery was announced, and the celebrations of the recovery was announced, and the celebrations of the recovery was announced, and the celebrations

Sunday Services.

First Baptist (white), Rev. George F. Adams, King Street. Services at 11 A. M., and 7.30 P. M.

First Baptist (colored), Rev. Wm. Taylor. Services at 10.30 A. M., 3 and 7 P. M.

Zion Church, Baptist (colored), Rev. Wm. Thornton, Butler School House, Old Point Road. Services at 10. 30 A. M., 3 and 7 P. M.

Second Baptist (colored), Rev. John Smith, Queen Street. Services at 10.30 A. M., 3 and 7 P. M.

St. John's Church, Episcopal (white), Rev. J. J. Norwood, Queen Street. Services at 11 A. M. and 7.30 P. M.

Methodist Episcopal, South (white), Rev. H. C. Cheatham, Queen Street. Services at 11 A. M., and 7.30 P. M.

Little Bethlehem Meth. Episcopal (col'd), Rev. James T. Morris. Services at 11 A. M., and 7 P. M.

Bethesda Chapel, Rev. Richard Tolman, in National Cemetery. Service at 11 A. M., Sunday School at 3 P. M.

St. Mary's, Catholic, Old Point, supplied from Norfolk. Services at 10.30 A. M., and 3.30 P. M.

Centurion, Episcopal, Fortress Monroe, Rev. M. L. Chevers. Services at 11 A. M., and 7 P. M.

Mill Creek Methodist Episcopal, Rev. J. S. Beyer. Services at 11 A. M., and 7 P. M.

Hampton Normal School.

TEACHERS AND STUDENTS' RECORD.

Calvin Johnson, Class '71, who entered the Law Department of the Howard University, was lately the successful competitor in an examination for a clerkship in the Freedmen's Bureau; he will there be able to sustain himself comfortably while studying law.

Andrew Davis, Class '72, is assistant Light House keeper at Old Point Comfort, Va. He cleans the glasses, and takes care of the lamp, besides walking to and from school five miles every day. The Government Light House Inspector, reports that this house is kept in the best order of any in the whole Light House course.

Miss Hattie Green reports that she is expecting to open school in Whiteville, ten miles from where she now is, on the first of March. Of Flemington she writes: "This is a place where there never was a school before, and you can imagine my troubles. After I had been teaching nearly two weeks, there was quite a complaint from some of the parents that their children had been going to school nearly two weeks and could not write their names. I tried to bear it, thinking it was but little to do for Christ. All my scholars began in the Alphabet, and when I closed, they were reading in the First Reader, and spelling in words of three syllables, and a few could write their names."

Henry Clay Payne writing from Big Lick, Roanoke Co., says:

"I have a large school of 100 scholars on my rolls, and taught by myself until the Board got me an assistant from Petersburg. I am using the Baptist Church for the school-room. I have two scholars who want to enter the Normal School next term. My monthly pay is $30.00, my assistant's is $25.00."

Miss Eliza Jackson reports a school of 33 pupils, who come so far that they have to bring their dinner with them; and keep her busy from nine to four o'clock. "My school," she continues "is very pleasant indeed, though some of the scholars give me a great deal of trouble. The free schools close the last of March; then I am going to keep a private school until June if I can get enough scholars. The one objection I have to teaching here is that they allow a term of but five months."

Edward Bowman writes from Kempsville, Va., as follows:

"I am very sorry to tell you that my school was disturbed on the 20th of last month by a low class of rowdies, because I was the only colored teacher in the county.

"They tried to catch me, but could not; they had guns and pistols. They would have been arrested, but their names could not be ascertained by the grand jurors. The way I made my escape was out of the window, and the children followed.

I intend to die at my post the next time, doing my duty. The citizens were all sorry, and tried all they could to help me catch the rascals."

Elliot Tolman, now in a hardware store in Boston, did a cool and courageous thing the other day. A dog in the store became mad, and attacked everybody in the neighborhood; all ran away except Tolman, who bravely seized the dog by the jaws and held him till some one came up and cut the animal's throat.

Teachers generally are requested to write to the Editor of this paper and give items of interest concerning their work.

Graduates of Colver Institute, Richmond, Va.

Nathaniel Baker, for more than a year has been successfully engaged in teaching at Smithfield, Isle of Wight County, Va.

Geo. F. Halloway has had a school for nearly a year at Omega, Halifax County, Va.

Geo. A. Copprew, son of Rev. P. G. Copprew, is teaching at Whitesfork, Va.

A. H. Cumber has a school at Proctor's Creek.

Rev. Whitfield Clark is teaching and preaching at Keysville.

James H. Carey has a good school at Dantonsville.

J. W. Gazadin, of Charleston, S. C., is teaching at Woodville, in the suburbs of Richmond.

W. W. Harris is succeeding as a teacher in Powhatan County.

Rev. J. M. Chavis, preacher in Sumter, S. Carolina.

Rev. J. P. Brockenton is pastor of the Macedonian Baptist Church, Darlington, S. Carolina.

H. P. Thorpe teaches a private school in Richmond.

Thomas Tyler has just begun a school in Gloucester County.

R. W. Rice is teaching somewhere in Texas.

Morris Armstead, when last heard from, was teaching in Tennessee; so also was Willis Franklin.

G. W. Williams, when last heard from, was teaching in Kentucky.

Distinguished Visitors.

The annual meeting of the Board of Managers of the National Asylum for Disabled Volunteers, of which Gen. B. F. Butler is President, took place on Saturday, March 9th. The Board was accompanied by a large party of ladies and gentlemen from Washington; among whom were Gen. Garfield, M. C. from Ohio, who is one of the trustees of this Institute; Hon. Henry Wilson, of Mass.; Gen. Fairchild, of Wisconsin; ex-Gov. Fred. Smythe, of New Hampshire; Hon. J. H. Platt, our own representative in Congress; Major Ben. Perley Poore, the veteran newspaper correspondent of the Boston Journal, and others of note. The party visited the Normal School, which was in session, and appeared much gratified at the opportunity to see the students in their classes, and at their various industries. They seemed especially interested in the Industrial Rooms, where the young women were being taught to make dresses, and to use the sewing-machines; and in the Printing Office, where the students were striking off the outside pages of this number of the "Southern Workman." One of the party took off his coat, and showed by the skill with which he handled the rollers, that he was no novice in the printing office; and that he could print his own "*stuff*" on occasion. After visiting the rooms where the classes were having recitations, the guests were invited into the large assembly-room where the whole school was gathered. Gen. Garfield addressed the school and then introduced Gen. Butler, who organized the first colored schools in this district, during the war, and senator Wilson, both of whom made brief addresses. The students then sang some of their fine choruses, to the evident delight of all the distinguished visitors, after which the school was dismissed. As the students marched out of the room, the Brass Band in the hall played the "Russian Hymn" with fine effect. This is the first appearance of the School Band, and considering that it is but two months since they received their instruments, and that none of the performers, from their young leader to the little drummer, have had any previous experience, their performance was very creditable. The distinguished guests expressed much gratification at their visit, which was an event to be long remembered by both teachers and students.

THE MYSTIC.—This staunch little steamer has returned to us after a month's absence, which she has improved in getting herself a new spring dress, and decorating herself in divers ways by the various *mystic* rites known to her sex. We welcome her back with her accommodating commander, to her daily routine. What is Hampton without the *Mystic*?

The *Mystic* leaves Hampton for Norfolk daily, (Sundays excepted) at 8.30 A. M. Returning, leaves Norfolk at 3.30 P. M., touching at Old Point each way.

NOTE.—We are unavoidably compelled to postpone till our next, the description of Fortress Monroe and the Artillery School at that post, which concludes our article on "Hampton and its surroundings."

THE NEW SINGER FAMILY SEWING MACHINE is the best in the market. It is no experiment to try one of them. Terms easy. Please call and examine them at Mrs. Titlow's, Agent.)

Children's Department.

The Wrangling Goats.

Two goats arrived at the same time on a narrow bridge that led over a deep chasm. They met each other in the middle and found the bridge not wide enough for them to pass. Each called out to the other that she should turn about and give way; but neither would do it. Each threatened and blowed her horns. And as neither would yield, they came at last to heavy blows, and both tumbled over the bridge down into the deep gorge, where they lay with broken limbs.

THE WRANGLING GOATS.

Who Stole the Bird's Nest?

"To whit! to whit! to whee!
Will you listen to me?
Who stole four eggs I laid,
And the nice nest I made?"

"Not I," said the cow, "moo, oo!
Such a thing I'd never do;
I gave you a wisp of hay,
But didn't take your nest away.
Not I," said the cow, "moo, oo!
Such a thing I'd never do."

"To whit! to whit! to whee!
Will you listen to me?
Who stole a nest away
From the plum-tree to-day?"

"Bobolink, bobolink!
Now what can you think?
Who stole four eggs I laid,
And the nice nest I made?"

"Not I," said the dog, "bow, wow!
I wouldn't be so mean, I vow;
I gave hairs the nest to make,
But the nest I didn't take.
Not I," said the dog, "bow, wow!
I wouldn't be so mean, I vow!"

"To whit! to whit! to whee!
Will you listen to me?
Who stole four eggs I laid,
And the nice nest I made?"

"Not I," said the sheep, "oh no!
I wouldn't treat a poor bird so.
I gave wool the nest to line,
But the nest was none of mine.
Baa, baa," said the sheep, "oh no!
I wouldn't treat a poor bird so.

"To whit! to whit! to whee!
Will you listen to me?
Who stole four eggs I laid,
And the nice nest I made?"

"Coo coo!" said the cuckoo,
"Let me speak a word, too.
Who stole that pretty nest
From the little yellow-breast?"

"Caw! caw!" cried the crow,
"I should like to know
What thief took away
A bird's nest to-day?"

"Cluck! cluck!" said the hen;
"Don't ask me again!
Why I haven't a chick
Would do such a trick.

"We all gave her a feather,
And she wove them together.
I'd scorn to intrude
On her or her brood.
Cluck! cluck!" said the hen,
"Don't ask me again!"

"Chir-a whir! Chir-a whir!
We will make a great stir!
Let us find out his name,
And sit cry: For shame!

"I would not rob a bird,"
Said little Mary Green;
"I think I never heard
Of anything so mean."

"'Tis very cruel, too,"
Said little Alice Neal;
"I wonder if he knew
How sad the bird would feel!"

A little boy hung down his head
And hid himself behind the bed;
For *he* stole that pretty nest
From poor little yellow-breast;
And he felt so full of shame,
He did not like to tell his name.

THE SWALLOW AND THE RAVEN.—The Swallow and the Raven contended which was the finer bird. The Raven ended by saying, "Your beauty is but for the summer, but mine will stand many winters."

Durability is better than show.

Anecdote of Commodore Rodgers of the United States Navy.

After a severe winter when the Susquehannah was filled with floating ice, a negro man and woman were seen by the inhabitants of Havre de grace, on separate fragments tending toward the Chesapeake Bay. Their fate seemed inevitable, but Commodore Rodgers, who had then recently married a lady of that place and was resident there, could not see two human beings perish without attempting their rescue. Finding that no reward could tempt any inhabitant of Havre de Grace to follow his direction, and run the risk of executing a plan he had thought of, he determined to go himself. As no boat could live in the river, he took two planks, and alternately walking on one plank, and throwing the other before him over the floating ice he at length reached the negro woman, who was so benumbed with cold that she was perfectly helpless. His difficulties were therefore redoubled, as he was obliged to support and push her before him, and manage the planks at the same time. But his noble efforts, watched with intense interest by all the inhabitants of Havre de Grace, succeeded. Amid their loud acclamations he landed with the woman in safety. His bride, who had witnessed the scene from a balcony, fainted the moment he reached the shore. The negro man carried by the current of the river near the bank, escaped, and came with his wife to thank Commodore Rodgers. They said they were crossing the Susquehannah some miles above Havre de Grace, where the ice was firm, but it suddenly broke up and caused the peril from which they were rescued.

As they were free negroes, they begged him to allow them to prove their gratitude by becoming his slaves; but he told them to go and be happy. He did not save the woman's life to deprive her of her freedom, and wanted no reward but the consciousness of having done a good action.

These facts were related by Commodore Rodgers at the request of a friend, in 1806.

A True Story of a Cat.

On a sultry day in July, a gentleman sits at a window, looking out upon a lawn which has a fine growth of shrubbery. Underneath the bushes at a distance of half a dozen yards, he perceives two cats with their kittens, stretched out for rest in the shade. One of the cats rolls about uneasily, and seems drooping, as if sick. Presently she takes her kitten in her mouth, and bringing it to the other cat, lays it beside her, close to her own kittens, and the news piteously. Now there seems to be general excitement; the other cat mews back, lays her paw upon the newly-arrived kitten and licks it. All the kittens move, and new family. The first cat then goes off staggeringly, to a distance of about ten yards, and lays herself down. After a minute or two, she does not move, nor seem to breathe. The gentleman went to her and found her dead. Then he watches the other cat to see what she will do. He finds her always taking the best care of the adopted kitten, feeding, defending and caressing it as her own, until it arrives at the estate of cat-hood, when kittens are generally turned off to provide for themselves. O yo who sneer at brute instinct, as being only another name for sensuous want, having no process of thought in it,—consider this history of a cat, and ask yourselves if it is indeed so far beneath your vaunted intelligence as to merit from you so mean a contempt.

As the narrator of the above was himself the eye-witness of the facts, I need say nothing as to their authenticity. It is surely a wonderful and a touching story.—*Our Dumb Animals.*

WISDOM is the olive which springs from the heart, blooms on the tongue, and bears fruit in the actions.

The Household.

If we can add to the comfort and happiness of any household by a few hints as to common things, we feel sure that the wives of the southern workmen will receive the friendly word in kindness. It often surprises one to see how even the poorest home can be brightened and made cheerful by a willing spirit and attention to simple cleanliness alone. We lately visited a cabin where such neatness was the first attraction. The young mother, the baby, the bed, floor and tables were all models of care-taking order, which is delightful to see, and we left that home with a feeling of satisfaction, for we felt sure it contained what was better than handsome furniture or fine clothes.

Next to fresh air, pure water is the greatest blessing we enjoy. Water is meant not only for the inside, but for the outside of man. If you look at the skin of your hand or arm through a magnifying glass, you will see that it is full of little holes. It is indeed a network, and the moisture or perspiration that is constantly coming out keeps us free from disease, and carries off a great many impurities. If this network is stopped up by the perspiration drying on the surface, or by the dust and dirt that will collect and lay like a varnish on the skin, then the only way to cleanse the network and make it cool and pure, is to wash it well with water. Remember the skin is a network, not all over with the face and hands, but over the whole body; and to be in vigorous health, you should wash all over once a day. Men who have to do dirty work should have the great refreshment of hot water ready for them when they come home at night. The good wife will not only have the evening meal ready, but a nice supply of hot water.

Miss Nightingale, says "a pint of hot water well applied, with a good rub after, is as good as a great bath just dipped into and no rubbing after." Of course she speaks of places where water is scanty, for it is certain a little hot water will, in cleansing the skin, go much farther than a great deal of cold.

But a good plunge into plenty of cold water, how pleasant it is! How refreshed people feel after it! How the skin will glow!

A dirty skin is a cold skin; wash off the dirt, and then see how warm you will be. An unclean skin makes people low-spirited. I remember an old man who was very cross and gloomy, and not over clean, who fell by accident into the river one morning, and was with difficulty rescued. He was put into a warm bath and scrubbed and rubbed and brought to; and from that time he seemed a new creature. He grew cheerful; he took to bathing himself and began to church.

John Wesley's maxim "Cleanliness is next to godliness," is very true, and is often the forerunner of godliness. There is a great affinity between a clean skin and a clean mind. Water has many other uses not named here.

WANTED.—A situation as Teacher, or Governess in a private family, by a young lady competent to teach English branches, French, Latin, Music and Painting. Address

V. V. WAGNER,
Hampton, Va.

Charity.

BY JAMES MONTGOMERY.

Could I command, with voice or pen,
The tongues of angels and of men,
A tinkling cymbal, sounding brass,
My speech and preaching would surpass;
Vain were such eloquence to me,
Without the grace of charity.

Could I the martyr's flame endure,
Give all my goods to feed the poor—
Had I the faith from Alpine steep
To hurl the mountain to the deep—
What were such zeal, such power to me,
Without the grace of charity.

Could I behold with prescient eye
Things future, as the things gone by—
Could I all earthly knowledge scan,
And mete out heaven with a span—
Poor were the chief of gifts to me
Without the chiefest—charity.

Charity suffers long, is kind—
Charity bears a humble mind—
Rejoices not when ills befall,
But glories in the weal of all;
She hopes, believes, and envies not,
Nor vaunts, nor murmurs o'er her lot.

The tongue of teachers shall be dumb,
Prophets discern not things to come,
Knowledge shall vanish out of thought,
And miracles no more be wrought;
But charity shall never fail—
Her anchor is within the veil.

Selections.

Henry Ward Beecher.

We are happy to introduce here to our readers Rev. Henry Ward Beecher, of Brooklyn, N. Y., who as a writer, lyceum lecturer, platform speaker and pulpit orator, has stood for years, in the front rank. As a preacher, he is said to have the largest uniform congregation in the United States. And when we consider the productions of his pen, so varied and vigorous, so fresh and spicy, so apt in illustrations, glowing in description, and sparkling with humor, we wonder not at the remark of a distinguished professor. "Always read what Henry Ward Beecher writes;—agree with him or not, he has got to be read."

One of the secrets of his success is, that he has the best kind of genius, a "genius for hard work;" being an indefatigable student, without any sympathy for drones. Mark his own words:

"Men seem ashamed of labor, and often you will find men who have made themselves respected by labor, have built up a business and amassed a fortune, who turn to their sons and say: "You shall never do as I did; you shall lead a different life; you shall be spared all this." Oh, these rich men's sons! They aim to lead a life of elegant leisure; and that is a life of emasculated idleness and laziness. Like the polyp that floats useless and nasty upon the sea, all jelly, all flabby, no muscle, no bone—it shuts and opens and opens and shuts, and sucks in and squirts out again, of no earthly account, influence or use. Such are these poor fools. Their parents toiled and grew strong, built up their frames of iron and bone; but denying all this to their sons, they turn them upon the world boneless, muscleless, simple gristle, and soft at that."

Another secret of his success is, that he is so sunshiny, hopeful and happy; endeavoring to win sinners to Christ, by showing religion to be winsome. It is said that a "merry heart," was almost all the medicine his father, Dr. Lyman Beecher, ever took. And this surely is the favorite medicine of the son.

"When people want to make things attractive in farming, they give exhibitions of their products. The women bring their very best butter, moulded into tempting golden lumps; and the men bring the noblest beets, and squashes, and vegetables of every kind, and from the orchards they bring the rarest fruits; and when you go into the room where all these things are displayed, they seem to you attractive and beautiful.

"It seems to me that is the way a Christian church ought to represent the Christian life. You ought to pile up your apples, and pears, and peaches, and flowers, and vegetables, to show what is the positive fruit of religion. But many people in Christian life do as farmers would do who should go to a show, and carry—one, pigweed; another, thistles; another, dock; and another, old hard lumps of clay, and should arrange these worthless things along the sides of the room, and mourn over them. What sort of husbandry would that be? Christians are too apt to represent the dark side of religion in their conversation and meetings."

"Nothing is more disagreeable to me than to hear of a man's ailments. If a person has a sore, I don't want to hear about it. I don't care to be regaled with the state of a man's stomach or liver. I have ills enough of my own. Yet some people will get together and croon and croon, and talk about other's sicknesses, and about corpses, and how many they have laid out, and have a regular graveyard banquet. It is the same with spiritual ailments."

ENERGY.—"Whoever became a man of influence by sitting under the harrow of despondency? What idle man ever benefited the world, his friends or himself? There is nothing like action coupled with cheerfulness. We see it everywhere. Who is he sitting on that empty barrel on the wharf? A man with no energy—a prey to grief. Who is that man with folded arms, standing in the market place? A lazy do-little sort of a vagabond, who hardly earns his bread and butter. Do you wish not to become such a character? Then arouse yourself! away from the arm-chair! up from the gutter! out from the downy bed! Move your arms, kick your feet, and stir about; give your blood a chance to circulate through your veins, and the air of heaven a chance to circulate through your lungs. Seize the first job presented and dispatch it at once, up for your pay, and get another forthwith, you will earn enough to pay for a wheelbarrow or a handcart and then you will begin to live. Who knows what you may become? Energy is half omnipotent. Small beginnings end in large gains. A penny well turned begins a fortune. Resolve then to do something, and you will bless us to your dying day for preaching thus faithful to you."

Another reason why Mr. Beecher has such a magic away over men, is his characteristic warm-hearted sympathy and broad humanity. He believes that in the words of Spurgeon, "Religion is a dish to be served hot," that it is only as he is tenderly affectionate toward the tempted and struggling, that he can most effectually influence them for good. This, with other characteristics, will appear from the following selections:

"Young men, you come here to get good advice. Now hear it. I tell you there is nothing in the world so profitable as lying and stealing—I should not like to drop down now, before I finished this sentence—so profitable in the beginning, but so sure to be bit by God's lightning at the end. You can gain fast, but you will lose fearfully and rapidly.

"When suspicion begins to touch you, the end is near.

"And when that time comes, if the rocks would fall from their everlasting beds and crush you and hide you, it would be unutterable mercy, compared with the burden of shame and contempt that you must bear.

"My heart is toward the young yet. Only when I look in the glass and see how the gray hairs are coming on my head, do I know that I am growing old. By the beating of my heart I should never know it. My heart is toward the young yet. Would that I could warn them so that they would heed; but they hear me, and they will go away and remember naught. They will follow *their* footsteps who are as *sure* to topple and go down to ruin as the sun is to rise and shine."

"HOW THE WORLD JUDGES CHRISTIANS.—There are persons who judge of Christians as a man would judge of apples, who should enter an orchard and go stooping along upon the ground in search of them. He picks up one, a hard, green thing, no bigger than a walnut. He bites it; it is sour and bitter; it puckers up his mouth, and sets his teeth on edge. "Ha!" he says, throwing the untimely fruit away. "I hear them speak of apples as being so delicious—I'm sure I don't think much of this one." He picks up another, which looks yellow. There's a hole in it, but he don't know what's in it, but he bites into it, and finds a worm. "Bah! apples delicious, indeed!" he cries in disgust; and then picks up a third, which is crushed by his touch, for it is rotten. So he condemns apples, because he has looked for them upon the ground instead of on the trees above his head, where they hang ripe and juicy. Just so, men judge of Christians by the rotten ones on the ground."

HIDDEN TREASURES.—In the "green-room," in Dresden, where, for centuries, the Saxon princes have gathered their gems and treasures unsurpassed in the world, are worth millions of dollars, may be seen a silver egg, a present to one of the Saxon queens, which, when you touch a spring, opens and reveals a golden yolk. Within this is hid a chicken, whose wing being pressed, also flies open, disclosing a splendid golden crown studded with jewels. Nor is this all; another secret spring being touched, hidden in the centre is found a magnificent *diamond* ring. So it is with every truth and promise of God's word,—a treasure within a treasure. The more we examine it, the richer it becomes. But how many neglect to touch the springs!

PROF. LOUIS AGASSIZ.

Agassiz.

Did any Southern Workman ever hear of a man whose time was so valuable that he could not afford to waste it in making money? In these money-getting days such men are rare. Professor Louis Agassiz, whose portrait you will find on this page, is one of them. He is one of the *great men* of the age; a man who has received the highest honors from the governments and learned societies of Europe, who was urged by the Emperor Napoleon to accept a most honorable and lucrative position, and whose services any civilized sovereign would rejoice to secure; but who, unmoved by all these brilliant opportunities for wealth and fame, remains a professor at Harvard College, in Massachusetts, United States by the King of Prussia, for the purpose of making himself acquainted with the natural history and geology of this country. Ample means were furnished him for the purpose of his mission, which it was supposed would occupy two years. He was so much pleased with the opportunities offered in this country for the pursuit of his favorite studies, and with the welcome which he received, that he decided to remain here to the end of his days. Having received an honorable discharge from the Prussian Government, he accepted the professorship of zoology and geology in the Lawrence Scientific School of Harvard University, where he has founded a museum of comparative zoology, which is the finest in the world. He has travelled all over the United sustained in his enterprize by the tender feelings of so many affectionate friends. He knows he is *loved* as well as honored; that conviction will put the spirit of youth into his sixty years."

LAND FOR SALE

On the Peninsula.

I have for sale 2000 acres of land between Williamsburg and Fort Monroe, Virginia. This section of the County is fully and accurately described in the diary of Captain John Smith. "Within is a country that may have the prerogative over the most pleasant places known, for large and pleasant navigable rivers, heaven and earth never yielded better to frame a place for man's habitation, were it fully manured and inhabited by industrious people. There are mountains, hils, plaines, valleys, rivers, and brookes, all running most pleasantly into a faire bay, compassed but for the mouth with fruitful and delightsome land.—Captain Smith's Map, 1624."

WILLIAM S. HOWARD,
Hampton, Va.

FARM FOR SALE.

A Truck Farm of thirty five acres, with neat and convenient house and out-buildings, one mile from Fort Monroe, and beautifully situated on

HAMPTON ROADS,

At the mouth of Hampton Creek. It has convenient landing for steamer which makes daily trips, passing within a few feet of the shore. It has a fine location for a store, and for oyster trade; and it is a beautiful location for a summer residence, or hotel. If the purchaser should not desire so much land, a part of the land, with the house would be sold. Address

D. H. WHITE,
Hampton, Va.

FOR SALE.

A neat little Farm of 45 acres.—20 acres in wood and pasture. Convenient to market. $700 worth of produce sold last year from 25 acres, with single horse cultivation. Price $1000. Terms easy. Address Box 33 Hampton, Va.

THE

NORMAL SCHOOL PRESS

BOOK & JOB

PRINTING

There are Gains for all our Losses.

BY RICHARD HENRY STODDARD.

There are gains for all our losses —
There are balms for all our pain;
But when youth, the dream, departs,
It takes something from our hearts,
And it never comes again.

We are stronger, and are better,
Under manhood's sterner reign;
Still we feel that something sweet
Followed youth with flying feet,
And will never come again.

Something beautiful is vanished,
And we sigh for it in vain;
We behold it everywhere,
On the earth, and in the air,
But it never comes again.

Hampton and its Surroundings.

III.

FORT MONROE

is situated on the western shore of Chesapeake Bay, about fifteen miles from where it empties into the Atlantic Ocean, on a narrow strip of land known as Old Point Comfort. It is the most costly, if not the most important fortification in the United States, and before the Rebellion, was considered impregnable. The wonderful improvements in heavy ordnance and armor-plated vessels that were called forth by the necessities of the war, have shown, however, as at Forts Sumpter and Pulaski, that stone walls are no match for iron-clad vessels.

Fort Monroe was first constructed for the protection of Gosport Navy Yard at Portsmouth, and at the beginning of the war had cost the government two and one half millions. Its area embraces about seventy acres, and in the centre it has a magnificent parade-ground, finely shaded with live oaks.

The walls of the fort are built of granite supported by heavy earthworks, and are about thirty-five feet in height. The fort is surrounded by a large canal or moat from seventy-five to one hundred feet wide, into which the tide ebbs and flows, and which is about ten feet deep at high water. On the side next the sea, there is a water battery of forty-two embrasures.

The fort has three entrances for teams, and one for foot passengers. One of the former has a draw-bridge, and the others are easily removed in case of attack. During the war, the fort was garrisoned by the 3d. Penn. heavy Artillery, and the Post was the headquarters for supplying the army of the Potomac, and that in North Carolina. When the Penn. Artillery was mustered out at the close of the war, they were relieved by the 5th. U. S. Artillery. When Gen. Grant was made Secretary of War *ad interim* by President Johnson, he conceived the idea of establishing an artillery school at this place. For the responsible duty of organizing this school, he selected Maj. Gen. W. F. Barry, Col. of the 2d. U. S. Artillery. Gen. Barry is an experienced and accomplished artillery officer. During the early part of the war, he organized the Artillery Brigade of the army of the Potomac, having his camp of instruction near Washington; he was subsequently ordered to duty in the army of the West, as Chief of Artillery on the staff of Gen. W. T. Sherman, under whom he served with distinction till the close of the war. The school was organized and formally opened on the 1st. of April, 1867. It consists of five artillery companies, one battery for each of the five regiments in the service, with a full complement of officers. The staff consists of Gen. W. F. Barry Commanding and two staff officers, who are superintendents of instruction in the practical and theoretical course, besides the Adjutant, Quartermaster, and Commissary of the Post.

The object of the school is to give 1st. and 2d. Lieutenants of the Artillery arm of the service, whether graduates from West Point, or appointed from civil life, a course of instruction of one year's duration, in the different branches of their profession. For this purpose, the Captains of Batteries are constituted Instructors, under the direction of the staff.

The course of instruction at this school is similar to that adopted at West Point, and is very severe. It consists of Military History, Law, Engineering, both ancient and modern, Ordnance and Gunnery, and the higher branches of mathematics.

The hours of recitation are from 9 o'clock, A. M., till 1 o'clock P. M., from September first, till the first of May. During the summer months, they are instructed in practical Artillery, mounting and dismounting heavy ordnance, eclge guns and mortars, practice with field batteries, building platforms for guns, and in the school of the soldier and battalion. At the end of the year, the class is examined, and diplomas awarded according to their respective merits. Such as do not pass a satisfactory examination, are required to remain another year and go through the same course of instruction. There is also a school for instruction of non-commissioned officers and such of the privates as wish to avail themselves of its advantages. The school is now in its fourth year of successful operation.

Among the many objects of interest in and about the Fort, are the Public Library and Reading-room and the Military Museum. The library has been selected with especial care, and contains valuable works on military history and engineering, dating back two hundred years, as well as more recent publications on these subjects; and also a miscellaneous collection of books for general reading. The museum contains specimens of different kinds of arms, both ancient and modern, of gun carriages, shot and shell, gunpowder, etc. It is kept in excellent order, is open to strangers, and is an interesting and instructive place to visit.

The Artesian well, which is now being bored within the Fort walls, is also an object of interest. It has reached the depth of about 1,000 feet without a supply of water being found. The water used at the Fort is caught in cisterns, or condensed from the sea water of the moat; and this well, it is hoped, will furnish a more certain and acceptable supply.

Fort Monroe was the first headquarters of all the military and naval expeditions that were sent during the war, to the Southern States. So completely did its possession control the commerce of Virginia, that it almost superceded the necessity for a blockade along the coast of this state. It was more than once in great peril during the war; and the memorable battle between the Monitor and Merrimac, which inaugurated a new era in the history of naval warfare, took place in sight of its walls.

THE CONTRAST.—UNITED STATES STEAMSHIP BROOKLYN.

The Contrast.

No naval vessel is more distinguished than the United States Steamship *Brooklyn*, whose picture we print on this page. A naval officer has kindly favored us with the main facts in her history. She is what is called a "screw sloop," carries 25 guns, and was built at Brooklyn, N. Y., in 1858. After cruising in the Home Squadron for a year, under Capts. D. G. Farragut and W. S. Walker, she was placed in the U. S. blockading fleet and was in active service during the entire war. In 1862, she assisted in the captnre of New Orleans. Captain T. T. Craven was her commander then, and she lost nine killed and twenty-six wounded, besides being struck eighteen times by round-shot. The next year she cruised along the Texas coast, under Commodore Bell. At the captnre of Mobile, 1864, under Capt. James Alden, she was struck thirty-one times by shot and had eleven men killed and forty-three wounded. Many more of her sailors would have been killed at this time, had they been placed on the lower deck instead of in the rigging. Near the end of the war, in January, 1865, the *Brooklyn* was present at the fall of Fort Fisher. Soon after, she was attached to the South American Squadron, under Rear Admiral Godon. This fine old ship still plows the waves in European waters. Capt. Bryson is her first officer.

On the fourth page of this paper is a picture of a vessel very unlike the *Brooklyn*. It is called the *Morning Star*. What sort of a region is she sailing in, and who are those strange creatures we see drawing her towards the shore? The land is an island far away in the waters of the South Pacific, and the people are the natives of that region. That ship was built by Sunday-school children in this country to carry missionaries to those Micronesian islands that the people there might hear the gospel. The children built the vessel by saving their ten cent pieces and putting them into the contribution box. She set sail from Boston, December 1st., 1856, and for nine years she was a messenger of glad tidings to the heathen. Many hearts were made happy by the first *Morning Star*. When she became unseaworthy, the children built a new vessel of the same name. That, too, has passed away, and now a third *Morning Star* is sailing on the deep.

The world will need the stanch war-ship for many a year to come; but God speed the time when only the vessels of peace shall be seen, and the nations shall make war no more.

THE last Legislature of North Carolina resolved to try an experiment in government, under a system called Cumulative Voting. Hereafter the city elections in Wilmington will be carried on as follows: Suppose ten Aldermen are to be elected. Of course each party will nominate ten men. Under the new law every voter can vote for ten men, or, if he desires, he can vote for one man ten times. If he has two friends whom he wishes to be elected, he may vote for each five times, and so on, according to the same principle. The opponents of this law claim it was passed for the purpose of confusing ignorant voters and gaining an undue advantage over them. The friends of the measure say it is intended to give the heavy tax-payers of the city a fair representation in the municipal government. A recent writer in the New York Independent declares that Cumulative Voting is contrary to the principles of Republican Government. We shall watch the experiment in Wilmington with interest.

THE London police force consists of 26 superintendents, 257 inspectors, 955 sergeants, and 7,922 constables. The most inflexible military discipline is maintained, the city is carefully districted, and telegraph wires, running underground, connect each district with headquarters.

THE coal beds of Missouri are said to cover an area of 2,700 square miles, mostly in the northwest.

Two women in Wisconsin have earned $2,600 the past season by keeping bees.

A man's pride shall bring him low.

THE SOUTHERN WORKMAN.

THE
Southern Workman,
ISSUED MONTHLY.
S. C. ARMSTRONG, *Editorial Manager.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will contain not less than three illustrations, will furnish a variety of choice reading, will tell what is going on in the world, and will aim to please and profit both old and young.

All are invited, the young especially, to ask by letter, questions on any subject upon which they wish information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

To every church which shall send us one hundred one dollar subscriptions for "The Southern Workman," we will send a beautiful communion set costing twenty-five dollars.

We will give a handsome Bible costing fifteen dollars to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars *in cash* for every one hundred one dollar subscriptions; or $16.75 for twenty-five subscriptions; or $12.50 for every 25 subscriptions.

In these cases the papers are to be sent in *one bundle to one address* to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address
J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, APRIL, 1872.

☞ *Hereafter we cannot furnish the January number of this paper to new subscribers, as it is out of print. Agents and others having spare copies of the first number will confer a favor by sending them to us. We shall be glad to pay the postage on them. New subscribers desiring the other back numbers will please mention the fact, otherwise their subscriptions will date from the time when they are received.*

A keen the benevolent institutions for elevating the Southern workman and giving him his "rights," the Freedman's Savings Bank deserverdly holds a high rank.

This enterprise was incorporated under the name of the Freedman's Savings and Trust Company, by an act of Congress, which was signed by Abrahom Lincoln, April 3d, 1865. The act provided fifty trustees, from various sections of the country, who were known for their financial ability and as the life-long friends of the colored man. It also directed the institution to receive on deposit, any sum of money offered by persons who had been slaves, or their descendents, and to invest such money in the stocks, bonds, Treasury notes, or other securities of the United States. Congress has since amended the charter, allowing the trustees to invest "to the extent of one-half in bonds, or such securities by mortage on real-estate in double the value of the loan." The trustees and other officers are not allowed to borrow or in any way use the funds, except to pay necessary expenses and to invest according to the charter.

The corporation commenced business as a bank in 1865, having their principal office in New York City, which was soon after transferred to Washington, D. C., where it has since remained. The principal office and the Washington Branch now occupy the new brown stone building, erected by the trustees last year, on Pennsylvania Avenue, opposite the United States Treasury, which is very fitly represented in the picture on this page. The building is five stories high, with a mansard roof, and, with the lot, cost $190,000. There are few banking houses in the country equal to it in appearance, or in conveniences for transacting business. At all the branches, now thirty-four in number, the company occupy commodious buildings many of which are owned by the corporation.

The statistics of the bank show a steady increase of business, and a growing popularity among the class for whose benefit it was intended. The published reports, covering a period of seven years, show

Total deposits to March 1, 1872	$61,396,402 87
Total drafts to March 1, 1872	57,578,766 60
Leaving due depositors now	$3,817,636 27

To pay this large amount, the bank had in stocks, bonds, mortgages, buildings and other available assets, on that day, $3,986,508.22, leaving a surplus of $111,768.25 beyond all its liabilities.

Not a dollar of any depositor's money has been *lost* since the bank opened; all possible safeguards have been applied by Congress, until the institution is now as safe as the government can make it. Interest at six per cent. is regularly paid on all accounts of five dollars and upwards, the whole amount of interest paid thus far, reaching the enormous sum of $302,379.82.

The system on which this bank is organized is purely democratic, seeking the exclusive benefit of the depositors, who are the only stockholders. There is no limit to the capacity of the institution, and apparently none to the demand for its work. Its branches are reaching all the large cities of the South, spreading like a net-work all over the land, and calls are daily being received to open new branches.

The strength and ability of the school, the church, and the newspaper, the well-conducted savings bank has ever been the poor man's friend in need, and from some acquaintance with its officers and work, we can assure our readers that among them all, none of the banks so fully meet the wants of the Southern workman and his family, or are more safely and wisely managed than the Freedman's Savings Banks.

To what extent the business of this bank will continue to increase, no one can tell. Something may be predicted of the future by scanning the history of the past. None who have watched its progress can doubt that the bank, if it continues to be prudently managed, is sure to become a powerful and gigantic corporation, possibly the greatest of the kind in the country.

The other day a crowd of colored workmen were gazing with admiration upon several copies of this paper, which had been spread out upon an unfinished boiler for their inspection. A white man, thinking to joke them, remarked, "It is no use to show the paper to them, they can't read." His remark was resented as an insult. The time has passed in this country when it is safe to presume that a person cannot read because he belongs to a particular class or race. While going about among the workmen of a certain Southern city week after week, and talking with scores of them we have met with very few, perhaps a dozen, who could not read at all. Where was the man who dared to predict such a state of things ten years ago?

We trust our many friends who have sent us articles for publication will none of them take offence, if they do not see their productions in print. We aim to publish such articles as will be of interest to the whole people, and therefore are compelled to omit much that is merely of local importance. We are always pleased to receive letters from all our subscribers, and we print as much from them as our space will allow.

Once more we are under obligations to leading publishers for fine pictures in this paper. Harper & Brothers, New York, furnish the picture of the *Brooklyn*, on the first page; and we have, John L. Shorey, of Boston, to thank for the cuts of *The Flying-fish* and *The Morning-star*. We feel that all our readers will fully appreciate the kindness of these gentlemen in providing us with the means of making brighter many Southern homes.

Virginia.

FINANCES OF THE FREEDMEN—THEIR BANK AT NORFOLK—"CALL OAKS FROM LITTLE ACORNS," ETC.

My dear Mr. Editor,—I think all your hundreds or thousands of readers will be interested in what can be said about the financial affairs of the lately emancipated, and especially concerning this branch of their Savings Bank.

In December, 1864, a bank was opened for the colored people of Norfolk, under the auspices of Gen. B. F. Butler, with Maj. George J. Carney, President, and Charles Spencer, now of the Richmond Branch, Cashier.

The business of the bank was practically confined to the soldiers and their families, who deposited their bounties, pay, etc., until the deposits reached, within six months, about $8,000. Meanwhile, the Freedman's Savings and Trust Company had been incorporated, and in June, 1865, through the efforts of their excellent president, Rev. J. W. Alvord, a branch was organized in this city, to which the funds and assets of Gen. Butler's Savings Bank was assigned as a nucleus for the new concern.

The success and growth of Norfolk Branch have been wonderful and beyond our most sanguine hopes, as is imperfectly shown by the following figures from our reports:

Year.	Deposits.	Drafts.	Due Depositors.
1866	$ 62,234 61	$ 13,917 00	$ 8,696 61
1867	126,491 30	87,397 13	39,190 78
1868	310,597 32	244,291 70	65,171 40
1869	464,989 72	377,847 47	87,142 25
1870	648,538 53	548,903 83	99,634 70
1871	808,980 55	700,806 53	108,174 02

Due depositors, April, 1st 1872, $124,447.61.

The deposits of the colored people have, during the seven years, averaged $135,434.58, each year, and the average of deposits increases each year, which shows the bank to be growing in the confidence of the people and securing more and more their patronage. Norfolk Branch has paid to its patrons $14,806.31 in interest money. This is probably the best argument to establish the utility of the institution among the class it is designed to help. Interest is regular and sure, and the principal and interest, be the amount great or small, is always repaid on *demand*.

We have now the names of over 4,200 depositors spread upon our ledgers. Among these are nearly 300 societies, and institutions, some of which are christened with names more comical than significant; for example, we have money belonging to the "Children of the Heavenly King," "Humble Sons of God," "Union Stars," "Wandering Pilgrims," "Oyster Association," "Wrestling Sons and Daughters of Jacob," and so on through the list.

Our counter is an excellent stand-point for observing human nature. During the year we have to deal with every variety of character,—including some men of no character,—from the plain men, women, and children of every-day life, to ministers, doctors, lawyers, bankers, legislators, lobbyists, thieves, and beggars. To satisfy all of them requires an abundance of patience, charity, and the like graces.

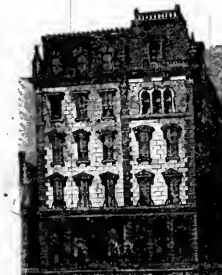
A large portion of the money repaid to depositors has been for purchase of homes. Hundreds of little farms, or snug city lots, have been paid for by a few years' savings of the prudent men and women who were wise enough to secure the benefits of this great National Savings Bank. One hard-working washer-woman in this city has from her own earnings over the tub and ironing-board, during the past three years, deposited with us nearly $600, with which she has paid for a city lot, and built thereon a good, comfortable house. A boot-black boy has saved over seventy dollars.

One man brought us an old box of 1,100 rusty, silver dollars, which has been many years buried in the earth; he thinks our bank pays better interest than the sandbank. These are fair examples of thousands of incidents which might be given, showing how the people appreciate the bank.

O that all the people who are wasting their money in tobacco, lottery and policy tickets, and the *accursed drink*—money which if saved would make happy homes for their old age—could be brought to see the "policy" of a good, growing bank account. That *policy* will win every time. But we are after them with the press, the school, and the pulpit, and shall reach them all soon. We depend on you, Mr. Editor, for *strong help* with your excellent "Workman," and we know we shall not depend in vain.

Yours very truly,
H. C. Percy, *Cashier.*

Freedman's Bank,
Norfolk, Va., *April* 1, 1872.



Freedman's Savings Bank, Washington, D. C.

North Carolina.

A private letter from the western part of the state contains many interesting facts. The writer says:

"The people here are so poor that they cannot help themselves. Shoemaking is the principal employment aside from farming, but there are more shoemakers than people able to buy shoes, and some cannot even get leather to make shoes for their children. Quite a number own one or more acres of land; but by their way of managing they get but little in return for their labor. All the pigs, and the few cows they own, are allowed to rove at large, so they get no manure and but little milk from the cows, and the pigs, when killed, are worth little or nothing. Your paper, in order to be useful in this part of the state, should urge the farmers to house their animals, and enrich their land.

"The freedmen here have been oppressed by the white people, and have not had the assistance, advice, and encouragement they needed. But, of late, they have received help and teachers from the North, and it seems to me they should be a little more advanced in civilization than we find them. We are told that most of the whites in this place are in sympathy with the Ku-Klux. Many outrages have been committed. A company of United States troops is here at present. I think it a pity that some of the soldiers sent South are not such men as command respect.

"Our school is growing thinner every day by reason of the scholars leaving to work on the plantations. We began school with twenty, and at one time there were one hundred and twenty names on the roll. The people have not seemed to take the interest in our work that we expected."

We publish, by request, a notice of the annual examination of the colored public schools of Wilmington. It was written by Hon. S. N. Martin, mayor of the city, for the Post:

"On Friday, March 29th, we had the pleasure to attend the examination of the colored schools, under the charge of Rev. H. B. Blake. There were present a number of prominent citizens. The exercises were conducted by teachers, each class taking its turn, as upon ordinary days. We cannot express in words our admiration of the system and the marked improvement of the children, who a few years ago, clamoring for knowledge, filled these same rooms, almost entirely ignorant of the alphabet. Now, these children may be compared favorably with any schools, white or colored, anywhere. We were amazed at the correctness of the answers and the promptness with which they were given. Any boy or girl who leaves this school, after two or three years, must possess more knowledge than many of the old gentlemen who graduated in ten years.

Altogether, the examination places beyond doubt the capacity of the colored children to learn. How any one, after an impartial examination into the matter, can doubt it, we cannot understand.

A few remarks were made by the friends of the school after the close of the exercises, and everybody went to their homes convinced that the prosperity of our State and city demands a most extended free school system.

South Carolina.

The Plymouth Congregational Church of Charleston dedicated their new chapel on Pitt street, Sabbath, March 10th. It is a beautiful little building, of wood, sixty-eight by thirty-six feet, with a Gothic roof and entrance. The interior is plainly but handsomely furnished.

In a recess at the farther end of the building are the platform and pulpit, while the choir occupy a position to the right of the same. A gallery at the opposite end of the room accomodates the children of the Sunday-school, over which are thrown a school law passed by the Legislature in 1870, which have proved, both for white and colored people a great success thus far. The white and colored schools are, by state law left separate, and this plan is so far as I know, entirely satisfactory to both white and colored. The colored people have a magnificent school building erected by the Bureau, under the direction of Capt. Risley, of U. S. A., formerly stationed at Hampton as a Bureau officer; and in that particular have for the present an advantage over the whites. But as the advantages of a free school system become more widely appreciated, money will come to erect convenient, and even elegant school buildings. The population of Brunswick is now not over 2,500, and the school attendance of white and colored is about 425. The white attendance is something larger than the colored, but the interest in the schools and the average attendance is increasing. Brunswick was first settled by General Oglethorpe, the founder of the colony of Georgia; was laid out as a city by him, and by him and his colony abandoned for Savannah. Since its abandonment by General Oglethorpe it has had three resurrections, and has been as many times abandoned to cotton-planting. We hope within the last few years taken a start forward which gives better promise of continuous growth than any of the previous spasmodic efforts at resuscitation. Some day it must and will be built here. An outlet for the through trade to the Pacific must be had ere long, and Brunswick has the advantage: 1st. that it is many miles nearer the sea-coast from New Orleans than any other accessible harbor. 2d. That it has greater depth of water than any harbor south of Fort Monroe, except Port Royal, and has the further advantage of being completely land-locked. 3d. The city is on a peninsula, has no fresh water streams within twelve miles, and is unusually healthy. We hope to build a city which shall rival if not excel Savannah and Charleston, and among other things we hope to finally establish a free school system which all citizens of our young city may look upon with just pride, and point to as one of the best evidences of our success.

Yours truly,
C. P. G.

Brunswick, Ga., *March* 7, 1872.

New Orleans.

We publish, by permission, a part of a letter received by a Northern gentleman from an intelligent mechanic who went South to establish himself. It will be read with interest as a frank free expression of opinion by an honest laboring man writing to an intimate friend. It is dated New Orleans, March 12, 1872:

"It may not be uninteresting to you to know how I view the state of affairs here; how I like the city and its people. I do not meddle in any way with their politics, but attend to my own affairs, and look on; this is I think but right for any one who does not intend to reside here. I have met and talked with a large number of men, Southern born and bred, and have received from them the most candid welcome and kindness. They know the part of the country I came from (Boston, Mass.), they have always answered questions with candor; they say, could a vote be taken to establish slavery not one in five would vote for it; they say the system is dead, and they are glad of it; but they feel it keenly in being made poor; they yet indulge le the hope of some day being partially paid for their slaves. They submit as soon as the negro has had time to realize his position, he will be a better man and a greater producer by being free, and the South will become much richer in consequence of his freedom. That is what they tell me, and that is what I have observed and what I think. As a class, the colored people are very happy and industrious. They have already learned that they have their own destiny to work out, and considering the time and opportunities, I think they are making good headway. There appears to be no trouble or feeling existing between the blacks and whites. I never have heard a word of complaint from either side. The whites treat them with respect, and the blacks do the same. Of course, there is a class of low-bred whites who will insult any one either white or black; they are the ones that cause all the trouble. Then the negroes are very jealous of any one encroaching on their rights, and perhaps in imagining insults when none are intended. All this must be expected, and the better class do all in their power to avoid such affairs. Upon the whole there is but little to be seen in the races. The colored people have the privilege of the horse-cars, steamboats, and any conveyance the whites have. I think this prejudice will soon be against them the same as I have seen in New York or Boston. I never saw a person leave a seat in a horse-car here because a negro came and took a seat beside him. I have seen that done both in New York and Boston.

"The state of affairs here is very encouraging, and the remedy for all existing evils is time.

"There is a political war going on here; this is between administration republicans and opposition republicans; there have been several fights between the two factions, and more are expected; a feeling of uneasiness prevails.

"The city of New Orleans is a very lively place: the streets in the business portion are quite clean, but the by-streets and places are fearfully dirty; for their own protection and safety they ought to be kept very clean."

Hampton Normal School.

This institution is under obligations to several of its friends for recent favors. Messrs. G. & C. Merriam, of Springfield, Mass., the firm who have remembered so many institutions and families in the South and West, will please accept our thanks for one dozen Webster's Dictionaries, six Unabridged and six National, of the latest edition. William J. Canby, Esq., of Philadelphia, has generously sent us a valuable case of books, from which to make selections for our Library.

Smith, Ainsworth, & Co., New York, and A. S. Barnes, New York, have favored us with liberal donations of school books.

Recent letters from Mrs. Eunice C. Dixon, who is now in London, announce that she is engaged in giving readings from leading American poets, in that city, for the benefit of this institution and her former pupils, who are much in need of it.

Several of our teachers attended a teachers's Institute for Elizabeth City county, held in the white male school house in Hampton, March 15. From what we can learn this was the first meeting of this kind ever held in Virginia. Geo. M. Peek, Esq., County Superintendent of schools presided. Resolutions were adopted and ordered, encouraging the present school system of the State, and inviting any citizen eot favoring the same to attend the Institute and state their objections. Remarks were made by Mr. Peek, Mr. Giddings, Rev. G. T. Adams, the Principal of the Normal School, and others. It is proposed to hold a county Institute every three months. We trust this is but the initial step in a movement that will result in much benefit to the county and state.

The Virginia Legislature, after debating the matter through two sessions, has finally passed the bill for the apportionment of the Agricultural College Land Scrips, of which the state's amount is 3000,000 acres. One third of this is set apart for the use of this institution, under the charge of a board of seven Curators including the Presidents of the State boards of Education and Agriculture.

One of our students earned fourteen dollars in the printing-office last month.

Agricultural.

ON THE SELECTION AND MANAGEMENT OF PLOWS.

There is no such thing as a universal plow because the objects of the farmer are so various. At one time he seeks merely to bury the sod and weeds, at another, pulverization is the chief end. It is occasionally necessary to turn the furrows half over to expose the greatest possible surface to the weather. Now are required deep-tilling plows which will follow a common plow and raise the dirt twice as high as usual so as to throw it over upon the inverted sod. Then subsoilers are required to loosen the lower layers without turning or raising it. In some cases reversible plows are wanted to throw furrows all in one direction. Each of these different ends has its appropriate pattern best adapted to its attainment. But on small farms where the work to be done is principally of the same character, it will be most profitable for the farmer not to own all these patterns, but to study carefully the principles of excellence which apply to all plows alike, and to seek to understand the great variety of effects which may be reached by different adjustments of the same implement.

In choosing a plow, the principal points are the pulverizing power, the ease to the team, the strength at the weakest point, the workmanship, and lastly, the price.

1st. The pulverizing power depends upon the shape of the mould-board, which may be either so gradually sloped that the earth will slide off in a long curl, or so that it may be sharply curved at the upper part so as to catch the hand of earth as it passes and crush and crumble it to powder. This breaking up makes the plow somewhat harder to draw.

2d. Ease to the team depends principally upon the shape of the point and cutting edge. By careful measurements of the forces, it is proved that the strength of the team is mainly spent in cutting the ground, just as in using a spade the greatest power is used in forcing it through, and not in the lifting and turning of the soil. The point and share should therefore be sloping and sharp.

3d. The weak spot in an ordinarily well made plow is in the beam at its junction with the share.

Having secured a good plow, its adjustment is next to be considered. It should be so arranged that the least possible force is required to draw it. To this end these three points should be in a straight line, namely, the forward end of the trace-chain, the clevis, and third, that part of the share which is in the centre of resistance. The latter point is higher when the furrows is deep and lower when it is shallow.

We can place these points in a line in two ways, often not properly adjusted, either by altering the length of the trace-chains, which varies the height of the forward end of the traces, or by changing the clevis, which means raising or lowering the point of attachment between the harness.

Whether a plow shall lay flat furrows or shall turn them only half over, depends partly on the width of the furrow, and partly on the adjustment of the coulter or knife which runs in front of the plow. If this knife is perpendicular, the sod is so cut that the first furrow holds up the second and prevents it from turning completely over. But if the coulter is so placed as to run under the sod, the first will be cut so as to offer no supporting corner to the second furrow, and the result is a flat style of plowing which completely buries the sod.

Besides being easy to draw, and turning the required kind of furrow, the plow should run steadily, and, in ground free from stones or roots, should scarcely require to be held. If a plow inclines to fall over to either side, or run upon its point, it is either badly shaped or badly adjusted. In the discovery of defects and in the nice and perfect adjustment of every part there is as much necessity for skill and intelligence as in inventing and manufacturing the implement.

Plows owe much of their present excellence to the genius of Thomas Jefferson, and the efforts of Ex-Governor Holbrook, of Vermont. For an admirable treatise on the subject, we refer our readers to a book written by J. J. Thomas, entitled "Farm Implements and Farm Machinery."

F. R.

THE SOUTHERN WORKMAN.

Domestic and Foreign News.

POLITICAL matters absorb the attention of the people more and more as the season advances. State elections have occurred in New Hampshire, Connecticut, and Rhode Island since our last issue. All these states want Republican, and, if we may believe the friends of Gen. Grant, all three are in favor of his re-election. But there are many politicians scattered over the country, who desire the election of some one else, and they propose to hold a convention at Cincinnati, on the 1st of May, to talk over Civil Service Reform, and Free Trade, and they will probably nominate some candidate for President. The Democrats are anxiously waiting to see who that candidate will be, then they will have their convention, and perhaps they will choose the same man that the Cincinnati people do. The Regular Republican Convention will meet at Philadelphia in June, and nominate Grant for another term, unless some unlooked for change occurs in the situation. Meanwhile local political canvassing is very active, especially in the South. Men are greedy after office, and much excitement prevails.

AFFAIRS at Washington do not at present attract the especial attention of the public. The French Arms Sale question is still under investigation by the committee; but few new facts however are being elicited. It was hoped, at one time, that Congress would make some advance in legislating upon the Tariff, and that tea and coffee would be placed on the free list; but nothing was accomplished in that direction. Something has been done which looks towards the building up of the shipping interest of the country, and the Franking Privilege has once more been discussed and then laid aside. The President has signed an act, granting to all soldiers of the U. S. Army, during the late war, 160 acres of public land, provided they will settle upon it, and improve the same. The House has passed a Supplementary Civil Rights Bill, similar to the one drawn by Mr. Sumner, granting equal privileges to travelers, without distinction of race. Secretary of the Navy, Robeson, has been subjected to an investigation of his department, but nothing of consequence has been proved against him.

THE Erie Ring has had its day. While Col. James Fisk lived, and Jay Gould held the office of Vice-President of the Erie road, much money was stolen, and the stockholders, many of whom were Englishmen, had but a slight voice in the affairs of the road. Early in March Gen. Sickles, in behalf of the English stockholders succeeded in deposing Mr. Gould and his friends from their places in the corporation, and in securing the election of Gen. John A. Dix as President of the road. New rules have since been passed, and it is hoped the road is now in the hands of honest men.

THE winter has been very severe, and the spring is unusually late. We hear of ice and snow, and that the ground is frozen very deep, all through the North. The gardens of New Jersey, that are commonly so green and promising at this time, are scarcely begun as yet, and vegetation at the South is almost as backward. In some localities the railroads are still blockaded with snow, and in others the spring rains are doing much damage.

TERRIBLE earthquakes have occurred in both hemispheres. March 26th, the Owens River Valley in Lower California, was visited by an earthquake which destroyed some thirty lives, and wounded about the same number of persons. Three hundred and sixty-one distinct shocks were counted at Lone Pine, and the effect was like that produced by the explosion of 200 pound Parrot shells, just beneath the surface. During the first week in April, half of the ancient city of Antioch, in Syria, was destroyed by an earthquake, and 1,500 people were killed. This city was built 300 years before Christ, and it was there that his disciples were first called Christians. It has several times been injured by earthquakes, by fire, and by hostile armies.

PROF. Samuel F. B. Morse, the inventor of the electric telegraph, died at New York, April 5d, aged eighty-one. He was born at Charlestown, Mass., and was educated at Yale College. In early life he embraced the profession of an artist. In 1832 he met a gentleman on board a packet-ship who related to him the results of recent experiments in Paris with the electro-magnet, and suggested that the electric spark might be used as a means of transmitting intelligence. From that time till 1844, he was busy in solving the problem, how it might be done, and during the latter year he built a telegraph line from Baltimore to Washington. Lines were soon after established throughout the country. Few men have done more for the advancement of civilization than Prof. Morse. He was buried with imposing ceremonies on Friday, April 9th. Memorial services in his honor were held in the Capitol at Washington, April 16th.

OWEN Arthur O'Connor, sometime ago made an idiotic assault upon Queen Victoria, while holding in his hand an empty pistol. No injury was done the Queen, and the young man is generally believed to be insane. The jury, however, who recently tried him, pronounced him sane, and sentenced him to one year's imprisonment at hard labor and twenty lashes. Sir Charles W. Dilke caused a first-class sensation in the House of Commons the other day by introducing a resolution demanding an inquiry into the expenses of the Royal Family since Victoria became Queen. Such inquiries are very uncommon in monarchical governments, and many in the House denounced Sir Charles as disloyal.

THE German parliament was opened on the 8th. Prince Bismarck read the speech of the Emperor. It recommended a commercial treaty with Portugal, a postal treaty with France, and a Consular convention with this country. German commerce is largely increasing, and direct trade is becoming smaller. The new university of Strasburg opens on the 1st of May. Early in March, one of the most important debates of the age took place in the Prussian House of Lords, in regard to the separation of Church and State. At its close, the new school law, which takes the management of the public schools out of the hands of the churches and clergymen and gives it to the people, as in this country, was passed.

A Contented Farmer.

Once upon a time, Frederick, King of Prussia, surnamed "Old Fritz," took a ride and espied an old farmer ploughing his acre by the wayside, cheerily singing his old melody.

"You must be well off, old man," said the king. "Does this acre belong to you, on which you so industriously labor?"

"No, sir," replied the farmer, who knew not that it was the king. "I plough for wages."

"How much do you get a day?" asked the king.

"Eight groschen" (about twenty cents), said the farmer.

"This is not much," replied the king; "can you get along with this?"

"Get along, and have something left."

"How is that?"

The farmer smiled, and said,—

"Well, if I must tell you: Two groschen are for myself and wife; two I pay my old debts; two I lend away; and two I give away for the Lord's sake."

"This is a mystery which I cannot solve," replied the king.

"Then I will solve it for you," said the farmer.

"I have two old parents at home who kept me when I was weak and needed help; and now that they are weak and need help, I support them. This is my debt toward which I pay two groschen a day. The third pair of groschen, which I lend away, I spend for my children, that they may receive Christian instruction. This will come handy to us and my wife when we get old. With the last two groschen I maintain two sick sisters, whom I could not be compelled to keep; this I give for the Lord's sake!"

The king, well pleased with the answer, said,—

"Bravely spoken, old man. Now I will also give you something to guess. Have you ever seen me before?"

"Never," said the farmer.

"In less than five minutes you shall see me fifty times, and carry in your pocket fifty of my likenesses."

This is a riddle which I cannot unravel," said the farmer.

"Then I will do it for you," replied the king.

Thrusting his hand into his pocket, and counting him fifty brass new gold pieces into his hand, stamped with his royal likeness, he said to the astonished farmer, who knew not what was coming,—

"The coin is genuine, for it also comes from our Lord Gisk, and I am his paymaster. I bid you adieu."

With all His Might.

"Look at that boy! He is a stout, strong fellow, and one of the sharpest in our workshops. But he will not serve our purpose: he must be dismissed."

"Why?" I inquired.

"Because he does not work *with all his might*. Just watch the dreamy, indifferent way in which he handles his tools. He is thinking about something else all the time." This was said to me the other day, by one of the proprietors of an extensive machine-shop, as he conducted me through the enormous works. "You must require great strength of muscle in your workmen," I remarked.

"No! not so much strength of muscle as strength of purpose. It is not men of might that we want, but men who *use* their might: men who work with zeal and energy at whatever they set themselves to do. It is not the strong Samsons, and the big Goliaths that do the most good; but lads like David; earnest, active, and strong of purpose; doing one thing at a time, but doing that one thing well."

"WITH ALL THY MIGHT!" It is God's own commandment as well as man's. It is the law of Heaven, as well as the general condition of worldly success. We cannot all be reckoned among the great and the famous; but we may all be reckoned among the useful, and the earnest.—*British Workman.*

How Monkeys are Captured.

Though we do not claim to be disciples of Darwin, yet we cannot but say that the following explanation of the method of catching monkeys shows a strong resemblance between these animals and men.

Monkeys are pretty common, yet as all the families are remarkably cunning, has it ever occurred to the reader how they are taken? Pitfalls will give a lion, and the famished monkeys will, after a few days' starvation, dart into a cage containing food, and thus be secured. But how are monkeys caught? The ape family resembles man. Their vices are human, they love liquor, and fall. In Darfour and Sennaar the natives make fermented beer, of which the monkeys are passionately fond. Aware of this, the natives go to the parts of the forest frequented by the monkeys, and set on the ground calabashes full of the enticing liquor. As soon as a monkey sees and tastes it, he utters loud cries of joy that soon attract his comrades. Then an orgie begins, and in a short time the beasts show all degrees of intoxication. Then the natives appear. The few who came too late to get fuddled, escape. The drinkers are too far gone to distrust them, but apparently take them for larger species of their own genus. The natives take some up, and these begin to weep and cover them with maudlin kisses. When the native takes one by the hand to lead him off, the nearest monkey pelaps to the one who thus finds a support, and endeavors to go off also. Another will grasp at him, and so on until the native leads a staggering line of ten or a dozen tipsy monkeys. When finally brought to the village they are securely caged, and gradually sober down; but for two or three days a gradually diminishing supply of liquor is given them, so as to reconcile them by degrees to their state of captivity.—*Exchange.*

If a bird in the hand is worth two in the bush, it is no less true that a thorn in the bush is worth two in the hand.

Children's Department.

My dear Children:—Here is a story about the little boy and the "trade-mark," which is a sermon for little ones of itself. We hope that every boy and girl who reads it will try to live so well that we shall see in their bright faces the sure sign of *goodness*, which is God's own "trade mark."

Trade-Marks

A bright little four-year-old boy with whom I am acquainted, asked his mother the other day what was a trade-mark; she explained that it was a mark or design of some kind which manufacturers placed upon articles they made, so that everybody might know, when they saw the mark whose work it was. At night when he was being undressed he observed a small brown spot or mole upon his leg and ran to his mother exclaiming "Oh! mamma that's God's trade-mark; now when He sees that, He'll know He made me." I think the little fellow spoke a grander truth than he knew. I hope he will realize it more and more as he grows older, and that all of you who read this anecdote, will remember that it is true of you also. You all bear God's trade-mark. He has set it upon every one of you, and wherever He finds you "He will know He made you." Never forget this, but to live so that wherever He may find you, He will gladly recognize His work.

THE FLYING-FISH.

Never disgrace this mark; never let it get rubbed out, or covered over, or marred so that there may be doubt whether it is there at all, but in pure, honest, upright noble lives, let it grow brighter and brighter, to the honor of the Great Manufacturer, who has put His *trade-mark* on you.

I read a story not long since of a little colored boy (in the days now thank God long gone by when colored boys and girls were bought and sold), who stood upon the auction block, and a gentleman said to him "If I buy you my boy, will you be honest?" "I will be honest," was his reply "whether you buy me or not." I think this boy felt God's trade-mark upon him, though perhaps he would not have known what those words meant; but if he fulfils the promise of his early years, I am sure that wherever God finds him, He will be glad to recognize and acknowledge him as bearing His own mark.

Our Dumb Animals.

And now we will tell you some true stories about birds and fish. If you learn anything new about them, and above all, if you are led to show kindness to any dumb animal from reading our stories, we shall feel well repaid for our efforts to amuse and instruct you.

We once lived at the Sandwich Islands, where we knew a gentleman who was a great lover of all kinds of dumb animals. Do you know where the Sandwich Islands are? They are in the middle of the North Pacific Ocean, many thousand miles from here. You can find them on your map. It is so warm there all the year round, that frost is never known; and the houses have no chimneys, because they never need fires to keep warm, and the cooking is done out of doors or in little kitchens built for the purpose. Mr. Moffit (the gentleman we speak of) owned a great farm, or "rancho," as it is called there, of four or five thousand acres, where he had great flocks and herds of the best kinds of sheep and cattle. When he bought the farm, the cattle were so wild and fierce, that men could only catch them by chasing them on horseback and throwing the *lasso*, (which is a long rope with a slipnoose at the end), over their horns. The cows had to have their heads and hind feet tied to posts before they could be milked. Mr. Moffitt, by kind treatment alone, got all these cattle so tame that they would come to him at his call, and the boys had no trouble in driving them about on foot. He collected curious animals and fowls from all parts of the world; and whenever he went out of his house, cows, sheep, beautiful peacocks and pheasants and other fowls would flock about him, to be fed and caressed from his hand. He had an old blind goose, of a rare kind, that is found nowhere in the world except on one of these Islands, where they are very wild. This old goose which Mr. Moffit had tamed, was so fond of an old dog of his, that he would never leave him. He never cared to stay with the other geese. It was very funny to see this old dog and blind goose always together. When the dog ran too fast for the goose to keep up with him, he would fly up in the air, and always light just ahead of the dog, and then the dog would trot along slowly, and the old goose would waddle by his side. When Mr. Moffit took his daily bath in a beautiful, clear pond in a shallow cave near the house, the goose always took *his* bath too, and would swim about with an air which seemed to say "How foolish you are to take so much trouble to undress; see how I dive down with all my clothes on, without getting them wet." I have been told that he even had a tame turtle that would nibble at his clothes, but this I did not see.

The "Honolulu Friend," in a notice of the death of Mr. Moffit, speaking of his kindness to the people about him, as well as to all dumb animals, says, "One characteristic of this gentleman has not been noticed. He was a friend to the little birds, and would not allow sportsmen to wander over his rancho with their fowling pieces. The little birds showed that they appreciated his kindness and protection, by flocking to his farm; and the plover especially looked up to him as their friend. We do not think that any part of the Sandwich Islands can compare with Kahuku for such exhibitions of civilization in horses, cattle, sheep, fowls and birds. "Who will now care for the little birds?"

The Flying-fish.

Out of the water into the light
I leap for a moment, then drop out of sight.
The gull sees a flying-fish; but I've no wing,
Nor can I mount freely like robins, and sing.

The shark and the dolphin, they try and they try
To catch me and eat, but too nimble am I;
For when they come near me, and think I'm their prey,
Up, up, I spring quick, and get out of their way.

The Nursery.

"Tell me some more about your voyages, papa," said Susan Gray, as she seated herself on her father's knee.

"Well, Susie," said Captain Gray, I will tell you about some things I have seen. Perhaps now you would like to hear about flying-fishes."

"Oh, yes, papa! Do tell me about them! What fanny things they must be! How do they look?"

"Look at this picture, my dear. It will show how they look, much better than I can tell you. I have seen them very often. Some of them are very beautiful. They are sometimes called sea-swallows."

"But do they really have wings like birds?" asked Susan.

"Not quite such good wings as birds have," said her father. "What we call their wings are the two large fins in front, that you see in the picture; but these serve as wings for while they are wet. As soon as they get dry, the wings become plain fins again, and the flying-fish has to drop back again into the water."

"Do they fly high up in the air?" asked Susan.

"No very high. They seldom get more than fifteen feet above the surface of the water; and they cannot fly very far; but, while they do fly, they skim along pretty fast."

"It must be nice to be able to fly and swim too," said Susan. "I think I should like that if I were a fish."

"Yes. If you were a fish, I have no doubt that you would find it very pleasant; and you would find it very useful too, in more ways than one. Look at the picture, and you will see what I mean."

"What do you mean, papa?"

"Why, you must know, my dear, that all little fishes have enemies. The flying-fish is hunted by a large fish called the bonito, and by some other large fishes. Now, when the flying-fish sees these enemies coming after him, he just pops right out of the water, and takes to his wings."

"Good!" said Susan. "They can't catch him then."

"He is not always safe, though, even then," said Captain Gray, "because there are some large sea-birds that are apt to pounce upon him."

"Poor fellow!" said Susan.

"But, when he sees the sea-birds coming at him, down he goes into the water again, and so escapes from their clutches."

"He must have a hard time of it. But, papa, you have not told me where you saw the flying-fishes."

"I have seen them in many different places," said Captain Gray. "The last time I saw them, I was in the West Indies."

The Burgomaster Gull.

The old wives sit on the heaving brim,
White-breasted in the sun,
Preening, and smoothing their feathers fine,
And chirping, merry ones.

The snowy kittiwakes overhead,
With beautiful beaks of gold,
And wings of delicate gray outspread,
Float, listening while they scold.

And a foolish guillemot, swimming by,
Though heavy, and clumsy, and dull,
Joins in with what he hears bears their cry
'Gainst the Burgomaster Gull.

For every sea-bird far and near,
With an atom of brains in its skull,
Know plenty of reasons for hate and fear
Of the Burgomaster Gull.

The black ducks gather, with plumes so rich,
And the coots in twinkling lines;
And the swift and slender watch-witch,
Whose neck like silver shines;

Big elder ducks, with their caps pale green
And their salmon-colored vests;
And gay mergansers sailing between,
With their long and glittering crests.

But the lion aloof on the outer edge
Of the rosy meeting keeps,
And laughs to watch them behind the ledge
Where the logy breaker sweeps.

They scream and wheel, and dive and fret,
And flutter in the foam;
And fish and mussels blue they get
To feed their young at home;

Till hurrying in, the little auk
Brings tidings that benumbs,
And stops at once their clamorous talk,—
"The Burgomaster comes!"

And up he sails, a splendid sight!
With wings "like banners" wide,
And eager eyes both big and bright,
That peer on every side.

A lovely kittiwake flying past
With a slippery pollock fine,—
Quoth the Burgomaster, "Not so fast,
My beauty! This is mine!"

His strong wing strikes with a digging shock;
Poor kittiwake, shrieking flees;
His booty he takes to the nearest rock,
To eat it at his ease.

The scared birds scatter to left and right,
But the bold bicaterer, in his glee,
Cares little enough for their woe and their fright,
"Twill be your time next!" cries he.

He sees not, hidden behind the rock,
In the sea-weed, a small boat's hull,
Nor does he the gunner have spared the flock
For the Burgomaster Gull.

So proudly his dusky wings are spread,
And he launches out on the breeze,—
When lo! What thunder of wrath and dread!
What deadly pangs are these!

The red blood drips and the feathers fly,
Down drop the pinions wide;
The robber-chief, with a bitter cry,
Falls headlong in the tide!

They hear him off with laugh and shout;
The wary birds return,—
From the clove-brown feathers that float about
The glorious news they learn.

Then such a tumult fills the place
As never was sung or said,—
And all cry, still with joy, "The base,
Bad Burgomaster's dead!"

And the old wives sit with their caps so white,
And their pretty beaks so red,
And swing on the billows, and scream with delight,
For the Burgomaster's dead!

JOHN T. BENTLEY,
PRACTICAL
WATCHMAKER
AND
JEWELER,
FORT MONROE, VA.
A Fine Stock of
FANCY GOODS
always on hand.
Watches, Clocks, and Jewelry, Sold and Repaired.
Dealer in
GENTRAL FURNISHING GOODS, NOTIONS, AND FANCY ARTICLES, STATIONERY, PERFUMERY, POMADES, COMBS, BRUSHES, AND PATENT MEDICINES, GENTS' UNDERCLOTHING, SOCKS, GLOVES, COLLARS, AND NECKTIES, LADIES' FANCY GOODS, HANDKERCHIEFS, GLOVES, HOSE, NETS, ELASTICS, BUTTONS, NEEDLES, PINS, ETC.
Cake and Confectionery.
Fresh Homemade Cake of all kinds on hand and made to order. Tea Biscuit every day.
French and American Candy and Confectionery of every description fresh and pure.
NUTS, RAISINS, CURRANTS, CITRON, ORANGES, LEMONS, AND FRUITS.
Orders received and filled for goods of every description at regular rates.
Agent for Perkins and Bacon's
Safety Lamps,
and the
German Student Lamps.
Shades, Chimneys, Globes, Wicks, etc., always on hand.
MILITARY GOODS, CAPS, AND SOLDIERS' FURNISHING GOODS OF ALL KINDS.

Mustered Out.

Let me lie down
Just here in the shade of this cannon-torn tree,
Here, low in the trampled grass, where I may see
The surge of the combat, and where I may hear
The glad cry of victory, cheer upon cheer!
Let me lie down.

O, it was grand!
Like the tempest we charged, in the triumph to share;
The tempest, its fury, its thunders were there,
On, on o'er the entrenchments, over living and dead,
With the foe under foot, and our flag over head:
O, it was grand.

Weary and faint;
Prone on this soldier's couch, O, how can I rest,
With this shot-shattered head, and sabre-pierced breast?
Comrades, all roll-call, when I shall be sought,
Say I fought till I fell, and fell where I fought,
Wounded and faint.

Oh! that last charge,
Right through the dread hell-fire of shrapnel and shell,
Through without fal'ring—clear through with a will,
Right in their midst, in the turmoil and gloom,
Like heroes we dashed, at the mandate of doom:
O, that last charge.

It was a duty.
Some things are worthless, and some others so good,
That nations who buy them pay only in blood.
For freedom and Union, each man owes his part,
And here I give my share, all warm from my heart;
It is a duty.

Dying at last.
My mother, dear mother, with meek, tearful eye,
Farewell, and tend upon you, forever and aye;
Oh! that I now lay on your pillowing breast,
To breathe my last sigh on the bosom first prest:
Dying at last.

I am no saint,
But, boys, say a prayer; there's one that begins
"Our Father," and then says, "forgive us our sins."
Dont forget that part,—say that strongly, and then
I'll try to repeat it, and you'll say "amen:"
Oh, I am no saint.

Hark! there's a shout!
Raise me up, comrade: we have conquered, I know;
Up, up, on my feet, with my face to the foe!
Ah, there flies that flag, with its star-spangles bright,
The emblem of glory, the symbol of right:
Well may they shout.

But, I'm "mustered out."
Oh, God of our fathers, our freedom prolong,
And tread down rebellion, oppression, and wrong;
Oh, land of earth's hope, on this blood-reddened sod,
I die for Liberty, Union, and God:
I'm mustered out.

Father Taylor.

I.

Such was the familiar designation of that sailor-preacher of world-wide fame, the late Rev. E. T. Taylor, of Boston, who died April 8th, 1871, aged seventy-seven. A Virginian by birth; commencing his sailor life at the early age of seven, and continuing it ten years; divorced with only six weeks' attendance at school; beginning to preach when he could scarcely read his text; yet, so diligently did he cultivate the gift of God that was in him, that, for more than half a century, he wielded a power in the pulpit that has been felt around the globe. Though preëminently the apostle of the seamen, the most highly educated of both sexes were among those who thronged his Bethel.

HIS CATHOLICITY OF SPIRIT.

This was a leading attmetion of the man, and a source of his power. He "would not wear a strait-jacket," or "Chinese shoes." Though a Methodist by connexion, his sympathies could not be confined to his denomination, but overflowed all the boundaries of sect,—delighting, as he did, to welcome Christians of every name, to his warm and loving embrace.

Some of his characteristic sayings on this point were: "My pulpit has no doors;" "When bigotry is buried I hope I shall be at the funeral;" "The shipwrecked, perishing sailor doesn't criticise the vessel that saves him, to see whether she is bark-rigged or sloop-rigged;" "Believers sail under a different flag, but with the same Commander." At a gathering of those of different denominations, he seemed perfectly delighted, remarking, "Old bigotry topples, and the wall falls down; the Devil has got tipped end over end, and it will take weeks for him to get right again." In a speech at Niagara, he poured out his great soul in the words,—"God bless the East! God bless the West! God bless the North! God bless the South! And oh for a gulf as deep as from here to Sirius, where all bickering and dissension and hair-splitting shall be forever buried."

But while his heart was as broad and deep in its sympathies as the sea, of which he was such a distinguished representative; while he so earnestly besought his hearers, "With sail full-spread, push bravely out into the ocean of God's love," his theology was far from being "a mush of concession;" he could not bear what he termed "a putty or wooden man;" but said, "Good steel will throw fire when struck."

HIS PLAINNESS OF SPEECH.

A remarkable example of this was in a Dedication sermon in presence of the representatives of various denominations.

Referring to the Unitarian, he said, "My brother, preach the depravity, the natural wickedness of man. Some make him very good by nature, and think there is no devil in him. But there is. Dress him up ever so much, make him ever so learned, adorn him in all the robes of politeness, and all the refinement of the most polished society of the most ornamented age of the world, and you cannot make him good. Oh, no! you have only to pull off the winding-sheet, and there he is, poor, weak, sinful human nature still."

Then referring to the Universalist, he said, "My brother, preach the judgments, a future judgment. For my part, I never could see why any man should be afraid or ashamed to preach it."

He next addressed the Calvinist. "My brother, preach free agency. Don't be a fatalist. Some ministers preach fatalism; tie men's hands behind their backs, and then tell them to work; tie their feet together, and then tell them to walk. Don't preach that; don't make the Almighty decree every thing from all eternity, and then call on man to break the decree. Preach man's free will. Whoever heard of any will but a free will."

Here he took the Episcopal minister. "My brother, preach baptism. It is an ordinance of God. Baptize the converted; but don't make baptism all the gospel. Don't make water everything. There are other elements in the world besides water; and there are other things in the gospel besides baptism, though some ministers never see any thing there but baptism. Don't make dipping *all* the gospel."

Then came the Restorationist. "My brother, preach future punishment. The wicked shall be turned into hell, and all the nations that forget God.' Leave them there, my brother, where the Bible does, and let any minister get them out who can. But don't you try it."

Having dealt thus plainly with each, he gave them all "a real Methodist hug," saying, "This is one of the most blessed seasons I ever enjoyed. Indeed, I have never seen but one like it, and that was when my own church was dedicated. Then we had all the stripes in the Union; and, bless the Lord! we've got them all now."

Thus, with all his catholicity of spirit, he was not indifferent to what he believed to be the truth; nor would he shun to declare it with a freedom and boldness, as refreshing as it is rare.

"A COMMON LANGUAGE GIVES MEN A COMMON CREED."

In illustration of this he referred to a case where the captain called the crew and passengers together and told them that it was hardly possible to keep the ship afloat another day, saying, "Now what do you think they prayed for? A little more Methodism, a little more Catholicism, a little more Presbyterianism a little more Unitarianism, Universalism, or any other *ism?* No, no, brethren. A common danger had given them a common religion. . . . . They prayed to a common Father, and he sent them a common salvation. . . . . Did creeds give those rescued souls consolation in their hour of extreme peril? No; but the Word of God did; and that is my creed. I hold to the Bible, the whole Bible, as my creed, because it never grows old or needs re-patching."

JULIUS CESAR, coming toward Rome with his army, and hearing that the senate and people had fled from it, said, "They that will not fight for this city, what city will they fight for?" If we will not take pains for the kingdom of heaven, what kingdom will we take pains for?

Temperance.

Exaggeration Impossible.

It is impossible to exaggerate and overstate the evil and mischief that are being continually done in the ruin of men and women—their ruin in soul, body, and state—through their indulgence in the sin of intemperance. In the case of Haman and his hundred victims, if he had been able to accomplish his designs, the property and the lives of thousands would have been sacrificed at a single blow. It would have been a thing done and done with. But that is not so with our social proscription that issues in the destruction of such multitudes. It is a long, wasting agony; it is a slow process. The victim dies by inches, so to speak; and not merely that, but he dies amid declining regard, lost self-respect, ruined means, weeping women, and sometimes degraded children. Fires burn themselves out; but this fire has the peculiarity of finding fuel for itself; for how often has it happened that the drunken wife has driven the husband to despair and to drunkenness, and how often has it happened that the drunken father and mother have communicated to the very physical nature of their children, the diseased end

THE CONTRAST—THE MORNING STAR.—[See first page.]

self-destroying appetite! How often has it happened that a family of social position and attractive manners has succeeded in inoculating a whole circle—perhaps a whole neighborhood—with a love of drink! How inevitably does it happen that, when a man has once embarked his means in the traffic, his interest and his prosperity will grow with the the growing love and passion for drink among his hapless neighbors round about him! Our fire does not consume itself for lack of fuel; it makes the fuel by which it is sustained and upon which it feeds. If you think that I overstate the case, you can correct my estimate; but I do not well see how you can correct it, if you have been going through life with your eyes open to the actual facts that are continually transpiring around us. I think you will be compelled to admit that, looking at it in any point of view, not only in a social, but in a spiritual point of view, this evil is so gigantic that the tongue gives no words that can overstate its wicked and atrocious characteristics.—*Dr. John Hall.*

Respectable Drinking.

As long as you make drinking respectable, drinking customs will prevail, and the ploughshare of death, drawn by terrible disasters, will go on tilling up this whole continent, from end to end, with the long, deep, awful furrow of drunkards' graves.

Oh! how this rum-fiend would like to go and haug up a skeleton in your beautiful house, so that, when you opened the front door to go in, you would see it in the hall; and, when you sat at your table, you would see it hanging from the wall; and, when you opened your bedroom, you would find it stretched upon your pillow; and, waking at night, you would feel its cold hand passing over your face, and plucking at your heart.

There is no home so beautiful, but it may be devastated by the awful curse. It throws its jargon into the sweetest harmony. What was it that silenced Sheridan's voice, and shattered the golden sceptre with which he swayed parliaments and courts? What foul sprite turned the sweet rhythm of Robert Burns into a tuneless babble? What brought down the majestic form of one who awed the American Senate with his eloquence, and, after a while, carried him home dead-drunk from the office of Secretary of State? What was it that swamped the noble spirit of one of the heroes of the last war, until, the other night, in a drunken fit, he reeled from the deck of a Western steamer, and was drowned? There was one whose voice we all loved to hear. Ha was one of the most classic orators of the century. People wondered why a man of so pure a heart, and so excellent a life, would have such a sad countenance always. They knew not that his wife was a sot.—*T. De Witt Talmage.*

Common Wonders.

I.

Did you ever go to see the magician, as he opened a bag and took from it, though it seemed empty, lots of eggs etc.? Or have you seen him take an armful of tow and pack it into his mouth, making a great fuse over it and making believe swallow it; and then when it was all in, he blew a stream of fire from his mouth, and when this was ended, drew from between his teeth all colors of ribbon? Well; this *did* seem wonderful, but if I should tell you how it was done you would declare it was nothing strange after all.

You have to pay a hardly earned quarter to see this, and when you come out, you know no more than before.

In these days, household spinning and weaving have ceased. Great factories now provide material for garments for the humblest class which were once only within the means of the richest.

The comforts of the family have been everywhere increased, while the toil of women has been lightened.

The constant aim of the housekeeper should be to add to the comfort of her family, and to do this, if she has no longer to "seek wool and flax," she must work *willingly* with her hands every-day, and all the day.

Industry is sure to bring its own reward. The mere habit of the mother is an example to the children, they will be tidy, cheerful and active, for nu industrious mother in her daily life shows them the way to be so, and if the whole family are workers, it is the rule, that the condition of the household improves.

The Household.

Every one, rich and poor, who desires to live usefully toward man and faithfully toward God, must be a *worker*. One of the great mistakes into which poor people sometimes fall, is in supposing that people of wealth live idolent lives. There is work in the world for all. There is brain-work that plans for laboring hands to execute.

Women are not exempt from this condition of work, and it is well they are not, for nothing is so miserable for miud or body, for health or temper, as indolence. Idle people are always fretful, useless, and unhappy, dissatisfied with themselves and with all around them; so you my dear readers whose lot is cast among those whose special inheritance is toil, ere not to be discouraged on that account; a *blessing* rests on your labor.

For hundreds of years the clothing of the whole family depended upon the industry of women; the fleece used to be brought home, where it was carded, spun, woven, and made into garments, all by the women. The spinning-wheel was in general use in the early days of our country as it was in the Bible history times, and women obtained a name from their ordinary employment and were called "Spinsters."

TRY.—No man is likely to accomplish much who moodily indulges a desponding view of his own capacities. By God's help the weakest of us may be strong, and it is the way to become so, to resolve never to give up a good work till we have tried our best to achieve it. To think nothing impossible is the privilege of faith. We deprecate the indolent cowardice of a man who always felt assured that every enterprise would be too much for him, and therefore declined it; but we admire the plnck of the ploughman who was asked on his examination if he could read Greek, and replied he did not know, because he had never tried. Those Suffolk horses which will pull at a post till they drop are worth a thousand times as much as jibbing animals that run back as soon as aver the collar begins to press them.

AIR HAS WEIGHT.

It is something like water, only not so heavy. We move about in it as the fishes do in the brook. This air is more than fifty miles in height and presses down upon the earth. It presses, like water, in all directions. You know if you make a hole in the side of a barrel of water it will press out the same as if the hole was in the bottom, so this fifty miles of air presses against the paper and holds the water in the tumbler. On every square inch it presses with a force of fifteen pounds. I will tell the boys how to make a toy to show how air will lift.

Get a piece of leather as big as your hand, put an awl through the middle and *fasten* it to a smooth board. Near the outside of the leather, press through to the board a sharp pointed knife. Now if you pass the leather around you will have a perfect circle. Through the awl hole, pass a leather string, secured by a knot on one end. Wet the leather and press it upon a flat rock and you will find you can lift it by the string; this is because the air presses the leather and rock to each other. Water is raised in a pump by the same forces. Take the air from the pump, and the water is pressed up by the air outside. Now the next time I have a chance to talk with you, I will tell you how to make a barometer, an instrument used to tell when it will storm; and also used in measuring the heights of mountains.

EMPTY THINGS USEFUL SOMETIMES.—"Of what use are *forms?*" exclaimed a petulant legislator to Dr. Franklin; "you cannot deny that they are often mere empty things!"

"Well, my friend, and so are *barrels*, but nevertheless they have their uses," quietly replied the doctor.

Rules are not the sweetest part of wisdom, but, like barrels, they hold the substance together, so that it cannot run to waste.

FREEDMAN'S

SAVINGS & TRUST

Company.

A National Savings Bank.

ESTABLISHED, MARCH, 1865.

Chartered by the Government of the United States.

Deposits of five cents or any larger amounts received.

SIX PER CENT. INTEREST

paid on sums of five dollars or more. *All deposits payable on demand, with interest due.*

All accounts *strictly private and confidential.*

PRINCIPAL OFFICE,

WASHINGTON, D. C.

BRANCH OFFICES

in all the larger cities of the South and Southwest.

THIS GREAT NATIONAL SAVINGS INSTITUTION,

established by the authority of the *United States Government* for the benefit of the *Freedmen*, knows no distinction of race or color, and offers its great advantages to all classes alike.

SAVE THE SMALL SUMS.

Cut off your vices—don't *smoke*—don't *drink*—don't *buy lottery tickets*. Put the money you save into the

BALTIMORE

Steam Packet

Company.

For Baltimore, Md., and all points North, South, East, and West.

One of the Company's Steamers leaves Norfolk, Va., at 2 o'clock, P. M., and Portsmouth, Va., on the arrival of the Evening Passenger and Mail Trains of the Seaboard and Roanoke Railroad, at 3 o'clock, P. M., daily (Sundays excepted), touching at Fort Monroe, Old Point Comfort, Va., about 4 o'clock, P. M. One of the Company's Steamers leaves Baltimore, foot of Concord Street, daily (Sundays excepted) at 4 o'clock, P. M., touching at Fort Monroe, Old Point Comfort, Va., about 4 o'clock, A. M., going South.

For rates of passage, freights, or other information apply to R. L. POOR, General Agent, Baltimore, Md.; CHAS. E. YEATMAN, Agent, Portsmouth, Va.; JOHN VERMILION, Agent, Norfolk, Va., or to

H. PHOENIX, *Fort Monroe, Va.*

LAND FOR SALE

On the Peninsula.

I have for sale 200 acres of land between Williamsburg and Fort Monroe, Virginia. This section of the Country is fully and agreeably described in the language of Captain John Smith: "Within is a country that may learn the proverbialist over the most plea-ant places known, for large and pleasant navigable rivers, heaven and earth never agreed better to frame a place for man's habitation, were it fully manured and inhabited by industrious people. There are meadows, inn, plaines, valleys, rivers, and woods, all running most pleasantly into a faire bay, compassed for the most part with pleasant and delightsome land.—CAPTAIN JOHN SMITH."

WILLIAM S. HOWARD, Hampton, Va.

FOR SALE.

A neat little Farm of 40 acres.—25 acres in wood and pasture. Convenient to market. $700 worth of produce sold last year from 25 acres, with single horse cultivation. Price $1000. Terms easy. Address Box 33 Hampton, Va.

WANTED.—A situation as Teacher, or Governess in a private family, by a young lady competent to teach English branches, French, Latin, Music and Painting. Address

V. V. WARNER, Hampton, Va.

Farm for Sale at Auction.

The subscriber will sell his farm, situated on Back River, 4 miles from Hampton, and one mile south of Big Bethel, on Saturday, the 21st inst., containing 320 acres more or less, at auction, on Tuesday, the 24th at the door in front of the Court House, in Hampton, at 12 o'clock, to the highest bidder. Said farm will be sold in a body, or in lots to suit purchasers, previous to day of sale. There is a good dwelling house with 7 rooms, all in good order; a good well of water at the door, and all necessary out-buildings, all new; and a variety of all kinds of fruit trees and vines, all in a thrifty condition, about 100 acres cleared land, the balance in heavy wood and timber. For further particulars, inquire of the subscriber, on the premises.

JACOB OSTRANDER.

THE
SOUTHERN WORKMAN,
DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. I. HAMPTON, VA., MAY, 1872. NO. 5.

God Save the Plough.

Ere,—how the shining share
Maketh earth's bosom fair,
Crowning her brow,—
Bread in its furrow springs,
Health and repose it brings,
Treasures unknown to kings,
God save the plough!

Look to the warrior's blade,
While o'er the tented glade,
Hate breathes his woe,—
Strife its unsheathing wakes,
Love at its lightning quakes,
Weeping and woe it makes,
God save the plough!

Ships o'er the deep may ride,
Storms wreck their banner'd pride,
Waves whelm their prow,
But the well-loaded wain
Garnereth the golden grain,
Gladdening the household train,
God save the plough!

The Steam Plough.

The beautiful lines which are printed above were written years ago by Mrs. Sigourney. Many poets, since the world began, have sung in praise of the plough. Many in all ages have loved to drive the plough. In the early days of man, the ploughs of the period were very simply made. A sharpened stake and a cross-beam constituted the whole plough. In some countries of the world, ploughs are still made after that fashion. But in all civilized countries, men have been at work for many years trying to improve their ploughs, so that they can plough deeply and rapidly. It is an interesting study for one, to visit a large hardware store and notice the different kinds of ploughs for sale. We do not need to enlarge on this subject after publishing such an article as we did in the Agricultural column of the last number of this paper. It is a happy man who can stand on some virgin prairie in the West and watch the farmers' "breaker-plough," tear up the soil that has never been cultivated before. Sometimes six and even more pair of oxen are hitched to this plough, and thus the turf flies up in a way that it delights one to see. Often some person goes in front of this plough and scatters corn, much as he would lay a train of powder, and when the plough comes along, the turf from the furrow covers up the corn and and the farmer has a crop that year of what is called "sod corn."

Since the steam-engine was invented, man has been constantly studying how to make it help him in some way unthought of before. It is a great thing to travel fifteen miles an hour on the water, and forty by land, on a smooth iron track; but men are not satisfied with this. They want an engine that will go up hill and down on a common road. It is a great thing to run a mighty factory, or unload a magnificent steamer with a steam-engine, but there are men who say "We must have an engine that we can take right out into the field, and that will do for us whatever we may happen to want." An English gentleman, Lord Dunmore, was of this mind. He put the steam engine at work on the farm "ploughing, cultivating, pulling out tree-roots, going to the railway station with baggage, carrying heavy timber, cutting hay and straw, bruising oats, working saw-mills, thrashing, carrying drain-tiles, pumping water, driving engine on the farm is a good one. Like many great problems in our day, it has as yet not been fully worked out. It needs years of careful experimenting to disclose how it can best be done. Perhaps the time will come in a few years when every community of farmers will own an engine, and use it for their mutual benefit.

LORD DUNMORE'S NEW STEAM-PLOUGH

A Tribute to the Memory of Col. Shaw.

An essay read by Miss Irene La Bate, at the annual Exhibition of the Shaw Memorial School, at Charleston, S. C., April 8th, 1872:

"A whiter soul, a fairer mind,
A life with purer course and aim,
A gentler eye, a voice more kind,
We may not look on earth to find.
The love that lingers o'er his name,
Is more than fame."

In our pride and prosperity we little think of the noble, generous ones who gave up their lives, while in their youth, to place us in a position of equality among men. Such was Robert Gould Shaw, who was born of an aristocratic family of Boston. When the war broke out, he was at a college in Geneva, Switzerland. Youthful, and ardent, he returned home, immediately, and entered the 2d Mass. Regiment, one of the most distinguished regiments of the Union army. When Governor Andrew with his characteristic patriotism, raised the first Northern colored regiment, Robert Shaw was given the command. The officers of this regiment were, as a general thing, of the best families in Boston. This regiment, the 54th, saw service on Morris Island. They landed at Land's End on St. Helena Island, formed part of General Gilmore's force sent to attack Battery Wagener, being the first colored troops who had actually been in battle. On the attack on Battery Wagener, they led the assault. A large part of them actually entered the fort and distinguished themselves in the hand to hand conflict which ensued. The attack was hopeless from the first, they being exposed to the fire from all the batteries. Col. Shaw was last seen on the top of the breast-works. Nothing more was ever heard of him. A demand was made for his body, and the reply was,—"We have buried him with his niggers." His stricken father's reply when he heard this was,—"he didn't desire for him a more honored grave, and was glad that Bob had so good a body-guard to Heaven."

"Buried with a band of brothers,
Who for him would fain have died;
Buried with the gallant fellows,
Who fell fighting by his side.

"Buried with the men God gave him,
Those whom he was sent to save;
Buried with the martyred heroes,
He has found an honored grave.

"Buried where his dust so precious
Makes the ground a hallowed spot;
Buried where by Christian patriots,
He shall never be forgot.

"Fare thee well, thou noble warrior!
Who, in youthful beauty, went
On a high and holy mission,
By the God of battles sent.

"Chosen of Him, elect and precious,
Well didst thou fulfil thy part;
When thy country counts her jewels,
She shall wear thee on her heart."

The soldiers of his regiment as long as the fate of their beloved colored was uncertain, eagerly inquired, every day for news of him; and, at last, when there could be no doubt of his death, those strong, rough men wept bitterly, and exclaimed "God bless him! He was the best man in the world." So perished in his manhood, in his prime, and his strength, the noble, honored and respected Colonel Shaw, a voluntary sacrifice on the altar of Liberty for an enslaved race. To our credit be it said, that we have erected for him a monument more enduring than marble. For though, not professing to be a normal institution, yet, from this school, there have gone forth within the past year, several teachers. And already we see a rich harvest springing up from the soil where "The head of the noble young hero was laid in the dust." May we as members of this school, do justice to his memory by maintaining our self-respect, honor and integrity.

"O, fallen in manhood's fairest noon,
We will remember mid our sighs,
He never yields his life too soon,
For country and for right who dies."

School-mates! the floor we tread is holy ground,
His gentle spirit's hovering round.

Printing.

The first book ever printed with metal type was a Latin Bible, published at Mentz in Germany, by John Gutenberg, four hundred years ago. Gutenberg had spent many years in perfecting his invention, and had printed several small books before, with types cut out of pear-tree wood. The important thought for which we owe him so many thanks, is that of making each letter separate. Before his time, wood-engraving had been invented; and block-books had been made, so called because all the pictures and letters for a single page were engraved on one block of wood. Presses were not used; but when the blocks had been well inked, paper was laid over them, and rubbed upon the back till a copy was made. This kind of printing was invented by the Chinese, who have practiced it at least nine hundred years; and it was introduced into Europe by travellers. With such a press as Benjamin Franklin had over a hundred years ago, the daily edition of the New York Tribune could not be printed in a month; now, with the aid of steam, papers can be printed at the rate of twenty-five thousand an hour.

In former times, not only were there no steam-engines, to make such rapid work possible, but there was nothing common and cheap enough to make books of in any great numbers. Perhaps this was one great reason why printing was not invented long before Gutenberg's time.

The ancients made books of all sorts of things. The oldest books in the world were found among the ruins in Egypt, and in the neighborhood of Babylon. Those found near Babylon are made of brick. This is what an inconvenient thing a brick Bible would be! What poor man could find room in his house for one! Egyptian books have been found written as long ago as when Abraham was alive. These were made from split stems of papyrus, a reed which grew on the banks of the Nile. From its name comes the word paper. Papyrus was not strong enough for printing, nor was there ever enough of it. Calf-skins and sheep-skins, (called, when prepared for use, vellum and parchment) were the chief writing materials used in Europe till paper became common. They were so scarce and expensive that whole books were frequently rubbed out with pumice-stone, and written over a second, or even a third time.

Our common paper is made of cotton or linen rags, mixed for very cheap paper with straw, wood, etc. It has been known in Europe since the eleventh century. The art of making it was learned either from the Chinese, or the Japanese. The Japanese possess wonderful skill in this art. They not only make writing, printing, and wrapping paper, but paper pocket-handkerchiefs and towels, excellent paper overcoats, and an imitation-leather, better for many purposes than real leather. They make all their paper by hand. We, on the contrary, use curious machines, which make it much faster, and in greater quantities. One who has the opportunity should not fail to visit a paper-mill, and a printing-office, a large one if possible, to see with his own eyes the wonderful contrivances by which we are supplied with those precious things — our books and newspapers.

Gleanings.

Under this head we propose to publish extracts from letters which we are receiving from all parts of the country.

A letter from Helena, Arkansas, says:

"The Normal Institute, nine miles from this place, is a flourishing school of 130 pupils, 80 of whom are boarders. The buildings are new, and cost $10,000. Many of the pupils will soon become teachers. The school is supported by the Indiana Yearly Meeting of Friends. Calvin and Alida Clarke are Superintendents."

A friend writes from Port Deposit, Md.:

"I believe the 'Southern Workman' is just what our people need. It addresses the laboring classes upon the great subject of industry. Without such papers as yours, the masses cannot be awakened to a sense of their duty."

This message comes from Smithfield, N. C.:

"My son sent me a paper, and I liked it so much that I had it read, by a better scholar than myself, in Sunday-school, and then I loaned it until it was worn out."

A teacher writes from New Hanover County, N. C.:

"I think your paper is destined to supply a great and growing want which no amount of schools or teachers can supply, but which they have rather *created*. I hope you will do much to benefit a large class of the people who, for want of recreation, pass their leisure time at the dram-shop."

Rev. J. C. Johnson, Herndon, Va., desires us to announce that he intends delivering a course of sermons upon the Ten Commandments in such churches in Virginia as shall be opened to him.

The Ebenezer Baptist Church of Wilmington N. C., Rev. W. H. Banks, Pastor, is enjoying a precious revival, and many of the congregation are rejoicing in a new-found hope in Christ.

THE Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, *Editorial Manager.*
R. W. BLAKE, *Assistant Editor.*
J. F. B. MARSHALL, *Business Manager.*

TERMS: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will contain not less than three illustrations, a variety of short articles, well told what is going on in the world, and will aim to please and profit both old and young.

All are invited, the young especially, to ask by letter, questions on any subject upon which they wish information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"*The Southern Workman*" *should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.*

To every church which shall send us a hundred cent dollar subscriptions for "The Southern Workman," we will send a beautiful communion set costing twenty-five dollars.

We will give a handsome Bible costing fifty-two dollars to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars *in cash* for every ten hundred cent dollar subscriptions; or $18.75 for seventy-five subscriptions; or $12.50 for every fifty subscriptions.

In these cases the papers are to be sent in one bundle to one address to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To insure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, MAY, 1872.

☞ *Hereafter we cannot furnish the June or any number of this paper to new subscribers, as it is out of print. Agents and others having copies of the first number will confer a favor by mailing them to us. It shall be glad to pay the postage on them. New subscribers desiring the other back numbers will please mention the fact, otherwise their subscriptions will date from the time when they are received.*

In no country do the working classes so directly share in the formation and support of the government, as in our own; and there is no country to which it is of such vital importance that the standard of education and morals, among the laboring classes, should be high and progressive. The chief danger of a despotism and the chief safety of a republic both exist in the ever-increasing intelligence of that part of the people that earn their bread by the sweat of their brows. While the nations that deny the right of every man to a share in the government have everything to fear from the growing strength of the masses, our republic sees in the universal education of the working men, a present defence and security for future greatness.

The sober-minded, intelligent action of a man who understood the practical duties of the government towards the people, has made our institutions what they are. Now that the settlement of new territory, the rapid increase of emigration, and the equally rapid introduction of the social problems that perplex all young governments are severely testing those institutions, it is more true than ever that nothing will keep us a great and honest nation unless every man shall know his own place and work as a member of civil society.

It is especially the duty of the working men of America to study the principles that lie as the foundation of our republican system. They need more than their richer fellow-citizens to be well grounded in those principles, for in no way can they afford to pay for the mistakes of ignorant or careless officials. Almost every great question of modern legislation assumes some practical form that demands the attention of intelligent working-men. No laws will ever justly define the duties of employer and employed until the latter are able thoroughly to understand their own position. His the work-men must have chiefly concerned in the relations of capital and labor. Most of the difficulties that complicate the labor questions arise from the ignorance of those most concerned for their speedy solution; and no doubt most of the unfriendly strikes and gluts in the labor market — which are so costly to working men — could be prevented by more general information on the points at issue. Again, the much debated question of suffrage directly affects the working portion of the community, and the time and manner of its final settlement will depend on them. It is their only direct means of political influence; and there are connected with it privileges whose value, if it is to be secured, they don't always appreciate.

Free trade, public extension, all political questions that rest upon principles, demand careful study from men who mean to deserve their citizenship.

Our country's future prosperity is directly dependent upon the use which her mechanics and other laboring men make of the facilities which are afforded them for influencing the national policy at home and abroad. Our industrial classes should understand this, that they may realize how large and increasing a share of the governing power is placed in their hands. We need only to consider how destructive to our growth as a people is ignorant legislation in regard to trade with other countries, or how quickly the national life is stunted when narrow views and prejudices, as they sometimes will, creep into the management of our schools, to understand that the power of the working classes over our future is immensely great. If they remain ignorant or indifferent regarding the public weal, the nation must ever fear them. If it were possible to awake every working man in the South to a sense of what he owes to himself and his fellow-citizens, under the new order of things, we should soon see the results of great advancement in our common political progress. A feeling of individual responsibility for the future of their country and state is greatly needed among the industrial classes here, and no appeal to them on this score can be too direct or forcible. We pray them to hold themselves to their work. We ask them to use their own intelligence as far as it serves them honestly, and to choose for their rulers and representatives men whose intelligence and honesty they can safely trust. Only thus can we escape from the difficulties bequeathed us by the sins and mistakes of past generations.

Our political sky has its clouds, no doubt, but it has also its promise of a brighter day to come, a promise which depends largely for its fulfilment upon the conscientious energy of the working men of the South.

A Thrilling Speech.

On the eleventh of April, Rev. Edward Everett Hale, pastor of one of the largest churches in Boston, and editor of the "Old and New" magazine, visited the Hampton Normal School, in company with a party of ladies and gentlemen, and addressed the pupils in their main assembly-room. We very much regret not being able to present our readers with an exact report of Mr. Hale's speech on that occasion. We print the substance of his remarks below:

"I am glad to be here once again, and I recognise some faces that I saw when here before, together with many new ones. No buildings anywhere are finer or better adapted for school purposes than is this building. Your friends here intend you shall have every advantage. Nothing that will make this a first class institution shall be denied you. But the success of the school depends upon you. It is for you to say whether this shall be the Oxford, the Cambridge, the Harvard, the Yale of your land. I am sadly sure how you can enjoy your studies, and take *great* pleasure in all your literary avocations here, but I fear that some of you do not see that chiefly the industrial part, *the work* you are required to do. Let me tell you that part is of the utmost importance. Every body should be able to work with the hand. Every boy who learns some trade is far more independent than he otherwise could be. I am a printer. I carry my tools in my head. I do not want you to think that I earn my bread by printing now, for I do not; but I have spent many happy hours at work in a printing-office, and if other resources fail me, I shall always have that to fall back upon. A printer can go all over the world if he desires, and pay his way as he goes. Suppose he wants to see Europe: he earns enough to pay his passage across the water, and sails for London. After looking about a few weeks he goes into a printing-office and inquires of the foreman 'Do you want a hand?' 'Do you know the case?' asks the foreman. 'Try me and see,' says the traveller. So he goes to the case and begins to set type. [Here the speaker imitated the motions of a compositor at his work]. The foreman engages him and he works in that office until he has acquired enough to carry him to France or Germany or any country he may wish to visit. Arriving there, he seeks out a place to work as before, and thus he can travel over the world. He carries his tools in his head.

"None of us ever expected to see such a condition of things as we find here today. I remember when Tyler was President that I called upon him at Washington. He said to me, 'You should go to Hampton, Mr. Hale, you should visit the mouth of the James River, you should see the place where American History had its beginnings. He little thought, and I little thought at that time, that when I did come to Hampton, I should find the house in which he used to live occupied by teachers of the colored race.

When I was here before, I noticed that some of you seemed reluctant to sing your own native songs to visitors. Never feel ashamed of them. Those songs, such as you have sung today, constitute the only American music that exists; if you, and others of your race do not sing them no one will. Cherish them, and be proud of them. I have heard all sorts of music. I have heard an American, a German, a Frenchman, and an Italian try to sing an Italian opera; but I never heard before today a chorus of one hundred Americans singing American music."

Virginia.

HERNDON LETTER.

Mr. Editor,—This thriving village is located on the Washington and Ohio Railroad, twenty-three miles from Alexandria. It was named Herndon in 1858. It was selected for our town after much deliberation and the rejection of several other proposed names, in honor of Captain L. Herndon, of Fredericksburg, who perished years ago in the wreck of the ship *Central America*. About four hundred and fifty passengers lost their lives when that ill-fated vessel sank. By great exertion Capt. Herndon saved sixty women and children. His last words were the commencement of a message to his wife. "Tell her," said he, and the engulfing wave left as a legacy this significant blank. In order to perpetuate the name and deeds of the youthful hero, we teach our children the following lines:—

"Our Herndon, vale of Amazon explores,
Then sinks in waters washing distant shores.
His burning soul with life he gave,
To rescue others from an ocean grave.
Here then we pledge, this be our constant aim
To make our place all worthy of its name.

Early in April, Rev. Dr. Chickering, of Boston, gave a lecture before our "Sweet Home Lodge of Good Templars." He spoke of Herndon as the "Banner town" of this part of Virginia, as respects the temperance cause.

During a recent visit to Alexandria I was much interested in listening to the preaching of Rev. Fields Cook. His church is in the outskirts of the city, not far from the Fairfax Theological Seminary. Brother Cook, once a slave, is now an able minister of the gospel, a faithful bishop of souls. He is now giving some attention to the practice of medicine. He is the happy owner of a good library.

It was my good fortune to be present at Washington during the celebration of the anniversary of emancipation in the District of Columbia. It was a great day. Lewis H. Douglas, son of Frederick Douglas, and John T. Johnson formed the procession. Several bands of music were in attendance, and among other companies I noticed the Howard University Cadets, all colored men. Hon. R. B. Elliot, of South Carolina, was orator of the day. During the day, the procession passed in front of the White House, and was reviewed by the President. The celebration ended by a serenade to Senator Sumner by the Excelsior Band, of Philadelphia, late in the evening. Owing to the state of his health, which does not permit open-air speaking at night, Mr. Sumner did not respond with a speech. If the colored people will only make a right use of emancipation, they can help save our great country, and also abundantly and permanently bless all other countries.

Yours truly,

J. R. J.

HERNDON, *April*, 1872.

Hampton Letter.

Mr. Editor,—I was much interested in your Boston letter for March, on the "Holly Tree Coffee Rooms." The idea, as a preventative of intemperance, is a good one. Is it utterly impracticable to open such rooms in larger cities, and even in small villages? Is there no Boston lady, no Hampton lady, who will undertake such an enterprise among us? While the cup of cold water is the praise of our town as regards temperance,—for I believe that, all in all, we are as free from drunkenness as any community in the land,—still there is a great deal of strong drink sold here, and the many grocery stores kept by professedly Christian men,—to their shame be it said,—where "Hell broth" is retailed. Consequently, much time, and money is wasted and much business destroyed.

How can we prevent this waste and want? Perhaps the only way to do it is by appealing to the customers of the whiskey dealers. "Where no wood is," says the wise man, "the fire goeth out." So when there are no buyers of strong drink, the grog-shops are closed. These buyers are the laborers and fishermen, the small farmers, who come to town every day or two, especially every Saturday, with wood, eggs, fish, or vegetables to sell. Let me say to such "Come now, let us reason together." You have earned a small load of wood, a dozen or two of eggs, or a bushel of potatoes. The whole probably amounts to $2.00. You buy a little sugar, a little coffee or tea, and a handkerchief, perhaps in all amounting to $1.50, while the rest is spent for mean whiskey! Is not this so? You step first at one store, then at another, treat yourself and your neighbor, and in a few hours one-fourth of your money is gone, and what have you to show for it? Now let us make a little calculation. There are few, very few men, who earn more than a dollar and a half or two cents a day for liquor. That amounts to $36.50 a year! In five years, it amounts to $182.50. Then you have the price of quite land enough for a small family; yet that amount is wasted, and worse than wasted in whiskey! Let us reason a little further. Suppose a man has a tract of land to sell and you want to buy it, but have not the cash to pay for it. The owner of the land is disposed to favor you, and he makes this proposition to you. The land is worth $50. All he asks is that you shall not buy any liquor and that you pay him ten cents a day until the whole amount is paid. Would you not think the terms quite liberal? But you can do better than that. Take your ten cents a day and put it into the savings bank, where every six months the interest is added to the principal and goes itself on interest, or as it is called, compound interest, and in less than five years you will have money enough to pay for that land.

But perhaps you will tell me that you cannot afford to lay by ten cents a day and find your family in bread. How then can you spend that amount in vile drink, that tends only to starve your family and ruin yourself? Think of it, and if you like my plain talk you may hear from me again.

KECOUGHTAN.

HAMPTON, *April*, 1872.

North Carolina.

Mr. Editor,—Your paper, published as it is at Hampton, recalls to my mind afresh the hallowed scenes I witnessed there during the war. How many patriot graves are there over which I have reared the prayer for years that are past. What great reason have we to thank God for some of the results of those years.

I wish to say a few words about

THE PRESBYTERY OF TARKIH.

This ecclesiastical body, composed of twenty-four churches and embracing within its limits more than half of North Carolina, met at Bethany, April 11th. Rev. W. J. Williams, the retiring Moderator, preached the opening sermon. Mr. W. R. Coles, late of Lincoln University, was licensed to preach. Rev. J. A. Chreshell and Henry Neely were elected delegates to the next General Assembly. The committees on the "Narrative of the State of Religion" reported that several revivals have been enjoyed and that nearly all the churches had received additions during the past year, in numbers ranging from one to twenty-two. The churches generally are more prosperous both spiritually and financially than they were a year ago, having preaching so seldom they are longing for more of it. The vacant churches are begging for the bread of life. They say, "We must have a preacher." Those that have regular services most of the time say, "We must have a minister all the time;" and they pledge themselves to make great sacrifices to support him.

We have never seen such a *strong determination* among the ruling elders to give on I support the gospel as was manifested at this meeting. Several of the churches had fair, soon to become self-sustaining. One poor man gave $15 last year. Sabbath-sch ols are prosperous. Weekly prayer-meetings are sustained in nearly all the churches. Commencing about six years ago with three ministers and two ruling elders; now we have 36 ministers, 27 churches, 5 presbyteries, 1 synod, 11 missionaries, and 2,000 communicants, of which 1,067 were added on examination the past year. Our Sabbaths-school day and Sabbath-schools are both in a very prospering condition, with about 90 scholars last sabbath; we have about 130 in all.

The colored people generally, are improving in all the elements of civilization. Many have secured lands and homes of their own, the past year.

A. S. B.

STATESVILLE, *April* 22, 1872.

Alabama.

MONTGOMERY LETTER.

Mr. Editor,—I came here in October last to take charge of Swayne School, which has been in successful operation for nearly four years. We have about four hundred and fifty scholars, most of whom are making good progress. There are six teachers, employed by the American Missionary Association. The colored people are beginning to see the necessity of securing homes for themselves. Since October there have been nearly thirty neat dwellings erected in the neighborhood of our school. Many are building small houses at first, to save rent. Some have paid most enough to get a small portion to buy a good lot, build a comfortable house, and furnish it with many of the conveniences and even luxuries of life. Many are putting up only the walls here, and much to build the front when they have saved rent money sufficient. This, in addition to the fact that any are depositing their money in them Freedman's Savings Bank, is one of the most encouraging signs among the colored people of Montgomery. If we are faithful, we may expect these results to culminate in the development of a high intellectual and moral standard among this people.

They may become, what they should be, no mean part of the American Nation.

J. M. M.

New Orleans Convention.

The National Convention of the colored people of the United States assembled at the State House in New Orleans, at noon, on Wednesday, April 10th, and was called to order by Lieut. Gov. Ranaier, of South Carolina. Lieut. Gov. Pinch back, of Louisiana was elected temporary chairman. Rev. Mr. Jordan, of Liberia, offered prayer. Among the delegates were, Frederick Douglas, New York, Rev. Phillip Martin, Massachusetts, Hon. Langston, District of Columbia, and R. B. Elliot, South Carolina. Frederick Douglas was elected President, and James Ingraham, first Vice President.

After a protracted and in many respects eloquent debate, the convention unanimously adopted the following resolutions:

Resolved, That we, in the name of the colored men of the United States, assembled in public convention whatever with the late Labor Convention, lately held at Columbus, Ohio, and also the convention of Liberal Republicans, called for the 1st of May, at Cincinnati.

Resolved, That Hon. Charles Sumner has by his *disinterested advocacy of our rights*, and his consummate statesmanship in securing a recognition of these rights in the Constitution of the United States, endeared himself to the colored people of the nation; and until Hon. Charles Sumner shall himself announce his secession from the Republican Party, we shall hold him to be as he has ever been, one of the purest and ablest members of our party.

Subsequent resolutions were adopted expressing gratitude to God and the friends of universal liberty for the recent blessings of freedom that have come to the colored race, declaring implicit confidence in the Republican Party, and eulogizing Senator Colfax. Very interesting reports of the proceedings of the convention are found in the New Orleans "Weekly National Republican," of April 16th and 21st.

Letter from Bermuda.

Dear Workman,—On our arrival here early in March, we found the weather cool enough for fire in the evening, while out of doors we gathered great bunches of roses, oleanders and geraniums, and revelled in the lucious fruits which were still so plentiful. These islands are wonderfully productive; for though they are acutely so far farther south than Savannah, their distance from the main-land gives them a climate of their own. Seven hundred and eighty miles of ocean lie between them and the mainland, and there is no island nearer than the Bahamas, five hundred miles away. Bananas, oranges, cocoanuts, lemons, pine-apples, peaches, strawberries, and indeed almost every known variety of fruit do well here; and sugar-cane, coffee, wheat, Indian-corn, potatoes of both kinds and arrow-root grow actually side-by-side. As I sit, I can see from my window a magnificent India-rubber tree, while with the dark green of the cedars which form the principal forest growth, is mixed the varied foliage of almost every one of the plants and trees which we suppose are peculiar to the tropics. The whole group of islands is only twenty-five miles in its greatest length, and seldom more than one in breadth; and the bays and inlets from the sea are so frequent as to make boats as necessary as houses. The inhabitants number about 12,000, and there is no appearance of want among them, although the resources of the country are entirely undeveloped, owing to the difficulty of obtaining skilled labor. In fact, the people are so surrounded by the riches of the climate and the fertility of the soil that they make little or no effort to improve the great natural advantages with which they are favored. Being a British colony, they depend mostly on England for their supplies, and use both English and American currency, though the number of Americans who reside here is very small. All the domestic animals thrive, and there are no poisonous serpents or insects, while the excellent roads and beautiful scenery make walking and driving a continual delight. In fact, nature seems to have done her utmost to fill these little, lonely islands with loveliness, and a little energy on the part of the inhabitants would convert them into a garden of luxurious and beauty. Here, as everywhere else, the first necessity is work, and the productiveness and wealth of this colony are nothing in comparison with what they might be, if the people were energetic and industrious.

Bermuda with all its astonishing fertility serves no better purpose than to illustrate the law which makes ideal industry the price of success. Nothing comes to perfection here, because nothing is properly cultivated, and one can scarcely enjoy the loveliness for the thought of how much is waiting to be done. If trust our own Southern States may never present a parallel to this condition of things, and that our own workmen may never yield to the temptation of wasting the riches and fruitful soil as the owners of the small farms here have done.

Yours,

M. F. A.

An Interesting Meeting in Norfolk.

That spacious and attractive edifice, the Bute-st. Methodist Church, was filled to overflowing, Monday evening, April 29th, by the friends of the Hampton Normal School, to listen to speeches from various gentlemen upon educational topics. The Normal School Band, [J. S. B. Knox, leader, delighted the audience with appropriate music. Rev. William L. Lewis, Presiding Elder of the Norfolk District, Chairman of the meeting, made some very telling remarks. S. H. Jones, of Richmond, Judge Oldfield, Rev. M. Crane, Gen'l Armstrong, H. C. Percy and H. W. Blake, addressed the assembly. The large audience listened attentively to all that was said; and the moral power of the meeting as a link in the mighty chain of deeds that shall bind together the forces of progress, and unite the people in all that is good, was patent to all. This was the first appearance of the band outside of Hampton, and it did them credit.

Record of Graduates.

HAMPTON NORMAL SCHOOL.

Jane Butland writes from Charleston, West Virginia, "My school has been out two weeks. I expect to begin teaching again in another week. My Sabbath-school is increasing in numbers, and the children show great interest in learning the Bible."

Dee A Elliot closed his school in Bridgewater, Va., March 29th, and is now attending the St. Augustine Normal School at Raleigh N. C., which is under the care of Rev. J. B. Smith, D. D.

Joseph D. Gilbert finished his school at Seven Mile Ford, Va., March 22d. He seems to have met with good success. He was expecting to remain there and take a private school. He writes us, April 22d, that he has removed to Saltville, Va., and that his school was not well under way as yet.

George W. Latchmore has 33 scholars at Kilmarnock, Va., and he hopes some of them will be able to enter the Normal School at the beginning of another year.

William H. Lee closed his school at Carrsville, Va., March 7th, much to the regret of his scholars. He is now teaching at Branchville, Southampton Co., Va.

H. H. Lewis writes that his health has not permitted him to teach, except on the Sabbath and a little in night-schools, since he left Hampton. He is farming, and has a fine crop on hand. He speaks very favorably of the schools, both public and private in Accomac County, Va.

The Shaw Memorial School.

This school was opened in Charleston, South Carolina, in the spring of 1865, by the New England Freedman's Aid Society. Mrs. Pillsbury, wife of Hon. Gilbert Pillsbury, afterwards Mayor of Charleston was in charge of the school during the first weeks of its existence, until Mr. Arthur Sumner, the present superintendent assumed control. For two years it was held in the large public school-house on Morris Street, and was then removed to Military Hall. That same autumn, Mr. Reuben Tomlinson, superintendent of the Freedman's Bureau Schools in South Carolina, proposed that the money which had been raised by the Union soldiers who fought in that state to build a monument to the memory of Col. Shaw, of the 54th Mass. Regiment Colored Volunteers, be spent in building a school-house. This proposition was accepted; and before the next term began a plain building was erected on the corner of May and America Streets. It contains six pleasant, well-furnished class rooms, and an assembly-hall. This hall is a spacious, sunny, well-ventilated apartment, in which a primary class of seventy-five is taught.

There are three grades in this school, Primary, Intermediate and Grammar. No children who cannot read well in the First Reader are admitted. The usual number is about 350. Several scholars from the first class are now teaching in the country. The first class this term is small, owing to the poverty of the parents, who have been obliged to put their children to trades, or to send them into the country to teach. I would not advise any scholar to leave school to teach in South Carolina, for those already engaged in that business have not been paid for several months. The present scholars of the first class will probably be able to attend school several years longer; and some of them, it is hoped, will go to good Northern institutions to finish their education. They have finished the most important parts of arithmetic, book-keeping by single entry, and an elementary treatise on physiology, botany, and natural philosophy. Most of them can perform arithmetical combinations, mentally, with astonishing rapidity. I have never seen any children so prompt and accurate in their answers; nor any class equal to them, except at the Normal School in Framingham, Massachusetts. They are now studying algebra, history, grammar and composition, geography, arithmetic, and are about to begin Latin. English grammar is taught in the first four rooms; but only so far as it is useful to the children in their conversation and compositions. Drawing is also taught in the classes; not the kind which simply teaches the pupil how to make "pretty things," but constructive drawing, which trains the eye and hand, and will be useful to them in the pursue mechanical employments. Newspapers, children's papers and the "Nursery" are used for reading material as well as the reading books. The younger children study "Our World," and "Guyot's Intermediate Geography;" and the first class, "Warren's Common School Geography." M.

The new School Law of North Carolina, passed February 12th, 1872, provides that Teachers' Associations shall be held throughout the State. Any number of teachers, provided there are not less than twenty, may form such an association, and thus become a body corporate in law, competent to buy, hold, and sell real and personal estate for educational purposes. It is desirable that such an association hold an annual session of a month, for the purpose of improvement in teaching. It is proposed to form such an association in Wilmington, beginning on Monday, May 13th, at 9 A. M. Any teachers in North Carolina, or any persons intending to become teachers are invited to join the association which will be held at the Williston school-house, on Seventh Street. The session will continue for one month. The best methods of teaching the common branches will be thoroughly discussed, and various lectures on important themes will be given. Any one desiring further information can obtain it by writing to Rev. H. B. Blake, Wilmington, N. C.

During the month of April, the following persons consented to act, as agents for this paper:

Tazewell Bryant, Wytheburg, Va., Mrs. Mary E. Miles, Hillsboro, N. C.; Mrs. F. E. W. Harper, Philadelphia, Pa.; Solomon Burton, Cherrystone, Va.; James A. Green, Powelton, Va.; Rev. Francis F. Howse, Oxford, N. C.; Nathaniel Baker, Lake Drummond, Va.; Rev. Thomas H. Lomax, Wilmington, N. C.; J. B. Bonner, Dinwiddie Court House, Va.; Robert Johnson, Atlanta, Ga.; Miss Sarah A. Hodges, East New York, L. I.

Some of the illusions of life are kept up to a great age, and nothing but death can extinguish them.

THE SOUTHERN WORKMAN.

A Lady Horse Trainer.

The base of Mrs. D'Anthony's method is love, and a sincere belief that all our domestic animals can be made more subservient and useful as well as contented and happy by the law of love and patience than by any harsh measures.

I will name a single instance. Last Friday, a gentleman brought a colt (with its dam) to Mrs. D'Anthony to wean, it being four months old. No person's hand had ever been placed upon it, and it was perfectly wild. The dam was sent away, and the colt placed in a large room twenty feet by twenty, well littered. It has not heard a loud word, and has only been spoken to in the gentlest tones, and although thin is not the fourth day of separation from its dam, it is perfectly contented, eats and drinks heartily and every time Mrs. D'Anthony goes into the paddock, neighs with pleasure, and runs to meet her.

By any other treatment this colt might easily be spoiled, as it is one of a breed whose characteristic is never to forget a blow.—*Our Dumb Animals.*

We have gained much information and encouragement from letters sent us for publication by the following persons:

Rev. A. J. Billingsley, A. H. Canber, Wm. Cawthorne, W. B. Weaver, Rev. A. M. Barrett, Miss Anna E. Pitts, J. R. Edwards, Rufus Beckwith, Isaac A. Parker, Frank White, Rev. J. H. Spriggs and J. M. Martin.

Domestic and Foreign News.

The great event of the month has been the "Liberal Republican Reform Convention," which met on the 1st inst. at Cincinnati. This convention was called by Republicans who feel dissatisfied with the present administration, and who believe the time has come for a union of men of all parties to secure needed reforms, and a return to methods of peace. Carl Schurz presided. Horace Greeley, and Gratz Brown were nominated as the candidates of the convention for President and Vice-President. The effect of this action cannot yet be foretold. The Republicans not in sympathy with the convention, are expressing themselves as not alarmed at the nomination while the Democrats say that their National Convention to convene on the 9th of July, will define the policy of the Democratic party.

The most important thing done by Congress is the passage of the bill repealing the duties on tea and coffee, which has been signed by the President, and goes into operation on the 1st of July. Now that tea and coffee are to be cheap, we hope every Southern workman will abandon all stronger beverages.

The immense coliseum building, which was being erected in Boston for the Manifold Peace Jubilee, was blown down during a heavy gale, and was a complete wreck. It is being rebuilt however of the same dimensions, but on a simpler plan.

The steamer Geo. B. Upton, of the Richmond and New York line, was burned in Chesapeake Bay on the 3d inst, near Chincoteague. The passengers and crew were safely landed, but the cargo, consisting chiefly of tobacco, was almost wholly destroyed.

A train on the Nashville and Chattanooga Railroad, was stopped on the 18th ult, by a hail storm. The iron works on the dome of the locomotive were badly battered, and indentations made even in the iron jacket which covers the boiler.

Fourteen prisoners who pleaded guilty of conspiracy, were sentenced in the United States Court at Charleston, S. C., on the 1st inst, to imprisonment for terms ranging from two to ten years, and to pay fines ranging from one hundred to a thousand dollars. Fifteen more were sentenced the next day, to imprisonment for from one month to three years and fines. This concludes the trials of Ku Klux prisoners.

The members of the Japanese embassy are busily engaged in studying our institutions, visiting the various educational and military establishments. We hope they will not omit the Artillery School at Fort Monroe, or the Hampton Normal and Agricultural Institute.

The soldiers of the Grand Army of the Republic, are raising funds to erect a monument to the great war governor of Massachusetts, John A. Andrew. Governor Andrew was the first to urge the enlistment of colored troops, and every colored soldier should contribute a sum, however small, towards the memorial.

In Spain, the followers of Don Carlos, or *Carlists*, as they are called, have been making desperate efforts to overthrow the government of King Amadeus. It is reported that Don Carlos has been captured with about one hundred of his adherents.

Out of the grandest eruptions of Mount Vesuvius, of the present century, has been witnessed during the past two weeks. A number of lives have been lost, and much damage done to the adjoining land and vineyards by the overflow of lava. Even in Naples ashes fall to the depth of one or two inches.

A telegram from Bombay confirms the announcement of the safety of Dr. Livingstone.

In Smyrna a desperate conflict has taken place between Greeks and Jews, growing out of a report that the latter in their religious ceremonies had sacrificed an infant. Several persons were killed and wounded.

A terrible earthquake took place in Syria, which partially destroyed the old city of Antioch. Three hundred people were killed in the town of Antioch, and one thousand and six hundred in the surrounding towns and country.

The Island of Zanzibar was visited by a terrible hurricane in April, which sank or stranded 150 vessels, and seriously damaged the town. The loss is estimated at ten million dollars.

Agricultural.

(From the American Agriculturist.)

Working Stock.—The farmer's great dependence this month upon his working oxen and horses should lead to their having extra care, shelter, good feed, and grooming. As the heat of the season increases, it is important to give longer restings time at noon, especially to oxen. Bathe yoke and harness galls, as before, wash tender spots, and if possible ease the pressure upon them by pads or otherwise to prevent galling. Oats with barley, or cornmeal, or with barley-meal and Indian meal mixed and fed upon cut hay, is good feed to work upon, and a great deal more labor will be done by well-fed animals, than with others. Everybody knows what a difference it makes with horses, and this is quite as marked with oxen, which are seldom too fat.

Milch Cows.—The greatest care should be exercised, that the milk does not fall off before cows are turned to grass; the employment of corn-meal, wheat or rye bran, cotton-seed oil-meal (if the seed was well boiled), and linseed oil-meal, is to be advised, if the supply of grass has not held out. Bran may be fed very freely; corn-meal moderately, 2 to 6 quarts a day; oil-meal 3 pints to 3 quarts a day.

Sheep and lambs.—We are advocates of early shearing without washing. This necessitates giving the sheep shelter from cold storms—and this should always be done. Wool which starts when there is real necessity for covering, is stronger than that beginning its growth in hot weather and often when a diseased condition of the skin is caused by unscalding. Besides, early-shorn sheep are well protected when hot weather comes, and if not washed are not almost prostrated by coke which come after this great exposure. A little extra grain or oil-meal tells advantageously after shearing.

Young Orchards may have root crops between the rows. When these crops are hoed, cut up the weeds and mellow the surface around the trees. Corn shades the trees too much late in the season, and prevents thorough ripening of the wood.

Clean out the horse.—This is the only time in the whole year when the horse may be emptied of everything. It is barn-cleaning time as much as April is house-cleaning time. If you have several tons of old hay, let it alone—but if the mows and bays are pretty low now is the chance sweep, and use the rake and hay-barn every where. Most of the stock are then in the pastures, and stable floors can be lifted and examined. Timbers may be decaying, and should be renewed. Accumulations will almost surely be found under the floors and near the timbers which may soon cause decay unless removed, and which will be valuable additions to the compost heap. Soon the hay will be coming in; and so this work must be done before then. Store old hay and straw where they can be conveniently got at after the barns are full.

Rainy-day Work.—Other work for rainy days is mending rakes, horse-rakes, and forks—fitting up the busy-rigging for the wagons; examining and painting the mowing machines in order. The clover will be fit to cut before we are ready for it—it almost always is.

Insects.—Do not wait until some of the legion have made sad havoc, and then write to us for a remedy which shall dispatch them at one application. We know of no sovereign cure for insects or weeds except work. One should be among his trees frequently, and note the first inroads. The eye should be trained to notice the beginning of trouble. The caterpillars that are today feeding upon the leaves of one twig only, in a week will have scattered over the whole tree. Neglect the little web that is just observable, and in a short time the tree will look as if light had fallen upon it. The nests of the tent-caterpillar are easily pulled out by a gloved or bare hand. Take them early in the morning when the inhabitants are at home.

The Curculio is only to be caught by jarring the tree. It will fall and may be caught on a sheet. Let all secret insect remedies alone.

Asparagus.—Many forget that next season's crop depends upon a good growth of tops after cutting stops. Do not cut too late. Hoe over the bed; and it will be all the better if a dressing of bone or phosphate can be given.

Washington as a Farmer.—The farm of General Washington, at Mount Vernon, contained ten thousand acres of land in one body, equal to about fifteen square miles. It was divided into farms of convenient size, at the distance of two, three and five miles from the Mansion House. He visited these farms every day in pleasant weather, and was continually engaged in making experiments for the improvement of agriculture. Some idea of the extent of his farming operations may be formed from the following facts:

In 1797 he had 946 acres in grass; 600 bushels of oats; 700 acres of wheat, and as much more in corn, barley, potatoes, beans, peas, &c., and 150 with turnips. His stock consisted of 140 horses, 112 cows, 336 working oxen, heifers and steers, and 500 sheep. He constantly employed 250 hands and kept 34 plows going during the whole year, when the earth and the state of the weather would permit. In 1799 he slaughtered 150 hogs for the use of his own family, and provisions for his negroes, for whose comfort he had great regard.

Those who wish to do good to their fellow-man but whose means are limited, should not be discouraged after the example set them by Mary A. Goodman, a colored woman of New Haven, who died recently, leaving her whole property, some $5,000, to the theological school in that city for the aid of young colored men studying for the ministry. This sum is the savings of a life spent in such toil as washing and domestic service. She felt that the time was coming, in the rapid progress of her race and people, when they would require a more highly educated ministry, and she consecrated to this object the entire earnings of her life.

Children's Department.

Dear Children :—I wish you could read the charming stories that the different Months once told to the children who lived in the Black Forest, Max and Thekla. To separate stories in this beautiful book by Susan Coolidge seems like tearing a petal from a rose, and yet I shall perhaps be forgiven if I let *May* step out from her sisters and tell her own story:

"It was in a cold country, a long way from here, which I never visit till pretty late in the season. You have crocus and the sea to get to it. Once only red people lived there. They dwelt in wigwams, and didn't care much for me, except that I melted the snow which kept them from their hunting-grounds. But one year, on arriving I found something new. A ship lay on the shore, and people with white faces were pitching tents and building huts as if they meant to stay. Among them were some children.

"Of these, two particularly took my fancy, two little sisters, fair as lilies. One was almost a baby. When they sat at the door of the tent, I used to steal up unseen, and put their cheeks with my hand. They did not know it was I; but they liked it.

"The men were busy in cutting trees for the houses. The women had to cook and wash and sew. There was hard work in plenty for all. No one had time to amuse the little ones, and the idea occurred to me of making them a garden."

SEA-BIRD CATCHING.

"The place I chose," said May, "was a sunny way off in the woods, a hidden nook, just such as I love. The trees stood thickly about it, but they opened and left a spot where the sunshine could come in and warm the earth. There for many days I worked with busy fingers clearing away dead leaves and roots, and covering the ground with a moss carpet thick and soft, into which tiny coral points were stuck to please baby eyes. In the very middle I set a snow-white mushroom, glistening and white as an ivory umbrella; and all about it I planted and wreathed the sweetest flower I know,—a flower whose cups are as pink as a rose, and hold a fragrance so rare, that if a perfumer could collect it in his bottles it would be worth its weight in gold. When all was done, it was the daintiest little garden ever seen; and now it only remained to entice the babies thither to enjoy it.

"This was easy. I selected a warm day, that they might not catch cold; and, as they sat at the door of the tent, I crept up and sat beside them. They did not see me, but I whispered in their ears,—a low, coaxing whisper which I only use for babies.

"'In the woods,' I said, 'the pretty, pretty woods, are such beautiful things! Red flowers and blue flowers, for you to play with; and squirrels with frisky tails, and birds which sing all the time. Oh, such fun as it is!'

"The baby laughed out, and showed her teeth white as milk; but it was only at the song in my voice, the words she did not understand. The elder one listened; and, as I went on, her small feet began to twitch and dance, as if they could no longer keep still.

"'Come, Sissy,' she said. 'Let's go and take a walk over yonder where it is so green. Sister'll find you some flowers to play with.'

"Baby was all ready for that, or any thing else. To her, 'Sister' was quite a grown-up person, because she could talk plain, and wore a funny little russet petticoat like their mother's. So side by side the little lambs trotted away. There was nobody on the watch to see them go, and soon the dark wood hid them from view. I held Sister's other hand, and gently guided to the right path.

"It wasn't much of a path. There were tangled mosses and rough boughs to catch the little feet; but I held fast, and did not let them trip. And by and by, when we came to a smoother place, I took from my bosom a butterfly I had brought on purpose, and set it flying before their eyes. There was no danger of tears or fright after that.

"Such a jolly race as then began! I had ordered the butterfly to fly slowly, so the clutching fingers seemed always just about to grasp it. Such funny, tripping steps, such peals of glee! Never was a merrier hunt! The hunt led them a long way. Once Baby's fingers almost closed on the painted wings, but still the butterfly flew before, and still the children ran behind; when all at once a third baby appeared, to share the chase—another child, a tiny Indian boy. No dress had his small, dark limbs. A little bow was in his hand, a quiver on his back; and as he jumped from behind a bush, and joined in the frolic, it was like a brown twig flying after two snow-white blossoms blown from the tree.

"The little ones were not frightened. They took kindly to a new playmate, whatever his color might be. 'Sister' made friends at once, while Baby stared at him with her big blue eyes. On they trotted together; and by and by the nimble boy made a clutch which secured the butterfly, and the brown head and the fair ones met together over the prize.

"'Pitty! pitty!' cried Baby, and she patted the little Indian with her soft hand. Then the same soft fingers made a grab at the purple wings. Ah me! one of them came off in her grasp. My poor butterfly! The first of the season!

"The children were sorry. Children are always sorry," said May, tartly, "after the mischief is done; but I don't see that it makes them any more careful next time. In two minutes the dead insect was forgotten by everybody but me. I picked him up, you may be sure; and that evening made him a little grave under a partridge-berry vine.

"It was droll to hear the three babies talk together. They had no words in common, but they had fingers to point with, comical little heads to nod and wag, and eyes to explain the meaning of each gesture. So they got on wonderfully. The brown baby's name was Ah-gon-qua, but 'Sister' called him Ally.

"'My name Ruth,' she said, 'her name Baby,' speaking very loud to make it easier to understand.

"Ally tried to say it, but couldn't get nearer than 'Pate.' This was stupid; but he was a clever baby, for all that. He could take straight aim with his bow, and bring down a robin or a quail ten yards off. He knew how to find the water-springs. He could climb a tree, and swing like a jolly little polliwog. Fearless as a squirrel, he sprang about the trackless wilderness without pathway or guide, and needed neither, and knew no fear.

"All the time they talked, the little ones were getting deeper and deeper into the wood. They did not know where they were going; but I knew, and guided every step.

"And now they reached the garden. The sun lay warm and bright on the moss; and, at sight of the fairy cups of pink and snow and of the ivory mushroom, they laughed for joy.

"'Pitty! pitty!' cried Baby again, using her sole little word; and, with one consent, all three sat down together in the midst of the flowers. How I did enjoy it! The long, cold voyage at sea, the bleak spring, the crowded home in the tents where all were too busy to notice them, were forgotten as they sat there in my garden; and they buzzed like bees in the sunshine. It was the sweetest sight to see!

"Such games as they played! Baby pulled flowers till her lap was full. She tossed them about. She put heaps of them on her head, and screamed with laughter as they rained down into her eyes. Ruth meantime was turning the little Indian into a big nosegay. She stuck leaves all over him. His quiver she filled with blossoms. Round his head she put a wreath of long sprays. It was great fun. Luckily, the small russet petticoat had a pocket, and in it was a big ship's-biscuit; so, when dinner-time came, they ate that, and were not hungry. And long as the sun shone, the play lasted; and he stayed late that night, as if to enjoy the pretty show as long as possible. But at last the long shadows had begun to creep over the place, and I to feel embarrassed as to how to get my babies home again, when the bark of a dog was heard close at hand. Then I was easy; for I knew somebody was coming to find them.

"Sure enough, before the dusk had crept over the happy group in the sun, they came,—two men with anxious faces, and guns on their shoulders, and a pale, frightened woman. That was the Mother. They could hardly believe what they saw. Bears and savages had been in their thoughts all the way. Never once had they dreamed that the little ones were playing in *My* garden.

"How the woman ran when she saw the children! How she caught up and kissed Baby, and hugged little Ruth in her arms! 'O children!' she cried, as soon as she could speak, 'how came you here? How could you frighten us so?'

"Ruth looked puzzled. 'I guess it was the butterfly,' she said; 'it came along, and showed us the way.'

"'Who is this?' asked one of the men.

"'That's Ally,' explained Ruth.

"'Poor boy!' said the Mother. 'I thought even the savages were too tender of their babes to let them thus alone in the forest. We will take him home with us, husband, and cherish him. Perchance his friends may seek him out.'

"But to all their words and kind looks the little Indian was deaf. When they pointed to the setting sun in token that night was near, he pointed to the east as if to say that the same sun would rise again before long. They tried to entice him with caresses; but he shook himself free, and, signing to some distant part of the wood where his home lay, he emptied the flowers from his quiver, threw back his dark hair with a toss, and with a few active bounds disappeared from their sight. Ruth cried after him, 'Ally! Ally!' but it was all in vain. He was gone, and he never came back."

"And what became of Ruth and Baby?" asked Thekla.

"Oh! they went home with their Father and Mother; and good care was taken that they should not stray again. I used to visit them sometimes, and play with their hair and soft cheeks; and I taught them to call the pink blossoms by my name. 'May-flowers,' they are formed to this day; and they are such favorites, that I plant immense beds of them in that country every spring, and then people grumble that there are not enough."

Sea-bird Catching.

The Faroe Islands, a group of islands belonging to Denmark, are situated in the Atlantic ocean about three hundred and fifty miles south-east from Iceland. The people of these islands support themselves chiefly by catching sea-birds, which flock in great numbers upon the steep rocks of the coast.

They daringly do this pursuit. Every year many of the Faroese lose their lives in it. The fowlers provide themselves with a long cable two inches thick, on which is fastened a kind of seat. A beam is placed at the edge of the rock to prevent the rope being cut by the rough stone.

The bird-taker, seated on the end of the cable, is let down by six men. He holds a small cord in his hand, by means of which he can make certain signs agreed upon with his comrades. On reaching a ledge, the bird-taker ties the rope to any convenient point, and then kills as many birds as he can, catching them in his net, or seizing them with his hands. If he sees a hollow or a niche beyond his reach, where many birds are perched, he sits down again on his little plank, and, by jerking the rope, swings himself to the spot he wishes to explore.

The birds when killed are thrown to the men below, who are ready for them in a boat under the cliff.—*The Nursery.*

The Boy Who Did a kind Act.

I know a man of wealth whose first name is John. He lives in New York. He is a good man. He has given large sums of money to help the poor children. He was once a poor boy himself.

His parents died when he was ten years old. They had taught him to read and write, and, what is better still, to be good and honest and kind. But there was no one to take care of him; and one day he went forth to seek for work.

How hard it was for him to find any one to give him work? He asked of this man and of that. Ah! they none of them had any work to give him. At last he came to the store of Mr. Burns, who was a rich man, and, at that time, very busy. He was thinking of his ships when John came into the room.

"What do you want boy?" asked Mr. Burns. "If you please, sir, I want a place."—"I cannot do anything for you," said Mr. Burns; "for if I tried to do for all the boys who come to me for work, I could not find time to do any work for myself."

John made a bow, and left the room. Mr. Burns went to the window, and stood there lost in thought. It was a bitter cold day. The wind blew. Snow and ice lay hard on the ground. Not far off he saw a horse and cart. The horse's blanket had been blown off, and the poor horse stood shivering in the cold.

"I wish some one would take care of that poor horse!" thought Mr. Burns. While he looked, a little boy took up the blanket, and fixed it nicely on the horse's back, and then patted him tenderly, as if saying "Poor old fellow! It is too bad to leave you here in the cold."

"That must be a good, kind boy," thought Mr. Burns; and he threw up the window, and called to him. It was John, the poor orphan boy. He came back to Mr. Burns. "My boy," said Mr. Burns, "I will find a place for you in my store. You shall not want work any more." John's fortune began there. Though rich now, he does not let man or beast suffer, if he can help it, for want of a blanket.

—*The Nursery.*

Working Cheap.

"What does Satan pay you for swearing?" asked one gentleman of another.

"He don't pay me anything," was the reply.

"Well, you work cheap, to lay aside the character of a gentleman, to inflict so much on your friends and civil people, to suffer, and lastly, to risk losing your own precious soul, and all for nothing. You certainly are working cheap—very cheap indeed."

Every man, woman, and child who reads this ought to save *something*, even though it be one cent a day. Even this saving makes three dollars and sixty-five cents a year—the price of a good pair of shoes, or a good weekly newspaper.

WANTED.—a situation as Teacher, or Governess in a private family, by a young lady competent to teach English branches, French, Latin, Music and Painting. Address

V. V. WARNER,
Hampton, Va.

JOHN T. BENTLEY,

PRACTICAL

WATCHMAKER

AND

JEWELER,

FORT MONROE, VA.

A Fine Stock of

FANCY GOODS

always on hand.

Watches, Clocks, and Jewelry, Sold and Repaired.

Dealer in

GENERAL FURNISHING GOODS, NOTIONS, AND FANCY ARTICLES, STATIONERY, PERFUMERY, POMADES, COMBS, BRUSHES, AND PATENT MEDICINES, GUNTS' UNDERCLOTHING, SOCKS, GLOVES, COLLARS, AND NECKTIES, LADIES' FANCY GOODS, HANDKERCHIEFS, GLOVES, HOSE, NETS, ELASTICS, BUTTONS, NEEDLES, PINS, ETC.

Cake and Confectionery.

Fresh Homemade Cake of all kinds on hand and made to order. Tea Biscuit every day.

French and American Candy and Confectionery of every description fresh and pure.

NUTS, RAISINS, CURRANTS, CITRON, ORANGES, LEMONS, AND FRUITS.

Orders received and filled for goods of every description at regular market prices.

Agent for Perkins and Howe's

Safety Lamps,

and the

German Student Lamps.

Shades, Chimneys, Globes, Wicks, etc., always on hand.

MILITARY GOODS, CAPS, AND SOLDIERS' FURNISHING GOODS OF ALL KINDS.

JOHN T. BENTLEY,
Baltimore Wharf, Fort Monroe, Va.

Thank God for Little Children.

BY MRS. FRANCES E. W. HARPER.

THANK God for little children,
Bright flowers by earth's wayside,
The dancing, joyous lifebeats
Upon life's stormy tide.

Thank God for little children;
When our skies are cold and gray,
They come as sunshine to our hearts,
And chase our cares away.

I almost think the angels,
Who tend life's garden fair,
Drop down the sweet wild blossoms
That bloom around us here.

It seems a breath of heaven
Round many a cradle lies,
And every little baby
Brings a message from the skies.

The humblest home with children
Is rich in precious gems,
That shame the wealth of monarchs,
And pale their diadems.

Dear mothers, guard these jewels,
An sacred offerings meet,
A wealth of household treasures
To lay at Jesus' feet.

Father Taylor.

II.

In calling the attention of our readers again to this son of Virginia, and sailor preacher of world-wide fame, we desire to unfold more fully the secret of his power. Reference has been made to his catholicity of spirit. Akin to this, was his tender, loving, all-embracing sympathy; so that, instead of standing in cold, aristocratic reserve, apart from the multitude, in stiff, starched propriety, endeavoring to reach them only by the arms-length process of formal effort, he touched their hearts with his own, pouring around them the genial atmosphere of his affectionate spirit, and was thus such a preacher as a sailor described when he said to him, "I tell you what I likes; when a man preaches at me, I want he should take something warm out of his heart, and shove it into mine; that's what I call preaching." Such preeminently was his preaching, whose love was of such a tropical fervor; in whom "a Southern heart married a Northern brain." Hence he did not like long introductions; for, as he expressed it, "A hungry man would not spoil half an hour in whetting his knife and fork before he began to eat." Hence also the impetuosity with which he rushed on in his discourse, leading a foreign lady to say, "There were but two cataracts in the United States, Niagara and Father Taylor."

But we should altogether fail of any adequate conception of him as a preacher, if we did not consider also his wonderful dramatic power; acting out the same, he would set before his audience in such a natural manner that it seemed a positive reality, so that on one occasion, as he was describing a storm at sea, "The sailors became wrought up to the highest pitch of excitement, until one, thinking that all would certainly go down unless something were instantly done for the rescue, shouted with intense earnestness, "Out with the long-boat!"

The following are specimens of his style of address:—

DEAD IN TRESPASSES AND SINS.

"Dead! not only dead, but buried; and you can't get out! A big bowlder lays on the main hatch, keeping it down over your heads. You may go to work with all your purchases,—bars, handspikes, winch, and double tackles; but you can't make it budge an inch. The beef isn't in you! But hark! what is it that has the watch on deck? Jesus Christ. Now, sing out to him, and sing out loud. Ah! He hears you; and He claps His shoulder against this rock of sin, casts it off the hatch, the bars fly open, and out you come."

REDEMPTION.

"One Sunday he attempted to give to his sailor congregation an idea of Redemption. He began with an eloquent description of a terrific storm at sea, rising to fury through all its gradations; then, amid the waves, a vessel is seen labering in distress, and driving on a lee shore. The masts bend and break, and go overboard; the sails are rent, the helm unshipped; they spring a leak; the vessel begins to fill, the water gains on them; she sinks deeper, deeper, *deeper, deeper!* He bent over the pulpit, repeating the last words again and again; his voice became low and hollow. The faces of the sailors as they gazed up at him with their mouths wide open, and their eyes fixed, I shall never forget. Suddenly stopping, and looking to the farthest end of the chapel as into space, he exclaimed, with a piercing cry of exultation, "A life-boat! a life-boat!" Then looking down upon his congregation, most of whom had sprung to their feet in an ecstacy of suspense, he said in a deep, impressive tone, and extending his arms, '*Christ is that life-boat!*'"

SALVATION FREE.

"Christ came to seek and to save those who are lost. Thea come to Him, my lads; and don't continue skulking and sneaking in the wake of the Devil another second. You know what he is by sad experience, a chent and a liar. Don't you despise a cheat and a liar among yourselves, and curse him up la heaps? how much more ought you to loathe the father of liars. I say, you know the Devil, and you know what I say is true; then why not cut adrift from him and come to Jesus? He knows all the storms of life; He has encountered them all, and has promised to be with us all, even to the end of the world, if we will but give ourselves to Him. Then, in sunshine or storm, we shall feel safe. There is no mystery about religion; a poor, unlettered negro can get as much of it as the admiral of a fleet, by believing in the Lord Jesus Christ and obeying his commandments."

"On another occasion, preaching from the text of St. Paul, 'I have fought a good fight, I have finished my course, have kept the faith: henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous Judge, shall give me at that day; and not to me only, but unto all them also that love his appearing,' he suddenly stopped, and, looking up to heaven, cried with a loud voice, 'Paul! are there any more crowns there?' He paused again. Then, casting his eyes upon the congregation, he continued, 'Yes, my brethren, there are more crowns left. They are not all taken yet. Blessed be God! there is one for me, and one for all of you, who love the appearing of the Lord Jesus Christ.'"

CARELESSNESS OF CHRISTIANS.

"Alluding to the carelessness of Christians, he used the figure of a mariner, steering into port through a narrow, dangerous channel, false lights here, rocks there, shifting sandbanks on one side, breakers on the other; and who, instead of fixing his attention to keep the head of his vessel right, and to obey the instructions of the pilot as he sings out from the wheel, throws the pilot overboard, lashes down the helm, and walks the deck whistling, with his hands in the pockets of his jacket.' Here suiting the action to the word, he put on a true sailor-like look of defiant jollity; changed in a moment to an expression of horror as he added, 'See! see! she drifts to destruction!'"

TEMPERANCE.

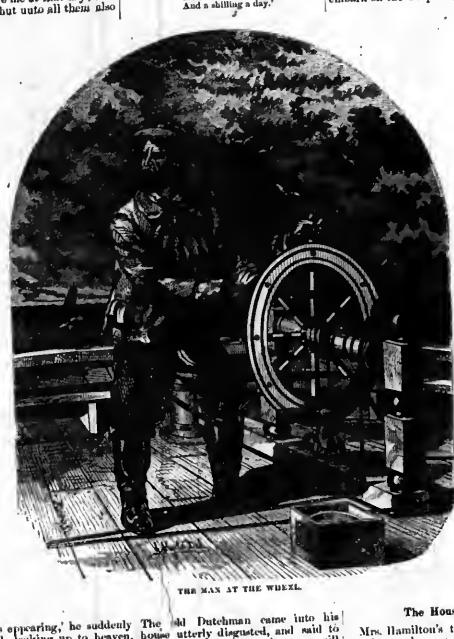
"Sailors cut off the bottoms of their pockets with a rum-bottle."

"'Your poorhouses are full, and your courts and prisons are filled, with the victims of this infernal rum traffic; and your homes and the hearts of your wives and mothers are full of sorrow: and yet the system is tolerated! And, when we ask men what is to be done about it, they tell us that "you can't help it!" No, you can't stop it! and yet (darting across the platform, and pointing in the direction of the monument, he exclaimed in a voice which pierced our ears like the blare of a trumpet) there is Bunker Hill! And you say "you can't stop it;" and up yonder is Lexington and Concord, where your fathers fought for the right, and bled and died; and you look on their monuments, and boast of the heroism of your fathers, and then tell us we must forever submit to be taxed and tortured by this accursed rum traffic, and we can't stop it! No! And fie, and we can't stop it! No! And yet (drawing himself up to full height, and expanding his naturally broad chest as though the words he would utter had blocked up the usual avenues of speech, and were about to force their way out by explosion, he exclaimed in a sort of whispered scream) your fathers, your patriotic fathers, could make a cup of tea for his Britannic Majesty out of a wholecargo, but you can't cork up a gin-jug! Ha!'"

MORAL AND LEGAL SUASION.

"Describing the difference between the two, he said it might well be illustrated by the course of a certain Dutchman, who came to this country, bought him a farm, married a matter-of-fact Yankee girl, and commenced farming. In getting in his hay, he hired an old American, whom he kept on butter-milk and whey, and agreed to pay a shilling a day. The countryman began his work; but every time he swung his scythe tardily through the grass he sung very slowly,—

"'Buttermilk and whey,
And a shilling a day.'



THE MAN AT THE WHEEL.

The old Dutchman came into his house utterly disgusted, and said to his wife, 'Mine frow, mine grass will never come in. That old fellow keeps say log,—

"'But ermilk and whey,
And a shilling a day;'

and mine grass will never come in.'

"'I told you so,' said his wife. 'You must do as we do in this country; you must keep him on bacon and eggs, and give him a dollar a day.'

"'Well,' he said, 'do as you please, mine frow.'

"So she called up the workman, gave him a change of diet, and told him of the change in his wages, if he could earn it. The workman returned to the field, with scythe newly sharpened, and began mowing the grass with great rapidity, singing as he worked,

"'Bacon and eggs,
And look out for your legs.'

"The old Dutchman came rushing into his house in great excitement, saying 'Mine frow, mine frow! Mine grass is all couing in, and mine bushes too.'

"'Moral suasion,' said Father Taylor, 'is like

"'Buttermilk and whey,
And a shilling a day;'

but legal suasion, well worked, is

"'Bacon and eggs,
And look out for your legs.'"

The Man at the Wheel.

What picture could be more appropriate to go with an article on Father Taylor than this one of "The Man at the Wheel" which has been kindly presented to us by Messrs. H.O. Houghton & Co., of the Riverside Press, Cambridge, Mass. How much depends upon this man. Do you see how anxiously he is watching the signs of the sky? It matters little how well built the ship is, how intelligent the captain may be, or how many strong and active sailors are on board, if the man at the wheel does not understand or neglects his duties. Upon him depends the lives of the passengers and the safety of the cargo. He has the compass before him and a chart of the course somewhere near by, and he must not fail to watch both carefully. The captain and crew repose confidence in him, and he is ready to brave all exposure of wind and storm for the sake of carrying the ship safely on her way. Suppose you take the Bible and turn to the third chapter of James, verse 4th, and read what is said about ships, and the man at the wheel.

All of you remember, I suppose, the song called "Homeward Bound" which the children sing in the Sunday-school. This is a part of it:

Wildly the storm sweeps us on as it roars,
We're homeward bound.
Look! yonder lis the bright heavenly shores,
We're homeward bound.
Steady, O pilot! stand firm at the wheel,
Steady! we near the outwarther the gale.
O, how we dy 'neath the loud-creaking sail,
We're homeward bound.

We are all sailing on the ocean of life. We shall come to some harbor before many years. There is only one resting-place, and that is found in Heaven. Jesus Christ is the Pilot for all who will trust in him. Let us all embark on the Gospel Ship.

The Household.

Mrs. Hamilton's three maxims are worthy to be remembered in every house:

"Do everything in its proper time.
"Keep everything to its proper use.
"Put everything in its proper place."

The working man's wife has to study two great requisites in cookery,—economy and cleanliness. It is a proof of sense and skill to be able to make a good, comfortable dinner out of a few cheap materials. The health of the body greatly depends on the kind and amount of food taken. All men who work hard require to live well. Common, plain food is often more nourishing than costly dainties; fortunately, a good managing wife will try to make the daily dinner nice and savory; and this is done at less expense than many suppose.

A bad cook puts the meat on the table either half raw,—looking disgusting—or dried to a chip, with no more nourishment than a bit of leather. And as to vegetables, a bad cook always spoils them; the potatoes are watery, the greens tough and gritty, the puddings heavy; and in such a dinner, there must be great waste as well as discomfort. The real goodness of every article of diet is only to be had by proper cooking. All pots and pans must be kept clean and dry. The cupboard in which food is kept must be clean, and any and every scrap left from a meal should be put into a dish or pan kept for that purpose, and *never used for anything else.* The first aim of the cook should be to dress vegetables well, for they form the best part of every meal, and a great variety may be cheaply introduced into the daily dinner, by a cook who rightly understands how to cook vegetables, especially potatoes. In Ireland, potatoes are boiled in their skins, in an iron pot, and carefully dried as soon as done, and usually they are very mealy and fine. Some cooks peel the potatoes carefully, and boil them quickly with a bit of salt in the water and directly they are done; pour off the water and dry them, shaking the pot to make the steam fly off that they may be mealy and good.

Of the three ways of cooking meats—roasting, baking, and boiling—roast meat is the most nutritious; baked the most wasteful; boiled the most convenient.

The good housewife will lay her dinner cloth and serve up her dinner neatly, thus adding greatly to its *relish* if not to its nourishment. — *Selected.*

Mrs. F. E. W. Harper.

This lady has recently visited this vicinity and addressed various gatherings of her own people on subjects of interest and vital importance. We are much interested in her work, and take pleasure in commending her as a lady of culture and refinement, and one calculated to do good. We hope all our readers will do all in their power both to hear and assist her, if occasion offers. Mrs. Harper is the author of several small books of poems, one of which is named "Moses, a Story of the Nile." Her last production is called "Sketches of Southern Life," and is an attempt to tell in verse many of the tales she has heard while travelling through the South. The poetry on our fourth page "Thank God for Little Children," is an extract from one of her early pamphlets. We feel that Mrs. Harper is extending a wide influence among her own people.

BALTIMORE
Steam Packet
Company.

For Baltimore, Md., and all points North South, East, and West.

One of the Company's steamers leaves Norfolk, Va., at 5 o'clock, P. M., and Portsmouth, Va., on the arrival of the Evening Passenger and Mail Train of the Seaboard and Roanoke Railroad, at 7 o'clock, daily (Sundays, P. M., excepted), touching at Fort Monroe, Old Point Comfort, Va., about 8 o'clock, P. M. One of the Company's steamers leaves Baltimore, foot of Concord Street, daily (Sundays excepted) at 4 o'clock, P. M., touching at Fort Monroe, Old Point Comfort, Va., about 4 o'clock, A. M., going South.

For rates of passage, freights, or other information apply to R. L. POOL, General Agent, Baltimore, Md.; CHAS. E. YEATMAN, Agent, Portsmouth, Va.; JOHN VERMILLION, Agent, Norfolk, Va., or to

LAND FOR SALE
On the Peninsula.

I have for sale 200 acres of land between Willoughby and Fort Monroe, Virginia. This section of the Country is fully and accurately described in the language of Captain John Smith: "Within is a country that may have the preeminence over the most pleasant places knowne, for large and pleasant navigable rivers, heaven and earth never agreed better to frame a place for man's habitation, were it fully manured and inhabited by industrious people. There are mountaines, plaines, valleyes, rivers, and brookes, all running most pleasantly into a faire bay, compassed (but for the mouth) with fruitfull and delightsome land.—CAPTAIN JOHN SMITH."

Men Wanted.

The world wants men—large-hearted, manly men:
Men who shall join its chorus, and prolong
The psalm of labor and the psalm of love.
The times want scholars—scholars who shall shape
The doubtful destinies of darkness passed,
And lead the ark, that bears our country's good.
The age wants heroes—heroes who shall dare
To struggle in the solid ranks of truth;
To clutch the monster error by the throat;
To bear opinion to a loftier seat;
To blot the era of oppression out;
And lead a universal freedom in.
And Heaven wants souls—fresh and capacious souls,
To taste its raptures, and expand like flowers
Beneath the glory of its central sun.
It wants fresh souls—not lean and shriveled ones;
It wants fresh souls, my brother give it thine
If thou indeed wilt be what scholars should;
If thou wilt be a hero, and will strive
To help thy fellow and exalt thyself,
Thy feet, at last, shall stand on jasper floors;
Thy heart, at last, shall see a thousand hearts—
Each single heart with myriad raptures filled—
While thou shalt sit with princes and with kings;
Rich in the jewel of a ransomed king.

Installation.

Rev. R. Tabnah was installed pastor of Bethesda Church of Hampton, May 19; sermon, with an address to the pastor, by Rev. J. H. Means, of Boston, Mass. In his excellent sermon from Is. 52: 7, Mr. Means hurling happily referred to the gospel as affording the best bond of union between the East and the West, the North and the South, Rev. Mr. Adams, pastor of the Baptist church in Hampton, very felicitously responded to that sentiment, in extending the hand of fellowship, speaking in substance as follows:

"My Brother,—It has been assigned to me to extend to you the hand of fellowship.

"There is something pleasing in that word, *fellowship*. It conveys to the mind, the idea of confidence and welcome. It is always a pleasant duty to welcome a co-laborer to the cares and responsibilities, and especially to the privileges and successes of the gospel ministry. It is the more so, when that co-laborer is possessed of talent that we respect, and piety that we admire.

"Besides these general feelings, there are two thoughts, which render this duty, on this occasion, the more pleasing to me, and I trust not less acceptable to you. One is that I stand here as a *Southern* man, while you, my brother, are from the North. But what has latitude to do with the Kingdom of Christ? For more than forty years that I have been a resident of the South, my heart and soul have been identified with this section. Yet so far from entertaining feelings of hostility towards citizens and especially Christians from the North, I rejoice in every opportunity to welcome them among us. How much more when they come bringing with them the conservative influences that are ever associated with the gospel, aye with the very name of Jesus. I am glad of this opportunity of contributing, even a little, to stir up more friendly feeling between the sections that you and I respectively represent. I rejoice in the oneness of our entire country. Why should I not so feel? Four years ago, I traveled northward, visiting Philadelphia, New York, Hartford, New Haven, Boston and other places. And though my errand was not calculated to improve a feeling of welcome among strangers—I was soliciting aid to rebuild our church edifice that had been destroyed by the war—yet everywhere I met with no other feeling than that of kindness and Christian sympathy. I am glad of this opportunity of reciprocating, in at least a small degree, the good feeling then extended to me. May God make your coming among us a blessing to our community and to yourself.

"Another thought that renders this occasion one of interest to me, is that you and I represent different denominations of Christians. There are points of doctrine and of duty, on which we may differ in our conscientious views of what our common Master requires at our hands. Conscience is a delicate thing and is always to be respected. There is, however, enough of common ground on which we may stand and which we may plead with sinners to be reconciled to God. And while there is so much that is common and cordial then let us work together to win souls to Christ.

"With these sentiments, my brother, as a citizen, as a Christian, as a Christian minister, I welcome you amongst us, and bid you God speed in all your efforts to build up the Kingdom of Christ in our midst. May Grace, Mercy and Peace abide with you and with all them that love our Lord Jesus Christ in sincerity and in truth."

Then there was an appropriate address to the people by Rev. Mr. Beyer, of the Methodist Episcopal Church; other parts by Rev. Messrs. Thurston, Smith, and Parker.

This union of brethren representing different sections of the country, and various denominations of Christians, was eminently suited to the occasion of installing the pastor of this Union church. May the blessing of Heaven ever attend pastor and people, whose connection has been publicly recognized under such auspicious circumstances.

The Free School.

Teachers, the swarms of little children that go to your school are going to rule the country by-and-by. The nation entrusts you with the important duty of preparing them for great responsibilities. Be anxious and interested about their performance of every little duty; visit them at their homes; talk freely with their parents, and the effect will be excellent.

Make the school-room beautiful, let in the light and air; impure air is one of Satan's worst devices for ruining mind and body; light is health.

Bring in evergreens and flowers—plenty of flowers—and the children will love their delightful school-room, and their kind teacher; they will study better, and become better men and women.

Don't let the fence around the building be half torn down; have a neat fence and whitewash it yourself if nobody else will; plant trees in the lot that will throw a sweet and grateful shade over little children for perhaps a hundred years after you are gone.

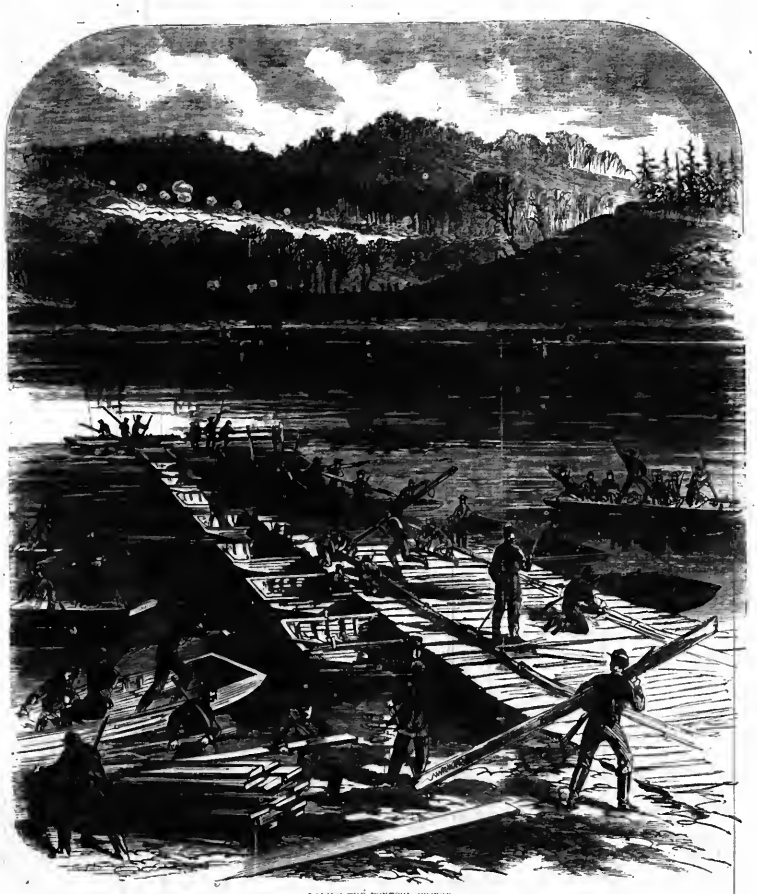
Be one among your pupils. Know them all thoroughly, and secure their love. Your work is the grandest God's creatures can engage in.

Remember that the real teacher aims to build up a true manhood, and womanhood; you must be a true man or woman yourself, before you are competent to teach the smallest school, or the youngest child.

Laying the Pontoon Bridge.

A SCENE OF THE WAR.

The river is the Rappahannock, and the engineers of Gen'l Sedgwick's corps are laying a bridge for the Federal troops. The puffs of smoke across the river are from the Confederate sharpshooters, who are picking off the Union soldiers as they hurry forward with their work.



LAYING THE PONTOON BRIDGE.

A few days after, followed one of the boldest deeds of the war. Gen'l Hooker crossed the river, took position on the flank of Gen'l Lee's army, and thought he would surely capture the Southern army.

But "Stonewall Jackson" struck such a terrible blow upon the right flank of Gen'l Hooker's army that the Union forces were only too glad to escape back to the side they came from. The loss on both sides was heavy. Never did greater disappointment befall those who followed the old flag.

The pontoon boats that were used to bring armies face to face and to destroy each other are now piled up in government yards and are decaying, as should all memories of strife and bitterness.

Spears are turned into pruning-hooks, and pontoons are turned into oyster boats. Many a one that bore the weight of troops and artillery is now used to carry small cargoes of produce across Hampton Roads. The "Grecian Bend" is one of the best known of these. Sometimes they are anchored out and small houses are built on them, from which men watch the oyster beds of Virginia, and shoot at all who intrude with wicked intent.

The printers who set the type for this paper can look out of their windows and see a wharf made out of old army pontoons on which several thousand tons of stone are being landed and carried to build a wall around the graves of five thousand soldiers, so that interlopers may forever be kept away from their "eternal camping ground," and no one may enter that sacred place but those who shall go by the appointed way, and tread the walks assigned to the living. This National Cemetery is in the centre of the Normal School grounds, and forms a most instructive feature of the place. Those who are studying and improving can, as they sit at their desks look out of the East windows of the Academic Hall and see the graves of an army of men who "died to make them free."

When the wall is built, the pontoon boats will perhaps become sail boats, and until they decay, go plowing through the waters of the York and James Rivers, helping men to earn money to take home to their wives and children.

Let us be glad that the machinery of war can be put to so good use, and let all bitter memories fade ere the last of the pontoons shall have made its last voyage.

There are few, very few, who will own themselves in a mistake.

Work among the Freedmen.

The following letter from a colored teacher in North Carolina to a friend in Massachusetts, illustrates the life that is before those who devote themselves to teaching the Freedmen. These teachers must be men of resource; they have more use for the hammer and saw than for Latin and Greek: they must begin with nothing and create everything. All honor to those who go bravely into this work, fight through every difficulty and lead the people up; how much better than to plunge into political strife ending too often in utter ruin:

"I have been fighting against rum and tobacco and snuff ever since I have been here. Of all the fights and street fusses, of all the snuff-dipping and tobacco chewing, of all the hedge-ground rum shops, you never saw. You never saw so many drunken men and women in all your life; I've seen more than fifty drunk at one time. The freedmen drink enough, but they are a great deal less habitual than the whites. We have a larger percentage of poor white trash,—which has ever been the curse of the South—too ignorant for anything but to throw away their money and their votes.

"I was ushered into a small room, eleven by fourteen, and told it was my home for four months. Nearly two are gone—six weeks. Not a place for the blessed sun, not a plank used in making it, a wooden chimney, etc. When I came here you could sit in the house and see the hogs, dogs, chickens, ducks, and other animals under the house through the cracks in the floor. Rafters stared me in the face all the time; I could see all the seven planets through the roof, and take a transit of the stars from one night to the other. Not a desk or blackboard in the school-room, though they have had six sessions of four months each, here. Is not here work? I went to work, made desks for sixty children, sent to Boston for blackboard slating, made me blackboards for twenty people, bought books and slates, etc., for the entire school; spending some twelve or fifteen dollars out of my own pocket, not a cent of which I expect to get back. Not a soul has come forward and offered to pay any of the expenses, yet all were incurred for their benefit. Besides spending the money, I did all the work; went to the saw-mill for the lumber, dressed it, and made the desks; borrowed a brush and painted the walls. This is not all—I have changed my room from a hovel to a parlor; taken up and relaid the floor, ceiled it all around, made brick hearth, papered the room, and am going to have some glass windows if I have to buy them. I had twenty-four in the first day, have over sixty-four now, some very bright, but oh, how stupid, how stupid are so many of them! How could it be otherwise? Not a toy in early childhood to train their minds and hands, not a single mother who can answer the childlike questions, but rather those who whip them for asking childish questions for information. I have to hear fifteen classes every day; wherewith shall Normal or any other method be followed? Am on the floor ten hours and a half every day—day school and night school. Have about ninety-five under my control, in day, night, and Sunday-school—work all day every Saturday.

"Yours truly,

"DAVID P. ALLEN."

Office-holding.

The kind of patriotism most worthy of imitation is that which studies least its own honor. The love of power for personal ends is a love so vulgar in itself that it has brought discredit upon the whole fraternity of politicians. A man who values power only as a means of doing good to his country, is a patriot of the stamp of Washington. But a politician who seeks office for its pay or for its dignity, merits far less respect than the most humble laborer whose industry is adding to the national wealth.

Office-holding unfits a man for other occupations; it is necessarily uncertain, and in the long run unprofitable. The chief justice of the United States could not afford to hold his position merely for the pay, because he could make more in private practice. Many railroad and other corporation presidents get more than the President of the United States. The same talent applied to business pursuits will raise a man more steadily and surely than attention to politics, and without sacrificing his conscience and the respect of those whose respect is worth having.

No one should be willing to hold office till satisfied 1st, that he is amply qualified; 2d, that his country really needs him in that more than in any other capacity; 3d, that he can do the country as much good as anyone else can, who is likely to be selected.

Railways are public benefactors, indeed. They loom every man to know his own station, and to stop there.

THE Southern Workman.

DEVOTED TO THE ELEVATION AND EDUCATION OF THE COLORED RACE.

PUBLISHED MONTHLY.

S. C. ARMSTRONG, *Editorial Manager.*
H. W. BLAKE, *Assistant Editor.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will contain not more than one thousand words, will furnish a variety of choice reading, will tell what is going on in the world, and will aim to please and profit both old and young.

All are invited, the young especially, to ask by letter, questions on any subject upon which they wish information.

It shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

To every church which shall send us one hundred one dollar subscriptions for "The Southern Workman," we will send a beautiful communion set costing twenty-five dollars.

We will give a handsome Bible for sorting thirteen dollars, to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars for every one hundred subscriptions; or $12.75 for every twenty-five subscriptions; or $13.50 for every fifty subscriptions.

At these rates the papers are to be sent in one bundle to one address to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, JUNE, 1872.

In the growth of our new society, the dependence of social order upon the intelligence and morality of our women can scarcely be over-valued. The short-sightedness of in any way neglecting the education of our young girls will soon bring its own punishment. Because the majority of women marry and do not perhaps directly labor for their own support, it is none the less necessary that they should receive equal advantages with the men. The work that men do in the world is not a whit more important than the work that women do. The idea that the women who are to become wives and mothers can be put off with incomplete training, or no training at all, is fatal to the best interests of society. While the results of their education are perhaps not so quickly seen, they are further reaching and more permanent. The characters of the children show what has been the education of the mother. The power of the children for good or evil depends very much upon the food they for the body and the mind that they receive from their mother's hands.

Woman's plan out the bend of the household, and the demands which are made upon her by the family, justify us in asking for her an education as broad as the work she has to do. When we consider how wide her influence is on society, how greatly the welfare of churches, schools, and other social institutions is affected by her position in them, we can hardly fail to see the need for a special, careful education of the women of our country.

A woman who has a husband, children and a house to care for, needs far more varied information than a man who has but one person of this limited employment, such as shoe-making or farming. As the health of the whole family is under her control, she needs, first of all, to know how to prepare for them food, wholesome in kind and quantity, how to guard them from disease, by the proper use of air, water and exercise, and finally, how to care for them when ill, with that tender nursing which is better medicine than can be bought from any doctor. Further, to the clothing of both children and father must be under her care. Her information on this point should include a knowledge of material, cost, and cut, which will enable her to keep all the many garments clean, whole and comfortable, at small expense. The charge of the house itself is again no small one, for it has first, to be kept clean and wholesome, and then to be made cheerful and attractive; not only a house, but a home. We want to see well-scrubbed floors and white walls; but more than this we want to see a few bright pictures on the walls and here and there in the room, some little ornament which shall please and refresh the eyes of parents, children, and friends. We want the plastering away from the front doors, and in their place, we want the brilliant flowers and luxuriant vines which cost so little, and give us back so much. All these things owe their origin and continuance to the thoughtful patience of the wife, the help-mate, and mother. She it is who must watch over the growth of the children, their school-going and home training. From her, in their first childhood, they should learn lessons whose worth to them in after life is not to be estimated, and from her their earliest teaching, in folly or wisdom, is sure to come.

An ordinary woman living an ordinary life here amongst us, has to feed, to clothe, to nurse, to teach the members of her household, to order the house itself, and not unfrequently the garden as well, and furthermore to do something in and for the church, of which she is, or is to be hoped, a member, and in other ways to assist her neighbors and keep her place in the society about her. Now can anybody who is not utterly careless of the meaning of its life, deny that this is a great work, a work that calls for intelligent, well-trained, good women? All the happiness and usefulness of our homes depends upon our women. We can do nothing well without their sympathy and cooperation, and to leave them uneducated is like leaving our fields and gardens untilled and unsown, and trusting to chance for the wheat and corn and fruit that are to keep us alive. We forget when we lightly estimate woman's work, that the material with which she has to work is the most expensive material in the world, namely, human souls and bodies, and that no ignorance can be more costly in its possible results to the race, than the ignorance of our wives and mothers whose work through quiet and commonplace, is also great and abiding. Let us remember then that the seed which we sow, painfully and slowly it may be, in the education of our young women, will bring in a rich harvest to the next generation, will not leave us, even in our day, without our reward.

North Carolina.

Mr. Editor,—I think your readers may be interested in some account of a trip I have just taken to Fayetteville, in the interests of the "Workman." Although I did not obtain many subscribers in the short time I was there, yet I regard the trip a successful one, because the attention of the people has been called to the paper and the way opened for an agent to work. Fayetteville is a beautiful village. It is located far above the river and swamp, so that it is free from malaria. The centre of the town is about a mile from the river. Until lately, the town has had no other communication with the outside world than by the Cape Fear River, but it is now connected with Raleigh by rail. When the cotton factories are rebuilt, of which there is a prospect, Fayetteville promises to grow rapidly. The town is seen intelligent, and the extreme of poverty and wealth that are found in some places, do not occur here.

The colored people of Fayetteville have a large Methodist church, and they are about organizing a Baptist church. I had the pleasure of attending a meeting of the two temperance societies in the Methodist church. Like most places in the South, there is need of such societies here, to educate the people to feel an abhorrance of intoxicating drinks. The first thing I did on arriving in town was to inquire for Mr. Harris' school-house. I found it to be a fine two-story building, in a large yard, enclosed by a neatly-painted fence. I could hardly believe that this was a colored school-house. As I entered, I was forcibly reminded of the promise, in the first number of the "Workman," to take the reader into neat New England school-houses. There are many more elegant and costly school buildings in New England than this, but I doubt if a neater one can be found anywhere. It was built by the Government, and for once Uncle Sam's money was not wasted. Mr. Harris superintended the work himself, and saw that none but the best materials and the best workmen were employed. He is governed by the same principle in his school. Everything is done thoroughly. Everything I heard or saw was done in the most orderly and systematic manner. It seemed as though those children must be an exception to the masses.

Fayetteville is connected with Wilmington by a daily line of steamers. The trip takes from eighteen to twenty hours.

J. D.

Biddle Institute.

Founded by the Presbyterians of the North in 1867, for the purpose of training men for ministers and teachers for the colored race, the progress of this Institution has been very encouraging from the beginning. The first year there were 43 students, this year there are 111. They began with two professors, now they have four. Although the college building is large, three stories high, yet with one respectable dormitory, they had to turn away some students the past year for want of room. They expect to enlarge the buildings this year.

President over by Rev. Dr. S. Mattoon, assisted by three professors, the Institution is now well manned. With a handsome lot of 10 acres most beautifully situated, with two good professors' houses, the entire property is worth about $15,000. Situated upon a handsome eminence, surrounded with sighing pines, and overlooking the beautiful city of Charlotte, it is a very nice place.

COMMENCEMENT.

Leaving Statesville at half past seven, amidst the glee and excitement of a throng, in the "Grand Excursion Train," thrilled with the stirring music of the Statesville Brass Band, the scene was grand and imposing. The throng, interest and excitement increased as we approached the beautiful city of Charlotte. Landed there, upon looking around a moment, we found Prof. Shedd's house and began walking to carry us on to Biddle.

After arriving there, we found a very large crowd of fine-looking, well-dressed colored people, sprinkled with a few whites, comfortably seated in front of the college, attentively listening to the very interesting dialogues, declamations, debates, original essays and original orations of the students. The oratory and ability displayed by the young men and orations, etc., together with the attention, order, decorum that characterized the whole performance were highly creditable to the Institution and to the progress of the students. Some of the best performances were by those whose skin is the blackest, proving that the best talent is not owing to the mixture of the white race. There was one young lady from South Carolina, who delivered an original oration on "The Bible," which, for comprehensiveness, unity, system and impressiveness in delivery equalled by one so young. The same may be said of one of the original essays.

A. S. B.

Ohio.

TO THE EDITOR OF THE SOUTHERN "WORKMAN."

Mr. Editor,—The din of preparation has been sounding through our quiet village for some time. Everything one could hear, was about the celebration of the 15th Amendment, which took place at Cleveland, Ohio, Wednesday, May 15th. Most of the negro citizens of Oberlin went down this morning on the six o'clock train, and were met at the Cleveland Depot by an escort of citizens who conducted them to the central Rink on Euclid Street. Every train seemed to be loaded with people who came to celebrate those *perpetual rights* granted to us by the 15th Amendment.

At nine o'clock, the "Ohio Lodge of Oddfellows," the "Grand Army of the Republic," and the Cleveland Band, marched to Erie Street, where the procession was formed, the order of which was as follows:

1st, Grand Marshal Holden, with his aids.

2d, A posse of the city police.

3d, The Cleveland Band.

4th, The flag bearer, surrounded by an armed detachment of the Grand Army of the Republic.

5th, The Grand Army of the Republic.

6th, The Ohio Lodge of Oddfellows.

7th, A large wagon containing a representation of the Goddess of Liberty surrounded by thirty-two maidens dressed in white, each representing a State.

8th, Fifty carriages bearing the negro citizens, and visitors.

9th, Mounted marshals.

10th, The Akron Band.

11th, A large number of children, carrying banners and mottoes.

12th, Carriages containing visitors from other cities.

The above procession was a mile and a half long. It commenced its march at ten o'clock, and went through St. Clair, Water and Superior Streets, to the Square, around the square, through Euclid, Sterling, Woodland, Ontario, Michigan, Seneca, St. Clair and Ontario Streets to the Central Rink, where we were addressed by two fine speakers from Ohio and two from Cleveland. The speakers' stands were surrounded by banners bearing the following inscriptions: "African Slavery designed by man for evil, overruled by God for good." "The fair color of the skin—a man is a man for all that." "We know our friends, and love them too." "Education the great equalizing want of the Negro race." The whole assembly presented a grand appearance. The toilettes of the ladies, and the music of the bands were very good, and formed no small part of the gratification.

There was a ball at the Rink, but we could not go to it, because we were obliged to take the seven o'clock train for Oberlin.

Yours truly,

S. C. WINDSOR.

OBERLIN, OHIO, *May* 15th, 1872.

Bermuda Letter.

Dear Workman,—During my residence in Bermuda, I have collected some facts which may be of use to us at home, and I send them to you, hoping that they may prove available. The inhabitants of this island emancipated their slaves in 1834. Since then, the colored population has increased considerably, so that it now numbers over 7,000, while the whites count only 4,125. It is to the progress and condition of the colored people that I have been chiefly interested, and I find that here as elsewhere, education is the only key to the position. The English Government has been in authority here, have shown much prejudice in the management of the schools, and it is now impossible for a colored person to obtain anything more than an elementary education in Bermuda. Children leave school at fourteen or fifteen years of age, and will see at once how disadvantageous this condition of things is to the colored people, and I am glad to say that in spite of it they can boast of 121 electors out of 3416. An elector here is obliged to possess a freehold of £60, (about $300). They have also the best photographer on the Island, an excellent dentist, also several clergymen and teachers. One colored gentleman whose acquaintance I have made, has interested me extremely by the breadth and justice of his views in regard to the future of his people here. His feels that the whole spirit which still exists, both in politics and domestic life is unfavorable to all improvement, and speaks in the strongest terms of the necessity for education. Through his kindness I have been able to examine one of the primary schools, and find the children and teachers healthy, and cheerful in their work. But there is great need for more advanced schools; and if a properly endowed college could be established here, the benefit to this island and the West Indies would be immense. In fact, the whole history of the colored people here shows that their first great need is education, and that everything else waits for that. The universal cry among the more intelligent colored Bermudians is for better schools. Now that they understand the secret of the prosperity which they desire for themselves, I trust that the next few years will bring them rapid improvement. They envy us in America, our wider opportunities, but their own delicious climate and fertile soil will enable them to do well for themselves as soon as they shall obtain the better means of instruction for which they are seeking, and learn the importance of personal industry and thrift. The value to us of the experience of the Bermudians, is manifest, and I hope that your readers may gather from this brief account another proof of the immense importance of general education.

YOURS,

M. T. A.

Correspondence.

Our columns are open to proper inquiry on any subject of general interest.

Receiving the May number of the "Southern Workman," which accidently reached my eyes, I find its contents very important, and especially a contribution from Rev. J. E. Jones, Herndon, Va.; an old friend of mine. The progress in colored schools at this place and Glover, Greensboro, etc., under the supervision of Fred. A. Jones, is remarkable and surprising. The young colored population have an opportunity here, to obtain an education almost equal to wealthy people's children in colleges, without any expense whatever.

I took the opportunity the other day, to visit the above-mentioned institutions, and I was not a little surprised in noticing the eagerness of the colored youth to learn, and the thorough system and tact in teaching in operation by the respective teachers in these schools. All the freedman needs here, is a Savings Bank, where he can lay up his saved penny, and make good use thereof, either in purchasing a home, or in rainy days.

Science in power, but our friend Horace's political science, since he formed an alliance with the majority of former slaveholding citizens, will not result in his obtaining the colored vote in the fall.

INDEPENDENT.

Mr. J. P. Rexford, writing from Nashville, Tenn., says:

"I believe you will succeed, and do much good with your paper, and am much pleased with the matter, style, and arrangement of it. I am trying to encourage reading among the colored people, not only of religious and political papers, but of rural papers; has hard work, and costs much entirely final argument and perseverance."

Miss Fannie Reese, sends a pleasant letter from Smith's Station, Alabama; we quote a portion of it.

"I am glad your paper has reached this far. I shall copy sent from Columbus Ga., and immediately subscribed for it. I like your paper because it is for the workmen. Our hands are fertile, but we need laborers, good laborers, and justice. There are some who work and don't get pay, get discouraged, and go down to degradation. Others work, but rather live a disgraceful life of idleness. Some of the people seem to think that it is disgrace to work, and if they do work, they must have a certain kind to do, or won't work at all.

"If we can't make our living at one kind of work we must try another. I do want to see the people of the South come out of the low life some of them are living; and nothing can do it but work."

John H. Plackney of St. Michales, Maryland, tells us of his native town. "We have," he says, "about 100 canoes engaged in the oyster business, and 20 or 30 large boats that run to and from Baltimore, which is 60 miles from this town. We have a good church, and nice school, numbering 70 pupils in the winter. It is taught by James G. Wright, our preacher's son; each one pays ten cents per week.

Mr. Daniel D. Chaney, superintendent of Sunday-school, which has an attendance of over 60. The teachers are Miss Mary L. Webb, Miss Josephine Johnson, Miss L. G. Green, Miss Emma M. Roberts, Mr. Perry Trusty, Mr. Jacob Trusty, Mr. Alfred Banton and myself.

"The farmers are very busy planting corn, and the finest fields are a perfect object of beauty."

Our enterprising friend, Mr. J. R. Johnson, of Alexandria, Va., writes that that large city has no letter-carrier; he wishes the following item inserted:

"CITY RECORD!—Or it depends the life of our country; if our cities should go to ruin by corruption, our nation would go with them: If our cities are saved, the nation will be saved."

We are glad to recognise the efforts of Mr. J. W. Spaulding, of Bladen Co., N. C., who secured in April, a large number of subscribers for our paper.

A correspondent asks what proportion of the money in the Freedman's Bank was put in by colored depositors. The cashier in Norfolk, Va., reports that last year, nine-tenths of the funds were from freedmen.

We should be glad to hear upon this point from Bank Headquarters in Washington.

We have received interesting and encouraging letters during the past month, from Martha C. Butler, of Charleston, S. C., who subscribed for several copies, but says the people generally, are too poor to pay for the paper;—from Mr. Alfred Irving, of Lenoir Co., Va., who is making vigorous effort to get subscribers, and promises to pay us a visit in company with the Hon. Armond Nickens, of the Virginia House of Delegates;—from Mr. William Bassett, of Whitestone, Va., who sent us the money for seven subscribers;—from Mr. W. H. Rocks, of Greensboro, Georgia, who is trying to get us a club to take this paper;—from Wm. A. Bond, of Chuckatuck, Va., who is teaching with success, and says some of his children have a great thirst for education;—from Mr. Geography, Alsen as spelling in "Webster's Dictionary," nine are in "Venable's Arithmetic," and fifteen in "Holmes' Fifth Reader;—from W. R. Polk, of Union Point, Georgia, who has done nobly for the "Southern Workman" by way of getting subscribers;—from the Hon. Peter G. Morgan, of Petersburg, who says the people there take little interest in this work;—from Rev. Francis Hange, of Oxford, North Carolina, who hopes to get up a club of twenty-five subscribers;—from Mr. Tazewell Bryant, of Charlotte Co., Va., who has taken hold in earnest as an agent of this paper.—from Miss Sarah Ann Hodges, of East New York, who will act as agent;—from Mr. S. H. Jones, of Richmond, and many others.

The columns of the "Southern Workman," are at the service of those who desire to make inquiry for friends from whom they have been separated.

Manual Franklin Mason, formerly of Sussex Co., Va., now residing in Great Barrington, Mass., writes as follows:

"My mother's name was Hannah Mason. I left two sisters, one in Brunswick Co., Va., and one in Petersburg, Va. Sister Lucy was owned by William Powell's widow; sister Morina was owned by Albert Organ. I was owned by Thomas Massenburg's widow, Tabby Massenburg.

"Egbert was born in Estonton, Georgia, was owned by David Myrick, and was sold in 1862, for $675 to William Massenburg, who lived in Petersburg, Va."

Letters written by these two men, directed to Great Barrington, Mass., will reach them; they are very anxious to hear from their friends.

Decoration Day.

On the 30th day of May, the long avenues of the National Cemetery at Hampton were crowded with hundreds who came to decorate the graves of the patriotic dead who died that this glorious Union might live. Early in the day, various loyal and military organizations arrived on steamer *Smith field*, from Norfolk and Portsmouth, accompanied by the U. S. Naval Band. Large crowds gathered about the Cemetery from the surrounding country during the morning. The exercises of the day began at 11 o'clock under the direction of Farragut Post, No. 3, Grand Army of the Republic. The first thing on the programme was a song, "Hernie Beal." Next came the reading of General Order No. 20, followed by Remarks by Commander Lincoln, Prayer by Rev. Mr. Very, Chaplain King, of Norfolk. R. G. Staples then led the assembly in the song, "From Earth's Dark and Shattered Places." Mr. Staples was then called upon by Thomas Kelly, of Boston, entitled, "Our Sleeping Comrades." After music by the band, another song was sung; "Before the Morning Broke." The oration of the day was then delivered by Col. Hiram Foster. It was an eloquent tribute to the honored dead, and breathed a spirit of Christian forbearance towards those who fought on the other side. The Choir of the Normal School then sung a hymn. Surgeon C. McDermot, of the Military Asylum then made a few remarks, which was all his health permitted. The last song, "Breathe Softer Sighs, Oh, Tender Spring" was then sung, and then came the closing prayer by Rev. James H. Beyer, of Chesapeake City, Va. The solemn ceremonies of decorating the graves was then performed. The exercises of the day passed off in a way to give general satisfaction.

The corner-stone of the First Baptist (colored) Church, Rev. Wm. Taylor, was laid with appropriate ceremonies on Monday, June 17th. The "Rising Sun" Lodge, No. 2, Free and accepted Masons, of Norfolk, were present in full regalia. A drum band and large numbers of the population escorted the Lodge to and from Fort Monroe. The new church is on King Street not far from the Court House.

Don't vote for bad men. The party papers will tell you to vote the regular ticket. But the regular ticket has been made, perhaps by men who care nothing for your interests and nothing for the interests of the country, only for the money they can get out of their offices. If the men are bad, don't vote for them. It is a sin against God. Bad rulers may *ruin a country*.

We are under obligations to Jas. R. Osgood, of Boston, for the excellent portrait of General Grant in the number; to the Harper Brothers, of New York, for the Pontoon scene; and to John L. Shorey for the picture of Horse and Lamb.

The bass drum for the Boston Jubilee is twelve feet in diameter, while its circumference is thirty-seven feet and eight inches, and its width five feet. It is made of maple, requires twelve boards, each fifteen feet long and thirteen inches wide, and contains one hundred and ninety-five square feet, of timber. It is the largest drum in the world, and was taken from the factory only by tearing away the wall.

GENERAL NEWS.

Important Intelligence.

Presidential Candidates.

STRIKES IN NEW YORK.

INTERNATIONAL PEACE JUBILEE.

SPEECH OF SENATOR SUMNER.

RUSSIA.

ENGLAND.

The Convention which met at Cleveland on the first day of May; nominated for President, HORACE GREELEY, Editor of the "New York Tribune," and for Vice-President, GOVERNOR B. GRATZ BROWN, of Missouri. These will be the Candidates of the "Liberal Republicans," and probably of the Democratic party.

Horace Greeley has been a life-long Republican, and has stood for years on the side of universal amnesty, and equal rights. He has always advocated the education of the colored people, and of late, has done a great deal to expose the outrages of the KuKlox, and bring them to justice.

He gained favor with the Southern people by signing the bail bond of Jefferson Davis, and it now looks as if the whole Democratic party of the country will give Greeley and Brown their votes.

The Convention which met at Philadelphia, on the 5th of June, nominated for next President, ULYSSES S. GRANT, now President of the United States, and for Vice-President, HENRY WILSON, U. S. Senator from Massachusetts.

The name of General Grant is too familiar to need comment.

Senator Wilson has well earned the honor conferred by this convention. He has proved himself the steadfast friend of the laboring class, of the soldier and of the colored man.

There was some competition between Mr. Colfax and Mr. Wilson, which resulted as above.

The great mass of the Republican party throughout the country will probably give their votes to Grant and Wilson.

We shall give our readers from month to month accounts of the progress of the Presidential Campaign.

There has been among the mechanics of New York city a strike of carriage-horse portlocps. The workmen have demanded a reduction of hours of labor from ten to eight a day. Carpenters, coach-makers, masons, wheelwrights, shipbuilders and many others have joined in this effort to reduce work without reducing wages. Some employers have yielded, and others are holding out. Determined not to give way. There has been no violence so far, and no outbreak is expected.

Great preparations are being made in Boston Mass., for a "Grand Peace Jubilee," to continue from June 17th, to July 4th.

It will be the grandest series of concerts ever given. A mammoth coliseum has been erected for the purpose. The Choirs will consist of twenty thousand voices, two thousand musical instruments, the great organ, drum and trumpet corps, all the bands of Boston, infantry and artillery accompaniments.

The celebrated band of the Grenadier Guards of London will come from England; one of the most celebrated French bands; the best band of the German Imperial army; the Irish National band; and a large number of the most famous European vocalists will be present at this Peace Jubilee.

There will be an Anvil Chorus composed of one hundred anvils.

The national airs of all countries will be played.

This will make the greatest musical demonstration ever known.

One or the most noticeable political events of the past month was a speech made by Senator Sumner upon General Grant, in which he attacked the Administration with the greatest bitterness, his accused the President of giving lucrative offices to his relations, and of abusing his power in a great many other ways.

The speech was one of great ability, but so irritating that it lost much of its effect. General Grant and Senator Sumner have long been on bad terms, personally.

There is a brighter prospect for the amicable settlement of the difficulties between the United States and Great Britain. The English Government is believed to be satisfied with the course of this country and the tribunal of Geneva will probably proceed to arbitrate upon the cases presented.

The Suez Canal promises to succeed as a financial enterprise in spite of all predictions of failure. When it was first begun, the English papers ridiculed it as a Quixotic schemes which would bring disgrace to its projectors. When it was finished, they asserted that the difficulties were only half conquered. The drifting sand would soon fill up the channel, and the expenses of management would exceed the revenues or right of passage.

But it has been easy to keep the channel open, and even to deepen it by constant dredging; and the increase of receipts surprises and gratifies the friends of the enterprise. The income for 1869 and 1870 was only $972,818; in 1871 it advanced to $1,643,818; and for the months of January and February, 1872, it has reached the large sum of $515,406, or at the rate of over three millions of dollars a year.

The large sums invested by the French directors will soon meet with a lucrative return.

A Song In The Wood.

I found a shy little violet root
Half hid in the woods, on a day of spring,
And a bird flew over, and looked at it too,
And for joy, as he looked, began to sing.

The sky was the tenderest blue above,—
And the flower like a bit of that sky below
And between them the wonderful winds of God
On his heavenly errands went to and fro.

Away from the summer, and out of the South
The bird had followed an instinct true,
As out from the brown and desolate mid
Stepped the shy little blossom, with eyes of blue.

And he sang to her, in the young spring day,
Of the joy with which the world was astir:
And her beauty and fragrance answered him,
While the spring's blue heaven bent over her.

—*Merry Year.*

The Hampton Normal School.

RECORD OF GRADUATES.

Samuel C. Windsor is compelled to leave Oberlin College because of the weakness of his eyes, and expects to teach at Big Lick, Roanoke Co, in this State, next fall. Windsor paid his board bills at Oberlin, by waiting on the students at table.

Euan D. Tilghman is teaching school on a plantation in Southern Louisiana, and is said to be getting a salary of $75 per month.

Merrit R. Wallace completes his eight month's teaching, June 1st, and wishes another school at once. He has given good satisfaction to the County school officers as a teacher.

A party of Northern ladies recently visited Sarah Brown's school at Wilmington, N. C., and were so pleased that they went the next day to hear more of her admirable teaching.

James Fields has been for a year, Principal of the Lincoln School, in Hampton, Va., assisted by George L. Taylor. They have worked most faithfully, and the result will be a class of twelve finely prepared students for the Normal School next year. These colored teachers have prepared the largest and best class that ever came from that school, although for three years it had Northern teachers.

Henry Thornton, has just closed, after a long session, in Matthews Co., Va., and will assist his father during the summer, in the care of "Back River" Light-house. He reports the Country as beautiful, but the people as very ignorant.

CLOSE OF THE SESSION.

On Wednesday, June 14th, the session of 1871-72 closed with appropriate exercises. The graduating class were examined in the various studies of the course, while crowds of visitors witnessed their proficiency. The leading studies of the past year have been Reading, English Grammar and Composition, Rhetoric, Natural Philosophy, Chemistry, Algebra, National and Universal History, Moral Science and the Science of Civil Government. After three hours of examination, the trustees, officers, students, and guests gathered in the Assembly Room, and listened to an eloquent oration from Hon. Lucius Fairchild, Governor of Wisconsin.

"The Hymn of Peace" was sung, after which the graduates were called up in front of the platform and received their diplomas from the Rev. Geo. Whipple, President of the Board of Trustees, whose few earnest words of advice, deeply impressed all who heard them.

The Doxology was sung and a benediction pronounced.

The Normal School Band marched out of the Academic Hall followed by the Trustees and the graduating class, passing between the Junior and Middle classes, drawn up in two ranks facing each other; all the classes closed in behind the latter. Seniors and escorted them with martial music to the dining-hall. In the evening, there was a social entertainment, which the students appeared to enjoy richly.

They broke up at a late hour, and early the next morning over fifty of them returned to their homes by the Seaboard and Petersburg railroads.

Twenty-three received diplomas and are expected to teach in the public schools next fall.

We hope to publish the oration of Governor Fairchild and the admirable sermon preached last Sunday by the Rev. Richard Tolman, from the text, "Show thyself a man."

PRESENTATION.

Among the many interesting incidents connected with the close of the Normal School term, was the presentation to each member of the graduating class, in the name of the distinguished authoress, of a copy of Mrs. Lydia Maria Child's "Freedman's Book." Mrs. Child, who has taken a great interest in this school, made the liberal donation of fifty copies for the benefit of the students. No book is better calculated to stimulate the energies, or to encourage the desire for progress of those who have now started upon their life's work, and are no longer under the eye of their teachers, than this which relates the struggles and triumphs of so many of their race who, without their great advantages and in the face of every obstacle to progress, have achieved eminence in science, the arts, statesmanship and in literature. We thank Mrs. Child for her considerate kindness, and feel sure that our graduates will appreciate and profit by her gift.

Rev. James Marshall, formerly chaplain of Chesapeake Hospital and pastor of Bethesda Chapel, preached in the chapel on Sunday, June 18th. In the evening of the same day, Rev. Richard Tolman began preaching at the National Military Asylum as regular chaplain.

FRUGALITY may be termed the daughter of prudence, the sister of temperance, and the parent of liberty. He that is extravagant will quickly become poor, and poverty will enforce dependence, and invite corruption.

Agricultural.

(From the American Agriculturist.)

HINTS ABOUT WORK.

Take Care of Your Health.—It is easier to prevent disease than to cure it. Thousands of our Southern workmen are ailing, weak, never able to do a full day's work because they live on fat pork, bacon, and greasy food. Eat fresh meat, eggs well cooked, and always have a variety of food on your table. Then take plenty of time for your meals, and eat regularly three times a day, always at the same hours. Neglect of these things cost many men more money than they ever earned. The cheapest way to live is to live well.

Take Care of Your Horses' Health.—Give them a change of food in the spring; carrots or oats.

If you wish to have plenty of fat hogs in the fall, feed your pigs until they are three or four months old with all they can eat; after that, if they can run but in the pastures, give less grain and rich food.

Corn.—Nothing is more important in raising corn than to give it a good start. It is half the race. A fine, mellow soil is of the first importance; as a rule, you seldom harrow the land enough.

Keep up a steady warfare against injurious insects.

Plant all seeds as soon as possible, and keep the beds free from weeds.

THE CULTURE OF PEANUTS.

The best soil for peanuts is a light loam, light both in texture and color. The plant needs the mellow soil for its peculiar habit of growth, and a red or dark clay soil gives an undesirable color to the nuts, which depreciates their market value. The soil should be prepared by one or two plowings, so that a perfectly mellow bed be prepared for the seed. A shallow furrow is considered the best, for the reason that the harvesting of the nuts is rendered easier when they are nearer the surface; if the soil is deep they will penetrate farther than is convenient in gathering them. When the ground is prepared in a proper manner, furrows are to be laid off twenty-seven to thirty-six inches apart as the land may be good or richer. Cross furrows are made at the same distances apart. In each check a handful of guano or superphosphate is to be dropped, at the rate of 150 pounds per acre. If the land is deficient in lime, a dressing of 50 bushels per acre should be given after the first plowing, and harrowed in. This is a crop that needs lime for its successful growth. The seed should be shelled very carefully by hand; the skin must not be broken. Two nuts are dropped in each hill, and covered very lightly, not more than two inches, or three at the most. Directly after planting, cultivation with the plow commences, to be followed with the hoe and hand-weeding. The crop must be kept perfectly free from weeds and grass, and the soil be kept loose and mellow. Constant cultivation is necessary, as many as seven plowings being generally given until the vines spread and are in the way, when hand-weeding is to be resorted to. No hilling up is necessary. The stems which produce the fruit enter the ground without being covered with the soil artificially. Generally, the crop is ready to harvest early in October. The harvesting should be done before frost, if possible, as a hard frost destroys the vines and detaches them from the nuts. A plow with a broad, sharp share attached to a bar or coulter, so that no furrow is turned, is run up and down the rows, cutting beneath the plants and severing the taproots, or the vines are dug up with prong-hoes or forks. Hands follow the plow, who pull up the loosened vines and shake off the adhering earth, and lay them in rows to dry. Two days' exposure is necessary before they are ready for stacking for final curing. A stake, painted at both ends, and seven feet long, is thrust into the ground, rails are laid on the surface to prevent contact with the earth, and the vines are heaped around the stake in a tall, narrow stack, so that the air can easily penetrate and cure the vines. Straw is placed over the top to shed rain, and two weeks are required to thoroughly cure the crop. Mold or dampness, which would injure the color, is to be carefully avoided. On the brightness and lightness of the color the value in a great measure depends. When cured, the nuts are separated by hand generally, but this is a slow process, two to four bushels daily being the work of an experienced hand. A thrashing-machine is used by large growers in North Carolina, which thrashes with two hands 100 to 200 bushels in a day. The vines make a very excellent fodder, but when spread on the ground and plowed in, and a dressing of lime given annually, with some fertilizer at planting, the crop may be grown successively for several years. It is not probable that this crop would retain its present market price if its production was materially increased, the demand being but limited; and in view of its comparatively costly culture, the average yield of 30 to 50 bushels per acre does not seem to make it a very enticing crop. The season required for perfect ripening is long, and it is very doubtful if the nuts could be matured farther north than Virginia in this section, and Kansas in the West. Nuts of excellent quality were grown in Kansas last season; but the bulk of the crop is raised in East Virginia and North Carolina, in the localities adjacent to tide-water.

"WE NEED MORE CAPITAL."—Certainly we do—and the same is true of all occupations, in trade, commerce, or manufactures. But what is capital? It is simply *labor*, or the means of procuring labor. We have heard farmers bemoan their lack of capital while they spent several hours a day, in winter, smoking and talking around the stove at a village grocery. Many farmers need enterprise and pluck much more than they need capital.

Children's Department.

The Horse and the Lamb.

Many of the good children have asked for more stories about animals, and we think they will like the picture of the Lamb on Horseback and the story of "Rex." "The Song in the Wood," and the "Skipper's Daughter," we hope will also find favor in the eyes of the young folks, which will be reward enough for any efforts in their behalf.

The horse loves company. Some horses do not like to stay in a stable or a field by themselves; and yet if they can have a dog, a cow, a goat, or a pet lamb near them, they will be quite content.

I have heard of a horse that grew quite fond of a little dog. The little dog would run up to the horse, and lick his nose, and the horse would scratch the little dog's back with his teeth. One day, when a big dog flew at the little dog this horse with his teeth seized the big dog, and shook

THE HORSE AND THE LAMB.

him well. The big dog then ran off, and did not harm the little dog.

There was once a man who was a trumpeter, and who had a horse which he rode for three years in the wars in Spain. In a great battle this man was shot and killed, but his faithful horse would not quit the body. He stood by it for days; and, when found, he was quite weak from loss of blood and want of food.

If an old car-horse, after he has been turned out to grass, hears the roll of a drum, or the twang of a trumpet, the freshness of youth seems to come upon him; and if he at the same time gets a sight of men clad in uniform, and drawn up in line, it is no easy thing to keep him from joining them.

There was a man, a friend of mine, and his name was Jennings. He had a fine Arabian horse, and the name of the horse was Rex. Do you know the meaning of "Rex?" I will tell you: it is a Latin word, and means *king*.

Some of the best horses in the world are those of Arabia. Many of the people of that land live in tents; and they will let their horses come into the tents, and lie down on the floor with the family.

An Arabian horse will pick his way over the sleeping babies as carefully as their own mother could do. He will let the children hang on his neck, and mount his back, and will take great pains to save them from harm.

At last, a man from England, not in a tent, but in a house; and Rex was kept in a stable. He was such a wild, fierce horse, that he was called "The Mad Arabian." For a long time, he would let no man mount him.

At last, a man from London, whose name was Hughes, said he could tame The Mad Arabian. All the other men who had tried to rule the horse had used the whip and the spur quite freely. Hughes threw them both away, and said, "I will conquer this horse by kindness."

And he did so. Rex soon gave back love for love. He would let Hughes bridle and saddle and drive him where he would.

Hughes had a pet lamb, that followed him into the stable. Of this lamb Rex grew so fond, that he would let her mount on his back, and gambol upon his shoulder.

See what a power there is in kindness! Be sure the way of love, is the best way in dealing with the brutes as well as with men.—*The Nursery.*

The Skipper's Daughter.

Dora's father used to go to sea. He was what is called a "skipper," but I think a better name than that is "captain," for he was the captain of "The Daystar," a fishing-schooner, that sailed out of Gloucester on Cape Ann.

He loved his little Dora so much, that he did not like to leave her: but then she needed good warm clothes for winter, and she needed plenty to eat and drink both summer and winter; so her father had to earn money, that which to buy clothes and food both for Dora and for Dora's mamma.

Unlike many little girls, Dora loved to play with boats. Wherever she could find a good deep puddle, she would take her little boat, and sail it there. When other little girls had dolls in their arms, Dora usually had a boat.

Dora was very fond of her papa, and was always sad when he had to leave her to go on a fishing-voyage. Once he went away, and did not come back at the right time. Every day Dora would go down to the beach, and watch; but no sign could she see of her papa's schooner. She used to know it by a red streak painted on its sides.

One day, seeing that her mamma had been weeping, Dora asked "What are you crying for, dear?" The little girl used to call her mother "dear."

"I am crying for your papa, my child," said her mother. "We have had bad news from the fishing-grounds. There has been a great storm, and many vessels have been lost; and to-day I hear that your father's vessel is among them. We shall never see your poor father again, my little girl."

"Yes, we shall, dear: I know we shall," said Dora. "There, don't you cry any more. You shall see him, dear. You shall see him very soon."

"But how do you know that?" asked her mother.

"I *know* it, I only *feel* it," said Dora. I woke up last night, and felt it so much, that I was quite happy."

The mother kissed her little girl, and was quite cheered by her confident words. Still a week went by, and no papa came; and the mother once more grew sad.

Dora no longer went to the beach to look out for the schooner streaked with red. But when her mother said, "The Daystar' was lost, and your father must have gone down in her, in that dreadful storm," Dora replied, "Don't give it up yet, dear. Papa will come."

How Dora knew that her papa would come, I cannot say. I only know that this is a true story, and that Dora proved to be right.

The next day, after sundown, as her mother was putting her to bed, Dora started up, and cried, "Hark! whose voice is that? Don't you hear him? He's talking with somebody. It is my own papa, my own papa!"

And sure enough, a step was heard at the outer door; the door was pushed open; and in rushed the captain of the lost "Daystar," well and hearty, with a plenty of kisses for his little girl and her mother.

He and his crew had been saved in the long-boat, and, after some delay, had taken passage for home. "And the best of it is," said papa, "I am not going to sea any more; for I have found good employment on land, and now I can see little Dora and her good mamma every day of my life."

"I told you, dear, he would come back," said Dora, patting her mamma on the head. As for mamma, she tried to speak, but could not. Joy would not let her.—*The Nursery.*

Moses in The Bulrushes.

In the land of Egypt, there is a large river called the Nile. Sometimes its waters rise above its banks, and then the land is quite wet. But this makes the soil rich, so that plants thrive well there.

Many, many hundred years ago, a king's daughter was one day standing by the river's brink, where the flags grew tall and rank. All at once, she saw something floating on the water.

It was a baby boy, about three months old. He lay in a little ark, or vessel, made of bulrushes.

The king's daughter sent one of her maids to take the poor little baby from the water. This was done. The baby was brought to the king's daughter, and began to cry.

Then the king's daughter took pity on the baby. A nurse was sent for, and this nurse was no other than the baby's mother.

Now, you may think it strange that the baby should have been found among the flags by the river's brink. How could the mother have been so careless as to let it be there?

I will tell you how it was. The cruel king had ordered that all the male children of the Hebrews should be cast into the river; for he feared that the Hebrews would grow to be greater than his own people.

So the mother hid the baby three months; and when she could no longer hide him, she made a mark of bulrushes, and daubed it with slime and with pitch, and put the baby in it.

Then she laid it in the flags by the river's brink; and the child's sister stood afar off to see what would be done to him. Soon she saw him safe in the ark of the burial.

The king's daughter called the baby Moses, and treated him as if he were her son. He grew to be a great man, and the leader of his people. He made laws for them, and taught them to deal justly, and to love and serve God.

To this day, much that is taught us in our books and in our churches was given to the world through Moses. He once lay, a helpless infant, in that little ark amid the flags of the River Nile!—*The Nursery.*

BALTIMORE

Steam Packet

Company.

For Baltimore, Md., and all points North South, East and West.

One of the Company's Steamers leaves Norfolk, Va., at 3 o'clock, P. M., and Portsmouth, Va., on the arrival of the Evening Passenger and Mail Train of the Seaboard and Roanoke Railroad, at 7 o'clock, daily (Sundays, P. M., excepted), touching at Fort Monroe, Old Point Comfort, Va., about 4 o'clock, P. M., going South.

One of the Company's Steamers leaves Baltimore, Md., (Light street wharf), every Saturday, at 3 o'clock, P. M., touching at Fort Monroe, Va., about 10 o'clock, A. M., going South.

For rates of passage, freights, or other information apply to H. B. POOLE, General Agent, Baltimore, Md.; C. H. MCCU, Gen'l Pass. Agent, Portsmouth, Va.; JOHN VERMILLION, Agent, Norfolk, Va.—or to

H. PROCHES, *Agent, Fort Monroe, Va.*

THE

FREEDMAN'S

SAVINGS & TRUST

COMPANY.

The seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain to deposits has been $1,127,337.47, being an increase of *fifty per cent.* on the balance due depositors at the close of the present year.

There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1865, has been $241,317. The good interest of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is fullof promise. Before the next annual meeting we shall be able to report still more to the depositors.

The Bank pays six per cent. interest

on savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.

Special arrangements made for receiving business accounts and for allowing interest on *large deposits* payable by check, and bearing 4 per cent. interest.

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERED,

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and *without loss of interest.*

For full information about the Bank address the Cashier at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is Washington, directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, J. W. Alvord, Esq., or B. L. Eaton.

FREEDMAN'S

SAVINGS & TRUST

Company.

A National Savings Bank.

ESTABLISHED MARCH, 1865.

Chartered by the Government of the United States.

Deposits of five cents or any larger amounts received.

SIX PER CENT. INTEREST

paid on sums of five dollars or more. *All deposits payable on demand, with interest due.*

All accounts *strictly private and confidential.*

PRINCIPAL OFFICE,

WASHINGTON, D. C.

BRANCH OFFICES

in all the larger cities of the south and southwest.

THIS GREAT NATIONAL SAVINGS INSTITUTION,

established by the authority of the *United States Government* for the benefit of the *Freedman*, knows no distinction of race or color, and offers its great advantages to all classes alike.

SAVE THE SMALL SUMS.

Cut off your vices—*don't smoke—don't drink—don't buy lottery tickets.* Put the money you save into the

FREEDMAN'S SAVINGS BANK.

Over and Over Again.

Over and over again,
No matter which way I turn,
I always find in the Book of Life
Some lessons I have to learn.
I must take my turn at the mill,
I must grind out the golden grain,
I must work my task with a resolute will,
Over and over again.

We cannot measure the need
Of even the tiniest flower,
Nor check the flow of the golden sands
That run through a single hour.
But the morning dews must fall,
And the sun and the summer rain
Must do their part and perform it all
Over and over again.

The path that has once been trod
Is never so rough to the feet;
And the lesson we once have learned,
Is never so hard to repeat.
Though sorrowful tears may fall,
And the heart to its death be driven
With storm and tempest, we need them all
To render us meet for heaven.

Father Taylor.

III.

ANECDOTES.

Soon after he commenced his sermon on a very hot day, two or three of the landsmen got up and went out. He paused, folded his arms, and said, "If any others wish to go out let them go now, while I wait a moment." No one went, and he resumed his sermon. About ten minutes after, a sailor rose up with jacket on his arm (the most of the sailors were sitting in their shirt-sleeves) and said, "Please, sir, I must go now; I wanted to stay as long as I could; my ship is all ready for sea, and I must be on board at the hour." Father Taylor, with the elbow of his right arm resting in the palm of his left hand, with his finger on his lip, said, as the sailor turned to leave the house, "That's right, my son! you have done just right; you are the man for me, you are a minute man. Go, and the God of the sea go with you." And he continued his preaching with redoubled power. And, at the close, such a prayer was made for that sailor and that ship, and all sailors and all ships, that it seemed as if it would convert the abundance of the sea to God.

Father Taylor's ejaculations in prayer-meeting were not always flattering. Every one has heard of the wealthy gentleman, who, in the midst of a very warm meeting, made a speech, telling the sailors how much had been done for them, and how grateful they ought to be to the liberal merchants for all their goodness. As he sat down, with a feeling that the church would run itself for the year on this consecration, he was surprised by the inquiry, "Is there any other old sinner from up in town, who would like to say a word before we go on with the meeting?"

Sometimes Father Taylor's mirthfulness led him to use expressions that seem out of place when reported in cold blood, and especially when printed. But, in the warmth of a good prayer-meeting, nothing seemed out of place that was seasoned with the love of man. Smiles and tears were wonderfully mingled at that altar. A Mr. Snow not being very warm in his talk, the old father groans out, "O Lord! melt that Snow." A colored brother, who was speaking ardently, drew out of him the response: "There is rain in that cloud." A man by the name of Wood, who was not noted for his warmth in his talks, drew from Father Taylor the brief prayer, "O Lord! set fire to that Wood." An old German saying he no more doubted his acceptance with God than that the sun shone at noon-day on a cloudless sky, the old veteran exclaims, "Bring your Harvard learned ones to this man, and let them learn true theology."

At a Springfield conference, there had been a warm discussion on the propriety of publishing in "The Minutes" the names of the donors to the missionary fund, together with the amount contributed by each. It had been advocated on the ground that it would increase our contributions, as all would wish to see their names in the list, and every name would have an influence for the following year. It was opposed, on the contrary, that those who could give but little would not like to see so small a sum attached to their names in print, and might be deterred from giving at all. Father Taylor had made one of his characteristic, pointed speeches upon ostentatious giving, closing with the injunction, "Let not thy right hand know what thy left hand doeth." In reply, it was urged by Dr. Butler that it would be in opposition neither to the spirit nor the letter of Scripture to publish the names of these donors; citing, as an illustration in proof of this position, that Christ himself had made invaluable influence for generous and self-denying beneficence. The speaker, who had been really eloquent, had scarcely finished—he had not taken his seat,—when Father Taylor half rising and leaning forward, with a shrill voice, not loud, but perfectly audible in every part of the house, called out, "Will Dr. Butler please give us the name of that poor widow?"

Mr. Taylor was a keen politician, in his younger days, a Jeffersonian Democrat, made so by his ardent patriotism and by his experience of a British jail: in latter days he was a devoted Whig, an earnest admirer of Daniel Webster and his associates. When George N. Briggs was elected Governor, to succeed Marcus Morton, it became Father Taylor's duty to read Govenor Morton's Thanksgiving Proclamation. As he read the concluding words, "God save the Commonwealth of Massachusetts," he paused, and added, "He did that last Monday."

As a venerable and especially beloved friend, who relieved the vacant hours of a supernatuated ministry with the cultivation of grapes, announced as his text, "I am the true vine," and began by saying, "There are some vines that will not bear good grapes." "That's so!" breaks in Father Taylor, "you sold me one of that sort."

U. S. GRANT, PRESIDENT OF THE UNITED STATES.

QUAINT SAYINGS.

"The *bride* must be seated first," he once called out to the landsmen pressing down the aisles; and when a gentleman in a dress-coat appeared at the door, "Steward, show that man with a gauff-topsail jacket under the wing, and stow sailors under the hatches."

What could be finer than his description of poor preachers—"like camels bearing precious spices and feeding on bitter herbs?" Or his demand that worn-out preachers ought to be fed on "preserved diminouts?" Or his saying, when one asked if his son-in-law, Judge Russell, the popular collector of the port of Boston, was a Christian, "Not a Christian, exactly, but a very sweet sinner?" What term could be sharper than his remark on a man who had abused Eastburn camp-meeting in the Boston papers: "If I owed the Devil a hypocrite, and he would not take you, I would cheat him out of the debt"?

Once, when his sentences were getting rather tangled, and the way of extricating himself from the verbal labyrinth was not apparent, he suddenly stopped and said, "Brethren, my nominative has lost its verb, and can't find it,—but I'm bound to the Kingdom of Heaven all the same!"

In order to encourage Dr. Waterson to work and wait, he told him, "Not to carry the seed-basket and sickle into the field at the same time." To a prayer-meeting which had just been exhorted that repentance was never too late, for a sinner blown up in a powder-mill could make his peace with Heaven before he fell to the earth, Father Taylor said, "Do not trust to such a chance, brethren—dont wait for your dying hour before you repent—*perhaps you never will be blown up in a powder-mill!*" Somebody once asked him why he was not called "Dr. Taylor"—why they did not make him a doctor of divinity? "I suppose it is because my divinity never needed doctoring," was his answer.

Father Taylor, and the Young Preacher.

On one Monday morning, by the special invitation of a Methodist minister, I, a Congregationalist minister, was present at "The Ministers' Meeting of Methodists," in Boston. Father Taylor was there. In a lively discussion, a young preacher in a rough manner opposed the views of that venerable man of God. "Take those words back," was the exclamation of several. Father Taylor was seated next to the youthful and indiscreet talker. On the shoulder of the youth he placed his broad hand, saying, "Do let the young cock crow, I love to hear him." The crowing ceased.

J. R. J.

God Sees Us.

One day the famous astronomer, Mitchell, was engaged in making some observations of the sun, and as it descended towards the horizon, just as it was setting, there came into the rays of the great telescope the top of a hill seven miles away. On the top of that hill was a large number of apple trees; in one of them were two boys stealing apples. They had looked all around, and felt certain that nobody saw them. But there sat Professor Mitchell, seven miles away, with the great eye of his telescope directed fully upon them, seeing every movement they made as plainly as if he had been under the tree with them.

So it is often with men. Because they do not see the eye which watches with a sleepless vigilance, they think they are not seen. But the great open eye of God is upon them, and not an action can be concealed. There is not a deed, there is not a word, there is not a thought which is not known to God. If man can penetrate with the searching eye which science constituted for his use, the wide realm of the material heavens, shall not He who sitteth upon their circuit be able to know all that transpires upon the earth, which he has made the resting-place of his feet? Let the three little words at the head of this article not be forgotten, but, let young and old remember the great truth which they contain. "Thou God, seest me."

General U. S. Grant.

We present to our readers a portrait of General U. S. Grant, President of the United States. Born in Ohio, in April, 1822; he graduated from West Point in 1839. He followed General Scott and Taylor in their Mexican Campaigns, and distinguished himself by bravery and good judgment. He was there associated with General "Stonewall Jackson," General Robert E. Lee, and many others whose whose names have passed into history.

Will Virginia Farming Pay?

A letter from a county in Virginia, written on the question, "*Will Virginia Farming pay?*" says: "We have a practical farmer here from New York, who knows what to do with land, and who has been farming here for two years. His opinion is that farming will pay better here than in the North, and, all things considered, the lands of Virginia are more to be desired than those of any other State, North or South, East or West."

After the war he was stationed in Oregon and was promoted to Captain. Becoming tired of guard mount and Indian hunting, he resigned, and settled, first, in Missouri, then in Illinois, and went into the tanning business.

He appears to have given up all idea of military honor and seemed to have accepted obscurity as his destiny.

But the startling events of the war roused him from his quiet life. He soon became Colonel of the 21st Regiment Illinois Volunteers, and continued to rise till he attained the highest office in the gift of the nation.

We cannot relate all the story of his brilliant rise. Endowed with unconquerable pertinacity and a clear, steady judgment, he carried everything before him, from the days of Fort Donelson till the campaign which closed at Appomattox.

The people chose him for their President and under his administration the country has prospered. Grant once said "*Let us have peace.*" He has put down law-breaking everywhere and the nation has "peace."

Temperance.

The Rumseller.

Every individual in society is expected to contribute something to its advancement and interest. We remember to have read many years ago, of a company of tradesmen who united themselves into a mutual benefit society, and each one had to contribute to its support.

First, the Blacksmith came forward and said:

"Gentlemen, I wish to become a member of your association."

"Well, what can you do?"

"Oh! I can iron your carriages, shoe your horses, and make all kinds of implements."

"Very well, come in Mr. Blacksmith."

The mason applied for admission into the society.

"And what can you do, Sir?"

"I can build your barns, houses, stables, and bridges."

"Very well, come in; we cannot do without you."

Along comes the shoemaker, and says:

"I wish to become a member of your society."

"Well, what can you do?"

"I can make boots and shoes for you."

"Come in, Mr. Shoemaker; we must have you."

In turn all the trades and professions applied, till at last an individual came in who wanted to become a member.

"And what are you?"

"I am a rumseller."

"A rumseller! and what can you do?"

"I can build jails, and prisons, and poorhouses."

"And in that all?"

"No, I can fill them. I can fill your jails with criminals, your prisons with convicts, and your poorhouses with paupers."

"And what else can you do?"

"I can bring the gray hairs of the aged to the grave with sorrow; I can break the heart of the wife, and blast the prospects of the friends of talent, and fill the land with more than the plagues of Egypt."

"Is that all you can do?"

"Good heavens!" cried the rumseller, "Is not that enough?"

VOL. I. HAMPTON, VA., JULY, 1872. NO. 7.

The Bucket.

How dear to this heart are the scenes of my childhood,
When fond recollection presents them to view!—
The orchard, the meadow, the deep-tangled wildwood,
And every loved spot which my infancy knew!
The wide-spreading pond, and the mill that stood by it;
The bridge, and the rock where the cataract fell;
The cot of my father, the dairy-house nigh it!
And o'er the rude bucket that hung in the well—
The old oaken bucket, the iron-bound bucket,
The moss-covered bucket which hung in the well.

That moss-covered vessel I hailed as a treasure;
For often at noon, when returned from the field,
I found it the source of an exquisite pleasure—
The purest and sweetest that nature can yield.
How ardent I seized it, with hands that were glowing,
And quick to the white-pebbled bottom it fell!
Then soon, with the emblem of truth overflowing,
And dripping with coolness, it rose from the well—
The old oaken bucket, the iron-bound bucket,
The moss-covered bucket, arose from the well.

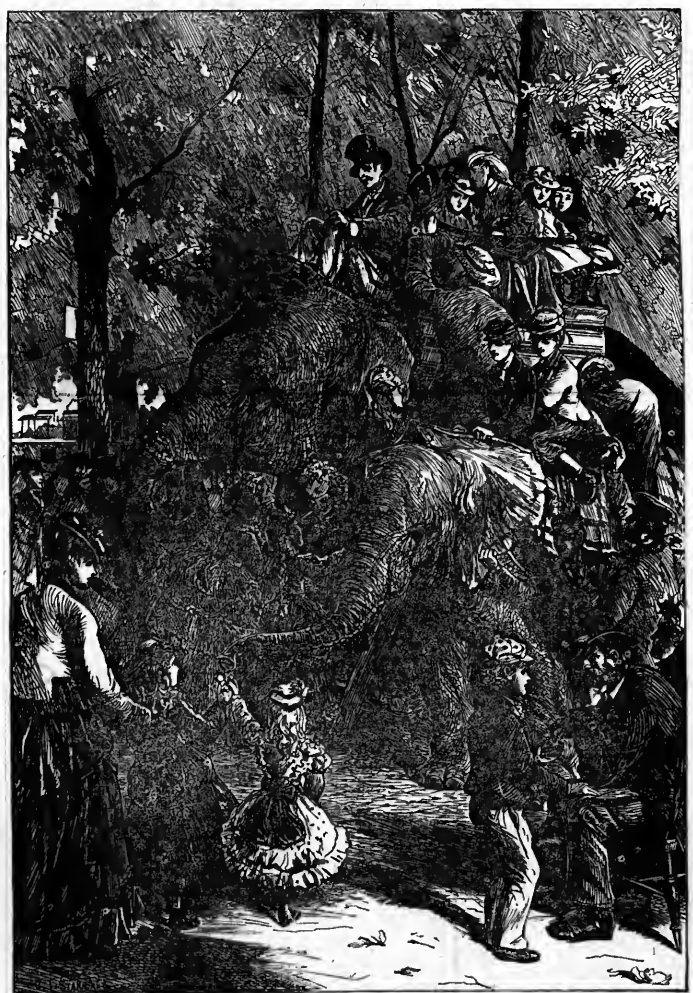
How sweet from the green, mossy brim to receive it,
As, poised on the curb, it inclined to my lips!
Not a full, blushing goblet could tempt me to leave it,
The brightest that beauty or revelry sips.
And now, far removed from the loved habitation,
The tear of regret will intrusively swell,
As fancy reverts to my father's plantation,
And sighs for the bucket that hangs in the well—
The old oaken bucket, the iron-bound bucket,
The moss-covered bucket that hangs in the well!

London.

Dear Workman,—You have asked me to describe to you some of the sights of London which are specially interesting to an American, and I have decided to head my list with the Zoölogical Gardens, [a scene in which is represented in the accompanying engraving, which has been furnished us by Messrs. Harper & Bros.—Ed.] and only wish that I could take many of the readers of "The Southern Workman" within the gates of this delightful out-of-door menagerie. For that is what it is, a great collection of birds and animals and snakes and fishes, with houses and ponds and dens and cages of their own, all enclosed in a beautiful garden which is a part of one of the big London parks. There are flowers and shrubs in wonderful variety, with bits of green sunny lawn and winding paths, and dotted thickly about are the homes of the strange creatures we have come to see.

As we enter we shall probably be attracted first of all, to the aviary, or bird house, for, swinging outside it in the sun are rare birds from every country and of every color; scarlet and blue, and emerald green, soft grey and flaming yellow, with spreading tails and shining crests and restless wings. Some of them are caged, but most are only fastened by the leg, and have such length of chain that unwary visitors sometimes suffer from the sharp claws of angry cockatoos or insulted parroquets. These impatient prisoners use their shrill voices with such effect that we can admire only in silence, for against their ceaseless chatter, human lungs stand little chance, and in spite of their beauty, we are glad to escape from their tiresome screams to the quieter house near by where the fawns and gazelles and zebras and antelopes, and all the pretty, graceful animals of their kind are kept, in large, separate stalls with a common yard in front where they can run free, and if they can, poor things, fancy themselves back upon their native plains. Close by are the ponds where the pelican and the stork and the scarlet flamingoes live, with their convenient little houses on the shore, and here too is an endless variety of ducks and geese and curious water-fowl, big and little, with sharp bills and flat bills, long legs and short legs, white and red and rainbow colored. If you look among the rocks just in this corner fenced off by some pretty rustic work, you will see the queer flat tails of the beaver as they glide about in the dark water, and presently pops up the shining head of a big seal, who crawls up on to the stones and looks uncomfortably like some half-drowned man. Here too are the porcupines and hedgehogs with their bristling quills, and some funny little animals whose names perhaps you never heard, wambats and ant-eaters. A high, strong fence, enclosing a sandy patch of ground and a big tank, enables us to peep securely at an immense rough-hided hippopotamus, and next to him are the rhinoceroses and the camels and long-necked giraffes. But, at this moment a tremendous, deep roar in the distance announces to anybody acquainted with the habits of the place that feeding time has come for the lions and their fierce neighbors, and hurrying past the cages of the wolves and foxes and jackals, we come, squeezed and pushed by a crowd of eager people, to the long row of dens into which a keeper is thrusting pieces of raw meat on the end of a long pole. Frightful indeed are the sounds that welcome this four o'clock dinner, which by-the-by is given only every other day, for these are blood-thirsty lions, tigers, panthers, jaguars and hyenas, and too much food would make them half mad and dangerously wild. Just at the end of their cages, which you may be sure are as strong as iron can make them, is a small paved yard with a tank half filled with floating cakes of ice, while on the stones by the side of it is a big, blue ice-block on which is lying *such* a white bear, a great, shaggy fellow straight from the ice-fields of the North Pole. Beside his yard again, is a regular bear-pit with stone walls and a strong pole in the centre. Here are black bears, and grizzly bears and cinnamon bears, and it is great fun to threw them bits of bread and cake, and see them swarm up the pole and sit on the top and growl, though it must be confessed that in the main, they are very good-natured, considering their close quarters.

But if we stop long with the bears we shall be too late for our ride on the elephant, and that, of all things we must not miss. Here he is, waiting for us with a sort of immense saddle on his patient back, with two rows of seats big enough to hold a dozen children. He will stand quite still while we pay our sixpence and climb up the ladder which the keeper holds against his side; and soon as the seats are filled with half-frightened children, off we start at a slow, swinging walk up and down the broad gravel path. A baby elephant trots beside its mother, and a funny little thing it is with its grey trunk and great, flapping ears. Our ride fortunately does not last long for we have still to look in at the monkey house where we must stop a moment to watch the baboons and apes, the great, grey, grandfather monkeys from Africa, and pretty little, sharp, black monkeys from Algeria, whose fights and frolics never fail to delight the little boys who especially patronize this department.



MONDAY AFTERNOON AT THE LONDON ZOOLOGICAL SOCIETY'S GARDENS.

The most unpleasant of all the divisions of the Garden is that devoted to the snakes, and for my part, I confess I never go into it. Who can like to see the great black coils of the anaconda and the boa constrictor, who are fed, you know, on poor little living rabbits and birds, which they swallow whole? or who can look without a shiver at the hateful, glittering heads of the poisonous adders and cobras and asps? No, I leave the snakes for other people's admiration, and shall vouchsafe a passing glance at the alligators and crocodiles as I harry you on to the broad stretch of lawn where finely-dressed ladies and gentlemen are sitting, listening to the music of the band which we hear with one ear, while the other is filled with the roar of the wild beasts, the screams of the birds, and the chatter of the monkeys. It is a pretty scene, and we are always sorry when sunset warns everybody to go home and leave the poor animals who have been teased and stared at all day, to the peace of the lonely night; and, as we go away with the rest, I find I am saying to myself some funny lines written by an English gentleman who was very fond of these Gardens, which will perhaps make you laugh as they always do me:—

"First I saw the white bear, then I saw the black,
Then I saw the camel with a hump upon his back,
Then I saw the camel with a hump upon his back.

Then I saw the grey wolf with mutton in his maw,
Then I saw the wambat waddle in the straw,
Then I saw the elephant with his waving trunk,
Then I saw the monkeys—mercy, how unpleasantly they smelt!"

Central Park.

If we should visit the city of New York to-day, nothing would interest us more than Central Park. We might be glad to wander about the streets awhile and watch the crowds that rush along the pavements, and gaze at the tall buildings on every side; but after a few hours spent in this way we should be glad to take the horse-cars and ride out to the park. In this park, surrounded as it is with city streets, are broad green fields, and beautiful ponds of water, and winding walks, and plenty of seats under rustic arbors, for those who are tired. Thousands of children are dancing about the walks, splendid carriages are rolling along the roads, and a band of music is playing near the lake where the swans swim so gracefully. The rich and the poor, the young and the old have come out here to breathe the pure air and listen to the music. It takes days to find what is in this park. It is two and a half miles long and half a mile wide. There are two large reservoirs for furnishing the city with water, inside the enclosure. The lake on which pleasure-boats sail in summer covers twenty acres. In winter this lake is drawn down to a depth of four feet and 50,000 people have been known to skate on it in a single day. I visited the park last Christmas, and greatly enjoyed watching the skating. Those who could not skate, or who were tired, were riding about in chairs made with runners and drawn by skaters. Wherever you go you are sure to find something new. In one place there is a cave; it is cold down there and dismal enough. Scattered about the park are monuments in honor of distinguished men. There is one to Professor Morse, the inventor of the telegraph, who died last spring. He had the pleasure of seeing it before he died. A new monument has just been built to the great English writer, Shakespeare, who lived and died long before the United States was ever heard of. Near the entrance on Fifth Avenue, there is a museum containing minerals, stuffed birds and a great variety of natural curiosities. On all sides of this museum there are houses where the wild animals live. I can assure you that they look and act very much as animals of the same kind do in London. The monkey-house is very popular. The bedlam there is worse than that made by a political caucus. Central Park is five miles from New York City Hall, but any one can ride out there for five cents, and it is not to be wondered at that 100,000 people sometimes go there in one day. Any stranger wishing to learn the way to the park has but to ask a policeman and he will tell him what horse-car to take. There are a great many special police or keepers about the park. They wear a grey uniform. Of course all New Yorkers are very proud of their park. Their advice to strangers is "You may not live long; go and see the park at once."

THE
Southern Workman,
ISSUED MONTHLY.

S. C. ARMSTRONG, *Editorial Manager.*
E. W. BLAKE, *Associate Editor.*
J. F. B. MARSHALL, *Business Manager.*

Terms; ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will contain not less than three illustrations, will furnish a variety of choice reading, will tell of what is going on in the world, and will aim to please and profit both old and young.

All are invited, the young especially, to ask by letter, questions on any subject upon which they wish information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"*The Southern Workman*" *should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.*

To every church which shall send us one hundred one dollar subscriptions for "The Southern Workman," we will send a beautiful communion set costing twenty-five dollars.

We will give a handsome Bible (costing fifteen dollars) to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars to cost for every one hundred and one dollar subscriptions; or $12.75 for seventy-five subscriptions; or $10.50 for every fifty subscriptions.

In these cases the papers are to be sent in *one bundle to one address* to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by Checks, Post-office orders, or Registered letters. If the latter, give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, JULY, 1872.

Six months have passed away since the first article was written, and the first copy set up for "The Southern Workman." It is no boast to say the paper is a success. All who read these words will be glad to know that this July number has gone into the homes of one thousand regular subscribers. These homes are scattered far and wide over our broad land. They are found in Maine and Colorado, Minnesota and Alabama. The names of some of the most distinguished men of the age are on our subscription books, while many a child in the cabins of the lowly counts "The Southern Workman" among his warmest friends. Nor are our readers all in this country. The paper goes to some who live in other lands than this.

It is fitting that the rumbling of the printing-press should be heard on this spot, where ten years ago the crack of the rifle and the roar of the cannon were but the ordinary occurrence of the hour. It is fitting that a paper devoted to the cause and race they died to save, should be printed so near the city of the patriot dead.

We ask our friends to remember that no one can make a live paper for the people except the people help him. We need fresh and sparkling letters from all over the country, that we may catch the voice of the people to be heard. We know full well that by simply sitting in the office and writing down our thoughts we cannot hope to stir up the masses. Therefore we intend to go abroad and look our readers in the face, whenever we can. But our main dependence must be upon our friends who dwell all over the South, who are able to tell us what sort of a paper the "Workman" should be. Like all editors, we have already received considerable advice. We return our acknowledgements to those who have favored us with suggestions. There have not been wanting some who have found fault with our efforts; but the cooperation and sympathy we have received from multitudes is a source of great pleasure to us.

We have little space to devote to ourselves. We have no promises to make for the future. If our paper has improved since its first issue, there is reason to suppose it will continue to improve. If it has not improved, it is useless for us to promise better things.

Politics.

Some of our friends have desired us to say more in regard to politics than we have yet said. They say that they live away back in the country, and that this paper is the only one that they see; and that they are anxious to know what is going on in the political world. We confess such a wish is natural and right. We will do all we can to give them the news. But we can not do much more than that. It is very easy to write political articles to praise up this man, and to blame that candidate; but our paper is devoted to "the industrial classes of the South" as a whole, and we can not give up our space to political debate.

It would be well for our readers, and for all men, to remember during these summer months, that there are some things to be thought of besides politics.

Now we all think we know who is the best and safest man among those who have been nominated for President of the United States. We have our own opinion of who should be Senator, or Judge, or Sheriff, in our immediate locality. It is our duty to vote for the right men, and to work for them if necessary. It is wrong in the sight of God for us to vote or work for those whom we believe to be bad men, no matter if they belong to our own party. There is a certain old Book that most of us regard highly which contains these words: "And he doeth according to his will in the army of heaven and among the inhabitants of the earth, and none can stay his hand or say unto him, 'What doest thou?'" God will still govern the world no matter who is President or who goes to Congress. If any one who reads this article is restless and troubled in regard to politics, so that he thinks less of his family, less of the church, and less of heaven, than he did before the campaign began: let him remember certain things. Let him remember that the 4th of July rise and set, and the tide ebb and flow, just the same if one man is elected, as they will if the other party wins. Let him remember that it costs him just as much to live now as it did last spring before political excitement began. Let him not forget that he is even more likely, suddenly to die, now than he was then. Let him not forget that he has a soul to save. Why should any one, especially a poor man, pause in the race of life, turn aside from the efforts he is making to get a home for his family, to educate his children, or to make himself a better citizen and improve the community where he lives, and rush into politics. All men have duties to their country. Few can afford to make politics their business. Least of all can teachers and preachers afford to be politicians. They can use their influence for the right on all questions, but as soon as they become professional politicians there is little chance for them to be any thing else.

The Voice of the Clergy.

Some three months ago we sent out from this office to many of the leading colored clergymen in Virginia and North Carolina, the following address, and to their people, asking them to sign it.

A good number were pleased so to do, and we take great pleasure in printing their names below.

ADDRESS.

To our Brethren in Virginia and North Carolina: We take pleasure in giving our approval and indorsement of "The Southern Workman" an illustrated monthly periodical published at the "Hampton Normal and Agricultural Institute at Hampton, Va., under the management of Gen. S. C. Armstrong, Principal. The object and aim of this paper and the method of carrying them out meet our entire approval, and we cordially bespeak your earnest cooperation in securing a large circulation for this periodical.

Virginia: Rev. William Lewis, Presiding Elder Norfolk District; Rev. Jonathan B. Hamilton, Richmond; Rev. Richard H. Parker, Hampton; Rev. Wm. B. Derrick, Presiding Elder Staunton District; Rev. Aaron Pindel, Staunton; Rev. R. J. Gassenovy, Greenville; also Rev. L. Black, Pastor of the First Baptist Church, Bute Street, Norfolk; Rev. Thomas Henderson, Pastor of the Bank-street Baptist Church, Norfolk; Rev. E. G. Corprew, Zion Baptist Church, Portsmouth; Rev. R. Walls, Richmond.

North Carolina: Rev. B. W. Morris, Presiding Elder Wilmington District; Rev. Thomas H. Lomax, Wilmington; Rev. J. W. Hood, Charlotte; Rev. Henry Harris, Wadesboro; Rev. A. M. Barrett, Pittsboro; Rev. Matthew Degraffinreidt, Rev. John Alston, Rev. Jesse Taylor, Rev. Gray Alston, and Rev. Aaron Alston.

One hundred and fifty new names were added to our subscription list during the month of June. This increase was largely due to the labors of Mr. L'Hommedieu, of the Freedman's Bank, Norfolk, and Mrs. Taylor, wife of the Rev. William Taylor, Pastor of the First Colored Baptist Church, Hampton. Mr. L'Hommedieu promises to send us the news regularly from Norfolk and vicinity. He has with him at the bank some fine pictures of Gen'l Grant, which were printed at this office, that he is prepared to sell cheap. The First Baptist Church, Hampton, is the only church that has yet formed a club for this paper, according to our offer of last January. We were glad to pay them one-fourth of the subscription money to assist in building their new church. We hope soon to publish a description of the building.

We notice that two of our Wilmington, N. C. subscribers have been nominated to office: William McLaurin for Representative to the Legislature, and J. C. Hill, Register of Deeds for New Hanover County. Mr. McLaurin was the first man in the State of North Carolina who subscribed for "The Southern Workman." He is superintendent of one of the largest Sunday-schools in the State, and has sometimes acted as judge of the city court. Mr. Hill has been for some time City Constable, and Mr. McLaurin's assistant in Sunday-school.

Do not fail to read Mr. Tolman's sermon on the last page of this paper. Some of our readers may object that there is no Gospel in it. We think there is much Gospel in this number. It was crowded out by other things, but we think that the poem on the first page, "The Old Oaken Bucket" is a good temperance piece as can be read; this last year's meeting of the Sunday-school Institute," It was written by the Hon. Alexander Hyde, of Lee, Mass., a trustee of the Normal School.

On Tuesday, July 2d, we attended, by invitation, the Annual Picnic of the Sunday-school belonging to the St. Luke's Methodist Church, Norfolk. Rev. James Lovitt is Pastor, and Mr. L'Hommedieu, Superintendent of the school. The picnic was held in a grove near the city, where the school marched early in the day, carrying many unique banners. Speeches, music and games made the day pass pleasantly away. There were a plenty of good things to eat. The school has improved wonderfully within two years. We were much pleased with its appearance.

The Boston Jubilee is over, and everybody has gone home. There was such a rush to Boston by the Southern people that it was difficult to obtain a berth on the steamers from Norfolk. We doubt if anything better has been written about the Jubilee than our Boston letter printed below. It is by the same lady that wrote "The Holly Tree Coffee Rooms," in the March number.

We were much interested in the history of the Second Colored Baptist Church of Richmond, as lately related to us. The house of worship belonging to this church was burned by some malicious person soon after the surrender of Richmond. The society immediately commenced building again, and their aim was to put up such an edifice as should meet their wants and be an honor to their people. The house itself is still unfinished, but the basement was dedicated a few weeks since to the worship of God. This basement is handsomely furnished and lighted with gas. The Rev. W. Troy is pastor of this church.

We are very glad to learn that it is the intention of the Government soon to establish a new order of things in the keeping of the National Cemeteries throughout the South. These cemeteries are to be divided into three grades, and the highest grade will be placed in charge of persons who were commissioned officers during the late war. The cemetery at Hampton will belong to the first grade, and this new law will provide a keeper who will make this cemetery an ornament to the place and a credit to the nation.

We have received an address, delivered at a recent literary entertainment given by the Pittsburg, Penn., Colored High School, by E. H. Butler, formerly a teacher in Waynesboro, N. C. The subject is "No Excellence without Labor." The following is an extract from this address:

"When Demosthenes was asked the three great qualities needful to a successful orator, he replied, 'Firstly, action, secondly, action, thirdly, action:' in like manner we were called upon to express the three principal requisites for an honorable and successful career in life, we should say—'Firstly, labor, secondly, labor, and thirdly, labor.'"

☞ *All agents for this paper, who receive bundles for regular subscribers, will greatly oblige us by paying the postage on the same and sending the bill to us. We intend to pay the postage when sending bundles to agents, but find it very inconvenient to pay in advance.*

Boston Letter.

Dear Workman—The World's Peace Jubilee began yesterday. The Coliseum, built especially for the occasion, in the west end of Boston, about a mile and a quarter from the State House. It is a rather attractive looking wooden building, with seats for 60,000 persons, broad entrances, and large, convenient anterooms for the officers of the Jubilee, for newspaper men and women, for police headquarters, and for every other class of persons that has any business there.

The building is well lighted, airy, painted in light tints, pleasant to the eye, and decorated tastefully and very profusely. The front, the balcony, is finished in red and gold, and the whole building is adorned with festoons of gay bunting, and with the flags of all the nations on the earth; every where they wave and droop; black and yellow and scarlet and white; green and blue and orange; in every imaginable combination, and with every device that patriotism or fancy could suggest. Immense allegorical paintings hang here and there, and a few white statues stand out clear in the warm light. In the orchestra is a 30,000 dollars organ of 1,200 pipes, and imagine the if you can. Stand with me on the rear balcony and look at these; not a face, not a figure is distinguishable with the naked eye at an ordinary distance, but the long sharp spears stand for the conductor, and the lines of musicians and their instruments; the number of bows actually make the place hazy, as it "quivers" with the motion of the living sea flecked with the blue and pink of feathers and ribbons stretches far away, divided in the middle by the organ, and flowing far down each aisle. Then add to this the audience that are fourteen or fifteen thousand persons, a goodly audience, but not half filling the space. Remember, please, that this is the opening day. The chorus and orchestra settle down in their places. Rev. Phillips Brooks, the largest clergyman in Boston, prays. We cannot hear a sound; but his whole body jerks violently, and the people near applaud, so being Yankees, we guess that it is good. He too has the wisdom to make his speech short, and to give place to Gen. Banks, straight, pompous, and grown very white. Not even his powerful voice can be heard—at least he cannot be understood by those far away, though the first sound of that great voice reaches to the remotest part of the building. But we all read his speech the next day, and we all think it was wise, noble and timely; and that Gen. Banks did a very good thing.

At last we shall hear! Mr. Gilmore steps upon the stand; the chorus breaks into wild applause; the audience joins; thousands of handkerchiefs flutter, thousands of voices cheer. But the baton is lifted, and the first notes of "Old Hundred" roll from organ and orchestra and chorus, and grow in power as they sweep over the expectant multitude who hold their breath to listen; lifting the hundreds of banners and filling the whole great space with the mighty sound of praise. It is magnificent. You may not believe in the Jubilee; you may criticise or laugh or jeer; but it is a grand and wonderful thing, and the enthusiasm of thousands of human beings, all stirred by one music, or patriotism, or devotion, is good for the heart and soul of every one of them.

After "Old Hundred" came the Overture to "Rienzi;" then "Dixie," a grand and triumphal march from "Naaman." The fourth number was a piano solo by Franz Bendel, a famous German pianist. The fifth was a four part song by the finest chorus, unaccompanied, and was beautiful music.

Madame Rudersdorff, a Russian Soprano who makes her home in England sang the "Inflammatus," and with great effort made herself heard throughout the building. She was warmly welcomed and heartily applauded. She was followed by a group of 150 selected singers, fan-fitfully called the "Bouquet of Artists," who sang a sextette from "Lucia."

After a short recess the U. S. Marine Band from Washington in scarlet coats and white trousers, marched to the front and played a selection of airs, under the direction of Henry Fries.

Before this, Mr. Gilmore or Mr. Zerrahn had conducted, and they shared equally the applause and greetings of both singers and audience.

It was now late in the afternoon and the sun sent long dusky beams streaming across the ground, making the statues gleam, and catching here the bright tip of a feather, there the spangles on a fan, and last beyond a diamond which shot out flames in answer to the touch. And to these flames was added the air that stirs every American pulse, "The Star-Spangled Banner." The twenty thousand voices sang it, the orchestra and all the military band played it; the organ lent its voice; cannon outside thundered it, and the bells in the church towers, moved by electric sympathy, rang out the chorus. In the third row of our Boston soprano, Mrs. Julia Houston West, sang a solo; her voice rose pleading and reverent in the words "In God is our trust," but in the last two lines send out a clear peal of triumphant rejoicing, that made the audience wild. She repeated it, and again there were cannon and bells and multitudinous shouts and excitement that cannot be described; and the dusky bars of sunlight grew longer and longer, and caught more tears on many cheeks, in addition to the spangles and gems.

Then the great composer Johann Strauss from Vienna came upon the stand, to lead the grand orchestra in one of his own waltzes. He is a small, dark man, and was almost swept away by the roar of his welcome; but at last he was allowed to begin; and such leading Boston had never seen before. Instead of a baton he had his violin and bow; at the accented beat check lay lightly on his instrument, and he joined the orchestra in their music; at the next, bow in one hand and violin in the other were waved wildly in the air; and the whole was over in other grave emphatic, till he hugged them close and played once more for just a bar or two. And all the while his whole body kept time to the waltz, and suggested a spirit dance going on within him. It was like the stories in "Charles Auchester" and "Counterparts" of German musicians; but never did Gilmore or Zerrahn or Thomas perform such antics.

The Anvil Chorus, a chorus from the oratorio of "St. Peter," and the hymn, "Nearer, my God, to Thee," finished the first concert.

We came out to find almost a solid mass of people sitting on the temporary bridges built over the railroad, on the fences, on the scattered timbers, on the ground; wherever they could see the coliseum or hear one note of the music, men women and children had collected and waited. And now as they moved, the sight was extraordinary; every street, every avenue was filled with tired and interested people. It was the ceremonies of June and a holiday, and then added somewhat to the crowd of idlers; but I saw nobody cross, and nobody drunk.

For days the whole city has been in a state of excitement over the arrival of the foreign bands. The streets have been filled with soldiers, and music has not ceased day or night. The Germans came with a brass band, and a procession of soldiers and citizens escorted them through the streets, and German and Prussian and American flags drooped and mingled together. Then the different nationalities were merged into one grand burrah! The English came, heavy with gold lace; and the French in their peculiar blue; and the Scots appeared in bare legs, and plaid uniform, with a genuine bag-pipe for their music. To-day the Japanese have arrived; the governors of twenty states are quartered at the Commonwealth Hotel, and the President will soon be here. Now, if ever, Boston may lay claim to her common title of the "Hub of the Universe."

Yesterday was the *American* day of the Jubilee. To-day is the English day. The band of the Grenadier Guards of London made their first appearance. Of course the whole chorus, orchestra, cannon and bells gave "God Save the Queen;" the applause was great; and when the audience demanded a repetition, the English band struck up "The Star-Spangled Banner," you must imagine the effect; singers and audience were all on their feet, and all joined in the singing, orchestra and bands played; and never was such a tumult, such a passion of international friendship heard, or seen, or dreamed of, before. To-day too, Madame Peschka-Leutner, a very great soprano, sang for the first time in the United States; and Madame Arbella Goddard, an English pianist of world-wide renown, made her first appearance here. To-morrow is the German day, with the German band, and Kaiser Wilhelm's wonderful corsed quartette. Thursday will be the French day, with the "Garde Republicaine Band" of Paris for the central group, and the "Marseillaise" to grow wild over.

Friday is to be in honor of Austria, and Saturday of Russia. And every day there will be national hymns, and international courtesies and enthusiasms. And if all this does not make peace and good will on earth, what will ever make it? I dont know how many angels sang the song 1,900 years ago, but I do know that this jubilee is a magnificent echo for the world to send back.

Boston, *June* 18, 1872.

Desks in Country Schools.

Rev. John Scott is the pastor of a flourishing Congregational church at Dudley, Wayne County, N. C. He has built there a neat little chapel, near the railroad station, which is used for a school-house during the week. The present building is but recently finished, and it stands on the site of a former chapel which was burned by some incendiary who was unable to bear the sense of free schools for all. The people in that region contributed liberally to build a new chapel, and showed much kindness to Mr. Scott and his people while they were without a house of worship. There are many conveniences about this building well worth the study of those who intend to erect school-houses or churches in the South. The desks in use are made after a pattern invented by Mr. Scott. He has kindly sent drawings and descriptions of them to us, and it would afford us much pleasure to print these drawings, if we were able to procure suitable plates representing them. We hope to be able to do so in course of time. We believe that this invention may be made of great use in providing country schools with cheap and convenient desks. There is no patent on the invention, and Mr. Scott will be glad to have any one interested in the cause of education engage in the manufacture of the desks. Any good carpenter can make them at an expense of two dollars apiece, as no iron-work is required. The seats are made of hard or soft wood, and are very durable and convenient. By making these desks five or six feet long, they can easily be used both for church services and as school benches.

The desk is so arranged that when the lid is down it makes a very comfortable church pew, and also adds very much to the convenience of keeping the room. It is made so as to be easily moved, but is heavy enough to stand firmly upon the floor. It is impossible for us to explain this invention understandingly without printing the drawings, but we presume Mr. Scott will willingly send said drawings to any responsible party who will promise to return them. We do not think the invention should be confined to Dudley.

Gleanings.

Rev. Job Berry, Presiding Elder of the Hillsboro District, North Carolina, writes us a very interesting letter. He says: "I am highly pleased with 'The Southern Workman.' I would to God that it was circulated throughout North Carolina. We North Carolinians have long been oppressed and kept in darkness by disgraceful Ku Klux bands. I think the 'Southern Workman' will create new life among us and brighten our prospects for the future."

Mr. H. H. Mitchell, of Trinas, Alabama, thinks he can raise a good club for our paper.

Rev. A. A. Jones writes us from Dalton, Ga., that a very pleasant union pic-nic was enjoyed by the Methodist, Presbyterian, and Baptist Sunday-schools at Cat's Spring, near Dalton, on the 23rd of June. A number of addresses were delivered, and the following question was debated by Mr. Jones and Mr. Noah Foster: "Which is of most interest to a nation, peace or gunpowder?". The debate was decided in favor of paper. Mr. Jones reports progress in his Sunday-school.

Our agent in New Kent County, Va., writes: "The people seem to appreciate whitstay and tobacco rather more than the reading of an important, and interesting newspaper. But I shall keep on trying to get their names."

Mr. E. C. Brown, Camden, S. C., reports that the paper is well received, and he thinks the people will be glad to take it when the proper steps to do so are taken.

J. C. Davis, Esq., is working for us in Chatham, Va.

Montgomery, Ala. has an agent for the "Workman," in the person of J. M. McTherron, P. O. Box 62.

Mr. George W. Dickson, Brunswick County, N. C., says: "Without any exception, I like your paper the best of any I have yet read."

The Hon. Henry Turpin writes very pleasantly from Pemberton, Va. He promises to call on us in the autumn.

A lady teacher writes from Allen, S. C., "Will do all I can for your paper. Work and education, *practical education* are what I believe in."

Mr. Burwell White is quite enthusiastic in the hope of getting up a good sized club in Matthews County, Va.

Mr. Edward Goodwin, Goochland County, Va., writes that it is very dry in his region, and the crops are suffering. Oats, corn and grass promise very poorly, and stock are beginning to lack good food. Wheat, on the contrary is very good.

Mr. Noah Hook is presenting the paper to the notice of the people of Weldon, N. C.

The Hampton Normal School.

VACATION.

All is very quiet on the banks of Hampton Creek. The Editorial Manager of this paper is sojourning among the green hills of New England. The Business Manager is trying to get over the effects of two weeks of the "heated term," spent in attendance upon the Boston Jubilee. Could our readers have seen the packing of trunks, the hurrying in hot haste, and the daily demonstrations attending the departure of the *Magnet*, they might feel as lonely as do we at this present writing. But after all, life runs along in much the same grooves as usual. The first office clerk is also first janitor, and the bells he rings are neither few nor far between. The work equal on the farm comes and goes with clock-like precision, and the summer happenings of the region, such as excursions and exhibitions, keep the printers busy on posters and tickets. There is work here for all who are willing to work, and opportunity to study, for those who are inclined. The new catalogues and circulars will soon be printed. The mail brings daily applications for them. If one quarter of the scholars who desire to enter this institution ever survive here, our numbers will be very large.

We promised the late principal of the Butler School that we would make a note of his final departure from these parts. He was attended by a goodly company, and the scene when they left the landing was certainly exciting. We trust they may all return to pass here in the future many happy days.

The work of manufacturing brick at the yard near the road to Fort Monroe is progressing finely. Judge Oldfield, of Norfolk, who has charge of the work proposes to burn a new lot in a few days.

RECORD OF GRADUATES—CLASS OF '71.

W. H. Lee writes from Vicksville, Va.: "I am now getting along very well with my school. I met several of the graduates of Hampton on the boat not long ago. When I arrived at Winton, N. C., I saw one of my old classmates; it made me think of Hampton more than ever."

G. W. Lattimore closed his school at Kilmarnock, Va., June 29th. He had seventy scholars, and many more in the Sunday-school.

C. D. Johnson, of Howard University called on us this week. By the recent transfer of the Freedman's Bureau to the War Department, Mr. Johnson loses his situation, and he is now in search of a school for the next four months.

CLASS OF '72.

Maria Chisman is spending the summer in Winton, N. C.

Eliza G. Nottingham writes from her home in Baltimore that she greatly desires to procure a school at once.

John H. Carter after a brief visit to his home returned to Hampton and then went to Newbury, New York, in search of employment for the summer.

James A. Dungey is expected back to Hampton soon. He will give his attention to the study of music for some months to come.

Hutchins Lupp is at present acting as chief clerk in the office of "The Southern Workman."

Luke B. Phillips and Everett Williams are at present connected with the Hygeia Hotel at Fortress Monroe.

George L. Pryor is clerk in a store on what is known as the "Butler Farm."

UNDERGRADUATES.

A. S. Bryant, H. C. Edmonds and A. M. Hodges are spending the summer on Long Island.

C. S. Boston is teaching at Big Springs, Virginia.

Hugh C. Christopher is stopping for the present at Lima, New York.

Peyton Lewis is teaching at Liberty, Va. He is laboring earnestly to obtain subscribers for our paper.

THE SOUTHERN CITIZEN.

General News.

HORACE Greeley has been nominated for President of the United States by the Democratic Party. The long-waited-for Democratic Convention assembled in the city of Baltimore on Tuesday, July 9th. Hon. J. R. Doolittle, of Wisconsin, was elected President. The final vote on the nomination was not taken till Wednesday, when Greeley and Brown received a unanimous vote. The convention passed the same resolutions that were adopted at the Liberal Convention held at Cincinnati last May. There was great rejoicing in some parts of the South when the news of Greeley's nomination was received. One hundred guns were fired at Capitol Square, Richmond, in honor of the event. No one can doubt now that if Horace Greeley is elected it will be by Democratic votes. No one can doubt either that his administration will be a democratic administration.

THE advocates of Gen'l Grant's re-election are keeping very quiet. Notwithstanding the speeches of stump orators and the leading editorials of certain newspapers about the present campaign being a very fierce one, there are many who predict that it will be far otherwise. There can be but little enthusiasm among the Democrats in voting for such a life-long Republican as Horace Greeley, and the friends of Gen'l Grant can afford to be calm, keep steadily at work, and patiently wait. The various State elections occur all through the autumn. That of North Carolina takes place early in August. After a few states have been heard from it will be easy to predict the result throughout the country.

THE spirit of the KuKlux is not dead yet. Hon. Thomas Settle, candidate for Congress in the Fifth North Carolina District was interrupted and his life threatened while speaking for Grant and Wilson, at Yanceyville, N. C., a few days ago.

CERTAIN gentlemen who are known as Free Traders had a little convention at the Fifth Avenue Hotel in New York City recently to nominate a new ticket, for President and Vice-President. Some of them were the men who started the Cincinnati Convention, but who have become displeased with their work. They had a nice quiet time, and the men they chose were W. D. Groesbeck for President, and T. W. Ousstead for Vice-President. The latter gentleman immediately refused to run. The convention adjourned, and nobody cared for what it did.

ONE of the notable events of the season is the long continued strike of the mechanics of New York City, the object being to secure an acknowledgement from their employers that eight hours is sufficient time to be counted as a day's work. The truth is that this strike is for the purpose of getting ten hour's pay for eight hours' work. Some 61,000 men have been engaged in this strike. Many of them have been unemployed for a considerable time and much money has been lost and much trouble experienced both by the workmen and their employers. The iron founders have resolved that they are willing to work ten hours, and have resumed work. It is to be hoped the other trades will follow their example.

THE trial of Stokes who murdered Jim Fisk at a New York hotel last winter attracts much attention. There is no doubt but he is guilty, although there is little hope, so corrupt are the New York courts, that he will be hung.

CONGRESS at its last session passed a new postal bill reducing the postage on pamphlets, transient newspapers, magazines, unsealed circulars, book manuscript, corrected proofs, etc., from two cents for every four ounces or less, to one cent for every two ounces or less. It also authorizes the use of one cent postal cards for correspondence or for printed matter, the cards and stamps to be provided by government.

THE weather throughout the country has been terribly hot and many deaths from sunstroke have occurred, especially in the large cities.

THE Fourth of July was very generally celebrated, both North and South. The city of Boston was visited by a tornado on that day which caused the bursting of the huge baloon "Columbus," and came near creating a panic among the audience who were attending one of the last Jubilee concerts in the Coliseum. One or two timbers fell and the building was filled with clouds of dust. Mr. Dan. Godfrey was leading the English Band in the "Overtures to Zampa." Seeing that the people were frightened he at once changed the tune to the "Star Spangled Banner," and the people began to cheer, and thus forgot their fright.

THERE is good reason to suppose that the recent question between England and America —the Alabama Claims —will be satisfactorily settled before many months. It has been agreed upon between the two nations that claims for indirect damages when either nation fails to fulfill its neutrality obligations shall not hereafter be prosecuted. This opens the way for the settlement of the whole business. The announcement of so favorable issue was received with loud cheers in the English parliament. There seems at present to be much good feeling between America and England. In fact the visit of the Foreign Bands to this country is doing much to establish friendly relations between the countries which they represent.

THERE is some prospect that a complete evacuation of French territory on the part of the German troops will soon take place. The provisional government which was organized only to treat with the Germans must then come to an end and a permanent government take its place. What the issue will be no man can tell. Already the President, M. Thiers has begun to quarrel with the party that has hitherto supported him. Perhaps the contending factions will break out in their old violence. The republican sentiment is, however, developing rapidly in France, and it may be that the republic will live and flourish.

IT is currently reported that the new Spanish ministry, which represents the liberal, but of course not the republican sentiment of the kingdom, is in favor of a separation of church and state in Spain.

Agricultural.

BOOK FARMING.

Those who are opposed to book farming are requested to read the following, and give us their opinion.—

There was a farmer once who hesitated not to burl in a manner of invective against book farming and those who consulted books for advice. By long experience and practical observation, he had become quite successful in the culture of grapes and trees. His fields were clean and fair, and highly productive. His trees were vigorous, well adjusted and profitable.

In conversation with a friend, he related his experience in raising grapes and trees, entering into the minutest details, some times becoming quite eloquent when describing his victories over the enemies which infested them.

"His knowledge," he said "was gained by dint of application, by actual experience and hard labor. It was none of your book knowledge, written by men who knew nothing about farming."

"Well," said his friend, "if all this valuable information gained by assiduous labor and observation of so many years, and which you have so clearly described, were written out and published, which would you have a young and experienced man do—take this as he finds it from your pen, or go through the same tedious process that you have gone through with including its vexations and losses?"

The question puzzled him, and he was silent for a moment; but was obliged at last to confess that, after all, there was much that was valuable in books, because combining and relating the results and experience of practical cultivators.

Do not condemn book farming. You may criticise certain books very severely, because written by ignorant, theoretical hands, but there is always good wheat as well as abundant chaff. So there are many good books as well as poor ones.

The time may come, when a single hint from a book or paper may save your farm or orchard, or add to your wealth, by telling you how to lourease your crops.

BALKY HORSES.

It is rarely well to whip or kick or scold a balky horse, as in the common practice. One of the best modes is to feed him where he stands with any accessible food, such as oats, ears of corn, or even grass by the wayside, or hay from the wagon, which can be provided for the emergency. Forgetting his whim, he will generally start without trouble. Another good way is to do something not harmful, but new; as filling his mouth with loose dirt, which a desire to get rid of will divert his thoughts, and before he knows it he will be jogging unconsciously along.

We have often seen this done with the most satisfactory success. Sometimes if one can spare the day, it is best to wait till, from weariness and hunger, the animal submits to your will; and the triumph in this instance is generally complete.

TRANSPLANTING PLANTS.—The editor of the Germantown "Telegraph" says: "There is no mode that we ever tried so effectual in transplanting; tomato, cabbage, cauliflower or any other tender plant from the hot bed, or from one place to another, as to prepare a vessel filled with manure water and rich soil, about the consistency of thin mush, with which the roots of the plants should be well coated, and set in a hole made with a round piece of wood or dibble. After being rather firmly planted moisten again with manure water. We have never failed in any transplanting when done in this way, and the trouble is very slight."

Children's Department.

Dear Children:—You all know that the Fourth of July has come and gone, within a few days. Some of you have seen it celebrated by the firing of guns and crackers, by martial music and fire-works. Others met to Sunday-school picnics on that day, I do not doubt. You know, I suppose, that the Fourth of July is celebrated all over this country, but not in other countries of the world. The people of America lived on this continent a great many years before anybody ever thought of celebrating the fourth day of July. But ninty-six years ago there was a war in the country and the representatives of the people were holding a meeting in the Old State House in the city of Philadelphia to see how they could best become free of their enemies. This meeting had been going on all the summer and the people were very anxious to hear what it would do. On the fourth of July, it was reported in the city that Congress, as the meeting was called, were going to declare the United States of America, free and independent. All the people were very glad and very much excited too. The doors of the State House were kept closed; but there was a great crowd outside, waiting for them to be opened. It is said that the old man who used to ring the State House bell went away up into the tower where the bell was, so as to be ready to ring it as soon as he should hear that the people were free. Down on the steps near the great doors, the old man's little grandson stood, ready to run up the stairs to the tower and give the word when it was time to ring the bell. It is a curious fact that years before these words had been placed on that bell: "Proclaim liberty throughout all the land, unto all the inhabitants thereof." You can find them in the book of Leviticus, 25th chapter, and 10th verse. The old man waited long in the tower and the little boy on the steps while the bell was still; but after a while the doors were opened and Congress came out and what we call the Declaration of Independence was read to the crowd. Then the little boy ran up the stairs and cried out, "Grandpapa, ring, ring, ring!" And the old man rung, and the people shouted, and that was the first celebration of the Fourth of July in America. We can well afford to celebrate in our day, for all men are free in our country to-day, and the bells we hear do proclaim liberty to all. If you should go to Philadelphia, you could see the building where Congress met; they call it Independence Hall now. Inside this hall is that old bell, and the table on which the Declaration was signed. I know you will be glad to see this poem about the boy and his grandpapa, which was published in the "Christian Weekly" last week.

Liberty and Independence.

JULY 4, 1776.

There was a tumult in the city,
In the quaint old Quaker town,
And the streets were rife with people
Pacing restless up and down—
People gathering at corners,
Where they whispered each to each,
And the sweat stood on their temples,
With the earnestness of speech.

As the black Atlantic currents
Lash the wild Newfoundland shore,
So they beat against the State-House,
So they surged against the door;
And the mingling of their voices
Made a harmony profound,
Till the quiet street of Chesnut
Was all turbulent with sound.

"Will they do it?" "Dare they do it?"
"Who is speaking?" "What's the news?"
"What of Adams?" "What of Sherman?"
"Oh, God grant they wont refuse!"

Make some way there!" "Let me nearer!"
"I am stifling!" "Stifle then!
When a nation's life's at hazard,
We've no time to think of men!"

So they beat against the portal,
Man and woman, maid and child;
And the July sun in heaven
On the scene looked down and smiled—
The same sun that saw the Spartan
Bind his patriot blood in vain,
Now beheld the soul of freedom,
All unconquered, rise again.

See! See! The door has opened quivers
Through all its lengthened line,
As the boy beside the portal
Looks forth to give the sign!
With his little hands uplifted,
Breezes dallying with his hair,
Hark! with deep, determined intonation,
Breaks his young voice on the air:

Hushed the people's swelling murmur,
List the boy's exultant cry!
"Ring!" he shouts; "Ring! Grandpa,
Ring! Oh, ring for Liberty!"
Quickly at the given signal
The old bellman lifts his hand,
Forth he sends the good news, making
Iron-music through the land.

How they shouted! What rejoicing!
How the old bell shook the air,
Till the clang of freedom ruffled
The calmly gliding Delaware!
How the bonfires and the torches
Lighted up the night's repose,
And, from the flames, like fabled Phœnix,
Our glorious Liberty arose!

That old State-House bell is silent;
Hushed is now its clam'rous tongue;
But the spirit it awakened
Still is living—ever young;

And when we greet the smiling sunlight
On the fourth of each July
We will ne'er forget the bellman
Who, betwixt the earth and sky,
Rang out, loudly, "INDEPENDENCE!"
Which, please God, shall never die!

The Picture.

We have here a picture that belongs to the new order of things. Here are some happy little colored boys marching along the street carrying the Star Spangled Banner with them. Their teacher is keeping them in order and several army officers and other gentlemen are looking on. Where do you think the boys are going? Perhaps they are on the way to school. It may be this is the first day, and they are taking the flag to put up over the school-house. I rather think it is a Sunday-school picnic and they are going out into the country to spend the day. It may be the Fourth of July. No matter where they are going, I am sure they are all very happy. All, did I say? See that man on the right, looking over the officer's shoulder. I am afraid you see something a good deal like a scowl on his face; I do not think he believes in free schools.

Not long ago I saw a great many children like those in the picture, march along the city streets. It was a bright day in May. They were going to put flowers on the graves of the Union soldiers who died far from their homes and friends that the dear old flag might not be dishonored, and that we might all be free. It was very quiet where those graves were. They were covered with green grass, and all the walks were neatly cared for. God only knows how many fathers and mothers, brothers and sisters,—yes and children too —who live far away at the North would have blessed those children if they could have watched them put flowers upon the graves of the soldiers they loved so well.

I can look out of my window now and see this flag of our country as it glistens in the summer sunshine. Is there a more beautiful thing to look upon than the American Flag? Thank God for such a country and such a flag.

If you would be loved, be kind, and always speak the truth.

FORT MONROE,

Old Point Comfort, Va.

GENERAL FORWARDING,

FIRE & LIFE

INSURANCE

Agency.

Adams Express Company.

GREAT EASTERN, WESTERN, AND SOUTHERN EXPRESS.

Forwarders of

PACKAGES, VALUABLES, BOOKS, MONIES, & MERCHANDISE

At low Rates, with promptness and care.

Commissions remitted and collections made at reasonable rates in all parts of the Union.

INSURANCE AGAINST LOSS OR DAMAGE BY FIRE OR LIGHTNING

effected on all kinds of Buildings, Merchandise, Household furniture, including Stock, Rents, and Leases, and all other insurable property, at reasonable rates consistent with safety, in the following responsible companies:—

Royal Insurance Company,
OF LIVERPOOL, ENGLAND.
Assets, Gold . . . $10,000,000.00

CONTINENTAL INSURANCE COMPANY,
OF NEW YORK.
Cash Assets . . . $3,500,506.27

Home Insurance Company,
OF COLUMBUS, OHIO.
Cash Assets . . . $971,426.82

AMERICAN FIRE INSURANCE COMPANY,
OF BALTIMORE, MD.
Capital . . . $300,000.00
All losses equitably adjusted and promptly paid in full. Persons desiring to obtain reliable insurance are solicited to give us their patronage.

LIFE INSURANCE POLICIES

of every desirable form issued upon the most liberal terms as to residence and travel, by the

GLOBE MUTUAL LIFE INSURANCE COMPANY,
OF NEW YORK.
Cash Assets . . . $2,123,186.39

The principal features of this company are, Absolute Security, Economical Management, and Liberality to the Insured.

REPUBLIC LIFE INSURANCE COMPANY
OF THE UNITED STATES.
Organized July, 1870.

Capital Stock	$5,000,000.00
Insurance effected since organization over	$20,000,000.00
Annual premiums on policies in force over	$500,000.00

Its department organizations in all the leading cities make it a home company everywhere. The largest company of its age in the world. Insures on the low rates of the stock plan.

CENTRAL OFFICE CHICAGO, ILLINOIS.

"It is a strange anomaly that men should be careful to insure their homes, their furniture, their ships, their merchandize, and yet neglect to insure their lives; surely the most important of all to their families, and far more subject to loss."—THE FRANKLIN.

Sight Drafts, in sums to suit, on the Royal Banks of Ireland, London, Paris, Edinburgh, and all the principal cities of Germany, Austria, Norway, Sweden, Denmark, Switzerland, and Italy, at lowest rates.

Cabin and Steerage Tickets to and from Liverpool, and Queenstown and all parts of Europe at lowest rates, via Cunard Line, the British and North American Royal Mail Steamships.

Special attention given to the execution of Commercial Processes, Acknowledgments, Mortgages, Leases, Deeds, Powers of Attorney, and all other Notarial business at lowest rates, by

For the Southern Workman.

When to Pray.

BY MRS. MARY N. W. BLAKE.

Go when the morning shineth,
Go at the close of day,
Go when the way is brightest,
Alone with God to pray.

Go oft in youth's bright freshness,
Go oft in manhood's prime,
Go till thy hours with stillness
From out no earthly shrine.

Go in each hour of sadness,
Go in joy's brightest day;
Prolong each hour to meet Him,
While lingering there to pray.

Go with the early sunlight,
Go in the noon's high day,
Go in the darksome midnight,
In secret always pray

True Manliness.

A SERMON BY REV. RICHARD TOLMAN,

June 9, 1872, the last Sabbath of the Term of the Hampton Normal and Agricultural Institute.

I Kings, 2: 2.—"Shew thyself a man." A man—not the mere outline or picture of a man, but a man in fact, as well as in form; with a man's mind and heart and soul, as well as body; allied by the material part to the earth, and by the spirit to the skies; a man made in God's image, after God's likeness, for God's glory. Now an important requisite for the development of the highest manhood is

INDUSTRY.

However we may differ in other respects, we should all have that best kind of genius, the genius for hard work. More is to be expected from such genius than from any amount of lazy talent.

When the celebrated English painter, Turner, was asked what his secret was, he replied, "I have no secret but hard work."

When that prince of philosophers, Sir Isaac Newton, was asked how he came by his wonderful discoveries in science, he replied, "By thinking," the hardest kind of work. Yes, Newton's great discoveries were not the result of indolence, did not come to him in his sleep, were not whispered to him in his dreams, "did not drop into his idle lap, a windfall from the clouds," but were the fruits of patient, profound, laborious thinking; his grand elevation being attained, according to his own testimony, not by that heaven-born genius possessed by only a few, but by that genius for hard work, which should be manifested by all.

That popular novelist, Charles Dickens, the productions of whose prolific pen have such a charm for the million, testifies that the only secret of his success was hard work, saying, "My own invention, or imagination would never have served me as it has, but for the habit of common-place, humble, patient, daily, toiling, drudging attention."

Our own Elihu Burritt, the learned blacksmith, acquainted with some fifty different languages, declares that the only secret of his marvelous linguistic acquirements is hard work, saying, "All that I have accomplished, or expect or hope to accomplish, has been and will be, by that patient, plodding, persevering process of accretion, which builds up ant-heaps, particle by particle, thought by thought, fact by fact."

The Honorable Henry Wilson, just nominated for the Vice-Presidency of the United States ("The Natick Cobbler," as he is sometimes called), rose from the humble shoe-bench to his present exalted position in the nation; rose by the same common, homely genius, by which so many others have risen, the genius for hard work.

And this is the only kind of genius on which it is safe for any of us to rely; and on this we may rely with confidence.

Be it then we must begin low down. How many now on the top round of the ladder of human distinction, began their ascent at the very lowest round, from the level of the common mass, rising only by continued, persevering effort.

By such effort you too may be sure to rise. Instead of therefore, like some foolish persons, going to any pretended fortune-teller, to ascertain your destiny, consider that, in an important sense, God has put that destiny in your own hands, made you the architects of your own fortune; that the best way of determining your destiny is by the degree of your genius for work; that while idleness, in the language of sacred writ, "shall clothe a man with rags," the Divine word to us is, "Seest thou a man diligent in his business"—not loafing around, with his hands in his pockets, indolently waiting for something to turn up, but rolling up his sleeves, and vigorously putting forth his hands to turn up something—"Seest thou a man diligent in his business, he shall stand before kings, he shall not stand before mean men,"—this diligence in business, this genius for work, being the most direct way to honor, the highest pledge of success; right diligently done, ever ensuring a glorious destiny.

CAREFUL CONSIDERATION.

This also is needed for the development of the highest manhood. Some work, work hard, but accomplish little, because they work to such an extent without thinking, using their hands only, not their minds. Now there is no such thing as turning our labor to the best account, without employing brain as well as muscle. In the language of inspired writ, "A wise man is strong"—not merely the man of brawny arm, but he of shrewd head—"A wise man is strong; yea a man of knowledge increaseth strength,"—by his inventions and appliances he increaseth strength, in manufactures for example, in a hundred-fold proportion to physical force; increaseth strength even in agriculture, so that one thinking head will often accomplish more than a dozen stout hands,—thought, in every department of life, being of vastly greater efficiency than mere muscular strength.

Indeed, so far from attaining the highest end, one is liable to the most humiliating and disastrous defeat, morally as well as industrially, just in the degree in which he neglects thoughtful consideration.

Last summer, on a sea voyage from Norfolk to Boston, we had a narrow escape from the same breakers, on which a vessel had been wrecked but a few days before. While surrounded by a dense fog, and going at the rate of some eight miles an hour, the look-out at the bow gave the startling alarm of breakers ahead. Instantly the ship was reversed, and was thus barely saved from destruction; —saved under God, by means of the vigilant look-out at the prow.

There are perils in our track over life's ocean, moral breakers; and if a young man will not consider his ways, will not keep any look-out at the prow, but will steam on recklessly, he is in fearful danger of making everlasting shipwreck of his soul. Amid the manifold moral perils that beset you, your only safety is in careful consideration, a watchful look-out at the prow.

DETAMINED ENERGY.

This should be combined with careful consideration in order to develope the highest manhood. It matters little how much one knows and thinks, if he has not force enough to do. We want pluck and push as well as brain; and, as a matter of fact, a comparatively small amount of brain, with a large supply of push, will put a man through, where he, whose head is a living library, may stick fast by the way.

"Creation's blot, creation's blank,
Whom none could love, whom none could thank."

Amos Lawrence rose to be a princely merchant of Boston, and what is better, a man of princely beneficence, and so shone for many years as a bright star in the clear upper sky, and then set at last

"As sets the morning star,
That goes not down behind the darkened west,
Nor hides obscured among the clouds,
But melts away into the pure light of heaven;"

leaving his name and deeds of mercy embalmed in ten thousand grateful hearts.

Think too of the prophet Daniel, surrounded by a band of conspirators plotting against his life, threatened with death in the lion's den, if he persevered in his habits of prayer, yet when he "knew that the writing was signed; he went into his house, and his windows being open in his chamber towards Jerusalem, he kneeled upon his knees three times a day, and"—without swerving or faltering in the least, but with the noblest independence—"prayed and gave thanks before his God, as he did aforetime;"—thus holding on in his course of obedience to heaven, despite the sneer of the world, the frown of power, and the king's unchangeable decree of death; and God rewards him with a complete and glorious victory. Be alike independent in God's service, and like him, you shall win, not the mere laurels of earth, but the crown of heaven.

Nor at this time, when the newspapers are so laden and darkened with the records of corruption and fraud in almost every department of life, should I fail to remind you that, in order to the development of the highest manhood, you must be of

UNSULLIED HONESTY.

The temptation to get money somehow, by fair means if not by fair, by lying or cheating or forging, or some such species of iniquity, may be very strong in case of those pinched with want; it being peculiarly hard, as is said, for an empty bag to stand upright. But whatever the temptation, stand it as you would shun the plague, no more dally with it than with a rattlesnake.

Think of Judas. By treachery, he got thirty pieces of silver, and meant to enjoy the money. Enjoy it! Ah! that was a fatal mistake. Judas found by bitter experience, as have so many others since, that money thus wickedly obtained is anything but enjoyable. How did those thirty pieces of silver so scorch his palm, and pierce with agony his soul, that he threw them away as he would a burning coal or stinging viper, and went and hanged himself. And be assured that, whatever temporary gratification unrighteous gain may afford, it will at last bite like a serpent, and sting like an adder.

Be then of unsullied honesty. If only one leak admits the water, the ship is not safe. Stopping but a little over, may plunge one down the fearful precipice to the very bottom. And when once in the mire of deceit and fraud, the more you floundier, the deeper you will sink. Beware therefore of a single link of this infamy, in the shape of the smallest theft or cheat; beware of overstepping, in the slightest degree, the bounds of strict integrity; remembering that only he, who, in the language of sacred writ, "walketh uprightly, walketh surely;"—his steps not slipping, nor sliding, nor sinking, but resting surely just in the degree in which they rest on the rock of uprightness. Oh amid the abounding corruption of the day, when it seems as though scarcely anything is struck but what sounds hollow; amid the fraudulent rogues and rings of rogues that infest the land, how manifest that, besides iron-clad ships and bomb-proof forts, we need men and women so sheathed with integrity, so fortified by the principles of love and loyalty to God, as to be proof against every temptation to cheat or defraud; whose hands will be unsoiled by any unrighteous gain; to whom virtue is more precious than gold; who will not defile their pockets by a single dishonest dollar.

"I'd rather be right than be President," is reported as a saying of Henry Clay. Whether he said so or not, it is the right; but he ought to have said it. And every one of us ought to be able to say in sincerity, "I'd rather be right than have any of the offices, honors or riches, which the nation or the world can bestow." Would you then each show yourself a man, show yourself of an honesty as incorruptible as the diamond, as incapable of stain as the light of heaven. Show yourself, be it added moreover, of

A CHARACTER FULL-ROUNDED AND COMPLETE.

And can there be such a character without religion? Is any one a finished man, whatever his attainments in human and earthly things, who neglects the divine and the heavenly? The Divine word to us is, "Ye are complete in Him," as though we could be complete only as modeled after God's own pattern of a man—here being no such thing as coming to a perfect man, except so far as we, in the words of scripture, "come to the measure of the stature of the fullness of Christ."

Indeed, so far from developing a full and heaven-blessed manhood without religion, we do not approximate towards it. The very beginning of wisdom, according to scripture, is the fear of God; the first step in true manliness, as Christ taught, is to repent and seek the kingdom of God and his righteousness. Neglect this, and you neglect the one thing needful. Fail of this, and you fail of that most worthy of a rational and immortal being; that indispensable to a complete man, a man blessed on earth, and blessed forever in heaven.

Before then the frostwork and ice of worldliness have gathered around the heart, chilling its best affections and blighting whatever is lovely and of good report; before any habits of sinful indulgence have bound you to earth with fetters of iron, and your character has passed from fluid into fixt, heed the voice from heaven, "My son, give me thine heart;" so that, instead of living an ungodly and miserable life, and going down to a dishonored grave, with no other prospect before you than that of a wretched and undone eternity, you may bless the world in your passage through it, die the happy death of the righteous, and be prepared for the joyful "well done" of your Lord, in the day of final reckoning.

This is indeed to make something valuable of life, to crown it with the wreath of a happy immortality, to coin its every hour into the imperishable gold of heaven.

ADDRESS TO THE GRADUATING CLASS.

My young friends, will not you make such a blissful and glorious life as that referred to yours? You know that with some life is successful and happy, rich in the joys of the present, radiant with the hopes of the future, the very sunbeam of heaven; while with others, life is a bitterness, a burden, a miserable failure, the prelude of the blackness of darkness forever, so that they wish that they had never been born.

Would you therefore make the best of life, make it bright with the smiles of God's favor on earth, and crowned with his glory in heaven, show yourselves true men and women. Let the reptile act out the reptile, and the brute show himself a brute; but may you who, in distinction from the beasts that perish, are made "with port erect and face toward heaven," with a soul as well as body, be something above the animals, act worthy of your high nature and exalted destiny, as becomes sons and daughters of the King of kings.

Such is the grand end for which the very best of teachers have been laboring the past three years. And as you are about to go forth into the world as the inmore and guides of your race, it is for you to show that your teachers here have not labored in vain; to show it by your faithful industry, your careful consideration, your determined energy, your noble independence, and unsullied honesty; to show it, in short, by a character well rounded and complete—thus honoring your school, honoring your race and your race, honoring your country and your God. Remember that the way to pass for true men and women, and to be respected as such, is to be such in reality; that this veneering and cheap gilding will not answer for solid wood and pure gold; that it is not the mere outward show of goodness, but the actual "well doing," which will, according to scripture, "put to silence the ignorance of foolish men;" repelling their taunts and sneers, overcoming their prejudices, commanding their respect. May such well-doing characterize you always and everywhere, so that if not arrayed, like some, in the costly apparel, or decked with the gold of earth, you may have that infinitely better, the garments of righteousness and ornaments of grace, which are of great price in the sight of heaven; and thus be numbered among the jewels of God, and shining at last as the brightness of the firmament, and as the stars for ever and ever.

JOSEPH GARIBALDI.

Joseph Garibaldi. *

Who is this goodlooking gentleman in the picture? Why does he wear an embroidered skull-cap, and have so unusual a name? He is a foreigner and a revolutionist. He has lived sixty-five years, and has been a sailor, a steamboat captain and a general. He was born in Nice, a city on the Mediterranean Sea, belonging to France. He has lived in most of the countries of Europe, in Africa, in our own country, and in South America. In most of these countries he has fought in battle, sometimes at the head of a mere handful of men, and again with an army behind him. Like many brave men in Europe, he has always been poor. Although he has fought for Liberty all his life, and has won many battles, he cannot be called a successful man. The kings of Europe are too strong, and their armies are too large to be overthrown by one general, unless he has a brave and determined people to support him. There are thousands of brave men in Europe who desire a republic, and are ready to die for one, but the masses of the people are not fitted to govern themselves. No true republic can exist anywhere in the world unless the people are intelligent, and inclined to obey the laws. It seems almost useless for such men as Garibaldi to marshal armies and bring on wars that republics may flourish in Southern Europe. But no cause can triumph without earnest champions; and it cannot be denied that the name of Garibaldi has done much to encourage the friends of liberty all over the world. While fighting against the French in 1859, it is said of him that he owned but one shirt, and when it became necessary to wash that, he used to retire to his tent until it was dry. He wore a short blouse buttoned snugly about the waist and rists, but otherwise quite loose. It was called a Garibaldi, and was very fashionable, especially with the ladies, in this country, ten years ago. During our last war, a regiment of men, exiles from Southern Europe called the "Garibaldi Guards," was raised in New York city to fight for the Union. I remember of reading in one of the papers of the day, that many of those men, when they marched to the war, carried with them pet kittens. For months after, these words kept running through my mind,—

"The Garibaldi Guard went down the street
With fifty kittens on their necks."

* This Picture was published in "Every Saturday," for Jan. 7th, 1871. J. R. Osgood, Esq., of Boston, kindly loaned it to the "Southern Workman."

The One Talent.

When Sammy Hicks, "The Village Blacksmith," was once conversing with the Rev. J. P. Thaxwell, on the subject of individual responsibility, he said: "I have but one talent, but I am resolved so to use it, that no one shall get it from me to make his ten into eleven."

THE

FREEDMAN'S SAVINGS & TRUST COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,427,327.67, being an increase of fifty per cent. on the balance due depositors at the close of the present year.

There are no stockholders in this Company, and all the profits, over and above expenses, are each month carried to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $126,218.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $5,000,000 due depositors.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn in Part after one year.

Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.

Certificates of deposit issued bearing interest and available only where in the United States.

ACCOUNTS TRANSFERED,

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and without loss of interest.

For full information about the Bank address the Secretary at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company in Washington, directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, J. W. Alvord, Esq., or D. L. Eaton.

LAND FOR SALE

On the Peninsula.

I have for sale 300 Acres of land between Wormley's and Fort Monroe, Virginia. This section of the Country is fully and admirably described in the language of Captain John Smith: "Within is a country that may boast the perspective over the most pleasant places known; for large and pleasant navigable rivers, how each commodity never agreed better to frame a place for man's habitation, were it fully manured and inhabited by industrious people. There are mountainous, hils, plaines, valleyes, rivers, neat brooks, all running most pleasantly into a fairy bay, compassed but for the mouth with fruitful and delightsome land.—CAPTAIN JOHN SMITH."

WILLIAM E. HOWARD,
Hampton, Va.

THE SOUTHERN WORKMAN,

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. I. HAMPTON, VA., AUGUST, 1872. NO. 8.

Summer.

How fast the rapid hours retire!
How soon the spring was done!
And now no cloud keeps off the fire
Of the bright, burning sun.

The slender flower had dreads to swell
In that undoubted blue,
And treasures in its fading bell
The spark of morning dew.

The stream bounds lightly from the spring
To cool and shadowy caves;
And the bird dips his weary wing
Beneath its sparkling waves.

Joe. Hodgkin's Bible Class.

A good picture is worthy of careful study. In looking at such a picture as the one on this page, we should seek to discover what the idea of the artist was when he drew it. In this picture we see some things that we do not usually find in the same room. We can see at once that the old man and the boy are sitting in a blacksmith's shop. We can see the forge and the anvil, the sledge-hammer and grappling tongs hanging from the high beam; the smaller iron tools and the horse-shoes on the wall. But the big book on the anvil, and the other book on the lowest shelf in the quaint cupboard over the blacksmith's head, make us wonder what kind of a blacksmith's shop this can be. The name of this smith is Joe Hodgkins. He lived out in the country on a quiet hilltop. It was not far from the city, and city people used to ride by the shop sometimes. One day a lady and gentleman from the city, while taking an evening ride, were stopped in front of the shop by Joe Hodgkins, who was determined to put a new shoe on to the horse they drove, whether they were willing or not. He had noticed that the horse was lame because one of his shoes was not properly set, and he was not willing the carriage should go on till all was right. Joe did not believe in "cruelty to animals," even if it was not intentional on the part of the driver.

Two years after that, the same lady and gentleman were driving along the same road. Just before they came to the shop, their horse lost off a shoe, and they stopped, at Joe Hodgkins to have it replaced. That was the time when Joe was found seated at the anvil with his Bible spread out before him, reading aloud to little Joe, who was just home from school. And this is the verse he was reading: "If thine enemy hunger, feed him; if he thirst give him drink; for in so doing, thou shalt heap coals of fire on his head."—*Romans* xii: 20.

When Joe found the gentleman was waiting, he wrapped the Bible up in an old cloth very carefully, and started up his bellows. Then he began to explain to little Joe the verse he had read.

"Now look here, Joe," said he, "you see this horseshoe. I can do nothing with it as it is now. I might hammer on while it is cold all day long, and it would never budge an inch. Perhaps I might break it, but I never could bend it, not the least bit. But now you see," (suiting the action to the word), "what I am going to do to it. First I put it in the fire, so; then I blow the bellows, and I heap the coals of fire on this way, and I blow, and I blow, and I blow till I get it red-hot, and then I take it out and put it on the anvil, and I hammer it into any shape I want it: Don't you see, Joe? That's what I suspect the Scripture means when it tells us to heap coals of fire on the heads of our enemies. As long as we keep off, and treat them coldly, they are as stiff as a bit of cold iron; but when we treat them kindly, and do them good, we soften them, and we can do with them pretty much as we like. And you see, Joe, if this shoe does not come right the first time, I put it into the furnace again, and heat it some more, and so I keep on till I fix it just as I want it. The next time Jim Hawkins tries to worry you, you try to fix him in the same way. It's the best way to fix our enemies, you may depend upon it, Joe."

But who was Jim Hawkins? He was one of the boys who had been making fun of little Joe, because he used to go into his father's shop every noon, and hear the Bible read and explained. Little Joe could not bear to be laughed at, and he and Jim had finally got into a fight, the day before. So his father was showing him a better way to get along with the boys.

But why do you suppose Joe took so much pains to read the Bible to little Joe every noon-time. It was because they had taken the Bible out of the school that he attended. Is there any father or mother who reads this article, who would be willing to send a child to a school where the Bible could not be read?

Yet there are a great many people in this country, who demand that the Bible shall be taken out of our public schools. These people are the Roman Catholics. Most of them came from over the sea. They were poor when they came to America. The people of this country arrested them kindly, and allowed them to have the same religious privileges that they had in their own countries. And now they have become rich and powerful, and they are trying to dictate to us where and when we shall not have the Bible read—the Bible that our fathers loved, which is the glory of our country. They had taken it out of the school where little Joe went, (so says the story in the "Christian Weekly,") and Joe's father said, "As to having Joe grow up like a heathen, without knowing the Word, that is not to be thought of." So he used to take Joe into the shop at noon; and after they had eaten their dinner together, the father read the Bible and the son listened. The school-boys, seeing them there, called them "Joe Hodgkin's Bible class."

The picture reminds me of the hymn that the children sing:

"We won't give up the Bible,
God's holy book of truth," etc.

JOE HODGKIN'S BIBLE-CLASS.

The Bible.

Some years ago, a heathen chief paid a visit to England. He was lost in wonder while watching the people of that country, and in studying their institutions and inventions. During his visit, he called on Queen Victoria, and among other things he asked her why her kingdom was so powerful, and wherein its glory consisted. "England's glory rests upon this book," said the Queen, placing her hand on a Bible that was lying near.

A truer sentence was never uttered. The Bible is the basis of civilization, the glory of every civilized nation. In the dark ages of the world, before the art of printing was invented, Bibles were very rare. Those that did exist were generally chained to the pulpits of the churches. There were very few who could read any book in those days.

The word Bible comes from the Greek language. It means simply, "book." It was first used to indicate that the Bible is the book of all books. The Old Testament was first written in the Hebrew language. It is thought that Moses began to write the Bible, being inspired by the Spirit of God, when he was keeping sheep in the land of Midian, nearly sixteen hundred years before the birth of Christ. He wrote the first five books of the Bible, excepting the last chapter of Deuteronomy; and it is thought he wrote the book of Job, which is supposed to be one of the oldest in the Bible. After Moses, other men wrote different books at intervals, and it was not till twelve hundred years after Moses wrote, and four hundred years before Christ, that the Old Testament was finished. Of course the Old Testament was all the Bible the Jews had in the time of Christ. It was then read in their churches, as the whole Bible is now in ours.

The New Testament was first written in the Greek language by the early apostles of Christ. St. John wrote the last book, some sixty-three years after the death of Christ. None of the twelve disciples were living then but John. By that time, the religion of Jesus had begun to spread all over the world, and the Bible began to be changed or translated from the Hebrew and the Greek, into other languages. The work of translating the Bible into the different languages of the world, has been going on ever since, and there are men engaged in it now.

The wish of Christians is that all the people in the world shall have Bibles printed in their own languages.

Before the days of printing, all books had to be written out on papyrus, parchment, or wax, in a very laborious way. The Jews were very particular to have every letter and point just right when copying the Scriptures.

When our Saviour says, "Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled," it is thought that he means that not one point of the Hebrew letters, or one "little horn" shall be rubbed out till all that is written in the law of God shall be fulfilled.

The first book ever printed was the book of Psalms, in 1477. The whole of the Old Testament was printed in 1488, and the whole Bible about three years later.

The work of correcting the New Testament, and deciding which of the many copies was the best, was almost as great as the work upon the Old Testament. So much of the New Testament is composed of letters which had been sent to the different churches all over the world, that it was found very difficult to collect the materials for a complete testament, or will, for that is the meaning of the word of our Saviour.

It is impossible in so short an article, to give any idea of the changes that have taken place in arranging the books of the Bible, in dividing up the text so as to employ chapters and verses, in punctuation, in marginal references, and in making concordances. Nor can I stop to tell of the life-long labors of scholars in all ages, to improve the text of the Bible. By improving the text I mean correcting the errors in it.

One of the first men who undertook to translate the Bible into English was John Wicliffe, who was born about the year 1324. At one time he was a teacher in the leading college of the land, and a popular minister, but he began very early to denounce the corruptions in the church, and was at last driven from college, and forced to live a quiet life. There, with the help of his friends, he translated the Bible. The world honors him now; but so filled were some of the people then, and so ignorant, that when he was dead they went and dug up his bones and burned them, trying to insult his memory, because, they said, he was a heretic. He died in 1384.

Fifty years after, another English edition of the Bible was published by two men whose names were Tyndale, and Coverdale. This edition, including the work of both these men, contained the whole of the sacred writings. Tyndale was burned at the stake by his religious enemies, in 1536, and Coverdale became Bishop of Antwell, soon after.

In some of your Bibles, you will notice, there is in the beginning of the book, an address "To the Most High and Mighty Prince James, by the Grace of God, King of Great Britain, France, and Ireland, Defender of the Faith, the Translators of the Bible, wish Grace, Mercy, and Peace, through Jesus Christ our Lord." This address was written in 1611. King James the First, at a conference held at Hampton Court, near London, about the year 1600, appointed fifty-four distinguished ministers to make a new English translation of the Bible. Seven out of the fifty-four died before the work was done. The task was finished in 1611, and the new Bible was printed by Robert Barker. It is no wonder that the translators felt moved to write an address to the King when they had finished their work. The address sounds very queerly to us who live in a Republic, and there are very few in this age who would speak so flatteringly to a king, but that was the custom of the time. James was by no means the best of men, but the people were so glad to have the Bible within their reach, that they were willing to praise the King who had helped them to obtain it.

Since then, there has been little change in the English Bible. Many errors have been found in the translation, and there is much room for improvement. But on the whole, the work of those translators appointed by King James, has stood the tests of time wonderfully, and it is doubtful if a new translation will be attempted for many years. The Bible has done more to preserve the English language in its purity, to keep it from changing so that no one could tell what it once was, than any other book ever published.

Although hundreds, and perhaps thousands of books have been written to prove that the Bible is not true, its power in the world is greater than ever before.

If home is the place where faces are sour, and words harsh, and fault-finding ever in the ascendant, children will spend as many hours as possible elsewhere.

THE Southern Workman.

THE
Southern Workman,
ISSUED MONTHLY.

S. C. ARMSTRONG, *Editorial Manager.*
H. W. BLAKE, *Assistant Editor.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will contain not less than three illustrations, will furnish a variety of choice reading, will tell what is going on in the world, and will aim to please and profit both old and young.

All are invited, the young especially, to ask by letter, questions on any subject upon which they wish information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

To every church which shall send us one hundred one dollar subscriptions for "The Southern Workman," we will send a beautiful communion set costing twenty-five dollars.

We will give a handsome Bible costing thirteen dollars to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars to each for every one hundred one dollar subscriptions, or $18.75 for seventy-five subscriptions; or $12.50 for every fifty subscriptions.

In these cases the papers are to be sent in such bundles as may direct to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, AUGUST, 1872.

We were pleased, some time since, to receive accounts of a temperance revival among the colored people of Aiken, S. C. Such revivals have, for a long time, been common at the North, and, next to a revival of religion, nothing is more to be desired. It seems that about the beginning of the present year, some of the leading colored men of Aiken, applied to the chief officer of the Sons of Temperance in their county, to assist them in promoting the cause of Temperance among their race. That gentleman was obliged to inform them that he could not admit them into the Order of which he was a member, because the National Grand Division had forbidden the formation of colored lodges of Sons of Temperance. Just here, we would like to ask the members of that Order, if they do not believe the colored man is in just as much danger from the use of liquor as the white man? Is there not as much virtue in saving a colored man from ruin in this world, and eternal misery in the next, as there would be if he was white? Will not his family suffer just as much if he is a drunkard? Will not his children cry as piteously for bread as though they were whites?

But to return to Aiken. The officer of the Sons of Temperance, anxious to help the colored men in so good a cause, applied to Rev. G. J. Griffith, pastor of the Aiken Methodist Church, to see what could be done. That gentleman wrote out a book of instructions, and a ritual called the "Lodge of Abstinence Manual," and a separate temperance organization was formed for the colored people. This manual is very highly commended by the "Aiken Journal." The society is called the "Aiken Lodge of Abstinence, No. 1." Its membership is rapidly increasing, and the intention is to petition the Legislature for a charter. Several applications have been received from other places in the state, asking permission to form new lodges. The prospect is that the Sons of Abstinence will increase to a multitude.

We suppose this new lodge is a secret society. In general, we are opposed to secret societies. We should prefer that a temperance organization should be open and free to all. But we know that there are certain advantages claimed for secret temperance societies, that do not exist in connection with those not secret. Moreover, we fear anything that will cause the colored man and the whiskey jug to part company.

We have long been interested in a temperance movement going on in a quiet way, among the school children of Willmington, N. C. There is a society there, called the "Crusaders," composed of the members of the Williston school, which meets semi-monthly. This society has been in existence some four or five years. It is under the care of Miss Esther A. Warner. The members are pledged against rum, tobacco, and swearing. They solemnly promise neither to drink intoxicating liquors, nor to use tobacco, nor swear. Some of those children have been very severe in keeping their pledge. If the parents went to drink, it is hard for the children not to drink. But some of these Crusaders have even kept their parents from having liquor in the house. The Crusaders often hold public meetings, and sometimes large crowds attend them.

It is high time that more was done in the temperance cause at the South. If you want to find an orderly community, and a virtuous people, go where the rule of intoxicating liquor is forbidden. There are certain places in North Carolina, where it has been made a crime to sell liquor, by special act of the Legislature, because there are colleges or academies in those places. Those towns serve as examples of how the whole community would become, if liquor could be banished.

There is no need of a temperance society among the students of this institution. The members are required to abstain from all those things which temperance societies are designed to prevent. The use of tobacco is especially prohibited.

The temperance society should go hand in hand with the church and Sunday-school. Let those who are in danger have the power of temptation, who care not for liquor, and can go by a dram shop with no desire to turn in, let them rise up and do something to save there fellow men. Let us lift up the temperance banner where all may see it, so that some may flock about it and be saved from the plague of drunkenness, as the Israelites of old were healed of their disease by looking at the brazen serpent.

There is no place in the South, too small or poor for the traveler not to find in it a sign on which is painted in large letters, "Bar." Perhaps it is safe to say there is not a southern city where liquor is not sold on one-half the corners of the business streets. How long shall these things be?

We were at fault last month, in stating that the picture of the Zoological Garden was furnished by Messrs. Harper & Brothers. We should have credited it to J. R. Osgood of Boston. The picture on the third page was loaned us by H. O. Houghton & Co., of the Riverside Press, Cambridge, Mass. Both firms will please accept our apologies for these errors. We are indebted to them for two of the pictures in the present number. Mr. Osgood provides the portrait of Dumas, and H. O. Houghton & Co. furnish the children's picture on the third page.

We have just received the plates of six large pictures, from the American Tract Society of New York. The designs are excellent, and the finish of the plates is all that can be desired. Inform them that he could not admit them into the Order of which he was a member, because the National Grand Division had forbidden the formation of colored lodges of Sons of Temperance. Just here, we would like to ask the members of that Order, if they do not believe the colored man is in just as much danger from the use of liquor as the white man? Is there not as much virtue in saving a colored man from ruin in this world, and eternal misery in the next, as there would be if he was white? Will not his family suffer just as much if he is a drunkard? Will not his children cry as piteously for bread as though they were whites?

But to return to Aiken. The officer of the Sons of Temperance, anxious to help the colored men in so good a cause, applied to Rev. G. J. Griffith, pastor of the Aiken Methodist Church, to see what could be done. That gentleman wrote out a book of instructions, and a ritual called the "Lodge of Abstinence Manual," and a separate temperance organization was formed for the colored people. This manual is very highly commended by the "Aiken Journal." The society is called the "Aiken Lodge of Abstinence, No. 1." Its membership is rapidly increasing, and the intention is to petition the Legislature for a charter. Several applications have been received from other places in the state, asking permission to form new lodges. The prospect is that the Sons of Abstinence will increase to a multitude.

We suppose this new lodge is a secret society. In general, we are opposed to secret societies. We should prefer that a temperance organization should be open and free to all. But we know that there are certain advantages claimed for secret temperance societies, that do not exist in connection with those not secret. Moreover, we fear anything that will cause the colored man and the whiskey jug to part company.

We have long been interested in a temperance movement going on in a quiet way, among the school children of Willmington, N. C. There is a society there, called the "Crusaders," composed of the members of the Williston school, which meets semi-monthly. This society has been in existence some four or five years. It is under the care of Miss Esther A. Warner. The members are pledged against rum, tobacco, and swearing. They solemnly promise neither to drink intoxicating liquors, nor to use tobacco, nor swear. Some of those children have been very severe in keeping their pledge. If the parents went to drink, it is hard for the children not to drink. But some of these Crusaders have even kept their parents from having liquor in the

Isaac N. Parker, who is teaching in Norfolk County writes us that he walks six miles in the morning to reach his school-house, and then back again at night for the sake of hearing at both and saving expense. There is a check for you. We do not believe he is ashamed to work.

Rev. W. E. Foster, of Tuscaloosa, Ala, called on us the other day. We were glad to welcome a visitor from so far South. He expressed himself much pleased with this institution. He tells us that some of the colored churches in Alabama are very large, and that a few of the preachers there receive handsome salaries,—from twelve to fifteen hundred dollars a year. Mr. Foster reports the state of the country as peaceably quiet.

"Teach as little as you can."—That is the motto of a celebrated teacher. The meaning is that in teaching, one should use as few words as he can, and at the same time clearly explain ideas he wishes to teach. Too many words confuse the children. They do not understand what they are to learn. A few ideas well taught are better than many poorly taught.

Sunday Excursions are quite popular now. Sometimes a church chartes a train on the Sabbath—for the purpose of going off somewhere to attend a funeral. Pastor and people leave their own service and spend the day coming and going. Sometimes church members start off on excursions Saturday night and travel until the next morning. They do not seem to think that it is any violation of the Sabbath if they only attend church during the day. Lately it was proposed by a clergyman not far distant that he and his people take an excursion on the Sabbath, to Fortress Monroe, and hold a sort of [illegible] to raise money to pay off the church debt. What is the difference between such excursions and [illegible] that are taken for mere pleasure? What are called the "world's [illegible]"

Look out for a swindle!—The world is full of chaff. If a man promises to give you ten times your money's worth, it you will only pay him what he asks, give him a wide berth. Keep away from him. He will surely cheat you. The book of the Savings Bank pays much better than a lottery ticket. There are thousands of sharpers all over the country, who are trying to get away the money you earn by hard work. They will offer you all sorts of things. Perhaps they will want to sell you some counterfeit money very cheap, and will tell you that you can easily pass it. You are sure to get into trouble if you have anything to do with them.

The farmers of Eastern Virginia are pretty much discouraged. The season is a hard one for them. Thousands of dollars have been lost in a single day in this region, on potatoes. They even talk of twenty-five cents a barrel for them in some places. Scarcely any one has realized anything from the early crops. The extreme cold of last spring retarded the crops about here so that they are scarcely any earlier than those in New Jersey. Much was hoped for when peaches should be ripe, but now they are decaying so rapidly that it becomes a question, if it is not best to cut down the trees and make room for something else.

Some teachers think it a good plan to have their pupils learn the names of the books of the Bible in their order, and recite them. We were present, not many months ago, at a State Normal School in Massachusetts, while such an exercise was going on. A class had been sent to the board to write the names of the books and then read them. Genesis and Exodus had been correctly written and pronounced. "Next," said the teacher. There was a pause, and everybody looked around. "The next book," said the scholar, "is—is Bartholomew, and I don't know how to spell it, sir." There were some who laughed.

We desire to say to our Northern friends who have subscribed for one paper or who may be asked to, that we intend to make it a mirror of the actual condition of the South. We have high hopes of being able to do this better than any political paper can, or any paper not printed on Southern ground. We believe our position will enable us to render a fair equivalent to all our subscribers, wherever they reside.

The National Educational Association holds its twelfth annual meeting this year in Boston, beginning August 6th. Many distinguished superintendents and teachers will be present; also a goodly number of Southern educators. Joseph Hodgson, State Superintendent of Public Instruction, Alabama, will read a paper on "Public Education in the South." We hope the association will be a benefit to general, and to Southern education.

We think if the heroism and sacrifices of some of the colored preachers herein the South could be known the world would applaud. We know of one preacher who last year gave up a business in the city, and took the position of Presiding Elder, in a North Carolina district, who receives no pay for his labors except the food he eats. He supports his family, in their old home, and pays all his traveling expenses; and all his people do is to feed him.

Eastern Virginia Sunday-school Union.

This organization was established in July, 1872, for the purpose of awakening and enlarging the Sunday-school interest of the State.

Pastors of churches and Superintendents of schools are *ex officio* members of the Union.

The chief object of the Association is to establish new schools in all the cities and counties of the State; also, to supply destitute schools with Bibles, papers, books, and all other helps requisite for the use of the Sunday-school.

These will be furnished gratis, as far as practicable, to those schools unable to pay for them; and all other schools making donations for the purchase of books and papers, will receive all they need at discount rates, thus enabling them to secure fully, one-third more of reading material than they otherwise could, should they purchase them outside of the agency of the Sunday-school Union.

Proceedings of the Union, and all matters of interest pertaining to the schools, will be published free of cost, in the "Southern Workman," by forwarding them to the general Sunday-school agent at Norfolk, Va.

Any school desiring assistance, will receive due attention by application of the superintendent, in person, or by letter, to

M. L'HOMMEDIEU,
General Agent,
Eastern Virginia S. S. Union,
Norfolk, Va.

Sunday-School Concert.

We publish by request, the particulars of a very interesting Sunday-school Concert, which was held in the Bate-st. Baptist Church, in Norfolk, Va., on Sabbath afternoon, July 27th, 1872, and which we think very worthy of imitation by the other schools of that city.

The exercises consisted of singing and recitations from different classes and members of the school. Two valuable silver prizes had been offered to the one who should commit to memory and repeat the greatest number of scripture verses. The contestants for these prizes were Luke Williams, George Hopper and Edward Valentine. The first recited in a very clear, and distinct manner one hundred verses, making twenty mistakes; the next repeated one hundred and five verses making fourteen errors; the last and successful one that obtained the prize, recited for nearly an hour in a very rapid manner, making only twenty mistakes in five hundred and forty verses. This number was only a part of what he had committed to memory; he was stopped by the superintendent, as the hour was now getting late, and no more time could be allowed him.

There was a Sunday-school Banner presented to the school by the superintendent Mr. J. Frazier. The prize for the best recitation in class was awarded to Joseph Valentine.

After the presentation of the prizes the exercises were concluded by singing,

"Shall we gather at the River," &c.

Sciopticon Exhibition at Hampton.

The members of Mr. Taylor's church were highly entertained on Monday evening, July 22d, and the members of Mr. Thornton's church, on Tuesday evening, July 23d, by a Sciopticon Exhibition under the management of Mr. L'Hommedieu, of Norfolk. These exhibitions were partly for the purpose of aiding the congregations in building new churches. The audience were very much pleased. The loud and continued applause from those present, as the different pictures were shown, in many cases prevented the voice of the lecturer from being heard. Appropriate music was furnished under the direction of Mr. Thos. P. Fenner, the Musical Instructor at the Normal School. Mr. L'Hommedieu, who is an agent for the "Southern Workman" in Norfolk, proposes to give other entertainments of like character, in different parts of this state.

Rotation in Office.

For many years an idea has prevailed in this country that a man ought not to hold an office very long, but that after a year or two he should give place to some one else. We hear a good deal of such talk in the political speeches now being made. A great many men speak of offices as though they were made for the people to get them, and as if they were merely arrangements by which a certain number of persons can obtain a comfortable living. Those same men often come to an office-holder and say, "You have had a nice easy time for a year or two, now stand aside and let your neighbor have the same chance." Such ideas are altogether foolish and wrong. Political offices are not established for the sake of men who hold them. They are for the good of the whole people, and every office-holder who does his duty is the servant of the people. The people intend that their servants shall have fair pay for the work they do; that they shall be paid as other men are paid. Any man who accepts an office for the sake of enriching himself rich is not worthy to be honored by the people. He should be allowed to retire to private life as soon as possible.

But if an office-holder is honest and faithful he should not be turned out of his office because any one else wants it or because any one else thinks it is his "turn" to hold office. Any man who has been in office some time, and always done his duty and pleased the people, and say to his "Give me a chance to hold this office of yours." I have no more right to do it than I have to go into a man's store or shop and say "Look here, you have been carrying on business here for some time, and you unfriend just what to do. How you just get off somewhere else, and let me see what I can do."

There is another style of talking that is common now which is even worse than any thing I have mentioned. One may say, "Here is Mr. A; we all know he is getting rich by his office. Some of the rest of us want to get rich too; he must give a new man a chance at the next election." In such cases there is little difference between the man who has made money and the one who wants to make it. The people should turn the cold shoulder upon both of them.

It does not pay to elect new men to office except for the best of reasons. It takes a new man from one to two years to learn how to perform the duties of his office. If a man is corrupt, if he is arrogant or "stuck up," if he does not prove true to the principles he was elected to carry out, or if he is not able to do well what his office requires he should do, let him be turned out. But do not let him ever be turned out simply because some one clamors for "rotation in office." In many cases it is very poor policy to elect new men to office because there is a change in the party in power. What difference does it make if a county superintendent of schools is a democrat or republican, provided he is a good man of schools for all, or what party a highway surveyor belongs to, if he keeps the roads in good repair? It is better to have men of both parties united in such enterprises as these, and those who do not see it are blind to the signs of the times.

Health.

In a very warm summer like this, we should take great care of our health. When we breathe in pure air, it is life to us. When we breathe it out it has poison in it. So we need a supply of fresh air all the time both day and night, and should never sleep long in rooms from which the fresh air is shut out.

The air often has disease in it. This is caused by the decay of substances rotting on, or near the ground. Everything that has an offensive smell should be removed, as it may cause sickness. Along the borders of swamps after many warm days there will be much poison in the air. We should avoid such places if we can, and live on the dry ground. The poison in the air is generally near the earth, and it is well to sleep in upper rooms if we can. In warm weather the whole body should be washed often. Our clothing should be clean and often changed.

Food sometimes causes disease. Fat meats are not good in the summer in warm climates. Unripe fruits often cause a great deal of sickness.

Temperance is necessary to health. Great pestilences like the cholera, carry off first the intemperate. Whiskey drinking always shortens life in one way or another.

B. B.

Labor no Disgrace.

Mr. Editor,—I notice in your June number a letter from Alabama which contains the following statement: "Some of the people seem to think that it is a disgrace to work; and if they do work, they must have a certain kind to do or they wont work at all." Such an idea must have grown out of the system of slavery. It cannot be strange in this land of freedom. Our intelligent boys and girls in the country are all brought up to work, and to feel that every kind of honest work is honorable, and learning is useful. The farmer's boys learn to black boots for themselves and their father; they can take care of a horse, harness him and drive him, and keep the wagon and harness in order. They know good tools, keep them in order, and use them. They learn to plant, sow, hoe, dig, and gather crops. Mechanics' boys learn to help their fathers and use tools, and do any work that will enable them to earn something. I knew an Irish orphan boy who supported himself by gathering and selling swill. He went to the Sabbath-school, and was respected as other boys. He was the first scholar in the high school, and was made captain of a company in the war. I could tell of many such cases, and know many instances of poor girls who, by their labor, got means to go to academies, and became well educated.

The sentiment that all honest work is honorable, and that it is disgraceful to be lazy, is the foundation of prosperity. No people can prosper without it. Those who feel above certain kinds of honest work will be shiftless, and ought to be despised; and it is as important to know how to keep money, and to form the habit of doing so, as to earn it. Persons who earn a little money and waste it on nice clothes or toys or snuff, tobacco or liquor will always be poor and shiftless. Many of those who do the most for supporting schools among the freedmen, have by no means been rich people, though they began poor, they labored and earned and laid up money little by little, till they became comfortably rich. The freedmen generally had to begin poor; they can never become independent, unless they labor, and save their earnings; nor will they respect themselves, nor can they be respected by others, nor is it of any use to try to help those who will not help themselves. But as they prosper they will be more and more respected.

A Freedman.

Correspondence.

A friend writes as follows:

"A great source of annoyance to teachers of colored schools in the South arises from the non-payment of the tuition fee. That the parents of the children are willing to pay the sum demanded by the teacher is self-evident, but un-looked-for events often require that moneys religiously laid aside for educational purposes be paid out for other things, and when the day to pay the teacher comes, he receives only excuses. I have found a decided remedy for this evil. In a school recently opened in Wilmington, N. C., the following plan has worked very successfully: I required the parents wishing to send their children to school, to buy for each child a ticket bearing these words: 'Good for one month's tuition.' This ticket was signed by the teacher, and also by the committee having the school in charge—gentlemen of good social and financial ability. On sending to school the children present their signed tickets and are entitled to a month's tuition. This plan is acceptable to the parents and the teacher. I would recommend it to all new teachers and to such old ones as have been troubled in collecting tuition due them."—F. H.

An occasional correspondent thus expresses his views:

"Why do we learn to read? Is it simply that we may know, without asking, what are Grant's chances for reelection? or that we may know that there is going to be an excursion to the sea-shore on the Fourth of July, and that the fare will be very low? If such things as these are all we read, why are we so anxious if we are than those who cannot read? A certain learned man, who had never attended school was asked how he obtained his education. His replied 'Some one showed me the alphabet, and what more did I need to enable me to acquire any knowledge I wished?' He became wise simply by reading. But it seems as if in every act for politics and the trivial news of the day, there are some who would never look at a book or a paper. Such persons must be made to acquire a taste for reading until they learn to enjoy a book as they enjoy a friend. Believing that 'The Southern Workman' will be a friend to all who read it regularly, I have recently spent much time and strength in trying to introduce it in various places. But the people are so slow that it is only after presenting the subject again and again that anything can be accomplished. I would like to ask every colored person who reads this: How long is this state of things to last? When are the people going to wake up and think quick and act, be forever examining' a thing in their 'minds?' Will not all who subscribe for this paper, keep showing it to those about them, until the communities in which they live are familiar with it? By so doing, they will help the paper to become a still more valuable friend and instructor wherever it goes."

J. D.

Joseph D. Giles, of Saltville, Va., writes very encouragingly of the condition of the colored people in that vicinity. He says they are industrious and very temperate, he having seen but one drunken man during his stay in that place (nearly a year). He also gives a very interesting account of a parade and dinner of the Zion Relief Association, which our limited space prevents us from publishing.

Kentucky Letter.

Mr. Editor,—I have received several numbers of your paper, published especially in the interest of the colored men in the country. I am glad you are doing this work, and I hope you will make a permanent success of the enterprise.

I have been known as a thorough anti-slavery man for the last twenty-five years, but never supposed I should live to see a paper like yours published in "Old Virginia." When one thinks of the various providential steps by which the freedom of the colored race has been wrought out and sustained, he can but exclaim "What hath God wrought?"

Receive my hearty wish that both your success and usefulness may be permanently assured.

Yours truly,
Edgar Nexsman.

Portsmouth Letter.

Mr. Editor,—A very interesting Sunday-school meeting was held in the Zion Baptist Church, of this city on the 30th day of July. The occasion was one of peculiar interest, for during the meeting a prize was awarded to Miss Georgia Carter, a member of Zion Baptist Sunday-school, for having recited in the most correct manner the largest number of verses from the Bible, of any scholar connected with the Virginia Baptist Association. The church may well be proud of their success in having secured the prize this year. Rev. Mr. Williams, of Petersburg, the founder of the Virginia Baptist Association and Sunday-school Union, two institutions that are so well known by the good work they are doing in our State—presented the silver prize to Miss Carter with appropriate remarks. She returned thanks for the same, and expressed the hope that it might bring with it a blessing upon the school. Previous to the presentation, Mr. Williams spoke of the success and future prospects of the Sunday-school cause, and urged the attention of all to the importance of the work. After the presentation, the school sang "Hosanna in the Highest." The school was then addressed by the Norfolk agent of your paper. We wish to return thanks to him for his generous donation of many copies of the "Workman," and to express the hope that all our members will send in their names to our pastor who is trying to raise a club for the benefit of the church.

S.

The North Carolina Election.

The contest in North Carolina, which closed on the 1st inst., was looked upon with intense interest by the whole country, each party hoping for and expecting a large majority. The first reports which arrived from the field of contest gave large majorities to the Conservative party throughout the State; but as the official returns arrived from the different districts, the Conservative majority began to diminish, and at last has been given to the Republicans instead. It is not estimated that they have carried the State by a 1,000 majority. This, of course, is very encouraging to the Republicans, and will inspire them with new vigor for the Presidential campaign.

Have Your Property Insured.

Almost every day we read accounts of disastrous fires in different sections of the country. In many cases these accounts end with the words "Loss covered by insurance;" but in how many others they end with the words "No insurance." Every few persons, in reading these accounts, fully realize all that is contained in those words. Perhaps some hard-working man has, after many years, or it may be years, saved sufficient to build him a house; and just as he begins to feel a little independent, his house takes fire and he loses his all of worldly goods. Had he expended a few dollars for insurance he still might have a home of his own.

Alexander Davy Dumas;

That is the name of the Frenchman whose picture we print on the fourth page of this paper. He was a distinguished literary man, perhaps the most distinguished colored writer that has ever lived. His grandfather was one of the nobles of France. His grandmother was a St. Domingo negress. His father went to Hayti, but went to France, when he was fourteen, and enlisted in the army. He made himself known by his lively temperament, his handsome figure, and his great strength. It is said he could strangle a horse between his knees. He served sixteen years in the army before he became a commissioned officer, but after that his promotion was very rapid. He finally became general of a division. In one battle he alone defended a bridge from the enemy until the French could come to his rescue. This deed greatly pleased his commander, Napoleon Bonaparte.

The father and son both bore the same name. The younger Dumas was born in France in 1803. After the death of his father, his mother left him entirely to care for himself. He went to school, but learned little from books. He could, however, excel in playing games, could ride horse-back well, and was a good penman. At twenty he went to Paris, and became a clerk in the office of the Duke of Orleans. His salary was $250 a year. His then ambition to study to make up for the time he had lost in his boyhood, and was soon writing plays for the Paris Theatres. He continued so to do for several years, and gained considerable money and popularity. Then he began to write novels, and these also were very favorably received by the public. He was a very rapid writer. He published books so often that people declared that he did not write them himself. And it is true that he did not, for he kept a number of assistants at work all the time, finishing up books of which he furnished the outline. Dumas was a Republican, and believed in free government. For some time he was the editor of a political paper. For several years before 1848 his yearly income from the sale of his books was $12,000. In that year there was a revolution in France, which went against the Republicans, and Dumas' means were diminished. He is said, however, to have gained a greater fortune by his pen than any man ever did before him. He was a startling writer, and was prone to dazzle the fancy. The translations of his novels have had a great circulation in this country. There are 1,200 books of which he claimed to be the author. Dumas had an olive complexion, broad nose and frizzled hair. He betrayed his negro origin in some respects, more strongly than his father. He was fond of bright colors, and extravagant costume. He probably owed his vivid imagination, which rendered him so unique among modern writers, to his negro parentage.

Dumas died in December, 1870. After all has been said in his favor that can be thought of, it cannot be claimed that he was a good man, or that the world is much better for his having lived in it. Any one who reads this sketch of his life can do as much, and more, for their fellowmen than he did.

Fruit Farms.

Fruit should constitute a part of the products of every farm, and a portion of the consumption of every family; but there are some lands especially adapted to fruit, such as hillsides, broken region, dry and rolling tracts. We observe in almost every part of the country much land made, as it were, for fruit. There is no way in which such land can be so profitably cultivated as to plant it wholly to fruit—it may be made to yield a double and sometimes a treble crop annually. By setting it out first to the larger fruits, as the peach, apple, pear, cherry, plum, etc., not very near together, a good orchard may be secured in a few years.

In the meantime, the same ground can be covered with small fruits, such as blackberry, strawberry and raspberry, which can be made to produce well in two or three years—a good crop of small fruit is exceedingly profitable of itself. To this may be added in a few years, larger fruits, which, in all markets find a ready sale. We know an orchard of eighteen acres thus, cultivated, which yields a net profit of several thousand dollars annually—this year, if no harm befalls the fruit and it brings anywhere near the usual price, it cannot be less than eight or ten thousand dollars.

But this orchard has the advantage of being near the city, so that its products can be marketed every day as fast as it ripens. In case of orchards away from markets, the fruit may be canned or dried. Canned fruit is now an article of commerce that always finds a ready sale at a high price. The work of canning is simple, and may be safe and certain.

This fruit culture we regard as a pleasant and profitable work; the world needs fruit; its health and happiness demand it. How much better that fruit take the place in hospitality, of the beverages that load the table and the sideboard. We look forward to a time when fruit shall be so plenty that, with little expense, every family can be amply supplied; then cordials, jellies, pleasant drinks and foods can be furnished for all social occasions, which may take the place of hurtful and dangerous drinks. Fruit is to be one of the means of blessing the world; so let the trees be put out and all preparations be made to hasten the fruit era of the world.—*State Journal.*

General News.

The great event of the month is the North Carolina Election. It has been the common talk of the whole country. Mass-meetings have been held all over the State by both parties. The largest demonstration of the Democrats took place at Weldon, July 13th. Large numbers attended and were addressed by Senators Ransom, of North Carolina, Tipton of Nebraska, Stocton of New Jersey, Gov. Walker of Virginia, Messrs. Vance, Clingman and Bavringer of North Carolina, and Coalition of Norfolk. The Speakers' stand was handsomely decorated with National flags on which were the mottoes, "Peace! Peace! Peace!" "Greeley and Brown—The Nation's Candidates;" "The North and South—One Country—United Against Corruption;" "Constitutional Liberty and Equal Rights to All—White and Colored."

The provisions served up for the crowd consisted of six beeves, one hundred hogs and sheep, one hundred hams, thousands of loaves of bread, and other provisions.

The great Republican gathering was at a place called Hilton, just out of the city of Wilmington. The Hon. Henry Wilson, candidate for Vice-President, was the chief speaker. Senator Pool, Hon. C. H. Brogden, candidate for Lieutenant Governor in North Carolina, and others assisted Mr. Wilson. The delegations were mostly from the country, a large portion of the employees of the city refusing to let their workmen off.

On the twelfth of July last year there was a severe riot in New York City, because certain Irishmen who are called Orangemen, undertook to have a public parade. These Irishmen are Protestants, and they are very much hated by the Roman Catholics. They parade every 12th of July, and it was feared that there might be a riot this year. So 1200 policemen turned out to protect the Orangmen, and everything passed off quietly.

The strike in New York is over. The laborers have gone to work again. Many of the leading business firms all over the country are leaguing together to prevent future strikes.

James Kelley of Williamsburg, Penn., has just left a legacy of $350,000, to found a school where young men can go to learn whatever trade they wish.

In the case of Stokes, the murderer of Col. Fisk, the jury did not agree. A new trial is expected.

One of the notable things of the season is a series of picnics given to the poor children of New York city by the "New York Times." Some writer in that paper suggested that something ought to be done to give the poor children a chance to spend one day in the country. Then people began to send money to the editor of that paper, and he expects to be able to provide excursions for some 10,000 or 15,000 children before the summer is over. All that go have a "glorious time."

The debt of New York City is $127,000,000.

A costly bronze statue of Abraham Lincoln is soon to be placed over his grave at Springfield, Illinois. The hight of the statue is eleven feet. Mr. Lincoln is represented as holding the pen which signed the Emancipation Proclamation in his right hand, and the proclamation itself in his left. Near him is the American flag, also a wreath of laurels.

A colored lad named Gibbs, son of the Secretary of State of Florida, has just been admitted to the Military Academy at West Point.

Many of the young people of New England were deeply interested in a college boat-race that came off on the Connecticut River, near Springfield, Mass., July 24th. Picked crews from six colleges in New England took part in the race. The victory rested with the boys from Amherst, Mass.

Children's Department.

Dear Children,—Do you think the boy in the picture looks happy? Is he having a nice time eating his breakfast? Do you suppose he got up late and forgot to take off his night-cap, and comb his hair? One would think by the looks of his face that all the rest of the family had gone off to a pic-nic and left him behind. I suppose he must be sick, because that bottle on the table probably has medicine in it, or it would not have a label on the outside. But supposing he is sick, will he feel any better for looking so cross and having the sulks? Not at all; if he wants to get well, he would better cheer up and make himself and those who come to see him, happy. If he don't, I am afraid none of his friends will want to call on him, for fear that he will make them sour for a week by just looking at them.

Of course it is unpleasant to be sick. But if we are fretful and cross, it makes those who take care of us more trouble, and it is very apt to hinder our getting well. There are many children who are sick all their lives, who lie day after day on their beds without being able to get up. But those children seem happy, or at least contented. They smile upon those who come to see them, and a present of a flower or toy makes them very glad. You often see little lame boys in the streets hopping about on crutches while their playmates run everywhere with the greatest freedom. Do such boys seem cross and peevish? Why, they laugh the most of any in the playground. Now we who are well most of the time should learn a lesson from such children. If we happen to be sick for a day or two, let us remember how much they suffer and try to be contented with our lot. This is a very beautiful world. We have a great deal to make us happy. Neither you nor I can afford to carry about such a scowl as the boy in the picture has on his face.

A GOOD REPUTATION TO HAVE.

The little story I am going to tell you happened just before the war, when every one was very, very busy. Soldiers were enlisting and going away from almost every home in the land.

One young man had volunteered, and was expecting daily to be ordered to the seat of war. One day his mother gave him an unpaid bill with money, and asked him to pay it. When he returned home at night, she said, "Did you pay that bill?"

"Yes," he answered.

In a few days the bill was sent in a second time.

"I thought," she said to her son, "that you paid this."

"I really don't remember, mother, you know I've had so many things on my mind."

"But you said you did."

"Well," he answered "if I said did, I did."

He went away, and his mother took the bill herself to the store. The young man had been known in the town all his life, and what opinion was held of him this will show.

"I am quite sure," she said, "that my son paid this some days ago; he has been very busy since, and has quite forgotten about it but he told me that day he had, and says if he said then that he had, he is quite sure he did."

"Well," said the man, "I forget about it; but if he ever said he did, he did."

Wasn't that a grand character to have? Having once said a thing, that was enough to make others believe it, whether they remembered it or not.

I wish all the boys in our land were as sure of a good reputation.—*Christian Weekly.*

The Hampton Normal and Agricultural Institute,

SESSION OF 1872–3,

Opens October 1, 1872, at which time those desirous of admission should be present.

CONDITIONS OF ADMISSION:

1. Sound health and good character.
2. Age not under fourteen and not over twenty-five years.
3. Ability to read and write, and knowledge of Arithmetic through Long Division.

TERMS:

Total charge, ten dollars per month, payable half in labor and half in cash; those eighteen years of age and less are expected to pay six dollars per month cash.

Only the totally destitute are allowed to work out all their expenses.

STUDIES:

The course of study is three years, and embraces the various branches of the study of Language (English), Mathematics, Natural Science, and History.

Instruction is given in the Science of Government and Moral Science, and in Practical Agriculture.

Bible Lessons are given weekly.

There are Agricultural, Mechanical, and Commercial Courses, in which instruction is given by experienced teachers in the leading principles of those departments.

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $4,281,987.62, being an increase of *fifty per cent.* on the balance due depositors at the close of the present year.

There are no stockholders in this Company, and all the profits, over and above expenses, are paid at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $178,215.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $5,000,000 due depositors.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by the Book only.

Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED,

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and *without loss of interest.*

For full information about the Bank address the Actuary at Washington, D. C., or the Cashiers of the respective Branches. Copies of our Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, J. W. Alvord, Esq., or D. L. Eaton.

LAND FOR SALE
On the Peninsula.

I have for sale 200 acres of land between Williamsburg and Fort Monroe, Virginia. This section of the Country is fully and accurately described in the language of Captain John Smith: "Within is a country that has been the perregation over the most pleasant places known, for large and pleasant navigable rivers, heaven and earth never agreed better to frame a place for man's habitation, were it fully manured and inhabited by industrious people. There are mountaines, hils, plaines, valleyes, rivers, and brookes, all running most pleasantly into a faire bay, compassed last for the mouth with fruitful and delightsome land."—CAPTAIN JOHN SMITH.

WILLIAM S. HOWARD,
Hampton, Va.

JOHN T. BENTLEY,

PRACTICAL

WATCHMAKER

AND

JEWELER,

FORT MONROE, VA.

A Fine Stock of

FANCY GOODS

always on hand.

Watches, Clocks, and Jewelry, Sold and Repaired.

Dealer in

GENERAL FURNISHING GOODS, NOTIONS, AND FANCY ARTICLES, STATIONERY, PERFUMERY, POMADES, COMBS, BRUSHES, AND PATENT MEDICINES, GENTS' UNDERCLOTHING,

SOCKS, GLOVES, COLLARS, AND NECKTIES, LADIES' FANCY GOODS, HANDKERCHIEFS, GLOVES, HOSE, NETS, ELASTICS, BUTTONS, NEEDLES, PINS, ETC.

Cake and Confectionery.

Fresh Homemade Cake of all kinds on hand and made to order. Tea Biscuit every day.

French and American Candy and Confectionery of every description fresh and pure.

NUTS, RAISINS, CURRANTS, CITRON, ORANGES, LEMONS, AND FRUITS.

Orders received and filled for goods of every description at regular market prices.

Agent for Perkins and House's

Safety Lamps,

and the

German Student Lamps.

Shades, Chimneys, Globes, Wicks, etc., always on hand.

MILITARY GOODS, CAPS, AND SOLDIERS' FURNISHING GOODS UP ALL KINDS.

JOHN T. BENTLEY,

Visiting Cards!

Send 60 cents for a pack of beautiful Visiting Cards, printed in the BEST manner, and of the very BEST MATERIAL; or the same put up in a neat case for 65 cents. These cards are equal in every respect to copper-plate. A liberal discount made where six or more names are sent.

Address NORMAL SCHOOL PRESS,
Hampton, Va.

God is Good.

God is good! Each perfumed flower,
The fragrant fields, the dark green wood,
The insect, fluttering for an hour,—
All things proclaim that God is good.

I hear it in the rushing wind;
Little that here it sings stood,
And clouds, with gold and silver lined,
Are still repeating, God is good.

Each little rill, that, many a year,
Has the same verdant path pursued,
And every bird, in accents clear,
Joins in the song that God is good.

The restless main, with haughty roar,
Calms each wild wave and billow rude,
Retreats submissive from the shore,
And swells the chorus, God is good.

Countless hosts of burning stars
Sing his praise with fervent ensemble.
The rising sun each day declares,
In rays of glory, God is good.

The moon that walks in brightness, says,
God is good!—and man, endued
With power to speak his Maker's praise,
Should still repeat that God is good.

Anniversary Address,

Delivered at the Hampton Normal School, June 12th, 1872,

BY THE HON. LUCIUS FAIRCHILD, OF WISCONSIN.

LADIES AND GENTLEMEN,—On a former occasion I visited this school and became aware of the magnitude of the work upon which its managers and supporters have entered. My mind was then forcibly directed to the overshadowing importance of this enterprise, both in a local and national point of view. That there were millions of colored persons who had lately been slaves, and were necessarily almost utterly ignorant of the duties which devolve upon every free citizen of this Republic, I knew; but when I looked upon your faces, and realized that you were the representatives of thousands upon thousands who are to come upon the active stage of life to take the places of the present generation in the management of affairs, private and political, local, state and national, I was impressed with the responsibility which rests upon me, as well as upon all of your fellow-citizens, to take you, and all like you, by the hand, and give you a strong, hearty pull upwards, until you, and those whom you represent, shall be sufficiently educated as to be fully competent to discharge the duty you owe your country and yourselves.

Men may differ as to the best mode of extending this help; but while they are discussing that point, let us see if you cannot here in this school demonstrate to all that you have the capacity and willingness to help yourselves.

What is the extent of the educational work to be accomplished in this country, and especially among the colored race?

At the beginning of the late war there were some four millions of slaves in the United States. So few of them were in any sense educated that we may well call the whole number totally ignorant. They had been in enforced ignorance for generations. The ruling classes of the North and South, with a few individual exceptions, had made no effort to have it otherwise. The blame for this state of ignorance, therefore, does not rest upon the colored race, and with such antecedents we must not look for the same aptitude in acquiring knowledge in them which we find in a race that has been for many generations enjoying the best educational facilities the world affords. Yet there are very many ignorant persons among the whites, as well as among the blacks, in the Northern as well as in the Southern states. I gather from the reports of the United States Commission of Education for for 1871, the following facts which will be of interest to you, and will show to you, better than any statement of mine can, the extent of the field into which you, as educators, are about to enter.

The whole number of illiterate persons in the United States, ten years old and over, is 5,643,531, without counting Indians and Chinese. Of this, 3,556,102 are in the Northern states; 114,000 in the Pacific states and the territories; and 4,189,972 are in the Southern states. Those in the Southern states are divided as follows: whites, 1,516,339; colored, 2,671,396. It will be observed that there are more than one half as many white illiterate persons in the Southern states as there are illiterate blacks, and very nearly all of the illiterate persons in the Northern and Pacific states are whites. I mention this simply to show that it is not alone among the colored people this educational movement must extend.

Another interesting fact: of these illiterates, 2,608,847 are males, and 3,034,684 are females, divided thus: in the Northern states, 571,954 males and 781,251 females; Pacific states and the territories, 51,517 males, and 51,077 females; Southern states, 1,985,376 males, and 2,202,359 females. This multitude of ignorant people are further classified as follows: Grand aggregate of such persons who are *adults*, being 21 years old and over, 3,457,422; *minors*, being ten years old, and under 21 years, 2,006,112. Geographically they are distributed thus: in the Northern states, 1,077,297 adults; minors, 375,805. Pacific states and territories, 70,534 adults; 52,060 minors. Southern states, 2,489,591 adults; and 1,698,144 minors. Of those in the Southern states, and I speak particularly of these states because it is in them you are to do your educational work among your own people, probably one half of the adults are of an age which does not preclude them from acquiring the rudiments of an education. The minors are certainly within the reach of the school teacher; giving as the field for educational effort in the Southern states nearly 3,000,000 of people—considerably more than one half of whom are blacks.

Of the 2,000,000 illiterate persons between 10 and 21 years of age, in the United States, nearly 1,700,000 are in the Southern states. Of the 505,000 illiterate colored youth between 15 and 21 years of age, about 494,000 are in the Southern states, and there are nearly 284,000 illiterate white youth of the same ages in these states. There are in the Southern states, 930,400 illiterate persons between the ages of 10 and 15, 488,600 of whom are colored. This multitude of children must have the immediate attention of the school-teacher. In a very few years they will become of increased age, be beyond help. It is almost appalling to contemplate the fact that we have such a multitude of ignorant people in our midst. But the evil must be met and overcome, and you must do your share of the work.

I will not weary you with further statements. The war came, and as one of the results of that war, emancipation came to your people, and as a necessary consequence they were soon invested with all the privileges and responsibilities of citizenship.

How and why all this came about I shall not discuss; nor the right or wrong of it. It is sufficient for me to know that it is so; but I may be allowed to express my joy that it is so. Your race cannot now fulfil the mission and that you will not fail to impress the fact upon all the young who may come within the sphere of your influence.

This school is fortunate also in its *location*. It is planted where others of your race can witness the effect of education upon its pupils. You are here in the midst of your fellow-*friends*; surrounded by those who sympathize with you in your efforts to elevate yourselves, and who will take great pride if you shall in your own persons give additional proof that your race is capable of being fitted for the discharge of the duties which heve so lately devolved upon it. That you, and those who may succeed you, will demonstrate this I have no doubt. Should you fail to do this, or should any number of you prove to be failures, no matter for what reason, it cannot but be of infinite damage to this and kindred schools. Therefore I desire to emphasize the fact that upon you, now here, in a very great degree, rests the future success of this institution. Suppose a part of your number who shall leave here and enter the profession of a teacher, shall prove to be

ALEXANDER OAVY DUMAS (See Third page).

ill-fitted for the work. Will not all who are cognizant of the fact be apt to say that you have demenstrated that the colored race is incapable of acquiring sufficient education to enable them to teach? One class of people will surely lay the blame upon this school, and assert that these in charge of it have failed to perform their duty. Should any number of you go from here and fail into evil courses in life, become thieves, vagabonds, or dissipated men and women, you will be pointed at by those who would belittle this educational effort, as fair samples of the moral effect of the instruction you have received here. There are men, and they are confined to no section, who will be greatly rejoiced to find among you, those who will furnish in their own persons, argument against the system of education here inaugurated. And there are men of wealth in the land who would be deterred from contributing to the support of this school, should such an example as I have supposed come under their observation. You see, my friends, that you will carry the reputation of this school with you wherever you shall go, and its future prosperity will depend very greatly upon your characters, as teachers, or in any other avocation. Do not forget that.

I am gratified to see that in this, one of the first of such schools to have been established, the women are put upon an equal footing with the men. Upon the mothers of your people, and indeed of all people, depends in a very great degree their success in life. A people who do not give to woman that respect and veneration which is her due, show themselves lacking in one of the first essentials of a high civilization. If she is kept in comparitive ignorance, she cannot occupy that place in the estimation of the world which she deserves and should hold, for the benefit of man more than of herself. In laying the foundation of a system of education for your people, do not make the mistake which has been one of the greatest hinderances to general culture among the whites. Do not fail to give to girls the same facilities for mental culture which you give to boys. If any difference must be made, I believe it would be wise to give to woman the advantage. Whenever the women of this nation shall attain a high standard of culture, uneducated children will be unknown in the land. An educated woman insensibly elevates her whole household, and seldom sends forth from her home an uneducated child.

I am also impressed with the educational value of this institution in its character as a *normal* school, in which all the most improved methods of teaching are brought to bear, and by which the brighter scholars are fitted to go out among your people as instructors, and among your own people for their elevation. No grander mission can be presented to you, nor one in which you can do more good in your day and generation.

I know well that your efforts as teachers may not be appreciated by those for whose benefit you work. You will often be tempted to leave a profession which is, at best, a hard one, and one which is among the least remunerative, but you must not fail, you must not falter, you must press on though the obstacles be apparently insurmountable. As you approach them they will diminish; when you meet them face to face they will disappear like the mist before the morning sun. Should you pursue this calling throughout life, and I believe most of you ought to do so, you will be oppressed and discouraged with this want of appreciation. Your reward cannot be complete in this world; but future generations will turn to you and bless your memory. You are to be among the pioneers of your race in this profession. You must therefore be willing to accept the life of a pioneer with all its hardships.

Mr. Jefferson, when his motives were misconstrued, and his actions unkindly criticised, in the foundation and early management of the University of Virginia, grieved and heart-sick, wrote to his friend Mr. Cabell, "It is from posterity we are to expect remuneration for the sacrifices which we are making for their service, of time, quiet, and good will, and I fear not the appeal. The multitude of fine young men whom we shall redeem from ignorance, and who will feel that they owe to me the elevation of mind, of character, and of station they will be able to obtain from the result of our efforts, will insure their remembering us with gratitude. We will not then, be weary in well-doing." Time has proven how truly he estimated the love and gratitude of those who should enjoy the benefits of that noble institution, which was the result of his efficient, untiring efforts, and which to-day stands one of the proudest monuments to his memory. To you I say, then, "Be not weary in well-doing." Your reward will be sure. If not in the present rewards and honors of the world, it will be none the less certain to be yours in the satisfaction you will experience in the honest discharge of a sacred duty, and in the good will and esteem you will win from those whose feet you have led into the paths of virtue and knowledge.

There is a beautiful, if not a strictly truthful, story told of the teacher's reward. Jupiter announced that he would bestow the crown of immortality upon him who could prove that he had done the most good to mankind. On the Olympian mount, the multitude assembled. The competitors for the prize came forward. The poet recited the burning verses he had composed, through which he had fired the people's hearts for liberty and truth. The orator came forward and declared that the great gifts of eloquence he had received had been used for the people's weal, and never for their woe. The statuary and the painter advanced, and urged that through the ministry of the beautiful in their hands, mankind had been exalted and purified. Others from different professions and pursuits in turn presented their claims. Just behind them stood a venerable man, his beard as white as snow. Modestly he drew near. "And what hast then to urge for the crown?" asked Jupiter. "Nothing," said the old man; "but all these are my pupils." "Crown him, crown him," said Jove; "the faithful teacher is worthy of immortality; for all these owe their useful lives to him."

If faithful in your duties, you shall bave a crown of immortality; and in that crown shall sparkle the jewels, furbished and polished by your skill to shine as stars in the firmament forever and ever. And when you shall have come to the end of your days, and can look back upon a life spent for the benefit of your people, you may well die content, happy in the consciousness that you have not lived in vain.

One of the great political dangers threatening your people is, that they may become the dupes and tools of cunning men of overweening ambition and no honesty. To meet and avert that danger is one of the pressing necessities of the nation. The first step towards protecting your people against it is taken, when they have acquired the rudiments of an education. After that, they will rapidly press forward, until they reach a point of culture which will preclude their being controlled by men who seek their companionship only to carry out selfish schemes. There should be, within a few years, men of your own race in every community sufficiently advanced to be leaders and counsellors. Some of you before me may occupy that position, or you may be the school-teachers who will train others for that high mission. Whoever of your race shall rise to that eminence, will be guilty of base ingratitude to God, and the good people who are now so earnestly endeavoring to aid you, if they shall use the power thus given them for bad or selfish purposes. If ever the leaders of a people were called upon to be honest, upright, unselfish and fearless in the right, they are the leaders, present and future, of the colored race. If at any time you discover a bad man among you, who, by virtue of superior knowledge, seeks to lead your people in the path of wrong, use every effort to thrust him down from his position as a leader. Spurn him as you would a viper. Impress this upon all who may come within the sphere of your influences in or out of the school-room. If wise and good men shall come up among you, as the result of this and other like educational efforts, and shall be accepted by your race as guides and leaders, the future of the race is secure. But it cannot be too deeply impressed upon you who are to be educated men and women, and teachers, that to make that future successful, each and all of you must do your whole duty.

"The indigenous sloes and crabs and weeds of England, when cultivated and improved in orchards and gardens, are plums and apples and flowers. Man without artificial culture, without intellectual, moral and religious education, is a stupid, sensual, ferocious and disgusting savage. Such is natural uncultivated man; not as poets paint him, or philosophers imagine him, but as travellers actually see him. The same human creature, subjected to early culture, instructed, disciplined, christianized, is but little lower than the angels."

Education is the lifting power which raises savages to be like unto the angels. Schools are a lever which may be efficient when power is applied; but the power must be supplied by each student for himself or herself.

Government, or citizens, may furnish the facilities for obtaining education, but cannot compel the people to accept it. Each must improve the opportunities offered, or nothing will be accomplished. You may lead a man to the water, but he must drink for himself. Those who are really thirsty, will not wait long for others to dig wells, but will set about the work themselves.

The National Government has about exhausted its powers to elevate the colored race. It has declared that they shall be free, free to be what they will, except that they must not be criminal. The government has not decreed that they *shall* be rich, but that they may be, if they will acquire wealth honestly; nor that they *shall* be learned, or good; but that they may be if they so will it. You must always bear in mind that freedom imposes great responsibilities. Since the laws of the land have declared the colored men free, they have, in morals, no longer the right to be vagabonds. They are no longer annexed to the plantation; no longer mere property; they are now a part and portion of the state; must be can work the plantation; must also can rule the state. They are no longer mere tools in others' hands, but are men, with all the privileges and responsibilities of manhood and citizenship. Remember that no man is a good citizen without an earnest effort on his part. Your people must not forget how to till the soil, nor must they despise manual labor, but they must add knowledge, and learn how to assist their fellow-citizens to fashion the destimes of the state. To be statesmen does not necessarily imply that they must forget to be plough-men, good ploughmen too, who work with will, adding, for the benefit of the state and themselves, to the national prosperity.

What this institution needs, and must have, is more money. Seventy-five thousand dollars are wanted immediately for the purpose of erecting additional buildings. There is a pressing demand for admission to its classes, which cannot be met unless means are forthcoming whereby to provide accommodations for more pupils. Nor can the demands upon the school for teachers be complied with without further facilities for instruction here.

The Institution needs, and should have, an immediate addition to its endowment fund of at least two hundred thousand dollars, to give it that stability which will ensure its future success beyond all doubt.

I am glad to know that Virginia has been liberal towards it in the division of lands devoted to educational purposes. I do not believe that Virginia will lag behind her sister states in this matter of educating her people. A new era has dawned for her; one of greater prosperity and progress. I trust, and believe, there are none within her borders who will oppose this onward course towards an educational goal which the "Mother of Presidents" should speedily reach.

But Virginia cannot now do all she would. The rich of other states must be called in to aid in building up your school. That you merit the approbation of all interested in the cause I have no doubt. If any are skeptical of this, and therefore hesitate to contribute of their means, let them come here and witness the progress you are making. And see to it, each one part, that you can point such persons to the improvement each one of you has made as proof that you can and will avail yourselves of all the educational advantages they will aid in giving you. Convince them that if they will open the fountains of knowledge, you will draw and drink for yourselves.

I shall be rejoiced if any word I have dropped to-day falls upon good ground, and bears good fruit in your hearts and future lives; or if it shall convince any one that duty calls for an open hand in replenishing the coffers of your institution.

Located on this beautiful spot, within view of Fortress Monroe, one of the symbols of the power of our government, near the National Home for disabled soldiers—a monument of the gratitude of the nation to those who served her in her time of need, guided by an efficient corps of teachers, in no pursue their labors with zeal and intelligence, under the inspiration of a sincere and earnest desire for your welfare, with friends everywhere ready to furnish the means for carrying forward the enterprise, let us trust that this institution will stand through coming years with ever-growing strength and usefulness, a perpetual source of knowledge and culture to the colored race, and through them, a perpetual blessing to our common country and to all mankind.

"I WANT to give you the secret of my success; it is contained in two words—be earnest. That was what made me in any degree successful; when I had anything to do, whether it was study, play, work or kindness, I want at it with all my might, giving myself wholly and entirely to it. So it must be with you, in your study, your work, your tasks, your sympathies; you must give yourselves, else you will get nothing back."—*Charlotte Cushman.*

Pride can grow as well upon our virtues, as our vices, and steals upon us on all occasions.

THE
SOUTHERN WORKMAN,
DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. I. HAMPTON, VA., SEPTEMBER, 1872. NO. 9.

Your Mission.

If you cannot on the ocean
Sail among the swiftest fleet,
Rocking on the highest billows,
Laughing at the storms you meet;
You can stand among the sailors;
Anchored yet within the bay,
You can lend a hand to help them,
As they launch their boats away.

If you are too weak to journey
Up the mountain, steep and high;
You can stand within the valley,
While the multitudes go by;
You can chant in happy measure,
As they slowly pass along,
Though they may forget the singer,
They will not forget the song.

If you cannot in the harvest,
Garner up the richest sheaves,
Many a grain, both ripe and golden
May the careless reapers leave.
Go and glean among the briers,
Growing rank against the wall,
For it may be that their shadow
Hides the heaviest wheat of all.

If you cannot be the watchman
Standing high on Zion's wall,
Pointing out the path to heaven,
Offering life and peace to all:
With your prayers and with your bounties,
You can do what heaven demands,
You can be like faithful Aaron,
Holding up the prophet's hands.

Do not, then, stand idly waiting,
For some greater work to do;
Time moves on with rapid motion,
Life and death are both in view;
Go and toil in any vineyard,
Do not fear to do or dare,
If you want a field of labor,
You can find it anywhere.

The Underground Railroad.

In the year 1850, when slavery was possessed of full power in the United States, a lady wrote a book called "Uncle Tom's Cabin," describing slave life in the different Southern states, and giving some account of the escape of certain slaves to Canada and freedom. No one can measure the influence of that book. It has been read all over the world, and has made the name of its author well nigh immortal. It led the way for many other books on the subject of slavery. A considerable number of these were works of fiction. Fifteen years ago, no one supposed that the real facts about slavery—the names of masters and of slaves, and the way in which certain things were done, could be published during the present century. But the hand of time has wrought many changes within the memory of us all: and the former things have passed away so that they appear but as a dream when one awaketh.

While slavery lasted, there was a very peculiar institution connected with it, called "The Underground Railroad." I suppose there are very few who read this article that are not acquainted with that railroad. But lest there should be some who have never heard of it before, I will say that whenever a slave was assisted to escape, it was said that he went off by the Underground Railroad. This term was a very inflexible one, for very few slaves escaped in exactly the same way. But among the Northern friends of the slave, there was so much system, that, if a fugitive succeeded in getting into the hands of certain parties, he was almost sure to be placed beyond the reach of his master.

The city of Philadelphia was for years a grand central depot of the Underground Railroad. It mattered little whether a slave started from Delaware, Maryland, Virginia or North Carolina, he was almost certain to find his way to the Anti-Slavery Office in Philadelphia. South of North Carolina very few slaves escaped. Most of those who gained their freedom lived somewhere near the waters adjacent to the Atlantic coast or the Ohio River.

Books were kept at the Anti-Slavery Office in Philadelphia, in which were written the names of the fugitives who came there from time to time, also the leading facts in their history. In this way, a knowledge of hundreds of fugitives was gained.

In the year 1852 a Vigilance Committee was organized in Philadelphia, to assist fugitive slaves who had escaped from the South, in reaching a place of safety. At that time, the slave-hunter was permitted to go anywhere in the United States, and there was no place of certain freedom for the black man under the Stars and Stripes. Nineteen men were on this Vigilance Committee, but the chief business was committed to four members who were called the Acting Vigilance Committee. William Still was the chairman of this committee. He is a colored gentleman of fine business ability, who has for many years been identified with the cause of freedom. By request of the Pennsylvania Anti-Slavery Society, he has recently published a book entitled "The Underground Railroad," which gives a history of a large number of passengers who escaped over that road, and also accounts of many of the men and women who befriended the slave in the dark days of American history. Truth is stranger than fiction, and the actual record of the sufferings and heroism of many fugitive slaves has more of romance in it, than is found in a hundred novels. The book contains the names of many masters who have lost slaves within the past few years. Doubtless some of them may chance to discover by reading it, what became of their slaves, how they escaped and what their recent history has been. It is also much to be hoped that some who have been long separated from their friends, may hear from them through this book. When a slave left his home, he generally left his family, and the joy of freedom was bleached by the grief of loneliness. Many succeeded in rescuing their wives and children from bondage in after years, but many families were severed, never to meet again.

The men who took passage over the Underground Road were, without doubt, the most intelligent part of the slave community. Many of them could read and write at the time of their escape, and all of them soon learned. Numbers of them have returned to the South, in these latter days, to enjoy citizenship in a climate far more congenial to them than Canada ever could be. Some of them are leaders among their people, and an honor to the community.

The laws of twenty years ago on the subject of slavery, and the decisions of the courts in connection with those laws, sound very strangely now. Then, it was regarded as treason against the United States for any man, white or colored, to resist the slave-hunter. The American people have learned since then what treason is.

The world honors the men and women who risked everything to succor the slave in those days. They did much to free their country from the disgrace of slavery. It is pleasant to read of their heroic deeds, now that slavery is gone forever.

The "Underground Railroad" is published by Potter & Coates, 822 Chestnut Street, Philadelphia. It contains nearly eight hundred pages and seventy engravings, including a large number made from photographs. It is handsomely bound, and will doubtless find its way to many of the parlor tables of those who were once slaves. Not a few will take great interest in purchasing such books, and preserving the past history of their race. Others will not care to remember the "House of bondage," desiring to live only in the present and the future. It is a matter of regret that the price of the book is so high, from $4.50 to $5, according to the binding. But there is probably no one who really desires it, who cannot, in some way, find means to procure it.

Kindness to Animals.

People are beginning to think more about treating animals kindly, in this age, than they ever did before. God has made man above all other things that he has created, and he has made it man's duty to treat the creatures that are below him with kindness. Not only that, but it never pays to be cruel. There is no joy in the house where the husband beats the wife, and the mother beats the children. Such people do not prosper in the world. So it is in the treatment of animals. A horse that is well fed, and kept in a good barn, and treated well in every way, is worth a great deal more than one that is compelled to draw enormous loads and is often cruelly beaten.

Horses, of all animals, are especially sensitive. They care for something besides food and shelter. They like to be spoken kindly to, and to be petted. They seem to have a real affection for their masters when treated thus. Many wonderful and truthful stories are told of horses who have saved their masters from death, and danger of all kinds. Many other stories are also told of horses who could not be broken or tamed with blows, that have become very gentle through the power of kindness.

In this picture, which was first used by the American Tract Society of New York in the "Christian Weekly," we see how eager the pony is to take the worm from the hand of his master. It is to be hoped that the little child, who is looking on, may learn from this very scene an early lesson of kindness to animals.

There is another thing that horses need, and that is rest. They cannot well work more hours in a week than a man. The horse-car companies of New York City find that unless they let their horses rest one day in seven, they become old and useless very fast. This goes to prove that animals, as well as men, should rest one day in seven, and that God has made the Sabbath a day of rest for both.

Much is being done in various places to compel men to treat these domestic animals kindly. Many laws have lately been passed for punishing cruel teamsters. Benevolent people have formed societies for the prevention of cruelty to animals. These societies have published papers and posted notices about the streets, asking drivers to uncheck their horses before going up hill, and many other things of the same sort. A society in Boston recently offered a considerable number of prizes to the children in the public schools of that city for essays on this subject—"Kindness to Our Dumb Animals." Many pieces were written by the children. Several of these were published entire, and a great many in part.

No man can rightly claim to be a gentleman, in every sense of the word, who is cruel to his beast.

The Emperor of Brazil.

The name of the gentleman whose picture we give on the fourth page is Dom Pedro. His grandfather, who was Emperor before him, had the same name—so this man is called "Dom Pedro II." He began to reign in the year 1840, being only fifteen years of age. He was crowned at Rio Janeiro, the capital of Brazil, in July, 1841. He is said to be a learned gentleman, and to care much for literature. He has done a great deal to encourage public works and the introduction of modern inventions into Brazil. He is very courteous, and kindly disposed toward foreigners. He writes and speaks fluently five foreign languages: English, French, German, Spanish, and Italian. He is an expert horseman, and delights in athletic sports. But all these things are of little note compared with his success in suppressing the slave-trade, once common in Brazil. He has chiefly accomplished this by inviting colonists from other countries to settle in his empire. These immigrants are leading the planters there to prefer free labor to the system of slavery. We are indebted to Messrs. Harper and Brothers, of New York for the picture of Dom Pedro.

The Slave Trade in Africa.

The end of slavery is not yet. The system had received many hard blows, within the last ten years. In a short time, we shall have reached the tenth anniversary of President Lincoln's proclamation of Sept. 22d, 1862, warning the Southerners, that their slaves would be freed, if they continued in rebellion against the government. Since then, much progress has been made in different parts of the world, toward universal freedom and now we are told that King Amadeus, of Spain, has, within a few days, signed a decree, providing for the gradual abolition of slavery in Cuba and Porto Rico. No nation that makes any pretense to civilization can dare to keep men in slavery much longer. But something more is required of these old nations of the world besides the abolition of slavery within their own borders.

There are countries that are exposed to-day with slavery as intolerable as ever existed in any age. Among them are Persia, Arabia, and Madagascar. Dr. Livingstone who has recently reported many new things to the world concerning Africa, declares that ninety thousand slaves are yearly exported from the Eastern coast of that continent. The slave trade still flourishes all over that benighted land, and no tongue can tell its horrors. It is a duty that civilized nations owe to humanity, to stop that trade. A report prevails that the United States, and several European Governments, are about to unite for that purpose. Much may be done by the navies of the world, to do away with the nefarious traffic. But as long as heathenism prevails in any region, there the slave trade is liable to exist. The Christian nations of the world must proclaim the gospel to those who buy and those who are bought. Not till then, will the trade in human flesh cease.

THE Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, *Editorial Manager.*
H. W. BLAKE, *Assistant Editor.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will contain not less than three illustrations, will furnish a variety of choice reading will tell what is going on in the world, and will aim to please and profit both old and young.

All are invited, the young especially, to ask by letter, questions on any subject upon which they wish information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"*The Southern Workman*" *should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.*

To every church which shall send us one hundred one dollar subscriptions for "The Southern Workman," we will send a beautiful communion set costing twenty-five dollars.

We will give a handsome Bible costing thirteen dollars to any church on society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars a cent. for every one hundred one dollar subscriptions; or $16.75 for seventy-five subscriptions; or $10.50 for every fifty subscriptions.

In these cases the papers are to be sent in *one bundle to one address* to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, SEPTEMBER, 1872.

Much is said in these days about the wants of the South. We are told that the South needs more capital. Money will build railroads and steamships. Money will put up factories that shall furnish labor for thousands. Money will buy machinery to cultivate the land, to work the mines and to improve the harbors of the sunny South. There is no doubt that the South needs more capital.

Again we are told the South needs a better system of laws. This cannot be denied. The laws of this part of our country are a mixture of the old and new. All sorts of men have helped to make them; some have been very ignorant, and others quite as unprincipled. New laws might be a great improvement. Moreover, it is claimed that there should be a general amnesty granted to all Southerners who were in the late war, and lost military rule here, now that peace has come. On the other hand, some declare that prosperity will never return until certain lawless bands of men, long known as Ku Klux, are forever suppressed. From some regions of the South these comes a cry, long and loud, saying, "Send us onigrants." If multitudes from other regions can be persuaded to come and dwell in the South to build up the waste places, it is thought a great want will be met.

Truly the wants of the South are many. But we firmly believe there is one great want that overshadows all the others. The South wants, most of all, a system of free schools. It is no use denying the established facts of history. Even the heathen nations of the world are beginning to understand that the countries that support common schools free to all, are the best, and that the people who live in such countries are the happiest under the sun.

Perhaps some of our readers think we say too much on this subject. But we feel that too much can never be said. Seven years have passed since the war, and all that has been done toward educating the masses of the South is but a drop in the bucket. School officials tell us that if the attention of the whole country is not directed to this matter at once, a whole generation will grow up in ignorance.

But our object at present is to contrast free schools and pay schools. In the days that are gone, all Southerners of any note were educated in pay schools. There were a few free schools in some states, but it was scarcely respectable for parents to send their children to them, and to-day the same idea has deep root all over the South, and it is very hard to convince people that any schools can be good that are not pay schools. Such an idea is altogether wrong. The names of the men who are straining every nerve to establish free schools among us, such men as Dr. Ruffner, of Virginia, Prof. McIver, of North Carolina, and Gen. Hodgson, of Alabama, will go down to history.

The labors and the sacrifices of the men and women who are the teachers in Southern free schools, in these days of their infancy, will not be forgotten by God nor man. Why then do we see multitudes of pay schools maintained right along side of the state free schools? Does not anyone see at once that these schools that are under the control of public school officers are more likely to be good than those in which the teacher is responsible to no one? What excuse is there for the many pay schools that are found in all large cities, and even out in the country? It may be said in reply that these pay schools furnish employment for a large number of teachers. This is true, but would it not be much better for these teachers to fit themselves to teach in the free schools? No teacher that is good for anything need long lack a place to teach a state school.

Of course we do not object to a pay school if it is not possible to have any other. It is often the best thing a community can do, to employ the same teacher to continue the school after the public money has all been used, at the expense of the parents of the scholars. In some states the funds are so small that each parent is obliged to pay some tuition in order that a public school may be established. We do not wish to complain of such laws, for they may be absolutely necessary. The point we would make is this: that everyone in a community, old and young, rich and poor, white and black, should in every way encourage the free school, and that everything that tends to detract from the interest of the free school should be set aside.

NO, WE DO NOT BELIEVE IT.—A friend said to us the other day, "Your paper will go down unless you take up one side or the other in politics." Now we maintain that a paper can be published in Old Virginia that is devoted to Education, Religion, Agriculture, News, and Everyday Life, and be made to live, even if we say but little about Greeley or Grant. Charles Sumner goes for one and Frederick Douglas for the other. What good will it do for us to advise our readers which of these leaders to follow? Are there not men in every village, all over the South, who are ready to expatiate on the merits of both candidates, by the hour? We represent before the public an institution that is in no sense political. It is our privilege to enjoy the confidence and cooperation of members of both parties, and nothing is farther from our wish than to involve this institution in political strife. It is one thing to speak freely upon such subjects, as the duties of citizens to the Government, and quite another to advocate the claims of any one man for President. The former we mean to do freely, the latter not at all.

NO GAINS WITHOUT PAINS.—This is an old motto and one that has carried many a man to success. The meaning is that anything worth having requires effort. You cannot have a good home and live well unless you work. You cannot hope to be a scholar without hard study. The only people in this world who are useful and happy are those who have a plenty to do. Study and work should go together. The one helps the other. God means to have us use our hands and brains at the same time. If you are a farmer you need to study your farm; that is, you need to find what crops you can raise best, how you can enrich it, the cheapest way, and a thousand other things. So if you are working at a trade, the more you study the best methods of working, of course the better workman you will be. Even a drayman can sometimes save himself much time and strength by a little study while loading or unloading his team. No gains without pains. This means also that you must save your money if you ever expect to have any. Put a little into the bank every month, and you will grow while you are asleep. Think how many thousands of dollars have been stowed away between the cracks and under the hearths of Southern cabins, only to be lost. Do not leave your money where it will be a constant temptation to some one to steal.

THE SIGNS OF THE TIMES ARE GOOD.—We were much interested in the experience of a gentleman we met the other day. He came South three years ago, fresh from a Western University, to teach and preach in a community near Richmond. He minded his own business. He did not go into politics. He built up a flourishing school. Having gained the confidence of the whites, he began preaching to the colored people. He sought not to build up any denomination, but to preach the gospel of Christ in simplicity. Up to the present time, he has carried on his work at a pecuniary loss to himself. But now a competent support has been tendered him by the citizens of the county. Having been so successful as a teacher of the whites, he proposed to the leading men of the region, that they allow him to open a colored school, that all the people may cease to be ignorant. This proposition was accepted, and when we met him, he was returning from the North, where he had been to make new arrangements for his glorious work. This man's experience goes to prove two things: first, that there are very few localities in the South where a Northern gentleman cannot gain the confidence of the people, if he takes the right way to do it; and second that patient workers in this field, may be sure of great moral, and good pecuniary success.

Not less cheering was the fact told us by a fellow-passenger, while riding on a Massachusetts train, not long ago. Hearing us speak of Hampton, he remarked: "I have heard of you, but never knew what you were doing. I have a class of young men in the Sunday-school. When a collection was taken for the Hampton Institute, one of the members of my class, a mechanic who works for a living, gave me fifty dollars toward supporting one of your scholars." We hope that scholar, whoever he may be, will appreciate such a gift.

GRAMMAR must be a very fascinating study, if we may judge from the frequency and earnestness with which it is daily and nightly discussed among the pupils of this institution. We wish they were as well versed in the correct use of language, as they are eager to master and comment upon the theory of that use. In these latter times it has been found easy to teach grammar in such a way that it does become a simple and pleasant study. We word pursuit at a Teacher's Institute, when the study was so explained in ten minutes talk, that a prominent citizen remarked, "I have learned more about grammar to-day, than I ever did at school." To all who are expecting to teach this study, we say: Practice what you teach. Don't let your pupils have a year speak incorrectly.

THE "Merryville Monitor" is a small monthly paper published at Merryville, Tenn., in connection with the Freedmen's Normal Institute, located there. W. B. Scott is the publisher, and Yardley Warner the editor. The motto of the paper is "God is no Respecter of persons." It is published "In the interests of the Freedmen, Education and Religion." The subscription price is only twenty-five cents a year. There are pleasant things about the "Monitor," and we wish it every success. The corner-stone of the Freedmen's Normal Institute, was appointed to be laid August 29th. It is a manual labor school.

THE hills and valleys of New England were never greener and more beautiful than they are at this writing. All through the summer, rain has fallen nearly every day, so that all the crops look green and thrifty. Here, in the South, how ever, it is far different. We long for a good old-fashioned rainy day. The earth is thirsty. All over the South there is complaint of drought.

HERE ARE A FEW FACTS ABOUT NEW YORK.—The island of Manhattan, on which the city is built, is nine miles long and has an average breadth of two miles and a half. This gives seventy-nine miles of water front where ships may lie at anchor. Only about one half of the island is built upon, so that the nine hundred and forty-two thousand, two hundred and forty-two persons who were living there in 1870, according to the census, dwell within an area of nine square miles, or at the rate of one hundred and sixty-two persons to the acre. In some parts of the city, there are seven hundred and thirty-two to the acre. There are in New York 291 miles of paved streets, 275 miles of sewers, 340 miles of water-pipes, and 10,000 gas-lamps. There are also 1,000 horse-cars and 12,000 licensed drays, and other public wagons. During the twenty-one years between 1847 and 1868, 4,038,391 foreigners landed at the port of New York. Nearly all of these people who had money and energy left the city and pushed out into the Western States, while those who were poor and shiftless remained to add to the poverty and crime of the Metropolis. The city is one of the most wicked on the earth, and no one can tell to what it is coming in the future.

WE are requested by Mr. L'Hommedieu, agent of the Virginia Sunday-school Union, to thankfully acknowledge, in the name of that society, the receipt of $10 from Misses Jemima and Cynthia Hawes, of Waltham, Mass., for Sunday-school work. We are glad to know that the new Sunday-school movement is meeting with much favor, both here and at the North. We believe it may yet do great things for the "Old Dominion."

SOME amusement was occasioned in the Freedman's Bank, at Norfolk, the other day, when a woman brought in a dollar, and requested a receipt for the city dog-tax. Some people have an idea that all kinds of business are carried on there. We confess we do not much wonder at it.

WE wish all our correspondents would write as much to the point as the one who recently closed a short letter with these words; "Knowing the limits of your paper, I will say no more." Please give us short letters, and many of them.

Correspondence.

We take great pleasure in presenting our readers with such a variety of letters from the people. We trust that our friends will continue to favor us in this respect, and that this department may increase in interest and variety.

Massachusetts.

Mr. Editor.—Massachusetts is a small state, only about a hundred and fifty miles long and fifty miles wide. The hills are very high and rocky and much of the soil is poor and full of rocks. The climate is cold; the snow often lies on the ground four months, and the cattle have to be fed one-half the year.

Yet this little state has a million and a half of people, and there is property enough to give two thousand dollars each to every man, woman and child in the state.

The reason of this is that the people of Massachusetts have always been intelligent, industrious and moral. For more than two hundred years they have had school-houses to teach all the children, and because they have been educated they have known how to build railroads and shops and cities and to make the state rich. The people of Massachusetts all work, and because they all work they grow rich and have great cities, and good houses, and fine farms, and an abundance of everything. It is because so many of them are moral, and fear God, and love liberty and truth, that they are so prosperous. Vice ruins everything. Other people may be as prosperous and happy if they will be as intelligent, industrious and moral. There is no other way to secure this good.

B. B.

INFORMATION WANTED.

Mr. Editor,—There is a colored woman living in Bedebertown, Mass., who is very anxious to hear from her friends, whom she left in Virginia. She calls herself Sukie Seward, and says she came from Newville P. O., Virginia, with Col. Lee, Parsons, of Northampton, Mass. Her master's name was Frank Harrison, and he was neighbor to James, William, and Rufus Harrison, and George Dillard. Sukie left City Point during the war, and has heard nothing of her friends since. She wishes information concerning her sister and brother, Fanny and [illegible] Seward. Letters may be sent to the care of Horatio Hollen, Esq., Bedebertown, Mass.

W.

Liberty, Va.

Mr. Editor.—This place is situated on the Virginia and Tennessee Railroad, thirty-five miles west of Lynchburg. During the war, it was greatly wrecked, but is now being built up considerably. A fine warehouse and depot are finished, and they add much to the appearance of the place. There are four stores and two saloons in town. The stores, whisky, and worn-out hands are the hope of this region, and in order to make your paper useful here, you must give the people a hard rub. You must give the people of Liberty have been quite successful in building churches and carrying on the work of the gospel. I am prospering in my school. When I began teaching I had no class, who, though they read in the Third Reader, knew nothing about mental or practical arithmetic. Now they can perform examples through multiplication. They have had a exercise in mental arithmetic and in grammar, a study they knew nothing of before my coming. Those who were in the alphabet, in the beginning, are now spelling considerably.

P. M. L.

Hanover Co., Va.

Mr. Editor.—Having read, in the July number, that the editor desires information from all parts of the country, I take pleasure in writing what I know of my own vicinity. I am now teaching in the same place where I taught three years ago, before entering Hampton. This school was the first one opened to the colored people in the county for the war. It was under the supervision of R. M. Manly, now Principal of the Richmond Normal School. Many of my old scholars are coming of age ago I have advanced are doing well in all the common studies. Some of them take the "Workman." The people have bought this house with half an acre of land, and intend, as soon as possible, to build a good church upon it.

The colored people seven miles above here, have built quite a fine church, at the cost of $600, and have converted the old one into a neat school-house. They desire a teacher for the next session, which begins September 1st. The place is known as Shiloh Church. I truly believe that the colored people desire the education of their children more than anything else. May God speed the time when they shall realize all they hope for.

WM. P. BROWN.

Portsmouth, Va.

Pursuant to adjournment, the Colored Baptist Sabbath-School Union of this city assembled at the Zion Baptist Church on Sunday afternoon, Aug. 18, at 3 o'clock.

Owing to the absence of the president, the school was called to order by Isaac Gordan, who is a consistent Sabbath-school worker. Mr. Gordan made some remarks in behalf of the school, and stated that the first business in order was to elect a temporary president.

On motion, Jacob Gaskins was elected temporary president.

The Union then sang a hymn on page 126 of the "Laurels;" after which the 5th chapter of Matthew was read, by the president and the school, as the first lesson.

Prayer was next offered by Mr. Gaskins, and then singing from the "Laurels."

Number of scholars present, 334; collection for the day, 5.07.

On motion, adjourned, subject to the call of the president.

JACOB GASKINS, President.
JAMES COPELAND, Secretary.

Self-help.

The Southern colored people do not know how much they gained by the efforts they made to learn to read during the war. Our soldiers became deeply interested in them, by seeing them get hold of solid, useful books and spell it out, and many used to instruct them. They came home and told the stories, and how children would sometimes learn, and then teach their parents. The colored people were respected for it, and it brought them a great deal of aid; for it led people to say, They cannot fall to rise to wealth and honor if they persist in getting learning.

Good schools are necessary in order to learn rapidly; but a great deal of learning can be obtained without schools. President Van Buren was a poor Dutch boy, at Kinderhook, and was obliged to study by the light of pine knots. Thousands of learned men have got their learning by studying at home after they had grown up, and women have done the same.

It is not necessary to be ignorant if one can get a book or newspaper, and the people who are the most intelligent will be the most useful in any community.

NEW ENGLAND.

Idle Heads and Hands.

Habitual idleness is ruinous to our best physical and mental powers. If we carry an arm in a sling for six months, we generally, at the end of that time, find it of very little use to us, and this fact holds good of every one of our members, and in a little different form, of every one of our faculties. The strength of our muscles depends directly upon the exercise of them; we all know how strong the arm of the blacksmith grows by his constant use of it; and though we cannot add one cubit to our stature, we have it in our power to increase to a remarkable degree all our faculties. Our memories, as any student knows, can be cultivated to an extraordinary growth, our voices by proper training acquire entirely new notes, and the sailor who is accustomed to look for sails and read signals long distances, obtains a clearness and strength of vision far beyond that of ordinary men. And just in proportion as careful, habitual use of our bodily and mental faculties strengthens them, disuse and neglect weaken them; wherefore, both directly and indirectly, idleness, which means unoccupied hands and hands, rusts and wears out a human being faster than any honest work can do it. Besides all this, work is our good friend, because it not only strengthens us for everything good, but also keeps us out of the way of much that is bad, for it is as true now as when Dr. Watts wrote it, that

"Satan finds some mischief still,
For idle hands to do."

X.

Books Received.

THE CHANDLER ELEMENTS ON DRAWING.—*Introductory to Drawing, Art, and Taste. By Prof. John S. Woodman, late of Dartmouth College Scientific Department. Boston: Ginn Brothers,* 1872.

It is wonderful what progress has been made in teaching the art of drawing in the public schools of this country, within the past few years. When the older teachers of to-day were children, no one thought of teaching drawing in school, and it was not considered the thing for even the smallest scholars to "mark on the slate." If the children out leaving school, could "read, write and cipher," it was enough. Now the pupils are taught to sing and draw. They learn something about the birds, and flowers, and natural laws. They gain a knowledge of the proportions of other lands. The modern methods of education, depend very much upon the efficient use of the blackboard. The teacher who can handle the crayon well, is the one sure to have attentive scholars. If you wish to teach a young child, present some object to his eye, and then he will think clearly. Then if the child be taught to draw, he will remember his lesson far better, his mind will be improved, and in after life, he will be better fitted to excel as an skilled laborer. Hence it is that so much attention is paid to school drawing. In some states all public school-teachers, are required to pass an examination in drawing before beginning to teach. Massachusetts has recently appointed a State Superintendent of Drawing. A large number of different systems are in use, and several books have been written for the use of teachers. Prof. Woodman's is the latest. We believe no one in all the land was better fitted to write such a book than he. The motto of the book is "No day without a line," a motto that the author lived up to, for he made the subject of drawing a life study. Having perfected his system while a college instructor, it was his habit to impart it to those who attended it at Teachers' Institutes, as they were held from time to time, in Northern New England. We wish that the work of all our college professors might be laid open to public view as Prof. Woodman's was. The book before us is but the introduction to a larger and more comprehensive work that was in preparation when the author died. Its publication will add greatly to the list of those who admire his talent and lament his premature death. The explanations of the book are so explicit and minute, that any teacher who has never seen the system before, can, with proper care, carry a class along in it successfully. The language used is clear and vigorous, and the illustrations are simple and natural.

LUTA BELOW.—*In Seven Poems.* HAYEN AND OTHER POEMS. *New York: Hurd & Houghton.*

Both these books are by the same author. With pleasure we place them on our library shelves.

Agricultural.

BEAUTIFY THE FARM.

The Maine "Farmer" says: "You can beautify your premises that travellers will have to love it as they pass, study the points that attract, and carry in their minds ever after, the recollection that it is a home of outward beauty, made so by the presence of an inward taste and happiness. But to your own mind will come the greater good. Life will be the brighter and happier to you. Your children will grow up to love the home you have rendered so attractive to them, and its beauties will ever act as educating influences for good upon their characters. The dull routine of hard labor will be relieved by the rational enjoyments which come from the surroundings, whenever brought under their silent power, and you will grow into a purer life and a nobler manhood in consequence.

MAKE THE HORSES WORK.

Horses were designed as beasts of burden to relieve mankind of fatiguing drudgery. It does not hurt them to work hard, if they are treated kindly. It is not the hard drawing and ponderous loads that wear out horses, and that make them poor, balky and worthless; but it is the hard driving, and the worrying by rough and inhuman drivers that use up more flesh, fat and muscle than all the labor a team performs. Consider the ponderous loads that many teams are required to cart every day, and several times a day, and yet they appear to grow fatter and stronger every year. *They* are treated kindly. On the contrary, other horses, that do not perform half the labor, soon become poor, gaunt, and the next we hear of them is, they "died with the harness on." Hard work does not kill them, but the fretting, worrying, and abuse did the job. Horses will do all the mowing and reaping on a large farm, thrash the grain, pitch the hay, turo the grindstone, saw the wood and perform almost all the heavy labor that farmers have been accustomed to do, and get fat, if they are not worried and jerked and kicked about as if they were a living football.—*N. Y. Times.*

BREAKING IN YOUNG STEERS.

First train them to lead by a rope attached to the horns. Then procure a light yoke and bows, and teach them to stand with them on for a few days, until they get used to them. Then take them out and exercise them gently, and with great patience, teaching them the meaning of the terms used in going to the right or left and backing. If they get restive, quiet them with a little hay and some caressing. Never anyoke them while they are excited; cool them down first. Let the lessons gradually increase in length until they understand their business; then attach a chain, and soon after a small log, or other weight, may be given them to draw. Working in this manner, they may soon be broke in to do harrowing, or other work not too heavy for them. It would be well if oxen were broke in to the use of a line attached to the horns, and the stifling commonly made use of were abandoned.—*American Agriculturist.*

THE OLD HORSE.

The old horse requires more time to eat his meals and rest his nerves. Of all animals, the old horse is the most unused. Although he has been our most faithful and profitable servant, yet in his old age the lash is applied to force out his youthful vigor. The older he grows the more he feels the lash. He is often turned out of doors to give place to the colts. Too often the neglect and abuse he is subjected to, because he is a little old, results in a greater loss than is made up in the care for the young horse. The last part of a horse's life may be more profitable, if rightly used, than the first part. There is more comfort and less danger in working old horses. We understand them and they understand us; and we should be as willing to conform to their nature as they are to conform to our wishes. It would be more humane as well as more profitable to use them as they should be, as long as it would pay, and then take them out and shoot them down. But the wicked practice is to knock them about as much as they will bear, and pay will, and then trade them off for a more inhuman wretch than themselves. The old servant is gone among strangers, and he receives no sympathy in his last extremities.—*Our Dumb Animals.*

STEAM-PLOWING.—An Illinois agricultural society has offered a large premium for the best steam-plow, and it is expected that the question whether a steam-plow is of use on the prairies or not will be well tested at a fair which is to take place September 3d. If successful, then we shall hope to see the steam-plow tried in the South. Much testimony is coming to us from England in favor of steam cultivation. It is cheaper there and more productive than horse cultivation.

AT WHAT AGE SHOULD YOUNG MULES WORK?—The "Agriculturist" thinks they may be taught to draw an empty wagon when they are two years old, at three they may do light work, such as cultivating corn or harrowing, but they ought not to be put to heavy work until they are four years old.

WEEDS.—The "American Agriculturist" declares that on thousands of farms in this country the weeds run away with half the profits. Yet with our hot summers and dry winds we ought to have the cleanest farms in the world. Make an earnest effort to kill the weeds and make thorough work of it.

TAKE good care of your health and that of your family. See that there is nothing about the place that will breed a fever. Remember to shovel plenty of dry earth into the out-houses every few weeks.

THE SOUTHERN WORKMAN.

General News.

THE event of the month in political circles, has been the convention of "Straight-out Democrats," as they are called, at Louisville, Kentucky. It was a gathering of such members of the old Democratic party as were insensible to Mr. Greeley. Blanton Duncan was one of the leaders of the movement. The convention assembled Tuesday, September 3d, and adjourned on the 5th. Charles O'Conner, of New York, and John Quincy Adams, of Massachusetts, were nominated for President and Vice-President; but Mr. O'Conner refuses to run, so that really the convention has accomplished nothing. The contest rests between Grant and Greeley. Early in August, Mr. Greeley took a trip up into New Hampshire, his native state, and made several speeches. General Grant has been off to the Thousand Isles, for a short time, and, of course, has made no speeches. Both sides have held Ratification Meetings, all over the country, and there has been a great display of bunting and brass bands. The soldiers' demonstration, at Portland, Maine, August 27th, was perhaps the largest affair of the kind, on the Grant side. General N. P. Banks, of Massachusetts, is making speeches in favor of Greeley.

ANDY Johnson has announced himself as a candidate for congressman at large in Tennessee, and a meeting of ten thousand people at Nashville have indorsed his claims.

THE State of Vermont held an election September 3d. The result was a large majority on the Republican side.

WEST Virginia has re-elected Governor Jacobs, and retitled the new State Constitution.

THE Republicans of South Carolina have split, and are now running two tickets. The regular convention nominated T. J. Moses, and the bolters, Ruben Tomlison.

THE soldiers and sailors who were in the Union army during the war, propose to hold a national convention at Pittsburg, Pennsylvania, in a short time. Many prominent speakers will be present. No doubt the convention will declare for Grant and Wilson. Those soldiers who are for Greeley and Brown, are also to meet at Philadelphia, October 1st.

THE steamer *Metis*, running between New York and Providence, R. I., was wrecked off Stonington, Conn., August 30th. The hull sank in deep water, and the upper deck was washed on to the shore. There were one hundred and forty-nine persons on board. Thirty-seven lives were lost.

THE steamer *Bicarille*, was burned, August 12th, while sailing in the West Indies. Of the ninety-two persons on board, thirty-six are yet to be heard from.

RALEIGH, N. C., is in trouble. A gang of men lately attacked a United State's deputy marshal, and beat him nearly to death, at the same time fatally shooting a friend of his. The police commissioner says he cannot execute the laws, and asks help of the U. S. marshall. There is a call for martial law, in some parts of Arkansas, because of lawlessness there.

JUDGE Barnard, of New York, one of the abettors of the late Tammany Ring, has been impeached, and forbidden ever to hold office in the state again.

AN attempt has been made to get some of the North Carolina Ku Klux in prison at Albany, N. Y., pardoned. President Grant has not as yet seen fit to allow it to succeed.

A BRONZE STATUE of Sir Walter Scott is soon to be placed in Central Park, New York.

INFORMATION from Mexico shows that the government of President Lerdo is daily growing stronger. The national credit has been restored, and the condition of affairs is entirely hopeful. United States Minister Nelson is coming home.

THE returns of the Spanish elections which occurred on Saturday, indicate a triumph for Amadeus and his ministry, although the federalists have made a good showing. The elections were orderly everywhere. The king has returned to Madrid.

COAL is higher now in London than it has been before for forty years. In 1851, the price was about one-half what it is now.

GREAT preparations are being made at Berlin, for the meeting of the Emperors of Germany, Austria, Russia, and the President of France, which will take place early this month.

IN Dublin, Ireland, many of the poor have been suffering for want of bread, because the bakers have been on a strike. There has been almost a bread riot, many people having gone about the streets threatening to break into the shops.

ENGLAND is in the midst of a meat famine. There are not cattle enough on the island to supply the market. The price is very high, and the people are much excited. Meetings are being held all over the kingdom, and many families are going without meat, hoping to bring down the price.

IT is thought that the Board of Arbitration at Geneva, will award to the United States some $15,000,000, in settlement of damages done to American shipping, by vessels fitted out in England, during the war.

DESIRES TO BE ASSESSED TO UNCLE SAM.—Prince Edward Island seems to be in earnest in its desire for annexation to the United States. The general election held there on the 17th ult., to decide whether the province would become a member of the Dominion, resulted in the negative, by an overwhelming majority. An American correspondent, writing from Charlottetown, says: "I was not a little surprised and delighted to witness the Stars and Stripes amid a goodly display of provincial and British emblems.

WHEN Bismarck undertook to take the German schools out from ecclesiastical control, the prophets of evil declared that the result would be infidel schools. Thus far, only fifty of the Protestant, and sixty of the Roman Catholic clerical inspectors, have been replaced by laymen. The work continues to be done by the clergy, as officers of the State.

ONE STEP MORE.

"Had I better get in and row across, I wonder? Nobody would ever know anything about it; and there the new boat lies rocking on the river; and there are two oars in the bottom. It is only a mile down to the bridge, and I could row down there and back in a little while; and it would be such a splendid sail!

"Of course, nothing could happen to me; for grandpa said to mamma the other evening, when we went to the mill, 'Why, Helen, Henry is a naturalborn sailor. He can manage the boat as well as I.'

"'Oh, dear! I wish he had never seen that boat!' said mamma. 'I expect it will be the death of him, yet.'

"'Well, he did not inherit his natural taste from you, that is certain,' laughed grandpa. 'But women are always nervous about the water.'

"And that is all. It is just mamma's nervousness; and I *know* nothing would happen to me, getting in there and having a little sail; and it would be so nice this afternoon! and the river looks, away up by the bridge, like a ribbon among the oaks and poplars.

"Nobody would ever know anything about it, either; for, of course, I should get back safe; and I do not believe there would be any harm in it.

"But, then, there is my promise to mother; there's negetting around that; and it was the last thing she said to me before she left home on Thursday.

"She called me to the carriage, and bent over one side, and smoothed my hair, as she always does when she talks to me.

"'Now, Harry, my boy,' she said, 'I want you to promise that you will not get inside of that boat until your father and I get home again.'

"'No, mamma, I will not, certainly,' I answered; though I hated to bad enough, that's a fact.

"And I think it is quite too bad that such a big boy as I am cannot have his owa way in such things.

"Oh, dear, dear! the longer I look, the more I want to go. It seems as if I must go.

"One step more, and I shall be in the boat. But there!—my promise to mamma!

"And how shall I feel when she comes and looks in my face, and calls me her darling boy, and puts her arms around my neck, and kisses me over and over again?

"She will not ask me whether I have been in the boat; because I promised her I would not; and I never told my mother a lie in my life, and will not now.

"Mamma came home last night. Such a hugging as I had!

"'Has my Harry been a good boy,' she said, 'and not done a single thing his mother would have disapproved of?'

"'No, I guess not, mamma,' I said. But I was thinking about the boat, and did not speak very positively.

"Mamma held me away, and looked into my eyes.

"'You guess not? Are you not quite certain, Harry?' she asked.

"'Well, mamma, I have not done anything; but I have thought about it.'

"She drew her arms around me, and held me close to her.

"'Tell me about it, Harry,' she said.

"And then I did. I told her about my going to the river Saturday afternoon, and how near I came to getting into the boat and rowing down to the bridge, and what a terrible temptation it was; and how, in one step, I should have been in; but the memory of my promise to her, and the thought that God saw me, held me back when there was only one step betwixt me and the boat.

"And, when I had done, I found mamma's tears falling just like raindrops, on my hair.

"'O, my child, I thank God, I thank God!' she said.

"And I, too, thanked him then, from my heart, that I did not take that 'one step.'"

Example better than Precept.

You want to do good? Remember that the most effectual means of accomplishing that result is by example. He who exhibits those excellences in his life which he proclaims with his tongue, will appear the most amiable and prove the most useful. A fine genius, a retentive memory, an eloquent tongue, may be desirable; but an enlightened mind and uniform life are every way superior.

It is observed of Cæsar, that he never said to his soldiers, "Ite," Go on; but "Venite," Come on, or Follow me. So our great Exemplar, while he commands us to duty, hath shown us the way. "Follow me" is the divine injunction.

Two architects were once candidates for the building of a certain temple at Athens. The first harangued the crowd very learnedly upon the different orders of architecture, and showed them in what manner the temple should be built. The other, who got up after him, observed, that "what his brother had spoken, he could do;" and thus he at once gained the cause.

Such is the force of example, that even our enemies are sometimes penetrated with admiration, and constrained to bear a testimony in our favor.

Children's Department.

THE PICTURE.

It is a pleasant thing to be on board an ocean steamship in fine weather. Nothing is more beautiful to look upon than the blue waves of the sea when they glisten in the summer sunshine. When one is well and can walk the deck with a steady step, and watch the sun rise out of the water in the early morning, and see him disappear beneath the wave at night, or look upon the sea-birds as they hover above, and note the gambols of many different kinds of fish, then life at sea is delightful. But when storms come, and the sky and water are black with the angry tempest, there are very few who would not be glad to find themselves safely on land. Then, too, if anyone is sick at sea, and must lie long days and nights in a narrow berth, or swing in a hammock, far from friends and home, you can see it must be a very sad situation.

Thousands of people die on the ocean every year. Sometimes the sailor-boy is blown from the high mast or is knocked off the deck by a sudden movement of the boom, so that he falls

into the water and is drowned. Sometimes the ship is wrecked, and both sailors and passengers lose their lives. In such cases, there is no time for any funeral, and it may be, none are left to tell the sad story of death. But when any one dies of disease on the ocean, it is customary to have a funeral somewhat like those upon the land. This picture represents a funeral at sea. The ship has been stopped, a door in the side opened, and a plank placed therein. On this plank the coffin has been placed; the inside end of the plank has been raised and the coffin gently lowered into the sea. You can see the upper part of the coffin just sinking into the water. All the people on the ship that can be spared from their duties, have gathered to see the burial. It very often happens that there is no minister on board the vessel to attend a funeral. Then it is customary for the captain to read the Burial Service of the Church of England, from a book. This is a very beautiful service. Here is a part of it: "For I know that my Redeemer liveth, and that he shall stand at the latter day upon the earth: And though after my skin worms destroy this body, yet in my flesh shall I see God."

You see in the picture that the funeral is over. The captain has finished reading, the plank will soon be hauled in, and all will go on among the sailors and passengers much as before. But the woman who stands leaning over the side, will not forget the dead, and the days to come will be full of sorrow to her.

It does not matter where we die. The bottom of the ocean is just as near to God as the highest mountain. It makes little difference where we live. But it makes a great difference *how* we live, and how we die.

BLACK LINA.

At the head of the pretty Valley of Nacoochee, close by the Chattahoochee River, among the mountains of Georgia, is a log-cabin occupied by a poor negro family.

On hearing that the mother was sick, I went with my husband to see her; for our present home is only a quarter of a mile farther up the river. We followed a path by the river-side, and were soon at the cabin. A bright-faced little girl, who said her name was Georgia, was at the door with a younger sister.

We went in, and saw Lina propped up in bed in one corner of the room. Old Rachel, her mother, sat by the open fire. The cabin consisted of but one room. There were two other beds, a table, a few chairs, and an open dresser, where a few dishes were kept.

"How few are the comforts here!" I thought, "and how miserably this family must live!" And yet, before my visit was over, I felt they were many in this world, rich and great, who would envy poor Lina's happiness.

I said to her, "Do you think you will get well?"

"Oh, no, Mrs De, I shall never get well; I am growing weaker every day."

"How do you feel about it?"

"Oh! I am ready to die at any time. I love the Lord: I do,—I do! I take great comfort, here by myself, thinking of him."

Mr. D. asked her how long since she had found Jesus.

"A fortnight ago," she said, "I found him. I prayed night and day; and then all at once I found him, and felt so happy, that I shouted."

THE MISSIONARY'S LANTERN.

Perhaps you have sometimes picked up from the grass the curious little glow-worms, which have no wings, but which shine among the leaves like a little spark of fire. But those are very dim compared with the beautiful luminous insects which are found in tropical lands. In some parts of South America they are used as ornaments. The ladies imprison them in net-works of gauze, and weave them in their hair. They shine in the evening like hundreds of the choicest diamonds. They are also caught and attached to their shoes by travellers who are obliged to journey in the night. They serve the purpose of lanterns; and there is no fear of their ever going out. But nothing of the kind can exceed the beautiful candle-fly of Jamaica.

A good missionary was called to go one night to see a poor sick Christian. The sky was covered with clouds, and a part of the way was very dangerous.

The good man prayed very earnestly that God would guide him safely over it; and went on very cautiously, with his staff in hand. As he was praying, the atmosphere around grew gradually brighter and brighter, until a beautiful candle-fly appeared hovering about him. The brightest lantern could not have served his purpose better; and, what was more wonderful still, it kept near him until he had passed the dangerous road, and was in a safe, even path again. Then it flew away, and he saw nothing more of it. You may be sure he thanked God for his mercy in sending it. Do you think he ever doubted who sent that light to him on that dreary night? No: he knew it was from his heavenly Father's hand; and many times afterward, when he was in trouble and darkness, he remembered his little candle-fly, and again took comfort and courage.

God can help us by small things just as well as by great; and no creature is so humble that it cannot do God's will. Little children, who have hearts and souls, should learn early to work for him.

TOBACCO—A SPEECH FOR BOYS.

I go against tobacco, because it goes against me. I eschew it. I will not chew it. I will tell you why. 1st. I do not like the taste of it; it tastes worse than any medicine you can put to my lips, it is such sickening stuff. 2d. I don't like the looks of it; when I see the tobacco I pity the mouth that chews it; and when I see the mouth which chews it I pity the tobacco; it is of a dirty dirt-color. 3d. I don't like the effects of its use: it makes the teeth yellow and brown when they should be white; it makes the breath offensive when it should be sweet; it injures the voice so that those who chew cannot sing and speak to advantage. The voice breaks, and the chorister croaks like a raven when he should sing like a bobolink; the orator merely barks, and a tobacco bark is very disagreeable. 4th. I fear tobacco creates an appetite for liquor; it lights a fire in the throat which water may not put out.—*American Agriculturist.*

WHAT WILL HE BECOME!

When you see a boy hoarding up his pennies and unwilling to part with them for any good purpose, you may set it down that he will be a miser.

When you see a boy willing to taste strong drink, you may rightly suppose that he will become a drunkard.

FREEDMAN'S

SAVINGS & TRUST

Company.

A National Savings Bank,

ESTABLISHED MARCH, 1865.

Chartered by the Government of the United States.

Deposits of five cents or any larger amounts received.

SIX PER CENT. INTEREST

paid on sums of five dollars or more. *All deposits payable on demand, with interest due.*

All accounts *strictly private and confidential.*

PRINCIPAL OFFICE,

WASHINGTON, D. C.

BRANCH OFFICES

in all the larger cities of the South and Southwest.

THIS GREAT NATIONAL SAVINGS INSTITUTION,

established by the authority of the *United States Government* for the benefit of the *Freedmen*, knows no distinction of race or color, and offers its great advantages to all classes alike.

SAVE THE SMALL SUMS.

Cut off your vices—don't *smoke*—don't *drink*—don't *buy lottery tickets*. Put the money you save into the

FREEDMAN'S SAVINGS BANK.

NORFOLK, Va. BRANCH

IS LOCATED AT

NO. 116 MAIN STREET,

Corner of Gray Street.

Bank hours, 10 A. M. to 2 P. M. Open also Saturday Nights from 8 to 1 o'clock.

J. W. ALVORD, *President.* U. C. PESCUD, *Cashier.* M. L'HOMMEDIEU, *Asst. Cashier.*

THE FREEDMAN'S SAVINGS & TRUST COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,327,197.67, being an increase of *fifty per cent.* on the balance due depositors at the close of the present year.

There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $123,233.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $5,000,000 due depositors.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by Pass Book only.

Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED,

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and *without loss of interest.*

For full information about the Bank address the *Secretary* at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, J. W. Alvord, Esq., or O. T. Eaton.

LAND FOR SALE

On the Peninsula.

I have for sale 200 acres of land between Williamsburg and Fort Monroe, Virginia. This section of the Country is fully and accurately described in the language of Captain John Smith: "Within is a country that may have the pervailing over the most pleasant places known, for large and pleasant navigable rivers, heaven and earth never agreed better to frame a place for man's habitation, were it only manured and inhabited by industrious people. There are mountainous, hils, plaines, valleyes, rivers, and brookes, all running most pleasantly into a faire bay, compassed but for the mouth with fruitful and delightsome land.—CAPTAIN JOHN SMITH."

WILLIAM S. HOWARD,
Hampton, Va.

Visiting Cards!

Send 60 cents for a pack of beautiful Visiting Cards, printed in the BEST manner, and of the very BEST MATERIAL; or the same put up in a neat case for $1 extra. These cards are equal in every respect to copper-plate. A liberal discount made where six or more names are sent.

Address NORMAL SCHOOL PRESS,
Hampton, Va.

The Hampton Normal and Agricultural Institute.

SESSION OF 1872–3.

Opens October 1, 1872, at which time those desirous of admission should be present.

CONDITIONS OF ADMISSION:

1. Sound health and good character.
2. Age not under fourteen and not over twenty-five years.
3. Ability to read and write, and knowledge of Arithmetic through Long Division.

TERMS:

Total charge, ten dollars per month, payable half in labor and half in cash; those eighteen years of age and less are expected to pay six dollars per month cash.

Only the totally destitute are allowed to work out all their expenses.

STUDIES:

The course of study is three years, and embraces the various branches of the study of Language (English), Mathematics, Natural Science, and History.

Instruction is given in the Science of Government and Moral Science, and in Practical Agriculture.

Bible Lessons are given weekly.

There are Agricultural, Mechanical, and Commercial Courses, in which instruction is given by experienced teachers in the leading principles of those departments.

For further information, apply to

S. C. ARMSTRONG, *Principal.*

HAMPTON, VA., *July*, 1872.

By-and-by.

There is an angel ever near,
When toil and trouble vex and try,
That bids our fainting hearts take cheer,
And whispers to us—"By-and-by."

We hear it at our mother's knee;
With tender smile and love-lit eye,
She grants some boon on childish plea,
In theirs soft accents—"By-and-by."

What visions crowd the youthful breast—
What holy aspirations high
Nerve the young heart to do its best,
And wait the promise—"By-and-by."

The maiden sitting sad and lone,
Her thoughts half uttered with a sigh,
Nurses the grief she will not own,
And dreams bright dreams of—"By-and-by."

The sole young wife dries up her tears,
And stills her restless infant's cry,
To catch the coming steps, but hears,
How sadly whispered—"By-and-by."

And manhood with its strength and will,
To breast life's ills and fate defy,
Though fame and fortune be his, still
Has plans that lie in—"By-and-by."

The destitute, whose scanty fare
The weary task can scarce supply,
Cheat the grim visage of Despair
With hope's fair promise—"By-and-by."

Thus ever o'er life's rugged way,
This angel beading from the sky,
Beguiles our sorrows, day by day,
With her sweet whispering—"By-and-by."

Pioneer Ministry.

The following extract from the life of Elder John Smith, Cincinnati, 1871, illustrates in a very amusing way, the tests applied to ascertain the soundness of doctrine, and the piety of heart of those desiring to serve in the sacred ministry:

"It is reported that John Leland, one of the most popular preachers of his day, in Virginia, and one of the most eccentric and singularly pious of men, was at first ordained a minister by the choice of the church, without the imposition of the hands of the Presbytery. He continued, for some years afterward, to preach and to baptize on the authority of his simple appointment, much to the distur bance of the peace of the association to which he belonged. In fact, on account of his departure from the usages of the churches in Virginia, he was not, for a while, in good fellowship with any. Whether right or wrong he openly professed to believe that the imposition of hands by the Apostles, in ancient times, was only to confer miraculous gifts; and that, consequently, such a ceremony in the church now, was in itself worthless because wholly unauthorized. His brethren urged him most earnestly, for the sake of peace, to submit to ordination by the hands of the ministry; and, finally, to gratify them, he consented that they might call a Presbytery for the purpose. Knowing all the questions which they would ask on his examination, and resolved in his own mind on the answers which he would give he felt confident that they would not ordain him.

"The Presbytery, consisting of three stanuch Calvinists, was called. The day appointed for the ordination arrived, and with it came a multitude of people to witness the ceremony. The work was divided amongst the several Presbyters. One was to ask the usual questions concerning his faith and call; another was to offer up an ordination prayer; and another was to deliver the charge to the pastor and the church. Leland took his seat long before they appeared, and resting his arms on his knees, and burying his face in his hands, awaited their movements. The Presbytery appointed to conduct the examination, at length began:

"'Brother Leland, it becomes us duty, according to previous arrangement, to ask you a few questions upon the subject of your faith, and in reference to your call to the ministry.'

"'Well, brother,' said Leland, slowly raising his head, 'I will tell you all I know, and down went his head into his hands again.

"*Presbyter.* 'Brother Leland, do you not believe that God chose his people in Christ before the foundation of the world?'

"*Leland.* (looking up). 'I know not, brother, what God was doing before he began to make this world.'

"*Presbyter.* 'Brother Leland, but do you not *believe* that God had a people from before the foundation of the world?'

"*Leland.* 'If he had, brother, they were not our kind of folks. Our people were made out of dust, you know, and before the foundation of the world, there was no dust to make them out of.'

"*Presbyter.* 'You believe, brother Leland, that all men are totally depraved?'

"*Leland.* 'No, brother; if they were, they could not wax worse and worse, as some of them do. The devil is no worse than totally depraved.'

"*Presbyter.* 'Well, there are other questions that will embrace all these in substance. I will ask, whether you do not believe that sinners are justified by the righteousness of Christ imputed to them?'

"*Leland.* 'Yes, brother, provided they will do right themselves; but I know of no righteousness that will justify a man that won't do right himself.'

"*Presbyter.* 'Brother Leland, I will ask you one more question; Do you not believe that all the saints will persevere through grace to glory, and get home to heaven at last?'

"*Leland.* 'I can tell you more about that, my brother, when I get there myself. Some seem to make a very bad start of it, here.'

"The Presbyter, seeing that the audience was greatly amused, proposed to his colleagues that they should retire for a few moments, and consult together. After returning, they remarked to the congregation, that brother Leland had not answered the questions as satisfactorily as they could wish, but they all knew that he had many eccentricities, for which they should make every allowance; that they had concluded accordingly to ask him a few questions touching his call to the ministry.

"*Presbyter.* 'Brother Leland, you believe that God has called you to preach the Gospel.'

"*Leland.* 'I never heard him, brother.'

"*Presbyter.* 'We do not suppose brother Leland, that you ever heard an audible voice; but you know what we mean.'

"*Leland.* 'But wouldn't it be a upper cut, brother, if there were no voice, and nothing said?'

"*Presbyter.* (evidently confused). 'Well well, brother Leland, you believe, at least, that it is your duty to preach the Gospel to every creature?'

"*Leland.* 'Ah! no, my brother, I do not believe it to be my duty to preach to the Dutch, for instance, for I can't do it. When the Lord sent the Apostles to preach to every nation, he taught them to talk to all sorts of people; but he has never taught me to talk Dutch, yet.'

"*Presbyter.* 'But, brother Leland, you feel a great desire for the salvation of sinners, do you not?'

"*Leland.* 'Sometimes I think I do; and then again I don't care if the devil gets the whole of them.'

"Well, brethren, when Peter put his hands on people, and took them off, they had more sense than they had before; but you have all had your hands on my head, and, before God, I am as big a fool now as I was before you put them on.'"

The following extract from the same book is a striking proof of the depth of true piety which a life of self-sacrificing good works, is well fitted to develop:

"The pluter of 1866-7 Elder Smith spent in Kentucky; but in March follow. ing, he made his arrangements to return to Missouri. He seemed to have a premonition, at the time, that he would never see his friends in Kentucky again; yet the anticipation that he would soon be with Christ, whom he had faithfully served for more than sixty years, filled him with serene cheerfulness, and he loved to talk of his decease. He called for the last time to see the friend who was then engaged in preparing his memoirs at Ashland, near Lexington, Ky. He spoke of his probable death in Missouri—of the disposition to be made of his remains—of his funeral, and, with eyes suffused with tenderness, he alluded to other friends, then living, that had stood by him for fifty

THE EMPEROR OF BRAZIL.

years whom, perh ps, he might never see again in flesh.

"He sat at the fireside at Ashland, surrounding those who were to him as children and his mind, kindling with the hope of the Christian, arose to the contemplation of that sublimest of all historic scenes—the transfiguration. For an hour, he sat and described the mount, the trembling disciples, the heavenly visitants, and the glory that invested Him at whose feet lawgiver and prophet had shown their homage.

"'His raiment,' said he, 'was exceeding white as snow. I once saw the fields and forests robed by a sleety storm in marvelous splendor; the morning sun made an exact turn, and backed the wagon to its usual position, entirely of his own accord.

Now, twenty years or more later, Brown resides in the village, and thither also he has taken Frank, whom he harnesses every morning, "hitches up" and leaves standing at his manger in the barn.

When it is mail time, Brown goes to the door and says, "Frank, Frank, come Frank, I am ready;" when faithful Frank backs carefully out from the baro, makes a turn and comes up to the steps for his master.

When arrived at the post-office, Brown gets his mail, and if he wishes to go home, says, "Frank, come round, I am ready to go home."

The horse then makes a careful turn, comes up to his master and takes him home; when this wonderful horse will take his accustomed place in the barn, awaiting "further orders." I might write quires of paper, and not tell one-half the interesting anecdotes of this remarkable horse. —*Sickle, in Our Dumb Animals.*

GREATER is he who causes good deeds than he who does them.

Temperance.

The Rum Tax.

RUM VERSUS MISSIONS AND SCHOOLS.

Sometime since, the New York "Tribune" contained these startling figures:

"Commissioner Wells reports to Congress, from the official and sworn returns of the retail liquor dealers of the United States, that the value of the liquors retailed by them over their counters, and drank where sold, is as follows:

"Amount of sales of retail liquor dealers:

New England States.....$100,987,300
New York, New Jersey, Penn., Ohio and Illinois,.....718,418,375

In the other States and Territories, 698,185,990

In all,.....$1,483,491,665

"The mere value of the liquors drank by the people in one year in the United States is, therefore, nearly fifteen hundred millions of dollars, or three-fifths of the national debt. As the amount of taxes paid by the retailers is proportionate to the amount of their sales, we might safely assume that the real quantities sold are much larger, but we are content with the retailers own figures."

The "Tribune" then adds a low valuation of the grains worse than wasted in producing this liquor, a low estimate of the time lost by drunkenness, and the destruction of property by crime and carelessness of men under the influence of liquor, and makes the sum total $25,000,000,000, considerably more than the national debt.

But we want to call attention to the amount of sales, reported by liquor dealers themselves, as the basis on which they should be taxed—nearly $1,500,000,000.

The late Annual Meeting recommended that $500,000 should be poured into the treasury of the American Missionary Association, this year. A large sum, it will be thought, but small compared with the wants of the fields we seek to cultivate, and sinking into insignificance compared with the amount worse than wasted for *rum*; being in the ratio of $1 for these missions, and $3,000 for rum.

With one thousandth part of what is thus thrown away, maddening its victims to violence and murder, making wives widows, and children orphans, homes desolate, and earning the country and the world, we would, with the favor of God upon our labors, bless the whole South and make every freedman rejoice, by planting a church and a school in his own neighborhood; and, with the whole of it, we would multiply a hundred fold the missionary enterprise of the world. Shall we have one dollar for missions to save men, for every three thousand the liquor dealers receive for destroying men?

THE door between us and heaven cannot be opened, if that between us and our fellow-men is shut.

VOL. I. HAMPTON, VA., OCTOBER, 1872. NO. 10.

A Psalm of Life.

What the Heart of the Young Man said to the Psalmist.

BY HENRY WADSWORTH LONGFELLOW.

Tell me not, in mournful numbers,
"Life is but an empty dream!"
For the soul is dead that slumbers,
And things are not what they seem.

Life is real! Life is earnest!
And the grave is not its goal;
"Dust thou art, to dust returnest,"
Was not spoken of the soul.

Not enjoyment, and not sorrow,
Is our destined end or way;
But to act, that each to-morrow
Find us further than to-day.

Art is long, and Time is fleeting,
And our hearts, though stout and brave,
Still, like muffled drums, are beating
Funeral marches to the grave.

In the world's broad field of battle,
In the bivouac of life,
Be not like dumb, driven cattle!
Be a hero in the strife!

Trust no future, howe'er pleasant!
Let the dead past bury its dead!
Act—act in the living present!
Heart within, and God o'erhead!

Lives of great men all remind us
We can make our lives sublime,
And, departing, leave behind us
Footprints on the sands of time—

Footprints that perhaps another,
Sailing o'er life's solemn main,
A forlorn and shipwrecked brother,
Seeing, shall take heart again.

Let us, then, be up and doing,
With a heart for any fate;
Still achieving, still pursuing,
Learn to labor and to wait.

Longfellow.

Turn to the fourth page of this paper and you will find the portrait of the man who wrote the poem printed above—Henry Wadsworth Longfellow—who is one of the most distinguished of American poets. He was born at Portland, Me., February 27, 1807. After graduating at four-teen he entered Bowdoin College in Maine where he graduated in 1825. Then like a great many other young men just leaving school he began to study Law, because he did not know what else to do, but soon gave it up. The next four years of his life he spent traveling about in Europe. In 1830 he became Professor of Modern Languages and Literature, in Bowdoin College. After remaining there five years he took the same position in Harvard College, at Cambridge, Mass. where he labored for seventeen years. Since leaving his professorship, he has continued to live in Cambridge and to write poems for publication. Mr. Longfellow is a ripe scholar, and has seen much of the world. His poems have been translated into many languages, and they are as familiar as household words in almost every part of the world. He has done much to present to his countrymen the habits, customs, and every-day life of European nations. He has been very successful in translating foreign writings into English. He has a great love for all beautiful things, and enriches into his writings the sentiment of an artist. He has, above all, a kind heart and wide sympathy for his fellow-men. He was early in life an Abolitionist, and always did all in his power to overthrow slavery. As long ago as 1842, he published a book entitled "Poems on Slavery." The feeling that slavery was a disgrace to America,—a stain upon her flag,—seems to have been common to all our best poets.

The following are the names of some of Mr. Longfellow's poems: "Hyperion," "Voices of the Night," "Spanish Student," "Poets and Poetry of Europe," "The Belfry of Bruges," "Evangeline," "Seaside and Fireside," "The Golden Legend," "The Song of Hiawatha," "The Courtship of Miles Standish," "Tales of a Wayside Inn," "The Divine Comedies," and "The New England Tragedies."

The New York and Brooklyn Bridge.

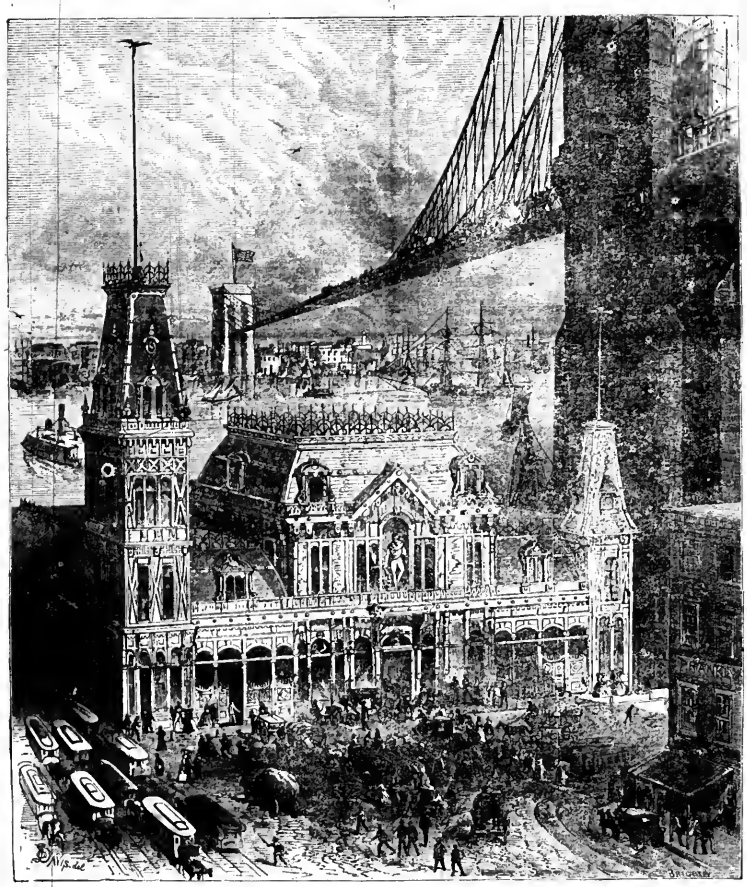
New York City has long been too narrow a place for all the people who do business there. People who are in the city through the middle of the day to attend to business, for the most part, do not think of living near their stores or offices. Their homes are scattered about the adjacent country for many miles; some in Brooklyn and on Long Island, some in New Jersey, and some up the Hudson. Some of these men spend four hours every day in going to and from their business. They cannot afford to live in New York. It costs a fortune to have a comfortable home in that city. No man without a fortune ever thinks of living there in a single house, with just his own family. Most of the people living in the city, who are not rich, are crowded into tenement houses, none of which are desirable houses, and some of which are too wretched and filthy to be described. Moreover, those parts of the city that are crowded with all kinds of people are very wicked, and in nowise fit for homes for virtuous people. Therefore, those New Yorkers who are neither very rich nor very poor have gone out of the city to live.

Of course, these people are anxious to spend as little time as possible in going from the city to their homes. For a long time, one of the great questions in New York has been what is called the transit problem, or, "How can the thousands who are always going out of and coming into New York be provided for?" All the steam-cars, horse-cars, ferry-boats, and omnibuses in and about the city have never yet been able to answer that question. Every year, the crowds of people entering and leaving the town, grow more cumbersome, and there is a louder call for better transit.

When New York was settled by the Dutch, communication was at once established between the village and the Long Island shore. In 1642, a public ferry was put on the East River. A large scow was all that was needed in those days to meet the wants of the public. Up to the year 1814, row-boats, horse-boats,—which were boats moved by driving horses around a windlass on the bank—flat scows with sprit-sails, periaguas or two-masted sail boats, were all used to carry passengers and freight. These were all at the mercy of the tides and winds, and navigation was often suspended, and there were many tedious delays.

In 1812, Robert Fulton, having applied the steam-engine to river navigation, and presented the steam-boat to an astonished world, established a line of steam-ferries, between New York and Brooklyn. They were insignificant enough compared with the boats now used; for Brooklyn, now the third city in the Union, was then a place of small importance—but those boats were the beginning of the most successful ferry arrangement in the world.

The present line of boats on the Fulton Ferry is owned by the Brooklyn Union Ferry Company, who carry forty millions of passengers from shore to shore, in a single year. Nearly ten millions are carried from one city to the other by the other ferry companies. The large building which is seen in the foreground of this picture is the ferry depot on the Brooklyn side.



THE NEW YORK AND BROOKLYN BRIDGE.

A stranger visiting New York now, is very apt to notice a huge and ugly looking stone wall reaching up above the adjacent houses, over on the Brooklyn shore. What it can be for, no one can tell by looking at it. But I was fortunate enough to have seen this picture, and I thought, in a moment, that the huge wall must be one of the piers of the great bridge that is to be built between New York and Brooklyn.

This is, I think, a very pleasant picture; and the buildings and people in it look quite natural; but no one in looking at it should forget that the like has never been seen anywhere. It is only a representation of the way the great bridge is expected to look when it is done. No doubt, it will be a wonderful bridge, then. It will cross the river by a single span of sixteen hundred feet. It begins, on the New York side, at the City Hall, rises by a gradual approach of two thousand three hundred and eighty-one feet in length, and on the Brooklyn side by an approach of one thousand eight hundred and eighty-one feet, till the height of the bridge, over the center of the river, shall be one hundred and thirty feet. This will allow the largest ships to pass underneath, as there are to be no piers built in the river. This is to be a suspension-bridge, and will be held up by means of wires attached to the main pipes. The floor of the bridge will be eighty feet wide, and there will be tracks for steam-cars, a driveway for carriages, and walks for foot-passengers. There will also be a delightful promenade, commanding a splendid view of the harbor. The whole cost is estimated at $8 000,000.

When the bridge is done, the ferry-boats will continue to run as now; and it is thought that in a few years other means of communication will have to be devised to accommodate the two cities.

FIRST understand; then argue.

Observation.

It is always worth while to keep one's eyes open. Some people never do, however. They contrive to go through the world and see but very little. They walk through the streets with their eyes on the ground. If they have been to see a beautiful landscape, or watched the working of machinery in a factory, or visited a collection of paintings, they are unable to give a good account of what has been before them. As a general thing, such men never succeed.

Sometimes a person's mind is wholly given up to a single study, so that there is no room for thought on other matters, and he becomes successful in that thing; but with most men who are unobserving the habit is inborn, and should be overcome. Perhaps the worst thing that can be said against it is, that he who fails to see what is going on about him loses many chances to make others happy. He cannot be polite, unless he notices an opportunity for politeness; he will not speak a pleasant word to one in sorrow unless he sees the need of it. Of course, it follows that if he often fails to make his fellows happy, he loses more happiness himself, for the greatest earthly bliss comes of doing good to others. Then the person without observation will gain but little pleasure from viewing the glorious works of God. There is no one, no matter how learned, who cannot find something new in studying the natural objects about him. Those who observe the habits of animals, the growth of plants, and even the way rocks are formed, find them as interesting a study as any found in books. God made all these things for the pleasure of man; and those who study them in the right way are brought nearer to their Maker. The men who have wrought wonders in the world, who have invented the steam-engine, the telegraph, the cotton-gin, the sewing-machine, have been observers of the laws and phenomena of nature. The men who have been orators, who have moved multitudes, and the men who have written great books, have closely watched their fellow-men.

There are few persons so situated that they cannot learn something new every day. I think it is safe to say, that we cannot meet anyone who is unable to tell us something we did not know before. Some people, when they do not understand a thing at first sight are apt to begin to ask questions at once, while others feel ashamed to question those who are ready to give them information if asked so to do.

Rev. Henry Ward Beecher, who is probably the most distinguished clergyman in America has just published a book of Lectures to young men beginning to preach. He says: "A minister ought to be the best informed man on the face of the earth. He ought to see everything, inquire about everything, and be interested in everything. Do not be ashamed to talk to the miller about his mill or the plowman about his plow. You ought to know about the women's spinning-wheel, about the weaver's loom, and every part of it. You ought to know what is done in the barn in the cellar, in the vineyard, and everywhere. You must study men, young men, and children—their weaknesses and their strong sides. See everything and see it right, and use it as you go along."

If these words are good for preachers, they are good for other men. Especially should the teacher cultivate the habit of observation. He will find that no two of his scholars are exactly alike, and that it will be impossible for him to do well, if he treats them all alike. He must study their dispositions, their abilities, their hopes and fears, in order to do justice to each one. He must study the book of nature, that he may teach them what God has wrought. He must understand what is going on in the community about him, and have some knowledge of, and take an interest in the trades and other employments which occupy the time of the parent of his scholars. The people like a teacher that makes himself one among them, and can talk with them about their business.

A habit of observation is good for all. It will save those that cultivate it many a hard knock in their journey through life. It will provide for them many a joy unfelt by others.

THE Southern Workman,

ISSUED MONTHLY,

S. C. ARMSTRONG, *Editorial Manager.*
H. W. BLAKE, *Assistant Editor.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each regular will contain not less than three illustrations, will furnish a variety of choice reading, will tell what is going on in the work, and will aim to please and profit both old and young.

All are invited, the young especially, to ask by letter, questions on any subject upon which they wish information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"*The Southern Workman*" *should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.*

To every church which shall send us one hundred new subscriptions (or The Southern Workman," we will send a beautiful communion set costing twenty-five dollars.

We will give a handsome Bible costing thirty-five dollars to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars in cash for every one hundred one dollar subscriptions; or $18.75 for twenty-five subscriptions; or $12.50 for every fifty subscriptions.

In these cases the papers are to be sent in one bundle to one address to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by drafts, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, OCTOBER, 1872.

The Labor Question in Virginia.

An article on this subject in the "Country Gentleman," by a highly intelligent and enterprising citizen of Norfolk, is so able and kindly that we are glad to place it before our readers. From an experience of several years in tide-water Virginia, we can testify to the correctness of the views presented. The superiority of "the thinking bayonet," has been proved in war on both Continents. Alike is the superiority of the thinking plough. We invite attention to the test of this on our Normal School Farm. Let the same test be applied to the whole of tide-water Virginia, and to the Old Dominion generally, and we have no question as to the excellence of the result as contrasted with that of uneducated labor. We publish the entire article:

Eds. "Country Gentleman,"—In your issue of August 22, "Observer" claims a decrease of 1860 to 1870 of over 50 per cent., in the agricultural productions of tide-water Virginia. This view is a partial one, inasmuch as the writer confines his attention exclusively to the four products,—wheat, corn, tobacco and wool, and makes no allowance for the diversion of the old laborers to other branches of industry, such as lumbering, the culture of garden vegetables and of peanuts, fishing, oystering and shop-keeping, which have developed rapidly, and in which the negro thinks he can do better than on the plantation. But granting the general accuracy of the statement that the products of Eastern Virginia have considerably decreased, the explanation of "Observer" is worthy of a person brought up in the straightest sect of political Bourbonism. "Industry and skill," says "Observer," "are alone needed, and they cannot be successfully applied in Virginia, in the face of a large negro population, any more than they can in Africa."

The logical consequences of this theory are, that the negro can have no place of usefulness as a citizen; that prosperity can only return to Virginia as she gets rid of her present labor; that the extinction of the negro from Virginia first, then from the United States, the West Indies, and finally from Africa, is the condition of advancement in civilization in those places respectively.

It must be admitted that such conclusions as these are in advance of any adequate experience in temperate latitudes. The hopeless views of "Observer" are supported only by examples drawn from countries where a tropical abundance of food precludes the necessity of forethought, and where no white race has ever worked out the problem of self-government. A residence of nearly four years in tide-water Virginia, has given me a far more favorable view of the capabilities of the negro than "Observer" entertains; and with your permission, I will note some of the evidences that the most absurd thing that can be done with the negro is to drive him away from a government whose glory it has been to fuse all nationalities, and to make the very differences of race balance each other and consolidate the political fabric.

The negro is charged with being too insensible even to labor. But consider under what circumstances he has been expected to work. Wages have been nominally from 50 to 75 cents per day, payable in orders on stores. Cash payment on Saturday night has been a rare exception. The wages earned have been necessarily absorbed in food and clothing bills at the stores of the employers. Where cash has been paid, if the rate was 75 cents per day, the laborers have had to feed themselves and families, and pay from $2 to $6 per month for house rent. It has been the boast of the ex-slaveholder that his labor cost less than before the war.

With scanty fare, doubtful pay, and a certainty of the poor-house ahead, the ex-slave has had to find therefrom the stimulus of hope. The effects of the war, of which "Observer" speaks so slightingly, have been the destruction of farming capital. Without fences, stock, teams or machinery, money or credit, the Virginia land holders have been attempting to hold their vast estates for better prices. Farming without adequate capital has been unprofitable in Virginia as elsewhere. The owners could not afford, under such management, to pay the taxes on their estates, but to the negro charged with the resulting short crop!

The vicinity of Norfolk affords perhaps a better opportunity of judging whether the negro can be provident or not, than any other part of tide-water Virginia. At that point, the government employment and the fisheries have furnished something to be provident with. The deposits of the colored people in the Freedman's Savings Bank of Norfolk, alone, have averaged $135,434.58 per year, for the last seven years. Besides this, a large number have invested money in homes of their own, and have formed companies to buy land. Thousands of oyster canoes dot the waters of Chesapeake Bay from one end to the other. These boats are owned by negroes mostly, whose families keep pigs and poultry around rented hovels on the banks. In all these humble enterprises, the negro displays an entirely different spirit from the Indian. He is willing to work for fair wages; he is anxious to better his children's condition in life. His zeal for education would scarcely be believed by those who have not witnessed it. His mistakes in business are usually the result of an ignorance sure to be cured by experience.

Much has been said about the inherent thievishness of the race. In my own experience have occurred a number of cases of fidelity under temptation, one have I seen the slightest proof that the negro is incapable of a high standard of honesty. When capital comes again to Virginia, and labor is fairly paid; when the laws are promptly executed; and when the negroes have common school education, then, and not till then, can it be decided whether thieving is any more inherent in them than in other races. The power of religion has not been brought to bear upon the smaller vices of the race. With his long-repressed intelligence, the negro does not clearly perceive the inequitableness of praying and stealing. But no one is more sensitive to the opinions of his fellow; and as their general intelligence rises, their standard of conduct must also be higher; and with it their intolerance of those who bring reproach upon their character. At Hampton, near Fortress Monroe, is an institution founded upon the idea of self-help. Besides the English branches, industries are taught, such as printing, house-painting, the use of the sewing-machine, and the best of agriculture adapted to small farms. Were it possible for "Observer" to visit this institution, to consider the starting point of these students, and to witness their zeal for knowledge and for labor, I think he would confess that the material was worth working up for some place in our political edifice.

FAIR PLAY.

During the last two months, the new subscriptions to this paper have been few and far between. Now that the school season has again opened throughout the South, and an army of teachers is in the field, we hope our friends will remember to work for us. There are numbers in every community who would be glad to welcome the "Workman" as a monthly visitor, if they were once introduced to it. Until lately, our subscription list has increased rapidly; and our present desire is to close the first year of our existence with prospects as encouraging as those with which we began our newspaper life.

About this time look out for a great deal of lying. It is the fashion. There will be lots of it after election. There is no feature of the present political canvass so humiliating to an upright man as the number of downright lies that are being published in the papers, and spoken in the speeches of the day. You can scarcely take up a daily paper without reading the heading, "Another lie nailed," followed by a paragraph in which some public man rises to explain that somebody has been publishing a falsehood about him. Things have come to such a pass that entire letters are published over the names of men who never dreamed of writing them. Of course, the people do not believe one half the politicians tell them; but many are liable to be deceived by such wholesale lying, and the guilt of those who indulge in it, is very great. Lying is nothing but lying, and the Bible does not say, "Thou shalt not bear false witness against thy neighbor, except at election time."

The residence of the ladies who recently made a donation to the Virginia Sunday-school Union should have been printed Wrentham, Mass., instead of Waltham.

The Needs of the South.

The Southern Agricultural Press are strenuously advocating the establishment of manufactories in the cotton States, instead of being, as they now are, at the mercy of speculators, who send their crops some thousands of miles to be made into cloth. It is claimed that they have every natural facility needed—any amount of water at hand. They need the population that immediately clusters around, to them, and the business stimulus that would follow such enterprise. Diversified farming is also advocated—more grass and stock and less cotton; also the division of the large plantations into small farms. All of this advice is undoubtedly good. The South needs, and must have, something different from the present plantation system to ever be either a desirable place to emigrate to, or ever be really pro-perous. We notice that some of the papers are advocating a better and cheaper class of laborers, and are trying to get the Chinese there. Here is where they are sadly at fault. Better inducements will produce better laborers; and if they encourage an immigration that will make homes, lay land, raise children, and build school-houses, cultivate farms, make roads, and become a part and parcel of the country, all will be benefitted; while, even with manufacturing, an influx of Chinese would perpetuate the caste, degrade labor, discourage all desirable immigration, and be generally ruinous to enterprise and the growth and prosperity of the South.—*California Agriculturist.*

Simplicity of Style.

People who use big words and a pompous style always get laughed at for it; and people who are not friendly to the colored people often, (we say by speeches) endeavor them to the "niggers" as they call them. Pray see to it that no such style as that is tolerated among the students at Hampton. The highest and English language is plain and simple, and mostly composed of short, Saxon words. That was Daniel Webster's style, and is the style of all the best writers and speakers. A FRIEND.

The Campaign Paper.

To Mr. Beecher's utterance, on this subject, in the "Christian Union," everyone should say *Amen*, until the battle of the politicians shall be conducted with a more decent regard for Christian courtesy and candor.

The era of that fearful thing, the Campaign Paper, is upon us. Once in every four years, a "campaign lie" is inflicted on us. Any attempt at description would be futile; but all sensible, kindly just and truthful men know it well, and shudder at its approach. It is a "compact of jars"—made up of nasty little utterances, but all discordant; many little prickles of a churlish hedge-hog; many little lies that bite incessant, before and behind; many lies, bringing virus in their proboscees from the nearest carrion. The shrewd and nasty little paragraphs of the Campaign Paper are "by-blows" in a double sense; for no responsible intellect is expected to acknowledge their parentage. They come anonymously; they die and leave no sign; and when the occasion of their being has passed away, you could not find a grimly negative and shame their authors than to attempt their resuscitation. By common consent, they are consigned to perdition among the "hypocrites."

The Campaign Paper is an arena at whose entrance gentlemen lay aside their courtesy, upright men their truthfulness, and Christians their charity—for the nonce. An end is to be attained; the election *must* be won; and "all is fair in politics." Facts must be distorted, manufactured, boldly falsified. Documents must be forged, garbled, suppressed. Scandals loathesome and cruel must be devised and set upon their slimy way. Private interest must be trampled on; the sweetest relations must be outraged; and personalities must swarm like noisome insects. Where is the candid acknowledgement of faults in candidate or party that need correction? Where the manly retraction of a charge disproven? simple duties of a true manhood, and probably natural enough to most of these writers, in their private capacity. Shall a sign be made, or a word be spoken, at the distates of a sentimentality or a morality utterly out of place in politics, that may chance to give a small advantage to the enemy? Not if the Campaign Paper knows itself!

But too much upon an unsavory subject. Let all necessary exceptions be excepted; but your genuine, unadulterated, "immensely effective" Campaign Paper—where is the universal!—is our darling abomination. We neither trust nor delight in the mowing imps that grin and chatter so smartly up and down its columns.

Correspondence.

Churchland, Va.

Mr. Editor:—I have been teaching here in the public schools, for two months; and have opened no time in discharging my duties to my scholars as far as I have been able. When next I sit down to impart instruction, I hope the school-house will be more comfortable than the one in which I am now teaching. The house is 18 x 18 feet, and, at the time I first entered it, was without a desk, blackboard, or seats of any kind. I first went to work and made some temporary seats and a writing-desk. The room was very cold, and the scholars were shivering about me. They seemed to be no other way but to close school and report the condition of things to the committee. But; on second thought, I remembered that I had an old stove at home, which I might use. So I brought it to the school-house and made a rough fit of it, by putting the pipe through one of the windows. I am glad to say that it has done me good service. I was obliged to close my school in June, before it was over, on account of whooping-cough, which reduced my scholars from thirty-eight to three.

I tried to teach my scholars not only to be attentive to their books, but also to keep themselves neat and clean. I cannot express my gratitude for the receipt of your paper. Rest assured that I shall do all that I can to introduce it to my numerous friends.

WALTER S. WILSON.

Norfolk.

Mr. Editor:—Much interest is manifested in the new Virginia Sunday-School Union. A number of new schools have been organized, and the workings of the Union are, thus far, very encouraging. I desire to acknowledge, in behalf of the Union, a large donation of books and papers from the Congregational Publishing Society of Boston, Mass.; also a large number of copies of that beautiful little paper "Apples of Gold," from the Riverside Press, Cambridge, Mass. These gifts have been a great help in the work, and were very thankfully received wherever distributed.

Business at the Freedman's Bank has been unusually good for the last month. Many of our depositors have drawn out their money within the past six months to provide themselves with homes, and many more are saving it up for the same purpose. Our deposits are slowly but steadily increasing from month to month.

Many of our people are ignorant of the precise rules and expressions of business. A depositor came in the other day and asked to have an "accession" placed on his book. Another declared his birth-day always came on the "third Saturday in June." Still another, wishing to know how much interest his money had gained, asked how the "sprouts" were getting along.

We have a society here, consisting of over two hundred different societies organized among the colored people. The financial interests of each one are managed by a banking committee of three, appointed by the society.

The bank is the headquarters of the colored people, and all matters not in keeping with their ideas of propriety are brought before us for examination.

M, L'HOMMEDIEU.

Hampton Normal School.

Record of Graduates.

Nancy Ellison, of the class of '71, was married on the 29th of August to Merritt R. Wallace. They will teach during the winter, probably in Mecklenburg County.

George Taylor has entered Howard University.

James Fields is still teaching the Lincoln School in Hampton, which has this year a large number of pupils. His classmates will hear with regret that his house, with almost all it contained was burned on the night of September.

Most of the graduates of '72 have been recommended to situations in Virginia, and we have heard from a few of them since they began their work.

George Pryor writes: "I arrived safely at Wytheville, Wednesday morning, the 18th inst., and opened school the same morning at 9 o'clock. The school then numbered 41 scholars, to-day, 81. Shaffer is teaching in the school with me, or rather I with him. We expect to have in a short time, at least two hundred scholars. We get $30.00 each. Mr. Thomas says that if we can get an average of eighty-five per cent., the school will be entitled to five months more of schooling, which with the term allowed by the county, will make ten months."

Lulo Phillips, who is in London Bridge, Princess Anne County, says: "I am in a lonesome part of the state, but I think I can do well if I stay. I get $35.00 a month, and have to pay $10.00 for board. I opened school to-day (Oct. 7th)."

There are no more teachers wanted just now, because the school-houses are not finished yet. Miss Rutledge has got her school, and she will get the pay I get. She has to walk about a mile and a half."

Maria Chisman is teaching at Murfreesboro, N. C., and Eliza Nottingham in Roanoke Co., Va.

John Williams is assisting Mr. Fields at the Lincoln School.

We hope to have some particulars of their work from many others of the class in time for the next number of our paper.

Agricultural.

Canned fruits.—It is a well-accepted fact, that fruits put up in tin cans are not as healthy as those preserved in glass cans. Solder is used in connecting tin cans, and solder contains lead which easily unites with the acids of the fruit and forms a poisonous mixture. Even if solder were not used, it would not be well to eat fruits long incased in tin. Undoubtedly, many persons have been injured by so doing. Glass jars are the only ones that should be used.

Roads and Fence Corners.—If there is any one thing which I hate more than another about a farm, it is to have the road, walks, and fence corners filled with brush and weeds. It is from these places that the Canada thistles and other noxious weeds become scattered over the farm; and who does not know that weeds in roads or walks are a sure mark of slovenliness on the part of the owner? Remove all the brush and weeds from the fence corners and roadsides; hoe and rake your garden walks, and see what a wonderful change it will make in the general appearance of your place. What a very bad habit is to otherwise well-kept gentleman, weedy walks and roads are to a good farm or garden. When I was a boy, my father taught me to hoe out my row, which meant to the center of the road, or close up to the fence, not permitting the weeds and grass to annually encroach upon that portion of the land occupied by crops.—*Rural New Yorker.*

Hens in place of Dogs.—There is hardly any family that does not throw away enough table scraps to feed at least a half dozen hens; but many families complain that they cannot afford to keep hens, who nevertheless keep a nuisance in the shape of a dog, who does no good, and costs them more than would a dozen good hens. If hens are well fed they will rarely go away from home, while a dog in general is a trouble to the whole neighborhood. Who ever saw one that was not a pest running across the newly-made garden, and sticking his nose into every thing? Kill off the cars, and give the food to the hens. We wish there was a tax of one hundred dollars on every dog in the country. Those that are of value as watch-dogs, could be retained; while the host of snarling, dirty curs would give place to some more useful and less troublesome pets.—*Poultry Standard.*

Water for Bees.—Bees consume large quantities of water when building comb and raising brood. Want of water is one of the causes of dysentery among bees. A bucket or trough filled with water, with a few pieces of old comb or sticks for the bees to alight upon and drink in safety, should be kept near the hives.—*N. Y. Journal.*

Whitewash for Outdoor Work.—Whitewash made from the following receipt is said to have been used very successfully on the public buildings at Washington:

To make whitewash, or cheap paint, which will last on wood, brick, or stone twenty or thirty years: Nice unslacked lime, one-half bushel; slake it with boiling water, covering it during the process to keep in the steam; strain the liquid through a fine sieve or strainer, and add to it salt, one peck, previously well dissolved in water; rice, three pounds, boiled to a thin paste and stirred in boiling hot; Spanish whiting, one-half pound; clean, nice glue, one pound, which has been previously dissolved in water, soaking being made there under a different name, but with the same purpose of the KuKlux. This was attempted in North Carolina, where the KuKlux have been dispersed effectually, but the people would not have anything to do with the matter.

General News.

A severe time about there was published a report of the storm on the night of August 20th, in which it was stated that Lumber Creek, 18 miles and 20 minutes P. M. and was accordingly has been received at Philadelphia in August 20th, at 10 hours and 15 minutes P. M. At first sight this is wonderful, yet by dividing the distance by the time actually occupied ninety five hours.

Nothing has yet been settled in regard to the time and method of ending the private claims, but out of the Alabama award of two hundred millions, it is thought, however, that Congress, at its next session, will provide for this without waiting for the payment of the money by Great Britian.

The official report of the investigation into the Modoc disaster throws the responsibility on Captain Burton and the two pilots, and absolves some blame to Dame, the first scout. The behavior of the captain and pilots have been rewarded.

The problem of telegraphing in the Chinese language, to write which requires some 20,000 different characters, has been solved in this way: A few thousands of the characters most used are cut upon wooden blocks. On the opposite side of each block is its number. Duplicates of each numbered blocks are at each telegraph station. The China merchant selects the blocks which express the thoughts to be transmitted. The operator telegraphs only the numerals designating those blocks, which enable the receiving operator to erect similar blocks at the end of the line.

A scheme of "postal cards," so-called, have been received at the Post-office Department from various parties, who have got them up as an advertising medium, and the Department has informed the speakers and manufacturers thereof in response to inquiries accompanying them, that if any business or other card is sent through the mails with written directions on it, they will be required to pay full letter postage, and that the one-cent stamp which is stuck on the corners will not be sufficient to send them. No postal card is, therefore, in order, till an appropriation has been made for them at the next session of Congress, and they are sold and distributed by the Post-Office Department.

The new postal card will be made from discut in hardened steel for surface printing, a novel, and heretofore considered impossible mode of engraving. The lines instead of being sunk are raised like those of an ordinary wood cut, so that the plate may be used in the same manner as type in any printing-press. The completed card is three inches by five and one-eight inches in size, made from a fine quality of card-board, and is of a light buff color. A border of scroll-work runs around the edge, while in the upper right-hand corner is a very handsome stamp, consisting of a head of liberty encircled with stars and, surrounded with elliptical scroll work. The denomination is one cent, and the color of the work a rich velvet brown. The inscription is simply "United States postal card"—write address only on this side, the message on the other." Below are ruled lines, while the reverse is blank.

A "wonderful discovery" is reported from Colorado, in the shape of an enormous silver ledge, or system of ledges, near Caribou. It is said to be sixty-three feet in width and five miles in length, assaying from $172 to $1000 per ton. It is also reported that a solid vein of silver ore, thirty inches wide, was struck in the Marshall tunnel near Georgetown, on the 21st ult.

Government has received information of extensive smuggling on the Gulf Coast, from Key West to New Orleans. The object of perpetrating the frauds is by running goods along the Gulf shore and thence into the interior to railroad points.

The Attorney-General has received a detailed report of observations and works of the secret agents of the Government in the Southern States, which shows that the KuKlux still consist, outrages in Georgia, Alabama, Mississippi, and Texas, and that organizations now being made there under a different name, but with the same purposes of the KuKlux. This was attempted in North Carolina, where the KuKlux have been dispersed effectually, but the people would not have anything to do with the matter.

On Tuesday, October 1st, the new law concerning stamp taxes went into operation. Under the new arrangement no stamp will be required on any promissory notes, time drafts, bonds, certificates, contracts, custom-house papers, or any other instrument mentioned in schedule B of the old law, except "the delivery of two cents on bank checks, drafts, or orders." In reference to the latter exception, the U. S. Internal Revenue Department has doubted that a 2 cent stamp is required on inland bills of exchange, if payable at sight or on demand, and also on all orders at sight on private individuals for any sum over ten dollars. This decision is, however, considered by high authority to be erroneous.

Notwithstanding the large number of cases already disposed of, eighteen thousand Communists are still to prison in France awaiting trial. Of these, more ten thousand will soon be discharged without a formal examination. Only persons accused of assassination, robbery, or arson, will be held for trial.

A wealthy society has been organized in France to erect school houses in destitute places.

Street cars are said to run up Mount Zion, Jerusalem, the street lamps being lighted with gas.

The Egyptian Viceroy has given a valuable lot in Cairo for the erection of an Episcopal Church.

A Joke Turned on the Jokers.

College boys have queer notions of fun. They work hard to play a practical joke on president or professors; but when they have to work equally hard to undo the joke, the laugh isn't on their side! "One who knows" tells how President Maxcy was a little too much for some of his wild boys:

On one occasion, several students of South Carolina College resolved to drag the doctor's carriage into the woods, and fixed upon a night for the performance of the exploit. One of their number, however, was troubled with some compunctious visitings, and managed to convey to the worthy president a hint that it would be well for him to secure the door of his carriage-house.

Instead of paying any heed to this suggestion, the doctor proceeded on the appointed night to the carriage-house and ensconced his portly person inside the vehicle.

In less than an hour some half a dozen young gentlemen came to his retreat and cautiously withdrew the carriage into the road. When they were fairly out of the college precincts they began to joke freely with each other by name.

One of them complained of the weight of the carriage, and another replied by swearing that it was heavy enough to have the old fellow himself in it. For nearly a mile they proceeded along the highway, and then struck off into the woods, to a cover which they concluded would effectually conceal the vehicle. Making themselves infinitely merry at the doctor's expense, and conjecturing how and when he would find his carriage, they at length reached the spot where they had resolved to leave it.

Just as they were about to depart, they were startled by the sudden dropping of one of the glass door panels, and the well known voice of the doctor himself addressed them:

"So, so, young gentlemen, you are going to leave me in the woods, are you? Surely as you have brought me hither for your own gratification, you will not refuse to take me back for mine. Come, Messrs. ——, and ——, and ——, buckle to, and let us return; it's getting late."

There was no appeal; for the window was raised, and the doctor resumed his seat. Almost without a word, the discomfitted young gentlemen took their place at the pole, and at the back or the vehicle, and quite as expeditiously, if with less voice, did they retrace their course.

In silence they dragged the carriage to its wonted place, and then retreated precipitately to their rooms to dream of the account they must render on the morrow. When they had gone, the doctor quietly vacated the carriage and went to the house, where he related the story to his family with much glee. He never called the heroes of that nocturnal expedition to an account, nor was the carriage ever afterwards dragged at night into the woods. —*Youth's Companion.*

Japanese Shoes.

Three kinds of shoes are worn in Japan.

1. There is the *straw* shoe. This consists of a snug mat of straw, made to fit the bottom of the foot, and fastened by means of a string going through the mat and round the ankles. The Japanese horses, what few they have, are shod with straw, in precisely the same way. The mat, being made to fit the bottom of the horse's foot, and turn up a little at the sides, is fastened by the means of a string going round the leg above the hoof.

2. The second kind of shoe is made of cloth for the upper part, and this is attached to a sole of felt an inch thick.

3. Then, instead of our gum overshoes, the Japanese construct a rude sandal of wood, the bottom of which fits the shape of the foot, and across the bottom are two transverse sections, one near the toe and another near the heel, forming two huge corks, a toe-cork and a heel-cork, of wood, four inches long and an inch thick. The whole is constructed of one solid piece of wood, and kept on the foot by means of a strong rope or string fastened to the top of the sandal, like the bail of a kettle, under which the foot is thrust to the instep, and the pedestrian is enabled to move "high and dry" over a muddy road. The tracks of such a traveller look queer enough. Two impressions in the soft earth, four inches long, and one inch wide, and four or five inches apart, are all you see.

What Brought Them Out.

An Irishman, one morning, went out very early in search of some game on an estate where the game laws were strictly enforced. Turning a sharp corner, whom did he meet but the gentleman who owned the estate. Paddy, seeing the game was up, coolly advanced to the gentleman and said,—

"The top of the morning to yony honor! and what brought your honor out so early this morning?"

The gentleman replied by saying,—"Indeed, Paddy, I just strolled out to see if I could find an appetite for my breakfast;" and then, eyeing Paddy rather suspiciously, said, "And now, Paddy, what brought you out so early this morning?"

Paddy replied, "Indade, your honor, I just strolled out to see if I could find a breakfast for my appetite."

Spare Moments.

A lean, awkward boy came one morning to the door of the principal of a celebrated school, and asked to see him. The servant eyed his mean clothes, and thinking he looked more like a beggar than anything else, told him to go round to the kitchen door. The boy did as he was told, and soon appeared at the back door. "I should like to see Mr. B." he repeated.

"You want a breakfast, more like," said the servant girl, "and I can give you that without troubling him."

"Thank you," said the boy, "I should have no objection to a bit of bread, but I should like to see Mr. B., if he can see me."

"Some old clothes, maybe you want," remarked the servant, again eyeing the boy's patched trowsers. "I know he has none to spare," and without regarding the boy's request, she went away about her work.

"Can I see Mr. B.?" again asked the boy, after finishing his bread and butter.

"Well, he's in the library; if he must be disturbed, he must; but he does like to be let alone sometimes," said the girl in a peevish tone. She seemed to think it very foolish to admit such an ill-looking fellow into her master's presence; however, she wiped her hands, and bade him follow. Opening the library door, she said, "Here's somebody, sir, who is dreadfully anxious to see you, so I let him in."

"I don't know how the boy introduced himself, or how he opened his business; but I know that after talking a while, the principal put aside the volume he was studying, and took up some Greek books, and began to examine the new-comer. The examination lasted sometime. Every question which the principal asked, the boy answered as readily as he could.

"'Upon my word,' exclaimed the principal, looking at the boy from head to foot, over his spectacles, "you certainly do well. Why, boy, where did you pick up so much?" "In my spare moments," answered the boy.

Here was a poor hard-working boy, with but a few opportunities for schooling, yet almost fitted for college by simply improving his spare moments. Truly, are not spare moments the gold-dust of time? How precious they should be! What account can you give for your spare moments? What can you say for them? Look and see. This boy can tell you how much can be laid up by improving them; and there are many other boys, I am afraid, in the jail, in the house of correction, in the forecastle of the whale-ship, in the tippling shop, who, if you should ask them when they began their sinful course, might answer, "In my spare moments."

Curiosities of Animal Life.

There can be no doubt that dogs feel shame as distinct from fear, and something very like modesty when begging too often for food. A great dog scouring the snarling of a little dog, and this may be called magnanimity. All animals feel wonder, and many exhibit curiosity, the latter quality affording opportunity for hunters, in many parts of the world, to decoy the game into their power. The faculty of imitation, so strongly developed in man, especially in a barbarous state, is present in monkeys. A certain bull-terrier of our acquaintance, when he wishes to get out of the upper part, and this is attached to a sole of felt an inch thick. door, jumps at the handle of the door, and grasps it with his jaws, although he cannot himself turn the handle. Parrots, also reproduce with wonderful fidelity, the tones of voice of different speakers, and puppies reared by cats have been known to lick their feet and wash their faces after the same manner as their foster-mothers. Attention and memory also are present in the lower animals, and it is impossible to deny that the presence of dogs and horses show the presence of imagination, or that a certain sort of reason is also present. Animals also profit by experience, as any man realizes who sets traps. The young are much more easily caught than the old, and the adults gain caution by seeing the fate of those which are caught. Tools, also, are used by some of the higher apes. The chimpanzee uses a stone to crack a nut resembling a walnut, and the Abyssinian baboons fight troops of other species, and roll down stones in the attack before they finally close in a hand-to-hand encounter. The idea of property is common also to every dog with a bone, to all birds with their nests, and notably in the case of rooks. Nor can a certain kind of language be denied to the brutes. The dog communicates his feelings by barks of different tones, which undoubtedly raise in his fellow-dogs ideas similar to those passing in his own mind.—*Edinburgh Review.*

WHAT is the difference between a bill and a pill? One is hard to get up and the other is hard to get down.

Children's Department.

Autumn Leaves.

The leaves, they are falling, falling, falling:
Red, brown, and yellow, I see them fall—
The birds, they are calling, calling, calling:
Swallows old and young, I hear them call.
Come, Mary! Come, Jamie! Come, Harry and Kate!
See the leaves and the swallows: come, do not be late.
The warm days, they are going, going, going:
Come, mount the hill with me before they go.
The little brooks are flowing, flowing, flowing:
But very soon they all will cease to flow.
For the leaves are falling, falling; the swallows flying, flying;
And soon the winds of winter will be sighing, sighing, sighing.

THE DONKEY, THE FOX, AND THE LION.

The autumn bees are humming, humming, humming:
Soon they will be silent all and still.
Said the children, "We are coming, coming, coming:
Wait there for us, Uncle Charley, on the hill.
Come summer, come winter, come heat, or come snow.
We're bound to be merry wherever we go."
—*The Nursery.*

HOLD ON, BOY.

The Donkey, the Fox, and the Lion.

If you wrong those who trust you, no one will pity you if you come to grief. Them is an old fable of the Donkey, the Fox, and the Lion. The Donkey and the Fox agreed to help each other, and then went into the woods to hunt.

They had not gone far when they met a Lion. The Fox, fearing that he could not keep out of the clutches of the Lion, thought he would try to save himself at the expense of his partner.

So the Fox went up to the Lion, and told him, that, if he would pledge his royal word not to harm him, he would lead the Donkey to a place where the Lion could catch him.

The Lion told the Fox to do it, and trust to his mercy. So the Fox led the poor Donkey to a deep pit, and contrived to have him fall into it. The Lion, seeing that the Donkey was in his power, then clutched the Fox, and said, "Those who cheat deserve to be cheated in their turn. I shall begin my meal with a joint of fox, and end with a bit of donkey."

But the Donkey brayed so loud that the hunters came up and helped him out of the deep pit. Then they gave chase to the Lion and the Fox, and killed them both.—*The Nursery.*

Hold on, Boy!

Look at the man and the boy on the back of the great horse! How fast the horse goes! I hope he will not trip. If he should trip and fall, the man and the boy would get hurt.

Why do they ride so fast? You shall hear. The boy was sent a long way with a note, which he was told to leave at a man's house. He left the note; but, on his way home, the sky grew dark.

"I think it will rain soon," thought the boy; and, as he thought this, he saw a man on the back of a horse. "Will you let me ride with you?" said the boy.

"Yes, my lad," said the man; "give me your hand, and jump. It will rain fast, soon. Hold on tight to my back, and I will leave you at your house."

So the boy gave a jump, and got on the back of the horse; and off they went, so fast that the boy got home in good time to shun the rain.—*The Nursery.*

A Good Beginning.

Hon. Erastus Corning died, not long since, at Albany, worth nearly ten million dollars. He came to the city in early boyhood, poor and friendless, seeking employment. Applying at a store for work of some kind, the merchant thought him too small and young for service.

"Why, my little boy," said he, "what can you do?"

"Can do what I am bid, sir," was the prompt reply.

That reply secured him a place, and that spirit made him a favorite with his employer, and insured steady promotion. Any young man who is ready for hard work, and attends to his duties promptly and with thoroughness, may hope to succeed. Idlers and shirkers, whose aim is to do as little as possible, have a hard road to travel.

Tom's Lesson.

"Go and get it! Go and get it, I say!"

Poor little Dash crept close to his young master's feet, looking up in his face with earnest, pleading eyes, as if he would say, "Please, please don't! I cannot do what you want."

Tom was trying to make Dash swim after a stick which he had just thrown into the river. Now, Dash was not a water dog, having no more love for it than a cat and foolish Tom was bent on making one! He kicked the poor little animal away and repeated his order; then, angry that it was not obeyed, seized him and threw him into the water. The dog was sorely frightened, but by hard struggling reached the bank and crawled to his master's feet with a pitiful whine, wet, panting, trembling. The cruel boy caught him up with rough words, and was just going to throw him in again, when a pair of strong arms seized him and a man's voice said, "Here, you young scamp! Now we'll see how you like to swim!"

It was Tom's turn to be frightened. He turned pale, trembled and caught his breath as the stranger lifted him in his stout arms as easily as he had poor Dash; he began to beg. "Oh, sir, pray don't! I cannot swim, indeed I cannot! O don't throw me into the water! I will never do so again."

The man paused, but did not let go his hold.

"Neither can your dog swim," he said; but you meant to make him do it, just to amuse yourself. Why can't not make you do it to amuse me? I am so much larger and stronger than you, as you are larger and stronger than that poor, panting, trembling dog."

Tom still begged and promised, and the stranger at last let him go, saying, "Now, my boy, let me give you a kind word of advice. Never treat another, whether human being or dumb animal, as you would not like to be treated yourself. Never try to make anybody or anything do what God, who he created it, did not make it to do, or to be what he did not mean it to be. If you keep these rules, you will be a better, wiser, happier boy. Good-bye."

And Tom knew in his heart that the man was right, and the lesson, though it seemed severe, had been given in kindness. —*Our Dumb Animals.*

A Mother's Love.

Children, look in those eyes; listen to that dear voice; notice the feeling of even a single touch that is bestowed upon you by the gentle hand. Make much of it while yet you have that most precious of all good gifts,—a loving mother. Read the unfathomable love of those eyes; the kind anxiety of that tone and look, however slight your pain. In after-life you may have friends,—fond, dear, kind friends; but never will you have again the inexpressible love and gentleness lavished upon you, which none but a mother bestows. Often do I sigh, in my struggles with the hard, uncaring world, for the sweet, deep security I felt, when of an evening, nestling to her bosom, I listened to some quiet tale suitable to my age, read in her tender and untiring voice. Never can I forget her sweet glances cast upon me when I appeared to sleep; never her kiss of peace at night. Years have passed away since we laid her beside my father in the old churchyard; yet still her voice whispers from the grave, and her eye watches over me as I visit spots long since hallowed to the memory of my mother.

Kindness for Kindness.

A bee, buzzing from flower to flower gathering honey, rested on the broad, pink petal of a full-blown rose. Alas! the rose was just ready to fall apart, and the bee, with a sudden dash toppled backward into the waters of a babbling brook. A dove, in the leafy bower of a maple-tree saw the accident, and plucking a leaf, dropped it to the frightened bee, who struggled on the leaf and was wafted safe to shore by this little sylvan boat.

A dove was softly cooing in her favorite tree, when a sportsman, with his dog and gun, came by, and slyly raised his deadly weapon to fire, when lo! a bee stung his finger making him drop his gun and cry out with pain. The shot was scattered, and the startled dove was off on the wing.

The bee went buzzing on his way—a happy bee! for it had paid a debt of kindness in kindness in return—

"And this is the world the rule was made
That each should his fellow-creature aid;
One does another a service to-day,
To-morrow that other the deed can repay."

The Roman Soldier.

"The Romans had a law that no person should approach the emperor's tent in the night upon pain of death; but it once happened that a soldier was found in that situation with a petition in his hand, whiting for an opportunity of presenting it. He was apprehended, and going to be immediately executed; but the emperor, having overheard the matter in his pavilion, cried aloud, saying, 'If the petition be for himself, let him die; if for another, spare his life.' Upon inquiry, it was found that the generous soldier prayed for the lives of his two comrades, who had been taken asleep on the watch. The emperor nobly forgave them all."—*The Well-Spring.*

Truth.

Why should you fear the truth to tell?
Does falsehood ever do so well?
Can you be satisfied to know
There's something wrong to hide below?
Yes, let your fault be what it may,
To own it is the better way.

INFORMATION WANTED!

Mr. Jordan Williams, of Norfolk, Va., desires to obtain information of his lost boy, PILAS WILLIAMS, who very mysteriously left home from the 22nd of July, and has not been heard from since. He is about 16 years of age, and was last May, at their competition, about four feet in height; a smart, active boy; rather thick in conversation, holding his head down while answering with myopic.

His father and mother are very anxious to learn as to his whereabouts. It was reported that he was in Petersburg, but as certainty as to the above statement can be ascertained.

Any information as to the above will be thankfully received if addressed to

JORDAN WILLIAMS,
Norfolk, Va.

established by the authority of the United States Government for the benefit of the Freedmen, known as one of the most reliable institutions of the kind in the country, and offers its great advantages to all classes alike.

SAVE THE SMALL SUMS.

Cut off your vices—don't smoke—don't drink—don't buy lottery tickets. Put the money you save into the

FREEDMAN'S SAVINGS BANK.

NORFOLK, Va. BRANCH

IS LOCATED AT

NO. 116 MAIN STREET,

Corner of Gray Street.

Bank hours, 10 A. M. to 3 P. M. Open also Saturday Nights from 6 to 8 o'clock.

J. W. ALFORD, *President.* H. C. PERCY, *Cashier.* M. L'HOMMEDIEU, *Asst. Cashier.*

THE

FREEDMAN'S SAVINGS & TRUST COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,357,267.67, being an increase of *fifty per cent.* on the balance due depositors at the close of the present year.

There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $213,213.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $5,000,000 due depositors.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.

Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED,

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and *without loss of interest.*

For full information about the Bank address the *Actuary* at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, J. W. Alvord, Esq., or D. L. Eaton.

LAND FOR SALE
On the Peninsula.

I have for sale 300 acres of land between Williamsburg and Fort Monroe, Virginia. This section of the Country is fully and accurately described in the language of Captain John Smith: "Within is a country that may have the perquisites over the most pleasant places known, for large and pleasant navigable rivers, havens and harbors never agreed better to frame a place for man's habitation. Here are fertile grounds, wholesome waters, prince people. The land is extended into pleasant valleys, rivers and brookes, all running most pleasantly into a faire bay, compassed about for the moath with fruitful and delightsome land.—LIKE TAKE JOHN SMITH."

WILLIAM S. HOWARD,
Hampton, Va.

JOHN T. BENTLEY,

"Sweeping the Gates."

I.

Oh, blessed is life when the warfare is ended,
And the Comforter comes as the victor to save,
And the soul follows after its Master ascended,
Victorious forever o'er death and the grave!
And blessed was he when the summons was given,
Our friend and our brother whose mission is done,
Who triumphed before the bright portals of Heaven,
And spoke of the glories salvation had won.
Who left the glad welcome—"Accepted I am,
And on pinions slate,
I am sweeping the gate,
Uptorne by the love of the Lamb."

II.

"I cannot tell what are the raptures before me,
The joys of the ransomed I cannot compare,
But I know that the smile of the Lord brightens o'er me,
And the sweetness of Paradise falls on the air.
I know that bright convoys above me now hover,
I know that the arches of Heaven are fair:
I know, yes, I know, that this hour will discover
The glory of glories, that Jesus is there.
I fly to his bosom: accepted I am,
And on pinions slate,
I am sweeping the gate,
Redeemed by the blood of the Lamb!"

III.

We shall meet him no more in our unions, forever,
When the music of bells fills the air with delight;
When the sunshine of evening fades soft on the river,
Or sets the gold stars of the diademed night,
His spirit no longer, on wings of elation,
Awaits the sweet seal of the Heavenly kiss,
But, passed to its rapture the gates of salvation,
Is now with the saints and the angels in bliss.
He is safe by the throne of the mighty I AM.
On pinious state,
He has swept the bright gate,
And is singing the blood of the Lamb!

Rev. T. De Witt Talmage.

Next to Henry Ward Beecher, Mr. Talmage is the most popular preacher in Brooklyn, New York. Though his style is not always such as we should choose, he is so spicy, witty, and sharp, so apt in illustration and graphic in description, and, above all, so earnest in his devotion to the Master's service, that we think our readers will be interested in the following extracts from his writings:

SORROWS OF CHILDHOOD.

"I deny the universal proposition that childhood is the happiest part of life. What with breaking your best top, and having the boy next to you stick pins into you—under the most favorable circumstances, it is the least comfortable portion of human existence. We do not understand the sorrows or perplexities of childhood—those days of bad colds without the alleviation of pocket-handkerchiefs; the days of examinations when the unhappy youth, perhaps, in awful presence, is told to 'Parse the first page of Young's Night Thoughts;'" and when prepositions, adjectives, verbs, articles, and conjunctions get into a grand riot worse than the Fourth Ward on election day. Well do I remember the unhappy sense of my childhood's educational experience. It was called "Herod's School-house," partly because a spin of that name lived not far away, and partly because it was "The Massacre of the Innocents." We went to school there from eight o'clock in the morning to five o'clock in the afternoon, and a boy got the worth of his money. There was none of your nonsense of blackboards, globes, and philosophical apparatus. It was sober business, and no trifling. There were the wooden desks around the wall, and seats with no backs to them, and there we sat all day with our faces to the wall; and along about four o'clock of a summer afternoon we would begin to forget *how educational advantages*, and get drowsy, and then the teacher, would come around very slyly, and with a big stick bring us instantly back to an appreciation of our educational advantages. And when we learned our A B C's, we *learned them!* I remember the whole process. "'What letter is that?' 'I don't know.' (Cuff.) 'What letter is that?' (higher key.) 'I don't know.' (Cuff, cuff.) (Tremendous applause). I remember all about it. It was a most serious thing under the best circumstances. And one day, too, a most awful circumstance occurred. Word came to the teacher that Joe Smith had actually kissed Mary Brown! Actually kissed her! and that teacher arose in his indignation, and didn't Joe Smith take it? Why shouldn't that teacher be filled like a vial of wrath at such a thing? He had never kissed anybody! Nobody had ever *kissed him!* But it did no good; for fifteen years later, a minister stood within the altar, a bridal trail swept down the aisle, and there, in the presence of the world, *Joe Smith kissed Mary Brown!* None of the sorrows of childhood about that!"

MAKING THINGS GO.

"The general rule is that moral success is worthily success. It is easier to make a permanent fortune in honorable ways than by dishonorable conduct. The devil is a poor financier. When the gold and the silver were laid down in the earth, they were sworn to serve the cause of righteousness, and they never go into the coffers of the dishonest without committing perjury. Lawful enterprise in the long run will declare larger dividends than dishonest scheming. The oil company of which Hon. Bogus Breasebeak is President, and Hocus Pocus, Esq., is Secretary, at first declares twenty per cent., then ten per cent., afterward three per cent.; and, last of all, nothing, leaving the widows and orphans to play the beautiful game of 'Money! money! who has the money?'"

GHOSTS.

"The only ghosts that glide across the room are those of the murdered hours of the past. When the door swings open without any hand, we send for the locksmith to put on a better latch. Sheeting has been so high since the war, that apparitions will never wear it again. Friday is an unlucky day only when on it we behave ill. If a salt-cellar upset, it means no misfortune, unless you have not paid for the salt. Spirits of the departed have enough employment in the next world to keep them from cutting up monkey-shines in this.

AIM HIGH.

"If a man's whole life object is to make dollars, he will be running against those who are making dollars. If his whole object is to get applause, he will run against those who are seeking applause. But if he rises higher than that, he will not be interrupted in his flight heavenward. Why does that flock of birds, floating up against the blue sky so high that you can hardly see them, not change its course for mire or tower? They are *above* all obstructions. So we would not have so often to change our Christian course if we lived in a higher atmosphere, nearer Christ, nearer the throne of God."

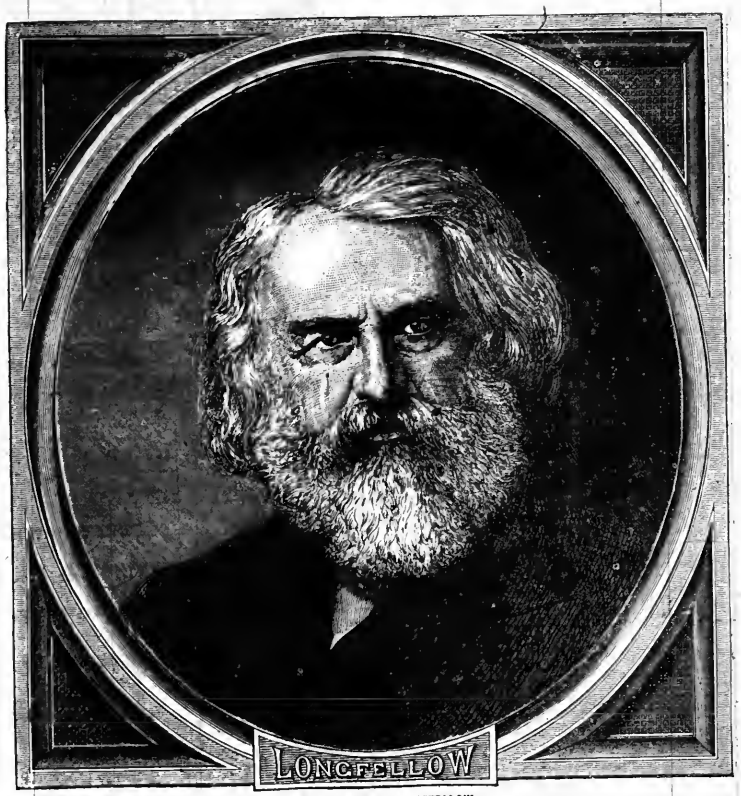
THE HATCHET BURIED.

"We have spent too much time in ecclesiastical pugilism. We have lost about a hundred years in gunning for Methodists, and drumming Baptists, and beating Presbyterians to death with the decrees, and pommelling Episcopalians with the battle-rent of the liturgy. As at Bothwell Bridge the Scotch army quarrelled among themselves, eighteen ministers, with eighteen different opinions, contending most fiercely, until Lord Claverhouse came down with disciplined troops and swept the field; so in the time when hosts of darkness in mail of hell were coming upon us, we were contending. Old School against New School, Free-will Baptists against close communionists, Methodist Church North against Methodist Church South, and we have been routed on a hundred fields, when, forgetting everything but the ancestarred banner under which we fought, and the Captain who led us on, we might have shouted the victory through our Lord Jesus Christ.

"Thank God that so many of the rams of the Church have had their horns sawed off, and that the ecclesiastical chantieleers have lost their spurs. The books of controversialists will be on the shelves of colleges and State libraries, old and yellow and cobwebbed, until even the book-worms will get tired of the alumbrous literature, and depart from old leather-backs, and some day the books will be cast into the fire, and just before the last flame goes out, the world will see in the consuming scrolls the image of two religious combatants with their hands in each other's hair, combing it the wrong way. Bigotry is an owl that cannot see in the daytime; on black and spectral wing it flits through the midnight heavens and roosts in the belfries of ruined churches.

"The millennium has already begun. The Episcopalian lion is eating straw like a Presbyterian ox; and Baptist and Pedo-Baptist, while lovingly discussing their differences, are first *sprinkled*, and then *immersed*, by a baptism of the Holy Ghost. Peace! If you, the methodist, want an Episcopal see, long as from Mulberry street to the Golden Horn, have it, and may it be crowded with repentant sinners. And if it shall be found out that all our Presbyterian brethren have been *fore-ordained* to eternal life, Bishops Simpson and Janes will rejoice with us in the fore-ordination. If this brother will preach in gown and bands, and the Western pioneer shall proclaim the Gospel in his shirt-sleeves, may the blessings come down upon both the preachers. Life is too short, and the work too great, to allow disputation about nonessentials. If a drowning man is to be pulled out of the floods, it makes but little difference whether the hand you reach out to him has on its buckskin mitten or kid glove.

"Quick! Let us find our work. *You* preach a sermon—*you* give a tract—*you* hand a flower—*you* sing a song—*you* give a crutch to a lame man—*you* teach the Sabbath class their A, B, C—*you* knit a pair of socks for a foundling—*you* pick a splinter from a child's finger. Do something! Do it now! *We will be dead soon!*"



HENRY WADSWORTH LONGFELLOW.

How to Eat.

You probably think, most of you, that advice on this point is quite unnecessary; but there was never a greater mistake, for the majority of people eat their daily food with very little knowledge of its effects, and still less of how to choose and prepare it, so that it may give the greatest possible amount of both nourishment and pleasure. To enjoy your food and be benefited by it, you must first of all, have a healthy appetite, which means more, perhaps, than you think for; it means that your stomach and your liver and several other important organs of your system are in good order, and your never-ceasing endeavor should be to keep them so. It is not so difficult either, for most working people are blessed with healthy bodies, and nine times out of ten have only themselves to blame for their sicknesses and discomfort. Our Creator has made the laws which govern our bodies so simple that the wayfaring man need not err therein; the difficulty, alas, lies almost always in our own weak wills. Determine then to be healthy as you were meant to be, and to that end follow certain simple roles of which here are three:

1st. Eat always at fixed times: regularity is all important, and if you try it, you will find it just as easy to have dinner at 12 o'clock precisely, as to have it, as too many do, anywhere from 10 o'clock to sundown.

2d. Fry nothing that can be cooked in any other way; roast, boil, bake, broil, do anything rather than fry, for when you fry your food you lose the best part of it, and make your stomach double work, a foolish waste of material and digestive power. There is no better manner of cooking fish or meat, than broiling over the coals.

3d. Eat a variety of vegetables plainly cooked, and eat them in the early part of the day, not at night when the stomach is tired, for they are gold in the morning, silver at noon, and lead at night, so far as their value as food is concerned. X.

Diamonds in the Dirt.

We hear of men from all parts of the world going to the diamond fields of Africa, braving perils by land and sea, encountering all manner of privations and fatigue; digging in the dirt with unwearied energy and patience, stimulated by the hope of finding therein a transparent stone that will dazzle the eyes of men with its long lashes of prismatic lustre. Meanwhile, there are diamonds lying neglected in the dirt all around us. Perhaps they were there from the beginning of their existence; or perhaps they were carelessly dropped from some rich man's breast, and fell upon a dung-hill, where barn-door fowls scratched dirt over them, and swine rooted them deeper and deeper into the mire. Either way, they are precious things buried in dirt and darkness, waiting for waters of truth to wash away the filth, and the sunlight of love to bring out their inherent lustre.

Blessings on those who are seeking to bring out of the darkness those lost *human* treasures, of more value to society than all the diamonds in imperial crowns! Immortal jewels, capable of forever reflecting divine radiance pleasing to the eye of God, after all the splendors of this world have vanished utterly! — *Christian Instructor.*

Help in Need.

A good man shall have what he needs, not always what he thinks he needs. Providence intends the supply of our necessities, but not of our desires. He will satisfy our wants, but not our wantonness. When a thing is not needful, a man cannot properly be said to want it; when it is needful, a good man shall not be without it. What is not bestowed upon us, may not be so beautiful at the time we desire it, for everything is beautiful in its season. He that did not want God's kindness to renew him, shall never want God's kindness to supply him; his hands shall not be wanting to give where his heart has been so large at working.—*Charnock.*

It costs more to revenge wrongs than to bear them.

Temperance.

Consider

That sparkling glass, if you partake,
Will prove your deadly foe,
And may, ere yet its bubbles break,
Have sealed your endless woe!

Then pause ere yet the cup you drain,
The hand that lifts it, stay;
Resolve forever to abstain,
And cast the bowl away.

A Plucky Temperance Man.

TWENTY years ago, a young man went to Washington with a petition to Congress from the people of old Massachusetts. While in that city, he was invited to dine with the celebrated John Quincy Adams.

Many great men sat at the table. The young man had been poor, and was then only a mechanic in moderate circumstances. During dinner, Mr. Adams said to him:

"Will you drink a glass of wine with me, sir?"

The young man was a temperance man. But the eyes of many greater than himself were upon him. They were all wine-drinkers, and it was no small matter to decline such a request from his venerable host. No wonder the young man was embarrassed, that he blushed and hesitated. It was a critical moment for him. But he was a true man. He had real manhood, and he stammered:

"Sir, I never take wine."

Nobly said, young man! Mesmerism gets heard that answer, and mother-hood it. She saw in Henry Wilson a man who could be trusted, and she took him one of her senators. To-day, as for several years past, he has been known as Senator Wilson! God bless him! May our readers follow his example, and however and by whomsoever tempted, stick to their principles.

Bands of Hope

This organization, designed for children and youths, was started in Scotland in 1847, and has been instrumental in reclaiming more persons than any other similar organization in the world. Its mode of organization is simple and plain, is usually commenced in the Sunday-school, where children, teachers, and parents unite in the meetings. The youth should be early pledged to total abstinence, and educated in the great fundamental truths of temperance. The following is the usual form of pledge, though some leaves of tobacco, in forming Bands, have left out all reference to the filthy weed:

"I hereby solemnly pledge myself to abstain from the use of all intoxicating drinks, including wine, beer, and cider, as a beverage; from the use of tobacco in every form, and from all profanity."

THE SOUTHERN WORKMAN

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH

VOL. I. HAMPTON, VA., NOVEMBER, 1872. NO. 11.

Tired Mothers.

A little elbow leand upon your knee,
Your tired knee, that has so much to bear;
A child's dear eyes are looking lovingly
From underneath a thatch of tangled hair.
Perhaps you do not heed the velvet touch
Of warm, moist fingers, fnding yours so tight;—
You do not prise this blessing over-much,
You almost are too tired to pray to-night.

But it ẃ blessedness! A year ago
I did not see it as I do to-day,—
Wa are so dull and thankless; and too slow
Te catch the sunshine till it slips away.
And now it seems surpassing strange to me,
That, while I wore the badge of motherhood,
I did not kiss more oft and tenderly,
The little child that brought me only good.

And if, some night when you sit down to rest,
You miss this elbow from your tired knee,
This restless curling head from off your breast,
This lisping tongue that chatters constantly;
If from your own the dimpled hands had slipped,
And ne'er would nestle in your palm again;
If the white feet into their grave had tripped,
I could not blame you for your heart-ache then!

I wonder so that mothers ever fret,
At little children clinging to their gown;
Or that the foot-prints when the days are wet
Are ever black enough to make them frown.
If I could find a little muddy boot,
Or cap, or jacket on my chamber floor
If I could kiss a rosy, restless foot,
And hear its patter in my home once more:

If I could mend a brok-n cart to-day,
To-morrow make a kite to reach the sky—
There is no woman in God's world could say
She was more blissfully content than I.
But ah! the dainty pillow next my own
Is never rumpled by a shining head;—
My singing birdling from its nest is flown;
The little boy I used to kiss is dead!

—*The Aldine.*

The Nineteenth Century.

For the picture on this page, so aptly portreying the spirit of this century, and for the accompanying article, we are indebted to the "Christian Weekly."

Formerly, labor was servile; the men of muscle were slaves to the men of brain. The gospel has redeemed toil and ransomed the laborer. Muscle in the nineteenth century is married to brain, and intelligent labor has become the characteristic of the age. The newspaper is now as indispenasble to the workingman's nooning as his lunch.

It is, we repeat, the gospel of Jesus Christ, which has thus elevated labor from servile drudgery to an intelligent art; the gospel — which represents God as both working and resting, portrays the Son of God as also the son of a carpenter, represents the first man in his highest estate as a gardener, proclaims that in God's sight every man is judged by what he is, and not by what he has nn, unsparingly denounces all idleness whether of wealth or of poverty, and, fermenting like leaven for ages, has brought about the growing conviction that all laziness is contemptible, whether of the church, the cloister, the palace,or the hut, and that no man is of any worth who is not In some sphere of life a "workingman."

Strikes.

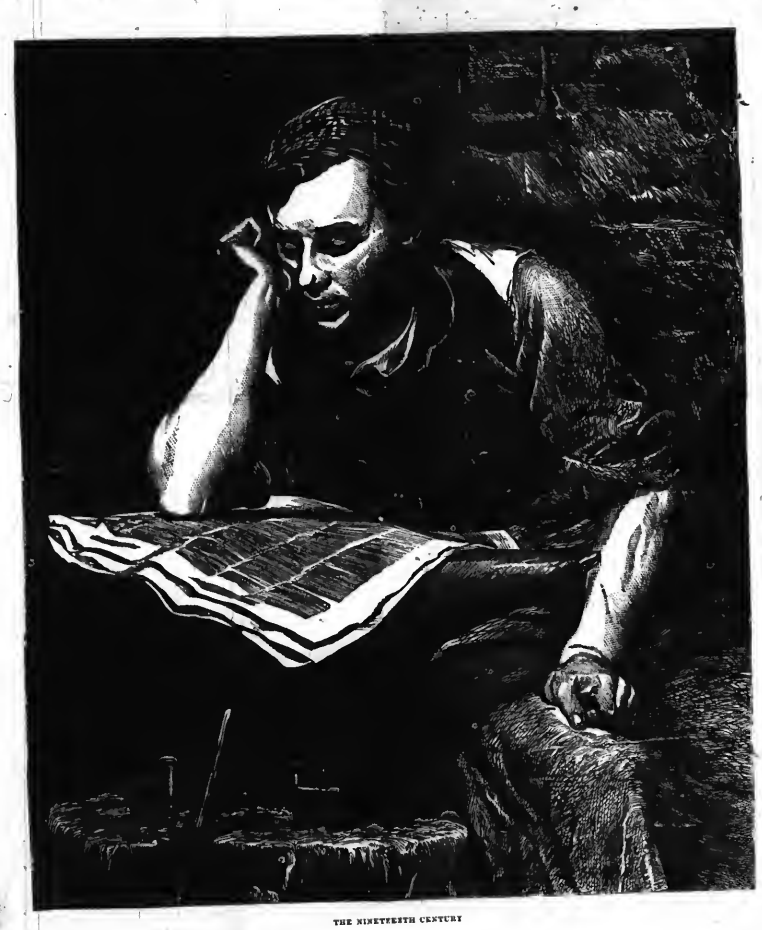
The remedy for the evil of strikes which has now appeared in Chicago, and is continually breaking ont here and there, is justly declared to be the establishment of kindly, sympathetic relations between laborers and their employers. The American Tract Society has for years emplnyed from one hundred to two hnndred and fifty men, and it has never known a strike. There are other public corporetions which, by a similar policy of justice and good-will have enjoyed a similar immunity. They are sufficiently numerdus to prove that generous justice in the employer and an intelligent industry in the wnrkman afford a far better panacea for strikes than any legislation whatsoever.

Chicago.

One year ago a fire, sudden and terrible as if sent from heaven, swept over one of the finest cities on the American continent. Street after street, block after block, dwellings, warehouses, churches, hotels, buildings whose massive stone and iron walls had seemed able to defy the attack nf any or all the elements; huge piles of fire-proof masonry, that seemed built for all time, were licked np like chaff by the terrible tongues nf flame. Thousands who at first watched the advancing sheet of fire from a distance had barely time to flee before it, leaving behind them their homes and all that made them dear. Many who lingered but for a moment to secure some precious keepsake, some household god dearer than all the rest, were crushed by the blazing reRere or smothered by the blinding smoke, and yielded up their lives on the very hearthstones where they had dreamed of so many years of future happiness. The streets were hnddled with men, women and children, who listened, panic-stricken, to the terrible roar of the swiftly approaching destroyer. The firemen deserted their engines in despair; as well might they have attempted to drench the sun as to stay the progress of the flames. And so, through all that fearful night and the equally fearful following day, Chicago was one great funeral pile, the smoke from her destruction shrouding the country for miles around with the gloom of desolation. Her beautiful dwellings, her magnificent public buildings, her costly churches, were unsightly heaps of ashes. The labor of years had ended in naught. A few hours before she had stood in her pride, a queen among the cities of the West. Now, discrowned and stripped of her glory, she sat among her ruins, helpless for the time, and destitute nf everything save energy and hope.

But as the calamity was unparalleled, so was the universal and spontaneous outburst of sympathy that followed it. The ann of that terrible day had not yet set, when every telegraph wire leading to the devastated city was crowded with messages of good-will, and, better still, with promises nf immediate help. Supplies came np to the grand centere with almost inconceivable repidity from every town and village in the land, and were forwarded without the loss of an hour to the walking sufferers. Money, clothing provisions, books, and even toys for the homeless little ones, poured in in immense quantities, filling huge freight trelns, which rolled impatiently to their destination as if sharing in the general feeling of anxious sympathy. Churches were turned into sewing-rooms, and mothere who were not able to leave their homes to asbist in the labors of the gathered multitude, shared the clothing of their children with the shivering little ones nf the great burnt city. The electrio thrill even ran across the sea, and England, forgetting the petty quarrels of diplomacy, came open-handed, bearing gifts. Chicago at once became a key for the unlocking of all hearts.

It has been only a year — a short year — since that time, and behold the new Chicago! Greater, prouder, more populous than before; her palaces rebuilt, the spires of her churches again pointing to the sky, her warehouses choked with grain, her streets magnificent with granite and iron and marble, and resonait with the hum of commerce. For six months past, the buildings of the burnt district have sprong up as if under a magician's wand, the number avereging one for every hour, day and night, in that time. And there is no cessation of the labor. Before the impetus given by the movement ceases, Chicago will have extended its limits vastly beyond what they would have been had the conflagration never occurred. In this, and in the fact that every building erected has been an improvement on that destroyed, may be found a partial compensation, perhaps, for the calamity; but, even looking at it from that point of view, it is a renovating process that the city would hardly care to undergo again, even were the benefits and advantages to be doubled. — *Globe.*



THE NINETEENTH CENTURY

The Art of not Hearing.

The art of not hearing is fully as important to domestic happiness as a cultivated ear, for which so much time and money are expended. There are so many things which are so painful to hear, many of which, if heard, will disturb the temper and detract from contentment and happiness, that everyone should be educated to take in or shut out sounds at will.

If a man falls into a violent passion and calls me all manner of names, the first word shuts my ears, and I hear no more. If in my quiet voyage nf life I am caught in one of these domestic whirlwinds of scolding, I shut op my ears, as a sailor would furl his sail, and making all tight, scud before the gale. If a hot and restless man begins to inflame my feelings, I consider what mischief these sparks might do in the magazine below, where my temper is kept, and instantly close the door.

Does a gadding, mischief-making fellow begin to inform me what people are saying about me, down drops the portcullis nf my ear, and he cannot get in any farther. Some people feel so very anxious to hear everything that will vex and annoy them, they set about searching and find it out. If all the petty things said of one by the heedless or ill-natured killers were to be brought home to him, he would become a mere walking pin-cushion stuck full of sharp remarks.

I should as soon thank a man for emptying on my head a bushel of nettles, or setting loose a swarm of musquitos in my chamber, or raising a pungent in my house generelly, as to bring upon me all the tattle of spiteful people. If you would be happy, when among good men, open your ears; when among bad, shut them.

It is not worth while to hear what your servants say when they have slammed the door; what a beggar says whose petition you have rejected; what neighbors say about your children; what your rivals say about your business or dress. I have noticed that a well-bred woman never hears an impertinent remark.

The Power of the Affirmative.

The power of positive ideas and the power of positive affirmation and promulgation of them move the world. Breath is wasted in nothing more lavishly than in negations and denials. A strong man and a strong cause need only to lead an affirmative life devoting no attention whatever to enemies, to win their way, and to trample beneath their feet all the obstacles that malice, or jealousy, or selfishness throw before them. The man who can say strongly and earnestly "I believe," has not only a vital and valuable possession, but he has a permanent source of inspiration with himself and a permanent influence over others. — *Scribner's Monthly.*

What is in the Body.

Of phosphorous every adult person carries enough (1 3-4 pounds) about with him in his body to make at least four thousand of the ordinary twocent packages of matches, but he does not have quite sulphur enough to complete that quantity of the little incendiary combustibles. This phosphorus exists in the bones and in the brain, and is one of the most important constituents in the body. Every schoolboy is acquainted with those strange metals, sodium and potassium, for he has seen them flash into a brilliant flame when thrown upon the water. The body contains two and a quarter ounces of the former and a half ounce of the latter metal; enough for all needed experimental purposes in the schools of a large city. The twelve grains of magnesium would be ample in quantity to form the "silver rein" for a dozen rockets, or enough to create a light which, nader favorable conditions could be seen a distance of twenty miles.

A Historical Re[illegible]

Dr. Arnold, the famous headm[illegible] of Rugby always had a great fondness for history. He died soon after receiving an appointment to the chair of History at Oxford or he would have made his mark on the historical studies of our age.

His love for history began when he had scarcely passed infancy. At three years of age he received Smollet's "History of England" as a present from his father, in reward for the accuracy with which he repeated the stories he had heard, in connection with the portraits and pictures of the successive reigns. At the same age he played with geographical cards, and knew perfectly by their shape, the different counties of England on the dissected map. He read Priestly's "Lectures on History," before he was eight years old, and quoted them from memory after he became professor at Oxford. Gibbon's "Decline of the Roman Empire," Mitford's "History of Greece," he read soon after, and never needed to read them again, as his memory retained both incidents and language when he wished to put them into use.

The Southern Workman.

VOLUME MONTHLY.

S. C. ARMSTRONG, *Editorial Manager.*
H. W. BLAKE, *Assistant Editor.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will be fully illustrated, will furnish a variety of choice reading, will tell what is going on in the world, and will aim to please and profit both old and young.

All are invited, the young especially, to aid by letter, questions on any subject upon which they wish information.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

To every church which shall send us one hundred subscriptions for "The Southern Workman," we will send a beautiful communion set costing twenty-five dollars. We will give a handsome Bible costing fifteen dollars to any church or society which shall subscribe for fifty copies. Freight to be paid by the church in both cases.

To aid in building churches we will return twenty-five dollars *in cash* for every one hundred one-dollar subscriptions; or $16.75 for seventy-five subscriptions; or $12.50 for every fifty subscriptions.

In these cases the papers are to be sent in *one bundle to one address* to be distributed by an agent to be appointed by the church.

Specimen copies sent upon Application.

To secure safety, it is important that money should be sent by express, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, NOVEMBER, 1872.

The Presidential Campaign.

Since the question at issue has been, not so much of platforms as of men, it has been to a great extent, a campaign of slander, disgraced by the worst personalities and the most vindictive abuse. Such appeals to passion and prejudice, to hate, division and strife, such exaggeration of the foibles and caricatures of the weaknesses of political opponents; such crimination and recrimination,—hurling against each other the foulest libels, with the most persistent malignity, must be demoralising in their effects upon the people.

Thus to God's rule the storm is over; and may the sunshine of a purer peace and a higher prosperity bless our land. The bright bow of promise is on the retiring cloud.

We may differ in our views as to the result of the election. One may not have been the winning candidate—the successful party. But while it has been too manifest that we are not sufficiently near the Millennium for politicians in so exciting a campaign to be all free from spite and prescription, and to refrain entirely from bespattering each other with dirty speech, —remembering that the golden rule of the Master is not suspended for their sakes, four months of each fourth year; that utterly vain is the attempt to glorify over party bitterness and party falsehood and abuse, by the villainous plea, "All is fair in politics;"—let us now, according to the gospel teaching, seek the things wherewith one may edify, not pull down another. By no means should we suffer political differences to lead to personal animosity. Beware of becoming sour toward others, of questioning their motives and searching their honesty, because the Ano two think and vote just like, walk exactly persons look, or feel exactly alike, or expect all of different alike, hold and modes of thinking, circumstances, to feel and act exactly alike, on great political questions, while are not so perfectly settled but that men as wise and good as ourselves, may view them differently. One important lesson which we need to learn in politics as in religion is, to be more patient and tolerant toward those whose opinions do not, in every respect, square with our own.

Besides, it is not in any mere political expedients, or party trimming, to save the nation. The clap-trap of the party press and party platform in every Presidential campaign is, to predict the ruin of the Republic, if the rival candidates succeed,—as though the Republic were but a bubble that's breath might destroy. But when we consider that blow after blow of this kind has fallen upon us, for scores of years past, and how we have survived the whole, it would seem as though there were some reason to believe that, if our Republic be a bubble, it is nevertheless a strong one—a bubble composed, not so much of fluid inflated, as of rock crystalized. There is a far higher good for our country than can be obtained by the triumph of any party,—the triumph of that righteousness which "exalteth a nation." "The people that do know their God, shall be strong and do exploits."

Hon. Wm. H. Seward died at his home in Auburn, N. Y., Oct. 10, aged 71. During his life he held many offices. was Governor of New York and U. S. Senator. He is chiefly honored because he was Secretary of State, under Abraham Lincoln. As such he signed the Emancipation Proclamation. When Mr. Lincoln was killed, an attempt was made to slay Mr. Seward also, who was lying sick in bed. An assassin went to his chamber and succeeded in injuring but not in killing the statesman. He was so ill that his doctor was afraid to tell him Mr. Lincoln was dead. Two or three days after he was looking out of the window and saw a flag at half-mast. He said at once, "The President is dead." It was in vain the servant tried to deny it. "I know he is dead," said Mr. Seward, "for if it was anyone else, he would have been to see me."

Of late years, Mr. Seward has spent his time in travelling in different parts of the world and in writing accounts of the places and persons he has seen. He was a man who did much to serve his day and generation. His last words to his friends were, "Love one another."

We have been much pleased in observing the excellent work that has lately been done in repairing the roads in this region. It reflects credit on those who have the matter in charge. There is nothing that indicates the condition of a country with more certainty than the condition of its roads. People who are thrifty and intelligent make good roads and keep them good. People who are ignorant and shiftless neither make nor mend their roads. In war time the roads are always poor. There is then no opportunity to mend the ways. But in time of peace poor roads always lead into a poor country. It is very easy to build good roads in this part of the South. There are no hills nor rocks to interfere. The one thing necessary is to so build the roads that the water can be easily carried off by drains, during severe storms. The South wants better roads.

A Corner-stone Laid.

The corner-stone of the Zion Baptist Church of Hampton, Va., was laid Wednesday, Oct. 16th. A good number was present, and the occasion was one of great interest. An address was made by the Rev. Richard Tolman, in which he felicitously contrasted the past condition of his auditors with the present; and told them that such an enterprise as this was one of the best means of gaining the favor of the Master, alluding to the case of the centurion who was recommended by the Jews to Christ with the words, "For he loveth our nation, and he hath built us a Synagogue."

Gen. Armstrong then added a few interesting and highly practical remarks, urging them all to take hold of the work thus auspiciously begun, and to carry it forward with energy and perseverance. Friend Kimber of Philadelphia, followed with a brief address expressing his satisfaction at being present on so interesting an occasion, and reminding them that although they were exempt from the outward yoke of bondage, those only were free whom Christ makes free.

Elder William Thornton, the pastor, then closed the exercises with a few remarks in which he stated that the sisters of the Church had always been more ready with pecuniary aid than the brothers, and hoped that now no one would hold back, but that all would assist in the erection of this new edifice with the earnest desire to

It is the interested in the welfare of the Zion Baptist Church that they may erect a neat and suitable place of worship. We bid them God-speed in this new enterprise.

An Evening with the Veterans.

At the National Military Asylum of Hampton for Disabled Soldiers, a series of entertainments has been arranged for the veterans in its charge, under the auspices of the Grand Army of the Republic. This good enterprise was happily inaugurated the evening of October 23d, with a Dickens reading and lecture given by Dr. McDermott resident surgeon of the post.

The chapel of the Asylum, appropriately decorated with national anthems, was nearly filled by the veterans themselves; and the sight of so many empty sleeves and honorable scars added touching interest to the occasion.

Among the small but sympathetic audience of outsiders, the faculty of Hampton Normal School were present by courteous invitation, and brought a contribution to the evening's pleasure in the Hampton Student Choir.

In all respects, the entertainment was a success. Dr. McDermott is a polished speaker and reader. His lecture, is endorsed by a few pleasantries which brought down the house, was an interesting discussion of the "American Notes," and the circumstances of English Society which made it only wonderful that an Englishman's judgment of American should have been at that time so fair as Charles Dickens's was. For his reading, Dr. McDermott selected the famous Bardell trial scene from Pickwick, which he gave with delicate appreciation of its irresistible humor. His style is quiet and gentlemanly, without any staginess of manner, but thoroughly sympathetic and natural. (Sergeant Buzfuz), (Justice Stareleigh,) and the immortal Samivel, played their mirth-compelling parts again, and the great Coramander-in-chief of Humor took another audience by storm with his unconquerable General Jack.

The Hampton Students did honor to themselves, the Normal school, and their skilful trainer, Prof. Thomas P. Fenner. After a spirited Campaign Song in compliment to the boys in blue, they gave several of their original plantation melodies. While carefully educating their voices, Mr. Fenner contrives to preserve to them all that wild sweetness, and effective simplicity which all who have heard the slave songs of the South recognize as *the real thing*, and sometimes regret to see it lost by too much training. The songs called forth enthusiastic applause and encores.

Prayer by the Rev. Mr. Tolman of the Bethesda Church closed the evening's exercises. They were a worthy beginning for the course, which we hope will be fully sustained.

We hear with great regret a rumor of the probable removal of General Hinks, the able Governor of the Asylum. If this be confirmed, the Asylum will lose an officer whose place cannot be easily filled, and Hampton Normal School a valued friend.

To Northern Employers and Southern Workers.

We would call particular attention to the announcement in another column of our purpose to establish a convenient medium of communication between northern employers and southern workers.

There is a great and growing demand for such a medium, and one which has never yet been met. At the North the housekeeping question becomes more and more serious every year. The factories take more and more of the young people who have formerly gone out to service, and their place cannot be even poorly supplied from the emigrants thronging weekly to our shores. These either gravitate to the large cities, or take Mr. Greeley's advice and go West.

The South, on the other hand, is filled with half-paid suffering freedmen, anxious for work.

How to bring these two classes together is the question. The freedman is often unable to pay his way North. The northern employer would gladly pay it for him, if there were a guarantee of honesty, and a reasonable hope of satisfaction.

It will take time to mature any system fully meeting these demands. It is our purpose to do so as fast as possible. Among the many applicants for admission to the Normal School, from whom we must select those most fitted to be educated as teachers, we can often heartily recommend persons for situations in the North as faithful and competent workers—and we can assure northern employers that all advertisements from colored people in the "Southern Workman," will be accompanied by good references which may be seen by application to this office.

To colored people, we say—In all cases send the name of your advertisement a recommendation from some responsible person—your minister, and if possible, one of our agents, or, of the American Missionary Association or Freedman's Bureau.

The Freedman's Savings Bank.

Probably few of our readers will need telling that the outrageous stories respecting this Bank, which were circulated in many political newspapers just before the recent election, are utterly false. But as these damaging reports may have created uneasiness in the minds of some who have deposits there, we take occasion as patrons of the Bank, to say that we have made inquiry, and find that nothing could be more false and untrue than the sensational stories above referred to. The funds of the Bank are all intact, and where at the shortest possible notice they can be turned into money enough to repay all depositors.

The reported failure of the Bank was a political hoax, gotten up by bad men, for a bad purpose, who deserve to be severely dealt with according to law.

From what we know of the Trustees and the management at the Principal Office in Washington, as well as at the Norfolk Branch, we can with all confidence assure our readers of the entire safety and high standing of the institution. The officers in charge are men of unquestioned integrity and ability, as well as life-long friends of the colored race; and if anything was seriously involving the safety of the Bank or the depositors' money, they would be the first to report it.

We are glad to learn from the Cashier at Norfolk, that there was no "run" nor unusual withdrawal of funds there in consequence of the malicious reports, but business is prospering as usual. This is as it should be. The United States government must have made the Freedman's Savings Bank *safe*; and from the beginning there has been no time when it has not been able to pay every lawful and just claim made upon it, and have a handsome balance remaining in its favor. If we had millions of dollars we should feel as safe with it in the bank as if our eyes were always upon it. Continue your deposits, friends. No banking institution in the world is safer.

Information Wanted!

By whom? It ought to be wanted by everybody. We mean to devote a part of every paper hereafter to questions and answers, and we especially invite our readers to send us material for this column. Questions on agriculture, horse-shoeing, selection of literature, teaching, or any other practical subject will be inserted in the "S. W." and answers either given chiefly or solicited from other correspondents. Knowledge is power. General information is the great need of the people. With all thy getting, get understanding.

Virginia and North Carolina Agricultural Fair.

PREMIUMS FOR NORMAL SCHOOL FARM STOCK.

At the late Agricultural Fair held in Norfolk, the following premiums, which were the highest offered in each class, were awarded to stock belonging to the Normal School farm, exhibited by Mr. Albert Howe, Farm Manager.

1. For Henry Draught Stallion, "Lion Heart," (Canadian), Silver Tee Pitcher.....$25 00
2. For best thorough-bred Ayrshire Bull, "Allen Ramsey," Silver Waiter.....15 00
3. For best Heifer Calf (The thoroughbred Jersey), "Rose," Silver Napkin ring.....3 00

This Calf with the thorough-bred Jersey Bull, "Xebeichanezzer," was sold to Thos. A. Hardy of Norfolk, on the ground.

The farm has superior breeds of swine and poultry, and several valuable pure blood Alderney and Ayshire Milch Cows, which would doubtless have taken premiums if they could have been spared for the purpose of exhibition. Realizing the fact that it costs no more to keep the best than the poorest stock, it is the aim of the trustees of the Normal School to keep the best breeds both for farm use, and for the improvement of stock in this county.

Boston in Ashes.

We little thought, when the article on Chicago on our first page was put in type-tint before our paper went to press, we should have to record a similar disaster to the city of Boston, by which hundreds of stately granite warehouses, crowded with the products of Massachusetts' industries, valued at nearly a hundred millions of dollars, were swept away in a single night.

Grand old Boston! whose "solid men" have well merited their title; well may we feel sorrow for her calamity. To the liberality of her merchant princes and her noble women, the "Southern Workman" is indebted for its existence, and but for their ready aid, our beloved Normal School would not have attained its present proportions. There is not a freedman in the Southern States that can not trace his personal obligations to Boston and the "old Bay State," of which she is the capital, for her noble and efficient efforts for his freedom and his elevation to the scale of humanity. It is our privilege to claim her as our birthplace; and though our lines have been cast in pleasant places in foreign lands, we have never ceased to feel pride and affection for our native State. But never did a Bostonian have more reason to feel proud of his native city than now, in the courage and energy with which her citizens have met the calamity of disaster. Promptly organizing a committee of relief for the suffering, her citizens have already begun the work of rebuilding the burnt district, and a few months hence the blackened ruins will alone mark the site of the great conflagration of [illegible]th of November, 1872.

"God save the commonwealth of Massachusetts."

Hampton Normal School.

RECORD OF GRADUATES.—CLASS OF '71.

Sarah J Brown continues at the Williston School, Wilmington, N. C., where she has charge of the Primary Department. She writes that in Teachers' Institute was held there this summer, by attending which she learned many useful things.

Eliza Jackson has reengaged to teach in Staunton.

Friends can address Mr. and Mrs. Merritt R. Wallace at Boydton, Mecklenburg Co., Va. They are both employed in the same school.

W. H. Lee has a school at South Quay, three miles from his own home.

George W. Latthimore has opened a school at Drewryaville, Southampton Co. He says, "In some parts of this county the rebels wont let the colored people board any teacher on their land."

CLASS OF '72.

David D. Weaver opened a school at Laney Spring, Rockingham Co., Va., on the 14th of Oct.

Florence Newsome is teaching at Carrsville.

Isabella Howe teaches in the Bureau School, Wilmington, N. C.

Alice R. Bayne is at Drummondtown, Accomack Co., Va. Her school began Oct. 7th. The Supt, Mr. Weaver, shows much interest in it.

J. H. Carter and T. E. Hines teach in Bedford Co., Va. Hines says that he is very much embarrassed for want of books, hardly any of his scholars being supplied with them.

Mary Robinson is at Thaxton's, three miles from Liberty. She is much pleased with her school, which numbers forty scholars, and enjoys living among the mountains.

W. H. Wilkins is at Otterville, and Louis Williams, at Charlimont, in the same county. The Supt, Mr. Benton, writes him their examinations show them to have been well instructed, and he wishes he had twice as many.

Everett Williams has an important school in Winchester. He was thought at first too young and inexperienced for the place, and it was given to him for one month only; but at the end of that time he was reengaged for the rest of the ten months term.

Hotchins Inge and James Dungey remain for the present at Hampton, engaged in the study of music.

Agricultural.

We extract the following excellent paragraphs from "The Congregationalist:"

A FARMER'S work has an unfailing element that distinguishes it from all other labor—*variety*. It varies somewhat every day; it changes wholly every fortnight; it is bound to the variety of nature itself, and follows in the glorious procession through germination and growth and fructification,—the servant and master of each stage.

BEFORE winter sets in, clean out barn yard, barn cellar, and hog pen, and cart contents to fields where manure will be wanted. Heavy work of this kind, requiring the team is busy time, should be pushed diligently, as it will be so much gained toward forwarding operations in spring.

Before winter sets in, see that swine and poultry have laid on all the fat they are expected to have before being killed. Cold nights eat up in warming animals about all the food you give them through the day. You can't make flesh and fuel at the same time, very profitably at least.

Before winter sets in, see that all roots are properly housed. Early November is full late enough to have mangolds or rutabagas in the ground, but English turnips, sown in August will continue to grow even later than this.

Before winter sets in protect your orchards from canker-worms by tarring or applying printer's ink to the trees from time to time, or by permanent fixtures that will stop their ascent.

Before winter sets in, gather together all farm implements and garden tools, and of a rainy day give them a thorough examination and repairing. See that they are well cleaned, oiled or painted and then carefully laid away in a dry place under cover. Rust and rot eat up money as fast as interest, or fire.

Before winter sets in, sort over bitter apples and barrel up such as are sound and fair. Put them in a cool cellar, well ventilated, and they will probably not require sorting for spots before sent for them. The patient waiter is sometimes a great gainer.

Before winter sets in, clean out all ditches and runs, so that water will not stand and freeze in mowing fields, winter-killing the grass roots and making bald spots.

Before winter sets in, husk all the corn, thresh and winnow up the smaller grains and store them away safe from vermin. It is a miserable practice to have the barn floors cumbered with corn and grain in the ear, liable to be wasted and spoiled just for lack of proper care in completing their harvesting.

Before winter sets in, house all wood and brush intended for fuel. Take it in dry day for it, and see that all soggy fuel is laid aside till it is fit to go under cover. No wonder that shuttering wood spoils a woman's cooking, to say nothing of her temper.

Before winter sets in, make a thorough inspection of the roofs of all farm buildings, that they be put in order, a few shingles in the leaky places will save rotting, not only of floors and timbers, but of hay and other fodder. Chilly mornings and icy ladders and roofs are sure preventives to outside repairing.

THE "Ohio Farmer" thinks it important to feed some straw every winter, as it seems to have a beneficial effect on most animals; it also thinks horses not at hard work do better on cut straw with a little grain, than upon hay and grain.

THE "American Agriculturist" gives the number of kernels in a bushel of wheat as 860,000; equally spread over an acre of ground, this would make the kernels lie a little over three inches from each other, or give about ten square inches to each kernel.

General Items.

THE event of the month has of course been a political one. The majority of Grant by a triumphant majority has definately announced the intention of the American people to fight it out on that line, and we have now before us four years of smooth sailing. In the minds of many people, the questions raised by the war have never been entirely settled; but the nation's voice has spoken, and the last 5th of November has made apparent true Republicanism in this country more than half a century of quarrelling could have done.

THE "Epizootic," a horse disease which has interrupted the business of the whole country is little understood at present, but if the animals attacked are properly treated it has been found to be not fatal or even dangerous. The symptoms are those of a severe cold in the head and sore throat, and the horse should not be overworked, but should have gentle exercise, should be kept warm, and not dosed with medicine. A bran mash two or three times a week will be quite sufficient, and any simple remedies to relieve the head and throat, such as smoking with tar, may be used. The attack lasts from 15 to 20 days, and all owners of horses will find it for their advantage to watch their animals carefully during that time.

The disease has extended to the deer in the woods of Michigan; but up to the present time, has not, to any extent, attacked the cattle.

ONE of the most destructive fires that has ever visited our country broke out in the City of Boston on the evening of the 9th of this month, and before it was subdued destroyed a large portion of the business part of the city, involving a loss estimated at from fifty to one hundred millions of dollars. The fire was first discovered in a store at the corner of Summer and Kingston streets about eight o'clock P. M. from which it spread rapidly in all directions. Summer, Broad, High, Purchase, Franklin, Hawley, Water, Devonshire, Federal, Congress and other streets have been swept in whole or in part by the flames. The total number of business houses and firms is stated at 930; dwelling and lodging houses, 60. Among the buildings and offices burned out were those of 21 banks, 46 insurance companies and 27 newspapers. It is estimated, that 300 families were thrown out of their homes.

THE steamer *Missouri*, en route from New York to Havana was burned at sea on the 24th of October. Eighty lives are reported lost.

THE overseers of Harvard University have decided to give women the same chances as the other sex, subject always to a rigid course of examination.

MRS. MARY T. GREELEY, wife of Hon. Horace Greeley died in New York on October 30th.

THE Cincinnati industrial Exposition the third in the annual series, paid expenses this year. Nearly one hundred thousand dollars were the receipts, and the expenses lacked three thousand dollars of that sum. This pays for forty thousand dollars' worth of buildings erected for the third Exposition. Half a million visitors witnessed the display during the twenty-eight days and nights it remained.

THE River Po has been overflowing and inflicted great losses upon the inhabitants of Lombardy and Piedmont. At Turin, many have been obliged to fly to the housetops and trees and boats to seek their death for want of food. Steps have been taken in London for the relief of the sufferers. Subscriptions have been opened for this purpose, and a large sum of money has already been received.

THE town of Paluzzo, Italy, in the province of Brescia was visited by a terrible hurricane on the 5th inst. Half of the buildings in the town were destroyed, thirty-two persons were killed, and 1000 families were made homeless.

MERLE D'Aubigne, the well-known historian of the Reformation has died very recently in Geneva, the city of his birth.

A TRACT of land eleven miles square, in Kansas, on the line of the Atlantic & Pacific railroad, two hundred and twenty-seven miles west of the Missouri river has been purchased by persons in England, and a colony from that country will arrive next spring to settle there. A new town is to be planted in the district, called Victoria.

THE Earl of Shaftesbury is building a new town for working-men a short distance out of London. Small dwellings therein are rented for a sum at which it would be impossible to live in the city, except in a tenement. The officers of the railroad running through the property have the good sense to carry the men at low trains, at low rates of fare to suit the laborer. Fresh air, good water, and yards for the children to play in, form a sharp contrast to the crowded courts and alleys, the squalor and foulness of the great city.

A CORRESPONDENT of the "Journal de St. Petersburg," describes the magnificence of an illuminated copy of the sacred writings of Buddha, in the language of Thibet, which is being executed for a Mongol prince. It will consist of one hundred and eight folio volumes of which eighty are completed, all in letters of gold, and bound in embroidered silk, with silver clasps. The copyist is to receive $25,000 for the work.

A NEWSPAPER, printed in English, will shortly be started at Rome, to be called the "Daily News," and to be conducted by an American, Mr. Daniels, brother-of a famous Minister resident of the United States at Turin.

THE SOUTHERN WORKMAN.

At Home.

The Troublesome Baby.

The little ones sling to the mother,
"With kisses that softly fall,
But nowhere the troublesome baby
Is nearest her heart of all;
Sick, and fretful, and small,
Green leaves, upwards to the most exquisite roses of the Provence. They grew on the walls of her castle, coiled round the pillars and window-frames into the passages, and along the railings in the halls, being variegated in fragrancy, in shape, and in color.

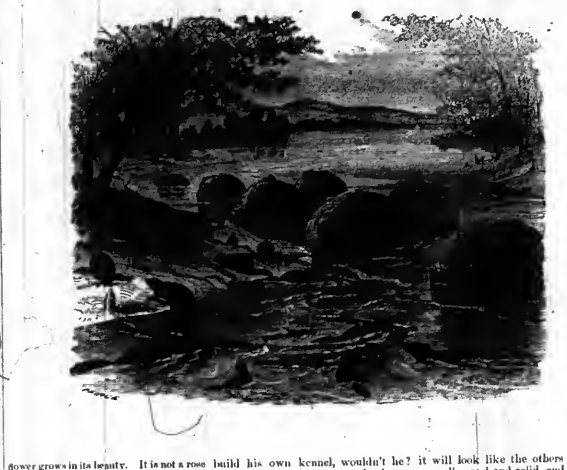
But sorrow and grief were within; the queen lay on her sick-bed, and the physicians said she must die.

"There is one hope left," said the wisest of them. "Bring the loveliest rose of the world, that rose which is the expression of the highest and purest love. If she can see it before her eyes are closed, she will not die."

Young and old people came from all sides with roses; with the loveliest that bloomed in every garden, but neither was the right one: it was to be fetched from the garden of love; but which rose there was the expression of highest and purest love?

And the poets were singing of the loveliest rose in the world, each one praising his own. And word was sent all around in the country, a message to all ranks and all ages.

"No one," said the wise man, "has until now pointed out the place where the



flower grows in its beauty. It is not a rose from the grave of friendship or love, although these roses will for ever be fragrant in songs and in poems; it is not a rose growing out of the ground moistened by the patriot's blood, shed for his country. Nor is it that wonderful flower, in nursing which a man through years and days, in toilsome, sleepless nights, within unadorned walls, spends and exhausts his vigorous life—the magical rose of science or learning."

"I know where it blooms," said a happy mother, who, with her tender babe approached the bed of the queen. "I know where the most splendid rose grows, that rose which is the expression of highest and purest love. It springs up from the blooming cheeks of my sweet boy, when, invigorated by sleep, he opens his eyes and smiles at me."

"Lovely is that rose," said the wise man; "but there is another still lovelier."

"Certainly, much handsomer," said another of the women. "I have seen it; there is no flower of a more sublime and sacred beauty. But it was pale like the leaves of the tea-rose. I saw it on the cheeks of our queen; she had divested herself of her royal crown, and carried her sick baby during a long sorrowful night on her arms. She cried, kissed the baby, and prayed for the child like a mother in the hour of her tribulation."

"Holy and wonderful is the white rose of grief; but it is not that we are looking for."

"No," said a pious old bishop. "I saw the most magnificent rose before the altar of the Lord, shining like an angelic countenance. The young maidens were coming to the table of the Lord; red and pale roses were growing on their cheeks; one of them looked up to her friend in the full candor and love of her devoted soul. That was the expression of purest and highest love."

"May she be blessed," said the wise man; "but no one has yet spoken of the finest rose."

Thereupon a child stepped into the room, the little son of the queen. Tears were in his eyes and on his cheeks. He carried a large paper book in velvet binding with silver clasps.

"Mother," said he, "listen to what I have been reading," and he sat down near the bed to read from that book of him who has given himself up to die on the cross to save sinners, even of generations not yet born.

"There is no greater love."

And a rosy light flew over the cheeks of the queen. Her eyes were getting large and clear, for she saw the loveliest rose rising from the leaves of the book, the same that sprang from the cross out of the blood of Christ.

"I see it," said she. "Never will he die who has by faith seen Him to whom in the Bible is given the name of 'the Rose of Sharon.'"—*Hans Christian Andersen.*

Children's Department.

As Busy as Beavers.

Far away from the sunny South, far away from the noisy cities, far away in the grand old woods that rise along the shores of Lake Superior—who knows where that is?—live a great many busy little workers.

Did you ever hear of a wood-cutter without any axe? Did you ever hear of a mason without any trowel? What would you think of a carpenter without a foot-rule, and a house-builder without any plan? Pretty poor workmen? Oh, you think so, do you? Come, let us look at their work then.

Oh, what a pretty picture! See the smooth river flowing quietly down to the lake, and the trees leaning lovingly over the water. And—ah ha—here you are my fine fellows, we've caught you all at work. Go on pray—never mind us!

But what sort of fellows are they, and what are they at, and what are those mounds some of them are sitting on in the water, and who sent them in after those sticks, like our Carlo?

Oh, how many questions! These are the little workers we've been talking about. Carlo would be puzzled if he had to cut his own sticks and build his own kennel, wouldn't he? But let me introduce you to the American Beavers. They are building their houses for the winter, and they have done not a little wood cutting, if a good workman may be known by his chips, yet I don't see an axe or a saw or a foot-rule among them, do you?

All the warm summer they have been roaming about where they liked, in the swamps and streams. But now they know that autumn is here and winter is coming—who tells them?—so they hurry together, bringing their babies with them, and set about making a village. They are true Americans, the Beavers, and know that "Union is Strength." What a chattering there is when they meet. I don't understand the Beaver language myself, but I know how it must be. All the new babies to show, and the summer journeys to tell about. But you may be sure they don't waste much time in gossip. There is work to be thought of. The first thing to do is to cut down some trees, and so—

"Oh, stop! Those little things cut down trees! It's a fairy story then!"

No dears, it's as true as the sun shining and the grass growing. There is no fairy book as wonderful as Mother Nature's, you know.

Do you think one of the shy little fellows would give you his paw? If he only would, you would find four sharp strong claws on it. Just made for digging, aren't they? And what short little legs! Well, his hind legs are long enough to make up for it, and his hind feet too, and this makes his walk rather uneven, but then, he is not to be hunted at for that. His hind trees are all joined together, you see, like a duck's, by a strong skin or web. That is to swim the better with, my dear. But look at those long sharp teeth standing out of his mouth. How strong they are! How he could gnaw with them, couldn't he? Yes, that is just what they are made for; they are axes and saws to these little house builders, and so, as I was saying, the first things needed being trees, off swim the beavers to find some that they like. Don't you think they are wise to go always up the stream so that the logs may float down to the place where they are wanted? Tender young willows or slenderish very birches and poplars are what they like best. You see they have cut down a good many on the shore by their village. Can you count the stumps? But there were not enough, so some of them have been after more, and are paddling merrily back, pushing their logs before them, and their broad tails floating out behind. Queer tails, those. All the rest of the body is covered with the softest brown fur, but these have only hard horny scales.

How neatly they have sawed off—so, I mean *gnawed* off—the logs. Now they will take them on shore, and tear off the bark, and pile it up on the bank. That is their winter food. Then, dragging the peeled sticks into the stream, and giving the water a loud slap with their tails—as much as to say, "here goes"—down they dive to the bottom, and thrust the sticks into the mud there. Then come the masons, bringing stones to keep them down. More sticks, and more stones, laid nicely round in a circle, and piled up higher and higher with plenty of mud to fill in; so the walls rise till they are well out of water. Then, the cunning workers know how to lay a floor high and dry, and cover all with a dome as good as that on the Capitol, for all their purpose.

Here, in this nearest house, you can see a little fellow at work on his floor. He will make all snug and warm for Mrs. Beaver and the babies, I warrant you. He wont leave that great hole in his house, either. When all is finished, it will look like the others that you see; all round and solid, and plastered all over with mud that he carries between his fore paws and his chin, and arranges with his feet, giving it a slap once in a while, with his great flat tail. He doesn't plaster his house till the weather is so cold that the mud freezes as fast as it is put on, and hardens almost into stone.

But where are the windows and doors? Well, the Beavers don't care much for light in their houses, I'm afraid, and they have a cruel enemy in the woods called the Wolverine or Glutton, who may try to pay them a visit, so they put their door under the water where he can't go. Of course, they must have a hole in the floor, too, to get into the room above.

Often, they have to set their houses in a brook so shallow that there is danger of its freezing deep enough to close the doors. Then, these wonderful little animals throw a dam across the stream below their village, to hold back the water and deepen it. These dams are built as the houses are, and are so strong that a man can walk over them. If the current is swift, they are curved so as to be stronger, and are always made low enough to let the water off before it can flood the family rooms. Two families generally live in one house. I have heard people say that no house is large enough to hold two families without quarreling. Do you think the Beaver's roof is larger than theirs, or is he more amiable than they?

Do you think that these Beavers in the picture have had to build a dam?

When all the little families are snugly settled in their winter quarters, how cozy it must be!—Plenty of food stored at their doors, plenty of neighbors for company. The road freezes, but that's no matter: the snow covers the roofs and makes them all the warmer. Perhaps the ugly Glutton comes scratching it off with his long claws. Scratch away Mr. Glutton, you may be a very fine looking Wolverine, but you can't come in here, you know.

If it were not for one enemy, the Beavers would be safe enough. Wise as they are, there is one who is wiser. That is the hunter. He comes just after they have gone to housekeeping, and with his heavy spear breaks in their roofs. The frightened families rush out below, and swim under the ice to holes they have made ready in the banks. But even there the hunter tracks them, finding out the hollow places by striking his spear on the ground, and so, at last the poor Beavers are killed, and their soft coats taken to make hats and collars for people not so well dressed by Mother Nature. Fortunately for the Beavers, fur hats are less fashionable now than they used to be, so they are having some respite. Don't you hope they will enjoy it this winter? How they spend the winters, they do not tell us exactly. I am sure they have earned a good rest, for while there is work to do, they are so industrious that when we want to express the perfection of industry we say "as busy as beavers."

How many boys and girls who read the "Southern Workman" are busy as beavers, I wonder. How many places do you know as full of industry as the Beaver's village? I know one, at least. That is our school at Hampton. No room for drones in this hive. If one strays in, we dont serve him as the honey bees do—how is that? We try to make a working bee of him, but if he will not let us, he has to go and find his way to "Schlaraffen Land" that you've heard about.

From the Superintendent to the smallest Junior, we're all "as busy as beavers," here. Come and see if we're not. Walk over our farm worked by our boys, look into our girls' industrial room, and our workshops; come into our classes. Not many lazy faces, are there? That is why there are so many happy ones. All the students are trying to make Southern Workmen of themselves, all the teachers working to help them. We are busy all the week.

"What! Saturdays, too?"

Certainly. Those who are busy in work can afford to be busy in play.

No idle hands here—except the quiet ones under those green mounds yonder; hands that dropped in our country's service, and left it to us. Hampton is ground sacred to work.

Sparks.

President Grant has appointed Thursday, the 28th of November as Thanksgiving Day. Turkeys take notice.

Squire.—"Hobson, they tell me you've taken your boy away from the National School. What's that for?" *Villager.*—"Cose the master ain't fit to teach un!" *Squire.*—"Oh, I've heard he's a very good master." *Villager.*—"Well, all I knows is, he wanted to teach my boy to spell 'taters' with a 'p'!"—*Punch.*

In South Bend, Indiana, they use small packages of quinine for change. As everybody takes quinine, they look upon it the same as legal tender, and it passes off without difficulty. South Bend's financial condition must be shaky.

Georgia mules are having the mumps.

A man fell between two trains of cars at the station on Long Island last week, in attempting to jump from one to the other. With the exception of a slight contusion, he was unharmed. When some of the railroad employés stooped to pick him up, he waved them off, saying, "I can pick up my own corpse."

An Indianapolis girl, who claims to be worth $200,000, advertises that she will receive sealed proposals for marriage.

"What are you drawing, Anna?" "I'se drawing your pictur." So the gentleman sat very still, and she worked away very earnestly for a while. Then she stopped, compared her work with the original, and shook her little head. "I don't like it, much" she said. "'Taint a great deal like you. I dess I'll put a tail to it, and call it a dog."

The height of a young lady's ambition. Two little feet.

TAKE NOTICE,

NORTHERN EMPLOYERS AND Southern Workers.

Advertisements from colored people wishing situations at the North, will be inserted in the "Southern Workman" at the rate of 50 cents per insertion, by references from responsible persons.

Advertisements from Northern employers for colored servants will be received at our usual charge of 50 cents per line.

Until further notice, parties North and South wishing to communicate further with each other on this subject may do so by letter, to the "Southern Workman."

INFORMATION WANTED!

Mr. Jordan Williams, of Norfolk, Va., desires to obtain information of his lost boy, SILAS WILLIAMS, who very mysteriously left home one year ago last October, and has not been heard from since that time. He was thirteen years of age last May; of dark complexion; about four feet in height; a smart, active boy; rather timid in conversation, having no bend down while conversing with a stranger.

His father and mother are very anxious to learn as to his whereabouts. It was reported that he was in Petersburg, but no certainty as to the above statement can be ascertained.

Any information as to the above will be thankfully received if addressed to

LAND FOR SALE
On the Peninsula.

I have for sale 200 acres of land between Williamsburg and Fort Monroe, Virginia. This section of the Country is fully and accurately described in the language of Captain John Smith: "Within is a country that may have the prerogative over the most pleasant places known, for large and pleasant navigable rivers, heaven and earth never agreed better to frame a place for man's habitation, were it fully manured and inhabited by industrious people. There are mountainous, hils, plaines, vallyes, rivers, and brookes, all running more pleasantly into a fairie bay, compassed half the moneth with fruitfull and delightsome lands."—CAPTAIN JOHN SMITH.

WILLIAM S. HOWARD,
Hampton, Va.

The Finest Rose in the World.

A DANISH ALLEGORY.

There reigned once a queen, in whose garden, at all seasons, were seen the finest flowers from all countries of the world. She was particularly fond of roses, and therefore possessed all descriptions of them, from the wild hedge-rose, with its fragrant leaves, upwards to the most exquisite roses of the Provence. They grew on the walls of her castle, coiled round the pillars and window-frames into the passages, and along the railings in the halls, being variegated in fragrancy, in shape, and in color.

But sorrow and grief were within; the queen lay on her sick-bed, and the physicians said she must die.

"There is one hope left," said the wisest of them. "Bring the loveliest rose of the world, that rose which is the expression of the highest and purest love. If she can see it before her eyes are closed, she will not die."

Young and old people came from all sides with roses; with the loveliest that bloomed in every garden, but neither was the right one: it was to be fetched from the garden of love; but which rose there was the expression of highest and purest love?

And the poets were singing of the loveliest rose in the world, each one praising his own. And word was sent all around in the country, a message to all ranks and all ages.

"No one," said the wise man, "has until now pointed out the place where the

flower grows in its beauty. It is not a rose from the grave of friendship or love, although these roses will for ever be fragrant in songs and in poems; it is not a rose growing out of the ground moistened by the patriot's blood, shed for his country. Nor is it that wonderful flower, in nursing which a man through years and days, in toilsome, sleepless nights, within unadorned walls, spends and exhausts his vigorous life—the magical rose of science or learning."

"I know where it blooms," said a happy mother, who, with her tender babe approached the bed of the queen. "I know where the most splendid rose grows, that rose which is the expression of highest and purest love. It springs up from the blooming cheeks of my sweet boy, when, invigorated by sleep, he opens his eyes and smiles at me."

"Lovely is that rose," said the wise man; "but there is another still lovelier."

"Certainly, much handsomer," said another of the women. "I have seen it; there is no flower of a more sublime and sacred beauty. But it was pale like the leaves of the tea-rose. I saw it on the cheeks of our queen; she had divested herself of her royal crown, and carried her sick baby during a long sorrowful night on her arms. She cried, kissed the baby, and prayed for the child like a mother in the hour of her tribulation."

"Holy and wonderful is the white rose of grief; but it is not that we are looking for."

"No," said a pious old bishop. "I saw the most magnificent rose before the altar of the Lord, shining like an angelic countenance. The young maidens were coming to the table of the Lord; red and pale roses were growing on their cheeks; one of them looked up to her friend in the full candor and love of her devoted soul. That was the expression of purest and highest love."

"May she be blessed," said the wise man; "but no one has yet spoken of the finest rose."

Thereupon a child stepped into the room, the little son of the queen. Tears were in his eyes and on his cheeks. He carried a large paper book in velvet binding with silver clasps.

"Mother," said he, "listen to what I have been reading," and he sat down near the bed to read from that book of him who has given himself up to die on the cross to save sinners, even of generations not yet born.

"There is no greater love."

And a rosy light flew over the cheeks of the queen. Her eyes were getting large and clear, for she saw the loveliest rose rising from the leaves of the book, the same that sprang from the cross out of the blood of Christ.

"I see it," said she. "Never will he die who has by faith seen Him to whom in the Bible is given the name of 'the Rose of Sharon.'"—*Hans Christian Andersen.*

Milk as a Remedial Agent.

Considerable has been said in medical journals concerning the value of milk as a remedial agent in certain diseases. We noticed an interesting article upon this subject that lately appeared in the "London Milk Journal," in which it is stated, on the authority of Dr. Benjamin Clark, that in the East Indies warm milk is used to a great extent as a specific for diarrhœa. A pint every four hours will check the most violent diarrhœa, stomach ache, incipient cholera, and dysentery. The milk should never be boiled, but only heated sufficiently to be agreeably warm, not also hot to drink. Milk which has been boiled is unfit for use.

This writer gives several instances to show the value of this simple substance in arresting this disease, among which is the following: He says, "It has never failed in curing me in six or twelve hours, and I have tried it, I should think, fifty times. I have also given it to a dying man who had been subject to dysentery eight months, latterly accompanied with one continual diarrhœa, and it acted to him like a charm. In two days his diarrhœa was gone, in three weeks he became a hale, fat man; and now nothing that may hereafter occur will ever shake his faith in hot milk."

A writer also communicates to the "Medical Times and Gazette," a statement of the value of milk in twenty-six cases of typhoid fever, in everyone of which its great value was apparent. It nourishes and cools the body. People suffering from disease require food quite as much as those in health, and much more so in certain diseases where there is rapid waste of the system. Frequently all ordinary food in certain diseases is rejected by the stomach, and even loathed by the patient; but nature, ever beneficent, has furnished a food that in all diseases is beneficial—in some, directly curative. Such food is milk.

We have also lately tested the value of milk in scarlet fever, and learn that it is now recommended by the medical faculty in all cases of this often distressing children's disease. Give all the milk the patient will take; even during the period of the greatest fever, it keeps up the strength of the patient, acts well upon the stomach, and in every way is a blessed thing in this sickness. Parents, remember it, and do not fear to give it if your dear ones are afflicted with this disease.—*Household.*

Influence of Light on Health.

1. There can be no persistent vitality nor healthfully-developed bodily structure without it. Compare the faces of those who work in light ra. dark rooms, and the contrast in cheerfulness is great. The forms of children brought up in dark lanes and places are stunted, and their bodies scrofulous.

2. Those who sleep in the day and labor at night are less healthy than when it is the reverse.

3. Dampness produces worse effects where there is no light than where it is abundant.

4. In the deep sea, where there is little light, animals and vegetables are low in the scale of organization.

5. Light attracts plants. They grow toward it.

6. Light rooms are more cheerful than dark ones. The light and warmth of an open fire are valuable aids to health and happiness.

7. The blood becomes more watery in those who live in the dark and damp.

8. People who live on the shady sides of streets are less healthy than those who live on the sunny sides.

9. In short, without the light and heat of the sun, there is no life. The light and heat of the sun are the source of all the energy on our globe. Let us then not cut ourselves off from it too much, but forever secure for ourselves enough to prevent those forms of premature decay that are occasioned by its absence.—*Herald of Health.*

Facts about Colors.

A spoonful of oxgall to a gallon of water will set the colors of almost any goods soaked in it previous to washing. A teacup of lye in a pail of water will improve the colors of black goods. Nankeen should lie in lye before being washed; it sets the color. A strong tea of common hay will preserve the color of French linens. Vinegar in the rinsing water for pink or green calicoes will brighten them. Soda answers the same purpose for both purple and blue.

Black-Valley Country.

A RIDE ON THE BLACK-VALLEY RAILROAD.

You have heard of the ride of John Gilpin,
That captain so jounced and gay,
How he rode down to Edmonton Village
In a very remarkable way.

You have heard of the ride of Maseppa,
Bound fast to his wing-footed steed,—
How he coursed through the fields and the forests
At a very remarkable speed.

But I sing of a trip more exciting,
In a song which I intend to rattle,
Of a ride down the Black-Valley Railroad,
Of a ride on the Black-Valley train.

The setting-out place for the journey
Is Sippington Station, I think;
Where the engines for water take whiskey,
And the people take—something to drink.

From collisions you need fear no danger,—
No trains are ever run back;
They all go one way,—to perdition,—
Provided they keep on the track.

By the time we reach Medicine Village,
The passengers find themselves sick,—
Have leg-ache or back-ache or head-ache,
Or some ache that strikes to the quick.

We are pious, and hold by the Scripture,
With Paul the Apostle agree,—
To take "wine," instead of much "water,"
For our "often infirmity."

In fact, we improve on the reading,
By just a slight change in the text,—
Say "rather," where the Scripture says "little,"
And leave "little" for what may come next.

We break up at Tippleton Station,
To try and get rid of our pain;
At Topersville also we tarry,
And do the same over again.

Our spirits indeed may be willing,
But very weak is the flesh;
So oft as we stop for five minutes,
We use all the time to refresh.

Now we come to the great central station,—
The last stopping-place on the line,—
Drunkards' Curve, where is kept the chief storehouse
Of rum, whiskey, brandy, and wine.

From this place on to Destruction,
The train makes no break or delay;
And those who may wish to stop sooner
Are kindly thrown out by the way.

A full supply of bad whiskey
For our engine is taken in here;
And a queer-looking fellow from Hades
Steps on for our engineer.

From Drunkards' Curve on to Destruction,
The train is strictly express,
And will not be slowed or halted
For any red flag of distress.

And so when all things are ready,
From Drunkards' Curve we set out;
Let me give you some flying glimpses
Of the places along on the route.

First Rowdyville claims our attention,
Then Quarrelton comes into view,
Then Riotville breaks on the vision,
And the filthy Beggarstown too.

As we rush by the village of Wayland,
There wretches are thrown from the train;
We can see them rolled over and over
Through the darkness, the mud, and the rain.

Our engineer chuckles and dances
In the wild lurid flashes he throws;
Hotter blaze the red fires of his furnace,
As on into blackness he goes.

Oh, the sounds that we hear in the darkness,
The laughter and crying and groans,
The ravings of anger and madness,
The sobbings and pitiful moans!

For now we have entered the regions
Where all things horrible dwell,
Where the shadows are peopled with goblins,
With the fiends and the furies of hell.

In this deep and Stygian darkness,
Lost spirits have made their abode:
It is plain we are near to Destruction,—
Very near to the end of the road.

Would you like my young friends, to take passage
To this region of horror and pain?
Here stretches the Black-Valley Railroad,
And here stands the Black-Valley train.

The picture of this road, and the book describing it, which have been kindly furnished us by the author, Rev. S. W. Hanks of Boston, are works of no ordinary genius; works which have preached temperance to multitudes in the most effective way. What an impressive representation of the drunkard's way to ruin, is the following advertisement:

Black-Valley Railroad.

Sippington.	GREAT	Demoniand.
Modletonville.	CENTRAL	Hideout-Nest
Tippleton.	FAST	Thicket.
Topersville.	ROUTE	Screech-Owl
Drunkards' Curve.	FROM	Forest.
Rowdyville.	Sippington	Horrorland.
Quarrelton.	TO THE	Serpentland.
Riotville.	BLACK VALLEY.	Maniacville.
Beggarstown.	ACCIDENTS	Idiot Flats.
Wayland.	*By Collisions*	Black Valley.
Gamblerville.	ENTIRELY MURDER,	Great Desert.
Fightington.	AS ONLY	Cloudland.
Brothelton.	*DOWN-TRAINS*	Thunderland.
Robbers' Den.	ARE RUN	Stormland.
Prisonton.	OVER THE ROAD.	Whirlwind Crossing.
Delirium-tree.	TICKETS SOLD AT ALL LIQUOR SHOPS.	Destruction.

Alike impressive are the names of the operators for the Black-Valley Railroad:

Messrs. Moneygrip, Allclaws, Gambler, Brotheller, Nevernober, Hategood, Allshaw, Gripeall, Ketchum, Cheatem, Rumfool, Beerbican, Killem, Clderross, Glnidiot, Flpsilly, Toddyman, Tremerom, Nightwalker, Allright, Loaferson, Foolem, Hatedevil, Killsoul, Sickem, Robwidow, Spildame, Blackmouth, Nightowl, Aidrogue, Gallowsface, Sceeperison, Toperson, Breakhead, Burglarson, Lightfinger, Loveevil, Ditchfall, Willowmire, Brandysmash, Clavpenny, Spitewater, Lagerwill, Slingsleed, McGreedy, Cotchhood, Sharkcamp, Staggerson, Brandyjig, Babbleman, Brawlaw, Hellsend, Outdrost, Swearstrong, Van Leeber.

Observe also the annual business of the United States branch.

It is carrying annually over six hundred thousand travellers into the *Black Valley Country*, where more than two millions of men, women, and children are kept under a cloud of untold misery and wretchedness.

In the language of sacred writ, "Surely in vain the net is spread in the sight of any bird." And shall it be in vain that the route from Sippington to Topersville the route from Sippington to Topersville and Destruction is so plainly mapped out before our eyes? Let us rather resort to what our author describes as "Fountainland," from its great abundance of water, where numerous flourishing villages and large cities have been built up.

These places are all famous for the health and thrift and enterprise and good character of their inhabitants. Wealth, too, abounds; and nearly all the people live in their own houses in a state of comparative independence. The morals and good order of the place are such, that no police force is required for the protection of life and property. Prisons, almshouses, and lunatic hospitals are entirely unknown. The taxes levied upon the people are principally for the support of educational institutions and the general improvement of the country. A case of delirium tremens is never known; and no native-born drunkard is ever seen in the streets.

May we all engage in the noble temperance reform, so aptly compared to the introduction of water for washing away the Black-Valley Railroad and its depots. In the words of our author:

> The condition of the whole Black-Valley Country was entirely changed by the flooding of *Sippington and Medicinaville*. At Howdyville and Quarrelton, all was quiet. At Riotville, mobs had entirely ceased. At Beggarstown, there were no arrivals, as no trains now came to that place. At Gamblersville, Fightington, and Brothelton, business was dull. At Prisonton, there were no arrivals. From Delirium-tree and Demonland, the evil spirits fled away disgusted with the quiet which everywhere prevailed.

In order to the more general introduction into Sabbath-schools of the Book and Pictures referred to, they will be forwarded by mail to Pastors, and Sunday-school Superintendents, *post paid*, as follows:—

The BLACK VALLEY, 200 pages (price $1.00), and PICTURES No. 2 (price 25 cents), for $1.00. For $1.50 the BLACK VALLEY and PICTURES No. 2 (price $1.00). For $2.50 the BLACK VALLEY and PICTURES No. 1 (price $5.00). For $5.00 the BLACK VALLEY and PICTURES No. 2 (price $5.00). For $8.50 the BLACK VALLEY and PICTURES No. 1 (price $5.00). For $5.00 the BLACK VALLEY and PICTURES No. 2 (price $1.00). For $8.50 the BLACK VALLEY and PICTURES No. 1 (price $5.00). also 100 leaflet pictures in colors (price $1.00 per 100), for use in connection with explanation of Pictures in Sabbath-school Concerts.

Send orders to Congregational Publishing Society, 13 Cornhill, Boston, Mass.

Gems From Hamilton.

FRUITS OF THE SPIRIT.

LOVE.—When a rosebud is formed, if the soil is soft, and the sky is genial, it is not long before it bursts; for the life within is so abundant that it can no longer contain it all, but in blossomed brightness and swimming fragrance it must needs let forth its joy, and gladden all the air. And if, when thus ripe, it refuses to expand, it would quickly rot at heart, and die. And Christian love is just piety with its petals fully spread, developing itself, and making a happier world. The religion which fancies that it loves God, when it never evinces love to its brother, is not piety, but a poor, mildewed theology,—a dogma with a worm in the heart.

JOY.—Joy is the happiness of love; it is love exulting; it is love aware of its own felicity, and rioting in riches which it has no fear of exhausting; it is love taking a look at its treasure, and surrendering itself to bliss without foreboding.

PEACE.—Peace is love reposing; it is love on the pastures; it is love beside the still waters. It is that great calm which comes over the conscience when it sees the atonement sufficient, and the Saviour willing. It is unclouded azure in a lake of peace. It is the soul which Christ has pacified, spread out in serenity and simple faith, and the Lord God, merciful and gracious, smiling over it.

GENTLENESS.—Gentleness is love in society; it is love holding intercourse with those around it. It is that cordiality of aspect, and that soul of speech, which assure us that kind and earnest hearts may still be met with here below. It is that quiet influence, which, like the scented flame of an alabaster lamp, fills many a home with light, and warmth, and fragrance altogether. It is the carpet, soft and deep, which, while it diffuses a look of ample comfort, deadens many a creaking sound. It is the curtain, from which many

"And your sick, rheumatic days, Molly?" said the Judge.

"It's only a little while, sir," said she.

"And what then, Molly?" asked the Judge.

"I shall enter into that rest which remains for the people of God," answered the old woman devoutly, "and the troublesomeness of the way there don't pester or fret me. It's only a little while, sir."

"All is well that ends well, I dare say," said the Judge; "but what makes you so sure, Molly?"

"How can I help being sure," said she, "since Christ is the way, and I am in him? He is mine, and I am his. Now I only feel him along the way. I shall see him as he is, in a little while, sir."

"Ah, Molly, you've got more than the law ever taught me," said the Judge.

"Yes, sir, because I went to the Gospel."

"Well, Molly, I must look into these things," said the Judge, taking an apple and walking off.

"There's only a little while, sir," said she.

An Angel in the Stone.

The story is related of Michael Angelo, that, while walking through one of the obscure streets in the City of Florence, he discovered a fine block of marble lying neglected in a yard, and half buried in dirt and rubbish. Regardless of his holiday attire, he at once fell to work upon it, clearing away its filth, and striving to get it from the slime and mire in which it lay. His companions asked him, in astonishment, what he was doing, and what he wanted with that worthless piece of rock.

"O, there's an angel in the stone," was the answer, "and I must cut it out."

He had it removed to his studio, and with patient toil, with mallet and chisel, he let the angel out. What to others was but a rude, unsightly mass of stone, to his educated eye was the heried glory of art. A mason would have put it into a stone wall; a cartman would have used it for filling in or to grade the streets; but Angelo transformed it into a gem of art, and gave it value for ages to come.

What possibilities of virtue and usefulness may not a good man see in a child? Do we know how to get the angel out? Are our children to be only for filling in!

THE BLACK-VALLEY RAILROAD.

A Train of the *Black Valley Railroad* is here seen just leaving Drunkard's Curve. On the left are some passengers from *Sippington*, who having been carried beyond their intended stopping place are hailing the last train for the *old Stream River Steeper*. On the right are some philanthropists who are helping into *Assistance* some ejected and respectable travellers. In the depot train from which they have been thrown out, are seen the two gentlemen in the foreground, engaged in a friendly manner. Beyond this the conductor is seen collecting fares over the head—and, by the same token, over the heads of the Road in—by a dark and stormy morning, the sights and sounds are few and dismal, and it is worthy of most considerations that the only telegram that comes over the wires from the lower regions of the Black Valley is—

"At the last it biteth like a Serpent and stingeth like an Adder."

Entered according to Act of Congress, in the year 1868, by S. W. Hanks, in the Clerk's office of the District Court of Massachusetts.

Wise Words.

See the sack open before you buy what is in it; he who trades in the dark asks to be cheated.

Do not choose your friend by his looks; handsome boots often pinch the feet.

It is good clover and much better in anger, to have the tongue kept clean and smooth.

Kindness is the music of good-will to men; and on this harp the smallest fingers may play heaven's sweetest tunes on earth.

Idleness among children, as among men, is the root of all evil, and leads to no other evil more surely than to ill-temper.

The devil keeps lazy folks at work.

Govern your thoughts when alone, and your tongue when in company.

He who waits to do a good deal at once will never do anything.

Faith knows there are no impossibilities with God, and will trust him when it cannot trace him.

The cup that is full will hold no more; keep your heart full of good thoughts, that bad thoughts may find no room to enter.

Consider well, execute with vigor, and stick to your purpose; putting off nothing till to-morrow. Nothing more impairs authority than a too frequent or indiscreet use of it. If thunder itself was to be continual, it would excite no more terror than the noise of a mill.

"It's Only a Little While, Sir."

"Well, Molly," said the Judge, going up to the old apple woman's stand, "do'nt you get tired sitting here these cold, dismal days?"

"It's only a little while," said she.

"And the hot, dusty days!" said he.

"It's only a little while, sir," answered Molly.

"And the rainy, drizzly days!" said the Judge.

"It's only a little while," answered Molly.

"But," said the boy, gently, "how can you trust to a god so weak that a child's hand can destroy him? Do you suppose, that, if he can't take care of himself or his companions, he can of you and the world, let alone *making* you?"

The heathen stopped to think; for it was a new idea. Then he broke his great idol, and went and kneeled down to pray to the true God, and called him "my father."—*Corrier Dove.*

Is He Honest?

It is rather interesting to see how even with some very benevolent people a moral taint is a bar to charity. "Is he honest?" they ask first. If that question is answered satisfactorily, their generosity knows no bounds. But if the poor fellow has the double misfortune of a light purse and a slim conscience,—then he must move on! If he is sick in body, they help him, O how tenderly! If he is sick in soul, they cast him off without compun tions. If a pile of bricks falls and breaks his leg, how quickly they run for bandages; but if a sudder accident overwhelms him in moral misery, they think they do well to abandon him to his fate. They appear never to consider how brittle the legs of their own virtue; how fortunate for themselves that their ways lie not alongside of totter-

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.

The Seventh Annual Report of the Company has been published.

The year has been a prosperous one. The gain in deposits has been $2,287,267.67, being an increase of *fifty per cent.* on the balance due depositors at the close of the preceding year.

There are on stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $238,32.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $6,000,000 due depositors.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.

Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED,

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and without loss of interest.

For full information about the Bank address the *Advisory* at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, J. W. Alvord, Esq., or D. L. Eaton.

Trifles.

Think naught a trifle, though it small appear;
Small sands make mountains, minutes make the year;
Trifles are life. Your care to trifles give,
Or you may die before you learn to live.
—*Apples of Gold.*

Weakness of Idols.

A little boy who lived in the house of a heathen said to him one day, "There is but one God,—the one who made the earth and the sky and everything. It is he who gives us the rain and the sunshine; and he knows what we do, and what we leave undone. He hears us when we pray; and he, the Eternal One, will punish us if we do wrong, and reward us if we do right. He can save us, or he can destroy us. But these images that you pray to are only lumps of baked clay. They can't see or hear: how, then, can they do you any good, or save you from any trouble? You ought to talk to God's messenger about that" (he meant the missionary).

The heathen paid no heed to him, but soon afterwards went on a little journey. While he was gone, the boy took a stick and broke all the images except the largest, into the hands of which he put the stick. When the man returned, he was furious to see what had happened, and exclaimed "Who has done this?"

"Perhaps," said the little boy," the big idol has been beating his little brothers."

"Nonsense," said the man. "Don't talk such stuff as that! You know as well as I do that the thing cannot even raise its hand. It was you, you little rascal! It was you! And, to pay you for your labor of wickedness, I'll beat you to death with the same stick." And, seizing the stick, he approached him.

"But," said the boy, gently, "how can you trust to a god so weak that a child's hand can destroy him? Do you suppose, that, if he can't take care of himself or his companions, he can of you and the world, let alone *making* you?"

The heathen stopped to think; for it was a new idea. Then he broke his great idol, and went and kneeled down to pray to the true God, and called him "my father."—*Corrier Dove.*

THE SOUTHERN WORKMAN.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. I. HAMPTON, VA., DECEMBER, 1872. NO. 12.

Landing of the Pilgrim Fathers in New England.

The breaking waves dashed high,
On a stern and rock-bound coast,
And the woods against a stormy sky
Their giant branches tossed;

And the heavy night hung dark,
The hills and waters o'er,
When a band of exiles moored their bark
On the wild New England shore.

Not as the conqueror comes,
They, the true-hearted came;
Not with the roll of the stirring drums,
And the trumpet that sings of fame.

Not as the flying come,
In silence and in fear;—
They shook the depths of the desert gloom
With their hymns of lofty cheer.

Amidst the storm they sang,
And the starboard, and the sea;
And the sounding aisles of the dim woods rang
To the anthem of the free!

The ocean-eagle soared
From his nest by the white waves' foam;
And the rocking pines of the forest roared—
This was their welcome home!

There were men with hoary hair
Amidst that pilgrim band;
Why had they come to wither there,
Away from their childhood's land?

There was woman's fearless eye,
Lit by her deep love's truth;
There was manhood's brow, serenely high,
And the fiery heart of youth.

What sought they thus afar?
Bright jewels of the mine?
The wealth of seas, the spoils of war?
They sought a faith's pure shrine!

Ay, call it holy ground,
The soil where first they trod—
They have left unstained what there they found—
Freedom to worship God.

Mrs. Hemans.

Original.

Ocean Steamers.

The voyage from America to England is undertaken weekly by so many thousand people that it has become a common experience with travellers, and is not of as much importance as a journey from Richmond to New York, or from New York to Boston, used to be thirty years ago. The principal line of steamships between New York and England is owned by English stockholders, and is known all the world over as the "Cunard line." These vessels are large, well manned, and thoroughly seaworthy, being on the whole as safe and commodious as any steamers now afloat. A description of one will suffice for the whole, and anybody who will cross from New York to Jersey City on a Saturday morning, may see the *Java*, or the *Abyssinia*, or the *Cuba*, or some other one of the line, starting on her outward voyage, crowded with passengers and freight.

We will fancy for a moment that we have taken our passage in the *Java*, and having crossed the ferry from New York, are now about to embark for the Atlantic voyage. Our boat lies waiting for us at the dock, her long black hull lying low in the water, her white decks filled with people, and her masts gay with English and American flags. She is some 375 feet long by 40 feet wide and 30 feet deep, and is about 3000 horse power, carrying some 350 people, including officers and crew. The main cabin is on deck, while the staterooms are below and are ventilated very thoroughly by means of the staircases and shafts. She is a screw, paddle wheels being now almost obsolete in ocean steamers, and her engines, of the new kind called "compound," only consume some fifty tons of coal a day, which motive power causes the screw to revolve about 500,000 times in crossing the Atlantic, usually without the cessation of an instant. The coal which she burns was formerly brought entirely from England, but now Maryland supplies the demand to a great extent. If we leave New York in this steamer on a Saturday, we shall, if no accident occurs, reach Liverpool in a week from the following Tuesday or Wednesday, and in summer the passage may be even shorter than this, for during July and August the ocean is often, for days together, as smooth as the bosom of a river. The course from New York is northerly, until we get on to the Banks of Newfoundland, where heavy fogs prevail at almost all seasons of the year, and where is consequently the chief danger from collision with other vessels and icebergs, which latter come down from the Arctic seas and in spring and early summer are the dread of sailors. After clearing the Banks on perhaps the third day, our vessel's head is turned eastward, and we have several days of quiet, monotonous progress, seeing now and then a sail and possibly a whale, and amusing ourselves by walking the deck, sleeping, and eating. On Monday or Tuesday we shall probably come in sight of the coast of Ireland, the bleak Irish Sea, close in under the purple Welsh hills, until at last we make the mouth of the River Mersey, and cast anchor in the shadow of the famous Liverpool docks, undoubtedly the finest in the world. Here we are taken off by a little tug, and say a half-sorrowful good-by to the staunch ship which has carried us so many days in safety, and standing on the massive stone quays which stretch for miles along the river front, we take a last look at the American flag, floating from our steamer's mast, and realize that we are indeed on foreign soil.

The voyage which cost Columbus and many a brave man after him, months of preparation, and weary weeks of uncertainty and danger, is made now daily by hundreds of travellers who are merely in pursuit of pleasure; but surely all who cross the Atlantic in the present luxurious fashion, ought at least to give a thought to the sailors and inventors who have made the ocean path so smooth.

RIGHT HON. JOHN BRIGHT.

John Bright.

John Bright whose portrait we give in the present number, is one of the best known of modern English Statesmen. He was born in 1811, in Rochdale, Lancashire, where his father was a cotton spinner and manufacturer, a man of position and wealth. Mr. Bright entered Parliament as member for the city of Durham in 1844, and has ever since used all his influence on the Liberal side in politics. He is an energetic worker, and remarkably persistent, to all his undertakings; to which fact, much of his success in life must be ascribed. He and all his family are members of the Society of Friends, and he has strenuously endeavored to prevent the English Government from engaging in wars with foreign nations, being a fundamental principle with the sect to which he belongs. He is a large mill owner in company with his brother, Jacob Bright, and has always favored free trade, and advocated the reduction of the standing military establishment. In private life he has always been distinguished for his kindliness, and his steady endeavor to relieve poverty and suffering of all kinds. Of late years he has been much broken in health, having several times been obliged to retire from his public duties, and spend some months in entire seclusion, but there is every reason to hope that his life of usefulness will not be closed for many years to come.

"Out of Debt, Out of Danger."

This is an old saying, and one well worth considering. No man who is in debt can feel entirely free. Suppose while he is at work he knows that some creditor is waiting to seize his wages as soon as they are earned, how can he work with a will, or go home at night a happy man? No, debt is slavery. Think of that, Father, when you are tempted to buy what you cannot pay for; remember that, Mother, when you desire something that costs more money than you have in your purse. Do not enslave yourself nor your children to debt.

There is just one thing it is generally safe and often best to run into debt for. That is a home. As soon as there is a little ready money in a family, let them move on to a desirable tract of land and build a small house. Then let the father and mother and all the children each take hold and give a long pull and a strong pull and a pull all together, to pay for the house and land. That is a much better way than to live year after year on another man's land, waiting for the time when the money can be paid down for a home.

In building a church it is very different. Enough cannot be said in praise of the wisdom shown by the colored people in this matter, during the last ten years. The almost universal rule seems to be, Do not spend a cent in church building that cannot be paid for at once. That so many substantial and some even elegant churches have been built without debt, in town and country, all over the South, seems very wonderful. But that is the only true way to build them, and the white people, both North and South should learn a lesson from the colored people in the matter of church building.

Africa.

The first explorers of Africa were Greeks and Romans, while the first circumnavigators of the continent were Phœnicians, who made the voyage in the reign of Pharaoh Necho (2 Kings xxiii.), about the year 600 B. C. The Arabs and Portuguese succeeded these early adventurers, and it is probable that about the middle of the fourteenth century the French founded a colony on the coast near Cape Verde. They undoubtedly had regular communication with the provinces of the River Gambia, in the sixteenth century, and kept up from that time their trade with the interior. The Dutch and English followed the example of the French in making settlements upon the west coast, and in our own time, the most important contributions to our knowledge of Africa, have been made by Englishmen, from Mungo Park to Dr. Livingstone, who for years has devoted himself to discovery, and at this hour, if he still lives, is exhausting every power in the endeavor to make thorough and satisfactory exploration in the interior of Africa.

Ventilation.

We are but just beginning to understand the necessity of building houses, churches, and especially schools, in such manner as to insure constant and thorough ventilation, and we need to give the matter close personal attention.

In schoolrooms, an excellent practice, common in many public schools, is to open all the windows three or four times during study hours, while any risk to the children from the sudden influx of cool air, is prevented by exercising them in marching or light gymnastics. Pupils and teacher both feel the benefit from the fresh supply of oxygen, and will learn that the reform is not for six days alone, but also for the seventh, when congregations will be less sleepy and ministers more hearty, if between the services every door and window is opened, even at the expense of the accumulated heat. In our houses we are proverbially given to over heating our rooms, forgetting that this is a frequent source of colds, and a never-failing cause of headache and stupidity. There should be a continual current of fresh air passing through inhabited rooms, and this must be insured either by windows opening at the top or by regular ventilators.

The Elysian Fields of Paris.

The most fashionable walk and drive in the city of Paris, is a long, broad avenue, called the Elysian Fields, stretching from the great palace of the Tuileries at one end to the Triumphal Arch at the other. On either side of it are booths for the sale of cakes and fruit, and chairs and benches where, for a small sum, one may sit and listen to the music of the different bands, while last, but not least, there are games for the children, merry go-rounds, swings, and rocking horses, all in the open air, and all to be enjoyed by anybody who has a few pennies to spare. Statues and fountains fill all unoccupied places, and no more brilliant scene can be imagined than these Elysian Fields present on a sunny October afternoon. Gay crowds of rich and poor, an endless succession of carriages of every description, fountains sparkling among beds of brilliant flowers, the laughter of children and the gay, quick notes of the music, form a picture full of attraction and amusement, especially to Americans who see nothing like it at home.

Sunday Religion.

Sunday comes but once a week, but that is a poor religion which contents itself with setting apart that single day for God, and reserving the other six for the devil. A Christian's Sunday should last from Saturday night to Saturday night again, and should mean something more than the singing of psalms and bending of knees. God has a temple not built by hands, and His children are always within its boundaries. The religion which shows itself in kindliness in the household, in honesty in business, in charity, in thoughtfulness for others, is a religion which cannot be put on on Sunday morning and taken off again in a hurry, before night comes. It must be a growth of the spirit, not a cloak for the body, and we need not boast of possessing it, until we are sure that we are just as good Christians at home as in church, on Monday as on Sunday.

Cleanliness Next to Godliness.

And indeed it is so nearly related to it that in these days we can scarcely feel men and women to be leading godly lives, who are not also leading clean lives. Fresh water and fresh air; keep yourselves and your house well supplied with these, and you will find that as dirt and foulness vanish before them, so many of your aches and pains will go too. Don't be afraid of cold water when you get up in the morning, use it always winter and summer, and use plenty of it.

What if it is sometimes troublesome to fetch it from the well or spring; in the end you'll find it cheaper than paying doctor's bills, and it is by no means so disagreeable a remedy as the doctor will have to prescribe for you, if you neglect the teaching of the great physician, Nature. You should wash thoroughly from head to feet, you and your children as regularly as the sun rises, and then when this same sun is fairly up, you should open every window and door in your house, and let his rays and the air he has warmed, have their own way, in your bedrooms, and kitchens, and best rooms. You *cannot breathe bad air and shun danger*, and when you sleep all night and live all day, in houses that are never thoroughly swept through by the winds, God sends to purify you, you are just making for yourselves breeding places for fevers, dysentery, measles and a dozen other filthy diseases. Remember that you cannot live and be healthy without plenty of fresh air, any more than a lamp can burn without oil; and that furthermore, your health depends upon the completeness with which your skin does its work, a work that can be done only when you keep yourself thoroughly clean with soap and water.

THE Southern Workman,

ISSUED MONTHLY.

H. W. BLAKE, *Assistant Editor.*

J. F. B. MARSHALL, *Business Manager.*

TERMS: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Each number will be fully illustrated, and, therefore, a child can learn reading, with what is going on in the world, and will tend to please and profit both old and young.

All are invited, the young especially, to write letters, questions on any subject upon which they may interest them.

We shall be thankful for useful information, anecdotes and incidents, and for suggestions from all quarters.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

To every church which shall send as one hundred *new yearly* subscriptions for "The Southern Workman," we will send a beautiful communion set costing twenty-five dollars.

We will give a handsome Bible costing thirteen dollars to any church or society which shall subscribe for fifty copies, *Freight to be paid by the church in both cases.*

To aid in building churches we will return twenty-five dollars *in cash for every one hundred* new dollar subscriptions; or $10.75 for seventy-five subscriptions; or $2.50 for every fifty subscriptions.

In these cases the papers are to be sent in *one bundle to one address* to be distributed by an agent to be appointed by the church.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent in checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager,*

The Southern Workman.

HAMPTON, DECEMBER, 1872.

Our national Thanksgiving which has just passed, was kept, we trust, with a general appreciation of the blessings for which as a people we are called upon to thank our Heavenly Father. We are at peace, within and without, the danger of internal dissension is over, the season has been fruitful, our commercial and agricultural interests have been prospered, the year has passed unmarked by any great calamity and has left the country healthy and sound to the core. There is good reason that we should have met in our homes and our churches to make glad recognition of the overruling mercy of God, and it is to be hoped that few of us have let the season pass unnoticed.

The reelection of President Grant, having practically determined the position of the government during the coming four years, there are numerous questions which deserve the immediate consideration of all citizens who are conscientious enough to feel that their duty to their country does not end with the closing of the polls. The ballot is undoubtedly an important aid in a majority of the measures which affect the welfare of the State, but there is much still left to the labor and example of individuals, and good work may be done outside of the political field. We trust that our readers will give to this truth the weight which it deserves, and bear in mind that the keenest politicians are by no means the best citizens.

Nothing is pressing just now more closely upon our attention than the matter of public education. The general lack throughout the South of good primary schools is beginning to be severely felt, and unless quickly supplied will become a threatening evil. We cannot afford to let our children grow up in ignorance, and yet we shall be obliged to do so, unless some provision is speedily made for them. In the North, schools of every grade are public, and there is no reason why we should not follow a similar simple and successful system. The fathers and mothers of the coming generation need to think more of this matter, and to realize that their own *every one* of their children at least a good common school education.

We desire to bring before the notice of our readers the fact that the system of weather records and prophecies which has been adopted by the government, is proving to be of very great practical value. The approach of a storm, or the likelihood of bad weather, is signalled from station to station along the coast, and telegraphed to all the principal cities, so much in advance of the storm itself that ample time for preparation is given, vessels can stay in port, or if at sea can make for a safe harbor, crops may be protected, and the plans of business men in general, arranged with regard to the weather probabilities. In one of our recent autumnal storms, it is said that scarcely a small vessel was caught out from Maine to Georgia, owing to the perfection of the signal system, which had warned them all into the various ports. In connection with these reports there is published daily a "Weather Map," which exhibits the direction of the wind in various places for that day, the chances of rain, snow, low or high temperatures, etc., and is of the greatest value to all those whose business is likely to be in any way affected by the weather.

Acknowledgements.

For the many beautiful illustrations which have appeared in the "Southern Workman," in the first year of its existence, which closes with this number, we have been indebted to the courtesy and liberality of our Northern friends. We thank them all for the valuable aid they have thus given us in our work, and we wish to record our special obligations to

The American Tract Society, N. Y.,
Messrs. J. R. Osgood, & Co., Boston,
" Harper Brothers, N. Y.,
" John P. Jewett & Co., Boston,
" Houghton & Co., Cambridge,

for their liberal contributions.

Caution.

We learn that a man has been collecting money in Chattanooga, Tennessee, and vicinity, under pretense of being an authorized agent of the Hampton Normal School. This man is a swindler, and it is rested will be dealt with as such. This school has no agents in the South authorized to solicit money for any purpose, and all persons are hereby cautioned against giving money to any such impostors.

J. F. B. MARSHALL,
Treasurer.

A Card.

Our thanks are due to the American Tract Society of New York for a valuable donation of pictures from the "Christian Weekly" of which admirable illustrated paper they are the proprietors. The excellent cuts on the first page of our last four numbers were their gift and should have been sooner acknowledged. We wish the "Illustrated Christian Weekly" the great success it merits, and hope that our more humble sheet may again be remembered by its proprietors.

Donations.

The Treasurer of the Hampton Normal and Agricultural Institute acknowledges the receipt of valuable donations of material, etc., from the following persons:

A. G. Boydan, Bridgewater, Mass., 1 bale clothing.
C. F. Dana, Wellesley, Mass., 1 bale clothing and material.
Freedman's Society, Waterbury, Conn., 1 *case* clothing and material.
Mrs. S. R. Russell, Boston, a full supply of material.
E. S. Bull, N. Y., 4 pieces flannel for Industrial Department.
Geo. S. Taylor, Chicopee Falls, Mass., valuable Agricultural Implements.
H. S. Collins, Collinsville, Conn., 1 *case* Ayrshire bull.
American Bible Society, New York, 150 Bibles.
Sam'l. Holmes, Esq., New York, Bibles and blankets.
Mrs. M. A. Washburn, blankets.
Hubbard Paper Co., writing paper, 15 reams.
Rev. J. H. Means' Society of Dorchester, Dry Goods for Industrial Room.
Crane Bros., Westfield, 21 reams letter paper.

J. F. B. MARSHALL,
Treasurer.

The Mystic—A Card.

We learn that this snug little steamer has changed hands and is now the property of the Old Dominion Steamship Co., who will continue her in her present route. We are confident that we speak the sentiments of the whole community as well as our own, in expressing the hope that her present obliging and efficient captain and officers will remain in charge.

The Normal School is under many obligations to Capt. Schermerhorn for courtesies received at his hands, and we gladly avail ourselves of this opportunity to acknowledge them.

We are especially indebted to his liberality for giving free passage unsolicited, to and from Norfolk, to our farm manager and assistant, and the stock (horses and cattle) taken by him for exhibition at the late Agricultural Fair in that city.

To Northern Employers and Southern Workers.

We would call particular attention to the announcement in another column, of our purpose to establish a convenient medium of communication between northern employers and southern workers.

There is a great and growing demand for such a medium, and one which has never yet been met. At the North the labor-supplying question becomes more pressing every year. The factories take more and more of the young people who have formerly gone out to service, and their places cannot be even poorly supplied from the emigrants throughout the world to our shores. These either gravitate to the large cities, or take Mr. Greeley's advice and go West.

The South, on the other hand, is filled with half-paid, suffering freedmen, anxious for work.

How to bring these two classes together is the question. The freedmen is often willing to pay his way North. The northern employer would gladly pay it for him, if there were a guarantee of honesty, and a reasonable hope of satisfaction.

It will take time to mature any system fully meeting these demands. It is our purpose to do so as fast as possible. Among the many applicants for admission to the Normal School, from whom we must select those most fitted to be educated as teachers, we can often hopefully recommend persons for situations in the North as faithful and competent workers, and we can assure northern employers that all advertisements from colored people in the "Southern Workman" will be accompanied by such guarantees which may be seen by application to this office.

To colored people, we say—in all cases send with your advertisement a recommendation from some responsible person—your minister, and if possible one of our agents, an officer of the Freedman's Bank, or a teacher of the American Missionary Association or other benevolent society.

Horace Greeley.

The man whose name has been in every one's mouth for thirty years, is done, with earth. But a few short weeks ago he was straining every nerve to become President of the United States; and before the month of November was over, he had entered the spirit land. He died on the 29th and was buried from Rev. Dr. Chapin's church, New York, Wednesday, Dec. 4th. He was not quite sixty-two years old. His last words were, "I know that my Redeemer liveth." Great honor was paid to his memory at the funeral. President Grant was present, together with many prominent men from all over the country.

Since Mr. Greeley is dead, all men are disposed to speak well of him. Some who were very bitter in their treatment of him a month since, are loud in his praise now. But it is quite possible to do his life justice without using extravagant praise. Horace Greeley had a large brain and a kind heart. He was a learned man but not always a wise man. The "New York Tribune," of which he was the founder, has been generally a power for good in the land. There is not a colored man in the country who has not cause to remember the labors of the great journalist in behalf of his race.

Mr. Greeley believed in work. Born among the granite hills of New Hampshire, the son of a poor man, he early manifested that genius for hard work that has made so many men great. His life, indeed, was a "busy" one. He is gone, and the world will long miss his genial face, and the productions of his vigorous pen.

A few Recollections of the Past Fifty Years in Hawaii.

The Hawaiian Islands are nine in number, in the Pacific Ocean, between N. latitudes of 19 and 22, about two thousand miles southwest from the California coast of America. They lie just in that semi-tropical region which knows no winter, and are free from the intense heat of the tropics which lie farther south. They enjoy the cooling breezes of the trade-winds during the whole of the summer season, which blow steadily from the north-east.

The islands are lofty mountains intersected with deep valleys, and are all of volcanic origin. Mauna Loa, the largest of the group, has two active volcanos, which have existed from times beyond the remotest traditions of antiquity. During my residence in this country, now nearly fifty years, there have been several fiery eruptions, accompanied with earthquakes and lava flows. These scenes have been most graphically described by the pen of Dr. T. Coan, in an article published in "Scribner's Monthly," and need not be here dwelt upon.

Fifty years ago, the natives of this group were estimated to number more than 120,000 persons. They have now dwindled down to about 60,000, and are slowly but constantly decreasing in numbers. The causes of this decrease are well known: the introduction of foreign diseases and foreign vices, with an ignorance of the laws of life and health, with a moral inability to govern themselves in the indulgence of irregular habits. Where or when the end of this deterioration will be, it is impossible to foretell. The people belong to the Polynesian race, a people scattered all over the Pacific Islands, from Hawaii in the northeast to New Zealand in the south west, and are nearly allied both in language and customs. But the origin of the race may be traced to the Malays of the Chinese or Indian Archipelago. Although the language of the latter people bears only a faint resemblance to that of the Polynesian, yet in many respects it has a resemblance, and indicates that the separation of the races took place in a very ancient period, of which even traditions gives no account.

Fifty years ago, the people of these islands were in a state of extreme barbarism. They had just emerged from a series of desolating wars, in which multitudes of defenseless men, women, and children had perished; for those wars destroyed and desolated the regions over which they swept, and left only a wilderness behind. The only refuge for the people was an escape to the mountains where many perished with cold and hunger.

Fifty-two years ago, the first Christian missionaries landed and began their labors for the conversion of those degraded pagans. Their first attention was given to learning the language. After that, they began to preach the gospel, to prepare an alphabet and schools books for the instruction of the people, and establish schools as fast as teachers could be raised up. Then came the translation and printing of the Bible, which was first published in parts as fast as the books could be prepared. After a few years, these efforts began to tell upon the rulers and people of the nation, in the conversion at many to the religion of Christ, and the general elevation of the masses from their former deep degradation. The nation became anxious to be clothed in civilized garments, and to adopt the manners of a civilized people. Our congregations became filled with worshippers, and our churches with those professing faith in Christ the Saviour. Although many of these proved unworthy and years set aside, yet a goodly number have persevered, and adorn their profession of godliness.

In 1840, a regular civil government was instituted, with a king at its head, a cabinet of ministers appointed, a representative parliament elected, a free constitution and good laws enacted, an efficient judiciary, and free schools for every child in the kingdom inaugurated, with compulsory laws to secure their attendance. Thus the nation has become what may be called a civilized and Christian people. Not that they have yet attained to the highest point in either, but that they are progressing upward. At present, every man is living here in as great security and safety as is enjoyed by any nation under heaven. Religion and thought are free to every man, under the protection of liberal laws.

If it be inquired, "What is the cause of this change in fifty years?" the answer is, "*The Scriptures of the Word of God, freely circulated among all classes.*" If to be asked further, "What special scriptures or word has had the most power in producing this effect?" It is this: "Believe on the Lord Jesus Christ, and thou shalt be saved." In monosyllables, this has been the most quoted of any other by the people, viz: "*Go, and sin no more.*" This was in the first reading lesson printed for the learner, and has had immense power in moulding the Christian character of this once heathen people.

A. Bishop.

Correspondence.

We are happy to receive from a highly intelligent Southern man, such favorable testimony and such words of wisdom as the following:

Editor Southern Workman,—If the objection to colored people's learning all the ordinary branches of school education were confined to a few proud aristocracy, I would not trouble myself to write or the reader to read one word on the subject. It is a matter of gratitude, that so few of the former owners of slaves make any objection to their being educated. The writer of this has conversed with very many on the subject, and has been gratified to learn that almost every man and woman who once owned slaves is now decidedly in favor of their learning all that they can learn. The principal objectors are the colored people themselves. They often say, "What is the use of my children going to school? They will have to work for a living either on a farm or in a shop, or in somebody's kitchen. And so they can do just as well without learning as with."

To many, this objection is very plausible and has just as much force, as if it were actually true. But in fact, it is not true. It is not true, that your son or your daughter is necessarily obliged to confine himself or herself to mere hard work, unless by your own neglect. If you encourage them to school, you are determined to do all you can to make them mere drudges. God has blessed them with minds, and you their parents, have no right to withhold from them the means of giving that mind to any be improved to the highest possible degree. You do not know what your child may be capable of. He may be a doctor, a lawyer, a senator, a president.

But suppose your son will never be anything but a laboring man, or at best a mechanic. Is learning of no use to a laborer or a mechanic? So far from it, everybody knows who has taken any notice of things, that an intelligent, well-educated man or woman will always command better situations, get better pay, and be more respected by all, than the rude and ignorant possibly ever can.

Not long since, a gentleman of wealth wanted to employ a man to do odd jobs of carpentry about his house. He had had after another, but they all wasted his lumber and spoiled his work. At last, he heard of a Dutchman, or rather a Prussian, who, though a poor laboring man, had like most of his countrymen, enjoyed the advantages of a good education. This man's name was Michael; but commonly called *Mike.* The gentleman sent for Mike and told him what he wanted done. By reason of his good education, Mike understood at once, what his employer wanted. And that there might be no mistake, Mike took a pencil and paper and drew a correct plan of the work and showed it to the boss, asked if that was what was to be done. It was exactly the thing, and Miké always found employment and good wages, not only with that gentleman, but wherever he was known. In the same shop with other men, Mike often received nearly twice as much wages as they did. What gave him this advantage? It was simply the fact that in his youth, he went to the public schools, and there he not only learned to read and write but to *draw.* Education gave him, what merely learning a trade could never give.

My colored friends, do all you can to help your children get an education. You may have no farm to leave them and if you had, it might soon be lost, but a good education can never be lost.

Editor Southern Workman:

Dear Sir,—You asked for any interesting news and I don't know if there can be anything more interesting than a little of my school. I am teaching in the little settlement of Woodville, and my school numbers about fifty, who are of such condition that I can manage them with little trouble. My 1st class use 5th Reader, Bullion's Grammar, intermediate geography, etc., and in arithmetic is in addition of fractions. I am extremely gratified to say that I have never seen scholars anywhere grasp their books with so much eagerness and pleasure. I have often said to myself that I only regret that in my younger days I did not possess this gigantic spirit. These children are craving for that which they must have. They may have land, houses, and money, but without education they will not be any more than slaves for the commonwealth of Virginia. When we look at this great city of Richmond, we behold hundreds, yea, thousands of poor children who are deprived of the privileges of education; many of them are packed away in factories and work large there from month to month for 50 cts or 75 cts. a week, or perhaps only for bread. I wish that in your next publication you would present this important subject to the public, and show the great danger that awaits our rising generation in the future if we neglect so great a duty.

Yours truly,

J. W. Gourdine.

[We have on hand several valuable communications which have been crowded out of this issue, but will appear in our next.]

Hampton Normal School.

Access to Graduates.

Maria Chilsman has returned to Hampton for a vacation. After Christmas she expects to return to her school in Murfreesboro.

Calvin D. Johnson has taken a school in Princess Anne Co. Va.

Hattie C. Green is teaching at Whitesville, N. C. At last accounts she had eighty scholars and was in search of an assistant.

Letters from Graduates.

Charleston, ——1872.

Dear Teacher,—I have been employed ever since I came home last March, though I did not expect to teach day when I came here. When the public school opened I was chosen assistant teacher for the term which will last ten months, commencing September 16th. I am getting good wages, and board at home. My department numbers eighty-seven; average of attendance, seventy-five. Since I left Hampton, I have had three hundred and forty-four scholars under my charge. I assist in the Sabbath-school, give one private lesson every evening and take a German lesson every evening myself.

- Henry Clay Payne.

Mt. Joy, Bedford Co., Va.,——1872.

Dear Teacher,—Knowing that you desire to hear from the schools I will make an attempt to give you a little description of mine. After lingering Bedford I succeeded in getting a school, though at first it seemed doubtful, and answer teaching in the Baptist church in Mount Joy. The school-house is situated near the highest peaks in Virginia, in a very beautiful place near the main road, and convenient to the majority of the children. I can stand in the door and get beautiful views. For it is entirely surrounded by mountains. My school numbers twenty-four and they seem to be making rapid progress in the way of learning, though they would get along very much better if they had all the necessary things. The school-house is very comfortable at present; and with a few exceptions the people seem to be quite sociable and accommodating, and in very good condition, as the crops are prosperous. You cannot imagine how I miss Hampton and wish to be with you and the school.

John H. Carter

From "The Popular Science Monthly."

Scientific Notes.

Lessons from a Brick.

An Austrian savant has discovered, by means of a microscope, in a brick taken from the pyramid of Cheoplus, many interesting particulars connected with the life of the ancient Egyptians. The brick itself is made of mud of the Nile, chopped straw, and sand, thus confirming what the Bible and Herodotus had handed down to us as the Egyptian method of brick-making. Besides these materials, the microscope has brought other things to light—the *debris* of river-shells, of fish, and of insects, seeds of wild and cultivated flowers, corn and barley, the field-pea, and the common flax, cultivated probably both for food and textile purposes, and the radish, with many others known to science. There were also manufactured products, such as fragments of tiles and pottery, and even small pieces of string made of flax and sheep's wool.

Jute.

This remarkable fibre, which formerly was only used for the coarsest purposes, has of late become invaluable. It makes a serviceable substitute for hair in chignons, and is now used extensively as a "mix" in silk. Owing to its kindly way of taking the dye, and the gloss which it sustains, a large quantity can be used in silk, and yet defy detection, except by an expert. It is in consequence highly desirable that it should be produced in our country if possible. Some experiments by agriculturists are under way, which seem to promise success. Mr. F. T. D. Lacroix, of New Iberia County, Louisiana, has, on his plantation, several rows of the jute-plant, the seed of which was sent to him by the Department of Agriculture. The plants are very vigorous, and the indications are that jute will thrive in that climate. It bears some resemblance to flax in appearance, as it is said to in fibre.

According to Prof. Gould, electric waves travel through the Atlantic cables at the rate of between 7,000 and 8,000 miles per second; or, about half as fast as they traverse the wires suspended on telegraph-poles.

General News.

The Forty-second Congress began its final session on Monday, Dec. 2.

The President's message announces that our relations with foreign nations are generally satisfactory, and urges no further reduction in taxation till it is seen whether this can be done without interfering with our credit and the payment of the national debt, recommends measures to facilitate inland navigation and increase our ocean trade, and reaffirms the Indian policy of the government which is, as far as possible, conciliatory.

The Secretary of the Treasury sets down the reduction in taxation since the close of the war at $300,350,111.

Mr. Senator's health will not allow him to serve on any of the Senate's committees this session.

The funeral of Horace Greeley was, by a singular coincidence, on the day appointed for the meeting of the Electoral Colleges. The funeral services were conducted by Dr. Chapin and Henry Ward Beecher. President Grant, Vice-President Colfax, Gen. Sheridan, and many other prominent men were present. He was buried in Greenwood Cemetery, Brooklyn.

The winter has set in with unusual violence at sea. A violent cyclone has traversed the whole Atlantic and many vessels have suffered severely.

The Arizona diamond fields have proved a gigantic hoax and swindle.

The shower of shooting stars through which we passed in the night of November 26th, is supposed by astronomers to have been fragments of a comet known as Bicle's comet.

Virginia seems to be doing good work to the State by her schools, judging from the statistics of attendance. In 1870 the number of pupils was 50,415; in 1871 it had increased to 157,844. This rapid increase of over 300 per cent. in one year is an encouragig sign for the progress of education in that State, and will undoubtedly have an important influence in stimulating the educational work of the whole South.

The American Colonization Society sent November 30th to Liberia a company of 150 colored emigrants, most of whom were from North Carolina and Georgia. Each family receives twenty-five acres of land free, and each man citizenship at once.

Prince Bismarck has recently ordered of Mr. Nelson Gwit, of Philadelphia, Pa., machinery for a paper-mill to be erected in Prussia. It is to be placed for comparison, by the Prince, in one of his large paper-mills, so that he can judge by observation whether the Philadelphia paper-making machinery is not far superior to that made in Germany, France, or England.

The Americans in London celebrated Thanksgiving Day with a banquet.

Four celebrated Englishmen are now lecturing in America, Froude the historian, Tyndall the scientific discoverer, Rev. George MacDonald the well-known author, and Mr. Edmund Yates, novelist and magazinist.

Three expeditions are about to start for Africa. One sent from the Khedive of Egypt with the avowed object of helping Dr. Livingstone look for the sources of the Nile, a geographical expedition from Berlin, and one from England to suppress the slave trade on the east coast of Africa.

There is serious trouble with the Indians in Texas and California. The United States troops are engaged in subduing them.

Two young men were blown to pieces and two more crippled for life, recently, to pay for throwing stones at a can of nitroglycerine which had been left by some workmen, carefully sealed, and marked Danger, Danger, Danger. They threw the stones at it just to see how it would explode.

Hasbrit B. Stowe is giving readings from her own works in New York with great success.

The Italian government has put a stop to duelling in Italy.

Two great exploring expeditions have just sailed from England and America. The American fleet is to explore the seas between our Pacific States and China and Japan, and construct more perfect charts for the benefit of our commerce. The English expedition is to circumnavigate the globe, and spend three years and a half in scientific and geographical research.

The number of slaves annually carried off from Africa to the Arab and Turkish markets is estimated at from 80,000 to 90,000.

Hans Christian Andersen, the most charming writer for children that ever lived, is seriously ill. He is now in his sixty-seventh year. His stories have been translated from their original Danish into many languages.

The great storm that swept the coast of New Brunswick and caused serious loss of life and damage to shipping on the 20th of November, was foreseen by the Signal Service Office in Washington, and proper warning was sent on the 19th to the Chief of the Canadian Meteorological Bureau in Toronto. This was *signal* service indeed.

The Prussian Government has resolved to employ henceforth solely Assmann's linen fibre paper for the manufacture of bank notes, such as is used in Washington.

Our Exchanges.

It is both pleasant and profitable to maintain some acquaintance with the literature of the day. Every month our table is loaded with valuable magazines and journals, contributed by the editorial friends of the "Southern Workman," and we do not mean to keep all the good things to ourselves. Henceforth, we shall give our readers a share in the treasures of our reading room.

THE AMERICAN MISSIONARY contains interesting intelligence of the work among the Freedmen. It is pleasant to read that the Society's receipts for the year amount to $329,000, knowing how wisely this is applied to the great work of educating and educating those whom the Truth alone can make free indeed.

SCRIBNER'S MONTHLY, published in New York, is very full and attractive this month. A fully illustrated description of the Chesapeake and Ohio Railroad takes us pleasantly through an interesting part of Virginia. Mr. Edward King, one of the editors of the "Boston Journal," has been engaged to write a series of articles for this magazine, upon the South as it is. They will be profusely illustrated and doubtless very interesting. We hope that Mr. King will visit Hampton Normal School before completing his series.

THE POPULAR SCIENCE MONTHLY, edited by Prof. E. L. Youmans, one of the most eminent chemists and brilliant lecturers on chemistry in America, is devoted to the noble work of spreading scientific knowledge among the people. Good selections from foreign scientific magazines, with some interesting original articles compose each number.

THE NURSERY is certainly the gem of all little mouthfuls for the youngest readers, with its beautiful pictures and charming stories. In our opinion, the best premium of all the nice ones it offers for new subscribers is a yearly volume of itself for three at $1.50 each, and we know of one little Miss Rosy-cheeks who is getting up what she calls a "squad" for the prize. Little readers will often find a sample of it in our children's department.

THE ILLUSTRATED CHRISTIAN WEEKLY, published by the American Tract Society for $2 a year, is a model of fine engravings and excellent reading for old and young. It is fortunate in its editor, the Rev. Lyman Abbot, a well-known member of a family whose name is identified with popular writing. It is in all respects a valuable family paper, and we would be glad to see it domesticated in every home.

HARPER'S WEEKLY is as attractive as ever, notwithstanding the close of the presidential campaign which has given such rich material to the pencil of its unrivalled artist, Mr. Thomas Nast. The service done to the Republican party during this campaign by "Harper's Weekly" through his irresistible caricatures cannot be computed. Nothing as good in this line has been produced in any country. Harper Brothers are noted among the old established publishers of New York for their enterprise and their liberality toward contributors, a policy which secures to them the best work, artistic and literary, which the country affords, and a consequent popularity which has become gigantic. "Harper's Monthly," "Weekly," and "Bazar" are household words.

EVERY SATURDAY, published by J. R. Osgood and Co., Boston, is just what it professes to be—"a Journal of Choice Reading." Like "Littell's Living Age," it is made up of selected articles from English magazines. It skims the cream of the best of them to set before its readers, who have only to turn its pages to find what they would most enjoy in "Chamber's Journal," the "London Athenæum," "Saturday Review," "Spectator," and many other valuable English periodicals. All the publications of this firm, the "Atlantic Monthly," "Our Young Folks," and the "North American Review," have a dignified character and position, which "Every Saturday," in its own way, fully maintains.

THE PAPER TRADE JOURNAL, published in New York, gives, twice a month, the latest information concerning the paper trade in all parts of the world. Its editor, Mr. Charles F. Wingate, also a popular correspondent of the "Springfield Republican" and other papers, shows great enterprise in its management. Its market quotations are prepared with great care. It is invaluable to paper makers, dealers, and printers, and its attractive arrangement and style make it also very interesting to the general reader.

THE PRINTER'S CIRCULAR is another valuable publication for a printing office. It is published monthly in Philadelphia. It contains valuable typographical intelligence, price lists, notices of new patents, and everything of interest to printers generally. The editor and publisher, Mr. R. S. Mansmin, is a man whose enterprise and liberality must insure popularity to his paper; he is also one of the publishers of the "American Cyclopedia of Printing," a work of such importance as a book of reference that no printing office or library should be considered complete without it. It contains a fund of valuable information never before found in any work on this subject. We would heartily recommend it to all interested in, or in any way connected with the printing business.

The rest of our valuable exchanges we must wait to notice at a future time.

To our editorial friends who generously put the "Southern Workman" on their exchange list, we would say, The good you do is not confined to our office. It makes part of the sunshine of the Hampton School reading room, and radiates from there all over the South wherever Hampton students go.

With many thanks for the favors of the last twelve months, we hope to welcome you again with a glad New Year.

The Tradition of Bishop Hatto.

The summer and autumn had been so wet,
That in winter the corn was growing yet.
'Twas a piteous sight to see all around,
The grain lie rotting on the ground.

Every day the starving poor
Crowded around Bishop Hatto's door,
For he had plentiful last year's store;
And all the neighborhood could tell
His granaries were full and well.

At last Bishop Hatto appointed a day
To quiet the poor without delay;
He bade them to his great barn repair,
And they should have food for the winter there.

Rejoic'd at such tidings good to hear
The poor folk flock'd from far and near;
The great barn was full as it could hold
Of women and children young and old.

Then when his saw it could hold no more,
Bishop Hatto he made fast the door;
And while for mercy on Christ they call,
He set fire to the barn and burnt them all.

"I' faith 'tis an excellent bonfire!" quoth he,
"And the country is greatly obliged to me,
For ridding it in these times forlorn,
Of rats that only consume the corn."

So then to his palace returned he,
And he sat down to supper merrily,
And he slept that night like an innocent man,
But Bishop Hatto never slept again.

In the morning as he enter'd the hall
Where the picture hung against the wall,
A sweat like death all over him came,
For the rats had eaten it out of the frame.

As he looked there came a man from his farm,
He had a countenance white with alarm.
"My Lord, I open'd your granaries this morn.
And the rats had eaten all your corn."

Another came running presently,
And he was as pale as pale could be:
"Fly! my lord bishop, fly," quoth he,
"Ten thousand rats are coming this way;
The Lord forgive you for yesterday!"

"I'll go to my tower on the Rhine," replied he,
"Tis the safest place in Germany;
The walls are high and the shores are steep,
And the stream is strong and deep."

Bishop Hatto fearfully hasten'd away,
And he crossed the Rhine without delay,
And reached his tower and barr'd with care
All the windows, doors, and loop-holes them.

He laid him down and closed his eyes,
But soon a scream made him arise,
He started and saw two eyes of flame
On his pillow, from whence the screaming came.

He listen'd and look'd: it was only the cat:
But the bishop he grew more fearful for that,
For she sat screaming, mad with fear
At the army of rats that were drawing near.

For they have swam over the river so deep,
And they have climb'd the shores so steep,
And now by thousands up they creep
To the holes and windows in the wall.

Down on his knees the bishop fell,
And faster and faster his beads did he tell,
As louder and louder drawing near,
The saw of their teeth without he could hear.

And in at the windows, and in at the door,
And through the walls by thousands they pour
And down through the ceiling and up through the floor,
From the right and the left, from behind and before,
From within and without, from above and below;
And all at once to the bishop they go.

They have whetted their teeth against the stones,
And now they pick the bishop's bones;
They gnawed the flesh from every limb,
For they were sent to do judgement on him.

—*Southey.*

J. B. Smith, the Caterer.

Among the citizens of Boston who are distinguished both for their enterprise and their liberality is a colored man named Joshua B. Smith. He is the most skilful and the most popular caterer in Boston, and though deprived of the advantages of early education, has by energy and good management become wealthy. He is a great admirer of Charles Sumner, to whom he feels that all colored men owe a deep debt of gratitude, for the services he has rendered to their race,—and though a firm republican, and in favor of the reelection of Gen. Grant, he couldnot hear a word spoken against Senator Sumner, without a feeling of indignation.

At the last session of Congress, after Mr. Sumner had made a speech in favor of his bill securing equal rights to the colored man which he wished appended to the bill granting amnesty to all engaged in the rebellion, Senator Hamlin proposed that the Senate should sing "Old Hundred."

When Smith heard of this fling at the Senator whom he loved and honored, he sat down and wrote the following verses as appropriate words for Senator Hamlin to sing to the tune he had proposed. Aside from the honest sentiments they express, they are worthy of perusal from their literary merit as being the production of a self-educated man.

Praise God from whom all blessings flow,
Praise for his gifts to man below,
Praise for the man that stood alone,
And made the Freedman's cause his own.

Praise to the man who still alone,
Now makes the Freedman's cause his own;
His name shall sound from shore to shore,
Till time is swrung'd by man no more.

Praise Massachusetts for her sen,
Her work he always well, has done,
Sing Sumner's name from shore to shore,
Till White and Black are known no more.

Praise Sumner, Cooper, Butler, too,
They all are faithful, good, and true;
We'll sing their names from shore to shore,
Till Hamlin's name is heard no more.

Praise Sumner for his noble works;
His long and useful life he's given;
His words on earth are not in vain,
For God will crown him when in Heaven.

When Senator Sumner embarked a few months since for Europe in search of health, he found his room on board the steamer decorated with a profusion of the rarest flowers, the gift of Mr. Smith. And among the many warm friends and admirers who will welcome the distinguished Statesman on his return, will be found a no more devoted or unselfish adherent than Smith the Caterer.

Mr. Smith has a daughter who is a pupil of the New England Conservatory of Music, and is said to be a superior singer.

Children's Department.

Jerry's Thanksgiving Day.

Once there was a boy named Jerry who named his cat after himself. That makes two Jerrys doesn't it, and how are you going to tell them apart?

To tell the truth, they were very much alike in one thing at least. Both Jerrys were very fond of a good dinner: And so are some other boys and pussy cats that I know.

They lived in a place where everybody believes in keeping Thanksgiving Day; and Jerry thought that the way to keep it is to eat just as much as possible. His last Thanksgiving Day ought to have been the jolliest of all. Such a Thanksgiving dinner as that was to be sure! The fifteen pounder turkeys with their brown, shining coats stuffed out like an alderman's, and the fat chickens bursting their sides with trying to look just as big and juicy; cracking their jaws with smiles with envy! Such gorgeous mountains of rosy cranberry jam, and great rubies of currant jelly all glowing and quivering with the excitement of the occasion! Such golden heaps of sweet potatoes! Such apple sauce if you please, and oh, the dessert! —the royal procession of pies, headed by the three sovereigns, Pumpkin, Apple, and Mince, with their trains held up by fat little cranberry tarts all red in the face with their exertion! The Indian pudding brought in all puffing and bubbling and

whispering to itself, and dished out by Grandpa with the advice to everybody to take a very large piece and swallow it quick! Oh, wasn't that a Thanksgiving dinner!

If they hadn't cracked as many jokes as nuts, and found a great many philopenas besides, I almost think they would have made themselves sick; but no one ever gets sick on Thanksgiving Day that I ever heard of.

The big table was so full of the grownups that the children had a little table all to themselves, which was just the best of it.

There was two Jerry at the head of the table and one Jerry at the foot, and I don't know which ate the most. The Jerry at the foot sat up in a high chair on a red velvet cushion, with a new blue ribbon round his neck, and behaved very well, seldom putting his nose into his next neighbors' plates—only he would jump for joy with every bite they gave him, to eat it on the floor, stretchiog his neck over it in a very unrefined and pussyish style. When they came to the nuts, he had a full saucer of cream instead, which he lapped up, every drop, and licked the plate, but he didn't beg for more that time. He marched off, rolled himself up on the hearth rug, and went straight to sleep and snored.

After dinner, the children all went into the sitting-room and had a splendid play—ring-game, and parlor croquet, and twenty-questions, and guessing pictures, and puss in the corner; and nobody told them not to make so much noise.

But in the midst of the sport, Jerry's mother came in and said:

"Jerry, dear, I'm sorry to interrupt your play, even a little while, but Susan's sister has just come in and told me of a very poor woman down in Meadow Street who has no dinner at all for Thanksgiving Day, and hardly any fire to keep her little children warm; so I have made up a basket of things for her. Will you carry it?"

Jerry was standing on the back of the lounge, and the minute before he had looked like a little rosy statue of Fun; but now his curly head dropped down, and the corners of his mouth, too, and he said

"Can't Susan's sister do it?"

"She is eating dinner with Susan, dear. Why, I thought you would like to go so much. The children will excuse you for a little while. You can run home so fast you know, and be back in fifteen minutes."

"I—don't—want—to," said Jerry.

"Well, never mind, then, dear. I don't want to *make* anyone do a kind thing on Thanksgiving Day," said his mother, and shut the door.

The children went on with their play; but somehow Jerry didn't enjoy it as much as before, especially when his cousin Jessie looked out of the window a few minutes after, and exclaimed:

"I declare, if there isn't Grandpa himself taking that basket! Look here, Jerry Bowen, I think you were real mean. I don't think you're much of a Christian, anyway!"

"I don't care—I don't pretend to be," said Jerry, flushing.

"Well, anyhow, you come of Christian parents, and you might know better than that," said Jessie.

"Shut up!" said Jerry.

I don't know what would have happened next, if Uncle George hadn't come in and built it locked like snow, and, as they would all have to walk home, they must start right away.

Jessie began to look cross at this, but her mother hurried her into her cloak and hood so fast that she had no time to say anything but "Good bye, Aunty, I have had such a spleu—did time."

So the visitors were gone, and what should Jerry do next? His mother went back to the parlor with cousin Hattie who had brought her baby and was going to stay all night, and Jerry was left alone. He stood a few minutes by the fire, kicking many little feet, and queer little voices—"queak, queak, queak."

"Mice!" thought Jerry, "Jerry's missed it." But the little squeaky voices kept on at such a rate, and presently he thought he could hear words spoken. What could it be? Creeping softly on his hands and knees out of the hollow nest, he peeked over its edge, and there at the foot of the pile of hay on the other side from that he had climbed up, what do you suppose he saw?

Why, a family party of cunning little mice, keeping Thanksgiving Day all by themselves! They had dressed their baby in paper, that was plain, and a nice one it must have been, judging from the crumbs of cheese and plum-cake that lay about. Mrs. Mouse was improving the time in spinning cobwebs from a tinier bit of a spinning wheel than ever your great-grandmother saw, into threads that could be meant only to weave into the very finest of fairy cambric sheets. A dozen of her children were playing quietly around her. One had a jumping jack on a stick, in the shape of a grasshopper instead of a monkey. Two of them had harnessed a pet wasp and were driving it around with reins of split horsehairs, and a maiden-hair fernstalk whip. The rest were playing tag.

But Mr. Mouse was the funniest of all. There he sat with his spectacles on his nose, reading the newspaper to his wife. A real, teenty newspaper, my dear, and Jerry, looking over his shoulder, could see that it was named "The World and All." He had a waxed mouse-tache that gave

him a strong resemblance to Louis Napoleon. Jerry thought, and, being a little grewy, he was altogether a very distinguished looking character.

"There is nothing in the paper my dear —really nothing—let's see. Oats are abundant because the horses all have the epizootic and don't feel like eating.' 'The rats have deserted Chappaqua,'—that we knew some time ago. 'We surmise that they are about to invade the White House.' 'Tragic *opera* of *The Three Blind Mice* performed to-night at Mouse's Hall. 100th representation. See how it runs! 'Oh, here's something! You have a taste for literature! A Frenchman has been writing a book called 'Bread and Cheese and Kisses.' That must be good."

"Oh, what a sweet title," squeaked Mrs. Mouse, sentimentally.

"And here my dear, is a poem on the tradition of Bishop Hatto. You and I know the story, but so ought our children to, and I will read it by-and-by.

"It is a pity those two legged giants that make so much trouble in the world, could not all read it, for it tells of the punishment inflicted by our race on one of stronger, and then let it go just to tear after it again. On Thanksgiving Day too! *Twenty* of them—fangs I—Who ever heard of twenty cats chasing one mouse! They're worse than cats!—worse than cats!"

And all the mice squeaked together—"Yes, they are worse than cats—worse than cats!"

Jerry's cheeks grew hot, for he knew who one of those boys was.

"Yes," continued old Mr Mouse, "and they're mean to each other, too. When you asked Pink-ears this morning to take some plum-cake to our poor relations, the Church Mice, did he say, 'No, I don't want to?' Not a bit of it. If you could have heard a story I did this morning from a Mouse in the wall!"

"Well, now, dear," said Mrs. Mouse, gently, "you're getting excited. Perhaps these cruel boys do not know they are cruel. Perhaps, when they really grow up, some of them may be as good as one I learned about when I was devouring so many books in the library. His name was Luther, and he was the greatest man that ever lived, and one day when he was walking, a little hare chased by the hunters, ran up to him and fell at his feet, and he picked it up and tried to hide it in his gown till the dogs had gone by."

"That is pleasant to hear" indeed," said Mr. Mouse. "That should be given to the "World and All."

As for Jerry, he had been so much affected by the stories that the tears pricked into his eyes and almost made him sneeze.

But just then, two enormous eyes like lanterns shone in at a hole in the wall, and an enormous head followed them. Mrs. Mouse sprang up, shrieking. The little mice screamed. Mr. Mouse sat with the paper in his hand, almost paralyzed.

Jerry could not stand it. He sprang to his feet and shouted, "Get out, Jerry—you mean thing, after such a Thanksgiving dinner as you've had!"

Instantly as he spoke, every mouse vanished and Jerry too. He was standing up on the hay in the dim twilight, alone in the great barn.

Frightened and wondering, he crept down, and ran as fast as he could to the house. He met his mother at the door.

"Where have you been, Jerry?" I was looking for you," she said.

"Oh, mother," he cried, "I'm awful sorry I was so mean to-day, but I aint worse than a cat,' for I wouldn't have spoiled that mouse's Thanksgiving party for anything!"

"Why, Jerry, you don't know what you're saying. You must leave been asleep. Come in to the fire."

There, by the fire, lay Jerry, but he crept under the sofa when he saw his master.

"Mother," said Jerry, "how long has Jerry been in the house?"

"An hour at least," said his mother.

Jerry looked queer. "Come out here, Jerry," he called. "If you haven't done anything worse than to run away from me, you shn't be whipped."

That night after he was tucked up in bed, with Jerry purring at his feet, Jerry told his mother his story, and she said it was a very nice one and ought to be sent to "The World and All," and she gave Jerry this pretty Thanksgiving verse to learn:

"He prayeth best who loveth best
All things both great and small;
For the dear God who loveth us
He made and loveth all."

DIED at Johnstown, Northampton Co., Va., on the 25 of Nov., of dropsy of the heart, Abraham D. Giddings, of the Senior Class of the Hampton Normal School.

A CARD

TO THE SUBSCRIBERS FOR THE "SOUTHERN WORKMAN."

We have received some complaints from subscribers that they have not received their papers. In many cases, the fault is not with us, as papers that have been regularly mailed have sometimes failed to reach subscribers to whom they were addressed. But in other cases, through the absence or sickness of the persons who made up the lists, some papers have not been mailed. We are perfecting our lists however, and trust there will be no more room for complaint in the future. Subscribers who do not receive their papers regularly, will do us a favor by reporting the fact promptly.

End of Volume I.

Subscribers who began the year with us are invited to renew their subscriptions. The first year expires with this number. Agents are requested to send for circular with terms, &c. Extra inducements will be offered for new subscribers.

THE

Illustrated Christian Weekly,

FOR 1873.

will continue to merit the claim of its critics to be the "handsomest illustrated paper in the world." New portraits of eminent men, equal to those already given of Beecher, Spurgeon, Lowell Mason, and others, are in preparation. Religious work, at home and abroad, social and domestic life, scenery in this and other lands, events of the day, are among the topics which will be illustrated in the best manner by such artists as Darley, Herrick, Beard, Dixon, and others. Each number of the paper will contain seven or more finely executed engravings.

In the literary department, Dr. C. S. Robinson, whose oriental sketches have been an acceptable feature of the paper the present year, will furnish a new series, descriptive of life and customs in the East. On the conclusion of John S. C. Abbott's fascinating "History of William the Conqueror," other historical sketches from the same masterly pen will be forthcoming. S. Z. Todd will give us designs of medium-priced houses, and show how to build them cheaply. Contributions may also be expected from Rev. Drs. Theodore L. Cuyler, Howard Crosby, J. G. Craigbead, Cyrus Hamlin, J. E. Rankin, Profs. H. M. Baird and W. C. Wilkinson, Jacob Abbott, A. L. Noble, Mrs. E. L. Beers, Mrs. A. E. Barr, Mrs. M. E. Miller, Mrs. M. A. Denison, and other popular writers.

Twelve Pages Weekly.

Two dollars a year.

The cheapest Family Paper in the world.

Waiting.

Waiting, for thy mercy,
Waiting for thy grace,
Waiting for the Spirit
Shining from thy face.

Waiting, for thy mercy,
Waiting for thy love,
Waiting for thy hearing
Falling from above.

Waiting, at thine altar,
Waiting all the day,
Waiting for thy blessing,
Here I kneel and pray.

Waiting for thy coming,
Make not long delay;
Weak am I, and faint at heart,
Waiting here, I pray.

Waiting all the day,
And, waiting all the night,
Waiting in the darkness,
And waiting in the light.

Waiting, still I'm waiting,
Kneeling at thy feet,
Lord, in mercy grant me
Consolation sweet.

Waiting, yet believing,
Those will not deny
What my soul in anguish
Seeks with longing cry.

Now these earnest moments
I hear thy gentle tread,
And feel thy hand in blessing
Placed upon my head.

I've waited long in sadness,
Now there's naught but joy;
This is sweetest rapture,
Bliss without alloy.

Life hath naught of sorrow,
Death hath naught of pain;
If only thy dear presence
Through it all I gain.

ELLA DENNIS.

Political and Religious Zeal.

Zeal in politics has been fervent enough. When the Presidential election was pending, what warm talk; what animated discussion; how heated and fiery the effusions of the party press. What running and driving hither and thither to caucuses and conventions and mass meetings. Think, too, of the brilliant fire-works, the splendid illuminations, the grand torch-light processions, the rousing music and songs and speeches, and the countless multitude of devices to kindle and fan the flame of party zeal. And, when the tug of strife came, what a mighty rallying at the polls.

Now, if there is so much zeal in politics, throwing society into one great sea of commotion, and stirring it from its very depths, what should be our zeal in things which pertain more directly to Christ and to heaven. Surely if our zeal is to be proportioned to the importance of the object, we should, above all be in earnest as Christians. Nothing can be more inconsistent than for us to be all fire in politics, and nothing but ice in religion.

"Push things," "Push things," was the significant, oft-repeated rallying cry of politicians. They did not want dull, sleepy men to carry a political end. They wanted men alive and astir; and they had them—men intent, wide awake, all aglow.

"Push things," politicians reiterated. For it is a common error to suppose that a good cause will prevail, merely because, on account of its intrinsic merits, it ought to prevail. But whatever those merits, failure will result from the neglect of appropriate effort. We carry an important political end, not without hard work, but by means of that work. Hence the immense amount of time and labor and money spent in the late Presidential campaign. Hence the cry was, Let there be no laggards, let every one be stir himself; read, talk, circulate papers, quit the doubtful, wake up the indifferent, work and keep working till the sun of election day is set. All up and down the lines, the drums beat and the bugles sounded, "Forward, forward to victory.

Since, then, the triumph of the gospel is of more importance than the triumph of a mere political party; since the reign of Christ in the hearts and lives of men is of more consequence than the reign of any political ruler, it becomes us as friends of Christ and his cause, to invoke and reiterate the cry in the highest and noblest sense, "Push things," work and keep working for the blessed Master, with all your might; so that, while men so thrill and throb with zeal in politics, zeal for that infinitely the greatest consequence, the zeal of our Great Exemplar for God's house, for the honor and interests of His kingdom, may engage the whole heart and soul.

The Horse Distemper.

This distemper has spread with startling rapidity over the land, cutting down hundreds of horses, and temporarily disabling thousands and tens of thousands more. It has smitten us unexpectedly, smitten us in a thousand homes when, a few weeks ago, no man ever thought or dreamed of—occasioning great temporary perplexity and embarrassment, and damaging to an incalculable extent, various kinds of trade and of travel.

We see thus impressively reminded of our dependence upon a Higher Power; that God can touch the atmosphere, or some other of the unnumbered elements on which our health and life, and the health and life of animals depend, and so confound all our calculations; defeating, as in the twinkling of an eye, the counsels of the great, and the schemes of the wise.

Yet, we rejoice in the belief that this event of Providence is for some good end. That end may be, in part, for the benefit of the horses, to lead us to treat those dumb animals, on which we are so dependent for our business and our pleasure, with the kindness which they deserve. Since, where horses are well cared for, the disease is comparatively light, and brief in duration, truly gratifying is the evidence that the disease has generally brought out the humanity of owners and drivers, in strong and beautiful relief, leading them to be as gentle with a horse as a nurse with a sick child.

The President's Policy.

The following letter will set at rest, in a very satisfactory manner, some rumors of a proposed alteration in the present policy of the Government:

EXECUTIVE MANSION, Washington, D. C., October 18, 1871.

GEORGE H. STUART, Esq.,

Dear Sir: Your favor of the 24th instant, saying that a change in the Indian policy of the Administration is reported to be contemplated, is just received. Such a thing had not been thought of. If the present policy toward the Indian can be improved in any way, I will always be ready to receive suggestions on the subject. But, if any change is made, it must be on the side of the civilization and Christianization of the Indian. I do not believe our Creator ever placed different races of men on this earth with the view of having the stronger exert all his energies in exterminating the weaker. If any change takes place in the Indian policy of the Government while I hold my present office, it will be on the humanitarian side of the question. Very truly, yours,

U. S. GRANT.

Gems.

Faith is the ladder on which the believer is constantly mounting to ascend into the heavenly Canaan, from thence to bring down clusters of delicious grapes, to refresh him in his wilderness journey.

The tree of life, said the holy Hyperichus, grows in heaven; and humility is the grace that climbs and touches the top of it.

Speak kindly in the morning, it lightens the cares of the day, and makes household and all other affairs move along more smoothly. Speak kindly at night, for it may be that before the dawn some loved one may finish his or her space of life for this world, and it will be too late to ask forgiveness.

But always there is seed being sown silently and unseen, and every where there some sweet flowers without our foresight or labor. We reap what we sow, but nature has love over and above that justice, and gives us shadow and blossom and fruit that spring from no planting of ours.

God's aim in afflicting his children is either to keep them from sin, or when they have sinned to bring them to repentance for it.

The love of one's friends is common to all religions; the love of one's enemies is characteristic of Christians.

The more we help others to bear their burdens the lighter our own will be.

The least set of self-renunciation hallows for the moment all within its sphere.—*Margaret Fuller.*

THE BLESSEDNESS OF RELIGION.—If I could choose what of all things would be at the same time the most delightful and useful to me, I should prefer a *firm religious belief* to every other blessing; for this makes life a discipline of goodness; creates new hopes when all earthly ones vanish; throws over the decay of existence the most gorgeous of all lights; awakens life even in death; makes even torture and shame the ladder of ascent to paradise; and far above all combinations of earthly hopes, calls up the most delightful visions of the future, the security of everlasting joys, where the sensualist and the sceptic view only gloom, decay, annihilation, and despair.—Sir H. DAVY.

FAMILY WORSHIP.—Its effects will greatly depend on the sincerity of the head of the family, and on his mode of conducting the worship of his household. Let the exercise be short, plain, tender, and heavenly.

"FOR THIS VERY PURPOSE CHRIST DIED."—Neither forgiveness of sin nor deliverance from punishment is the great and ultimate blessing which God intends for man in the work of Christ. In fact, the forgiveness of sin is only a preparatory step, as it were, to the great blessing, which consists in becoming "the habitations of God through the Spirit"—in being "turned away every one of us from our iniquities"—in being "holy and without blame before God in love"—in "having eternal life."—*T. Erskine.*

Temperance.

Death and the Glass.

"I am hungry," said the Grave, "give me food."

Death answered:

"I will send forth a minister of awful destruction, and you shall be satisfied."

"What minister will you send?"

"I will send Alcohol. He shall go in the guise of food and medicine, pleasure and hospitality. The people shall drink and die."

And the Grave answered:

"I am content."

And now the church bells began to toll, and the mournful procession to advance.

"Who are they bringing now?" said the Grave.

"Ah," said Death, "they are bringing a household. The drunken father aimed a blow at his wife. He killed the mother and her child together, and then dashed out his own life."

"And who," said the Grave, "comes next, followed by a train of weeping children?"

"This is a broken-hearted woman, who has long pined away in want, while her husband has wasted his substance at the tavern. And he, too, is borne behind, killed by the hand of violence."

"And who next?"

"A young man of generous impulse, who, step by step, became dissipated, and squandered his all. My agent turned him out to be frozen in the street."

"Hush!" said the Grave, "none but myself upon this hill must be silenced."

"Yes, it is the widow's cry. It is the only son of his mother. He spurned her love, reviled her warning, and a bloated corpse he comes to thee. And thus they come—farther than the eye can reach, the procession crowds to thy abodes. And still lured by the enchanting cup which I have mingled, the sons of men crowd the paths of dissipation. Vainly they dream of escape, but I shut behind them the invisible door of destiny. They know it not, and with song, and dance, and riot, they hasten to thee, O Grave!

Then I throw my fatal spell upon the new throng of youth, and soon they, too, will be with thee."

The Serpent of Appetite.

It is an old Eastern fable that a certain king once suffered the evil one to kiss him on either shoulder. Immediately there sprang therefrom two serpents, who, furious with hunger, attacked the man, and strove to eat into his brain. The now terrified king strove to tear them away and cast them from him, when he found, to his horror, that they had become a part of himself.

Just so it is with every one who becomes a slave to his appetite. He may yield in what seems a very little thing at first; even when he finds himself attacked by the serpent that lurks in the glass, he may fancy he can cast him off. But, alas! he finds the thirst for strong drink has become a part of himself. It would be almost as easy to cut off his right hand. The poor poet Burns said that if a barrel of rum was placed in one corner of the room and a loaded cannon in another, pointing toward him, ready to be fired if he approached the barrel, he had no choice but to go for the rum.

The person who first tempts you to take a glass may appear very friendly. It was but a dart that Satan aimed at the fated king. He only gave him a kiss. But the serpent that sprang from it was just as deadly for all that.

Oh be careful of letting this serpent of appetite get possession of you, for it will be a miracle of grace, indeed, if you are ever able again to shake him off.

Guard against every sin, dear children, however small; let it not gain a hold upon you. Pray to be kept from temptation in every form, and think not that in your own strength you can fight battle against it.—*Youth's Temperance Banner.*

Anecdote of Admiral Farragut.

When Admiral Farragut was ten years of age, his father, then an officer of rank in the United States Navy, end high in the estimation of the government, said in his son's hearing that when he (the boy) was old enough to make a compact and keep it, he had a bargain to offer him. The son rose up and asked his father to state the terms of the contract.

The Admiral said: "The proposal that I intend to make is: If you will not smoke nor chew tobacco, drink intoxicating drinks nor strong wines, till you are 21 years of age I will then give you $1000." "I am old enough to make that bargain now," said young Farragut, "I will accept the offer." The bargain was closed. And on the attainment of young Farragut's majority, the cash was handed over.

Trifles.

An old farmer said to his sons: "Boys, don't you ever wait for some to turn up. You might as well go and sit down on a stone in the middle of a meddler, with a pail atwixt your legs, and wait for a cow to back up to you to be milked."

THE DIFFERENCE.—Bad luck is frequently a man with his hands in his breeches pockets and a pipe in his mouth, looking to see how it will turn up. Good luck is a man of pluck to meet difficulties, his sleeves rolled up, working to make it turn up.

Mind what you run after! Never be content with a bubble that will burst, or a fire-work that will end in smoke and darkness. Get that which you can keep, and which is worth keeping—

Something sterling, that will stay
When gold and silver fly away.

Editing a newspaper is very much like raking a fire—every one thinks he can perform the operation better than the man who has hold of the poker.

A prodigal writes from Omaha "I have to have my only shirt washed by the dozen, for it is in as many pieces, and the smallest hole is the one I put my head through."

The medicine-chest of one of the abandoned Arctic whalers was broken open by some of the natives, who, thinking they had found a prize, proceeded to swallow the contents of all the bottles. The survivors describe the result as startling, for the doses were too large for the constitution of even an Esquimaux. Several of the partakers died, and others wanted to, but couldn't.

LET US HAVE PEACE.—Mark Twain has been troubled with a lightning-rod man, and to get rid of him addressed him as follows:

Let us have peace, I shrieked. Put up a hundred and fifty. Put some on the kitchen; put a dozen on the barn; put a couple on the cow; scatter them all over the persecuted place till it looks like a zinc plated, spiral-twisted, silver-mounted cane-brake! Move! Use up all the material you can get your hands on, and when you have run out of lightning-rods, put ram-rods, cam-rods, stair-rods, pistou-rods—anything that will pander to your dismal appetite for artificial scenery and bring respite to my raging brain, and healing to my lacerated soul!

TAKE NOTICE,

NORTHERN EMPLOYERS AND

Southern Workers.

Advertisements from colored people wishing situations at the North, will be inserted in the "Southern Workman" free of charge, if accompanied by references from responsible persons.

Advertisements from Northern employers for colored servants will be received at our usual charge of ten cents a line.

Until further notice, parties North and South wishing to communicate further with each other on this subject may do so by letter to the "Southern Workman."

INFORMATION WANTED!

Mr. Jordan Williams, of Norfolk, Va., desires to obtain information of the present boy, SILAS WILLIAMS, who very unfortunately left home one year ago last June, and has not been heard from since that time. He was thirteen years of age last May. Said boy is about three feet four feet in height; is very active boy; rather timid in conversation, holding his head down while conversing with anybody. His father and mother are very anxious to know as to his whereabouts. It was reported that he was in Petersburg, but no certainty as to the above statement can be ascertained.

Any information as to the above will be thankfully received if addressed to

JORDAN WILLIAMS,
Norfolk, Va.,
Care of M. L'HOMMEDIEU.

INFORMATION WANTED!

Information is wanted as to the whereabouts of a lad supposed to be lost. He strayed from his home in April, 1871, being then about 16 years of age. His name is SAMUEL DAVIS. His master's name was Lawrence Godwin. Any news will be gladly received by his uncle, if addressed to,

GEORGE GODWIN,
Norfolk, Va.,
Care of M. L'HOMMEDIEU.

LAND FOR SALE
On the Peninsula.

I have for sale 200 acres of land between Williamsburg and Fort Magruder. This section of the Country is fully and favorably known as "Within a country that may boast of the finest climate over the most pleasant places, the most fertile corn and pleasant navigable rivers, streams and earth forever exempt from cyclone. I have a place for man's habitation, securely and naturally fortified by profuse, living springs. There are mountainless, hills, plateaus, valleys, rivers, and streams, all running more pleasantly into a table bay, compassed but for the mouth with fruitful and delightsome land.—CAPTAIN JOHN SMITH.

WILLIAM S. HOWARD,
Hampton, Va.

THE FREEDMAN'S SAVINGS & TRUST COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,000,000, being an increase of *fifty per cent.* on the balance due depositors at the close of the preceal year.

There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent., and the amount paid since March, 1871, has been $20,000.47. The past history of the Company is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report 40,000 one depositors.

The Bank pays six per cent. interest

on savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.

Special arrangements made for receiving business accounts payable by check, bearing 3 per cent. interest.

Certificates of deposits issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED,

at request of depositors, from Branches where kept to any other Branch, without risk or trouble, and *without loss of interest.*

For full information about the Bank address the *Actuary* at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, J. W. Alvord, Esq., or D. L. Eaton.

Christmas Hymn.

Calm on the listening ear of night
Come Heaven's melodious strains,
Where wild Judea stretches far
Her silver-mantled plains!

Celestial choirs, from courts above,
Shed sacred glories there;
And angels, with their sparkling lyres,
Make music on the air.

The answering hills of Palestine
Send back the glad reply;
Most great, from all their glory heights,
The day spring from on high.

On the blue depths of Galilee
There comes a holier calm,
And Sharon waves in solemn praise,
Her silent groves of palm.

"Glory to God!" the sounding skies
Loud with their anthems ring;—
Peace to the earth,—good will to men,
From Heaven's Eternal King!

Light on thy hills, Jerusalem!
The Savior now is born!
And bright on Bethlehem's joyous plains
Breaks the first Christmas morn.

E. H. SEARS.

Original.

Christmas.

Christmas, the festival which has just passed, is kept by all Christian people as the anniversary of the Saviour's birth. It is supposed to have been instituted by Pope Telesphorus, who died A.D. 138, end in the 4th century, the theologians of the East and the West, agreed upon the 25th of December as being probably the day of Christ's nativity. Since that time it has been celebrated both as a holy commemoration and a joyful holiday, and is the chief festival of the Christian year. During the middle ages it was kept with revelry and dancing, and the singing of Christmas carols in memory of the song of the shepherds, dates from a very early time. It has always been held to be a day upon which all good people should make merry, keeping always in their hearts, faithful remembrance of the deep meaning of their joy, and the Christmas customs of different nations at the present day are an interesting study.

In Protestant Germany and the North of Europe, Christmas is thought to be especially the children's day, and no house, however poor, is without its tree or branch of green yew, lighted with colored tapers, and hung with gifts, sweet meats, nuts, apples and ornaments. It is the Christ child, the children believe, who brings them their pretty presents, and often a little image of the angel who has brought the good things, is placed on the topmost spray of the shining tree, whence he looks down in blessing upon the crowd of happy little faces gathered about him.

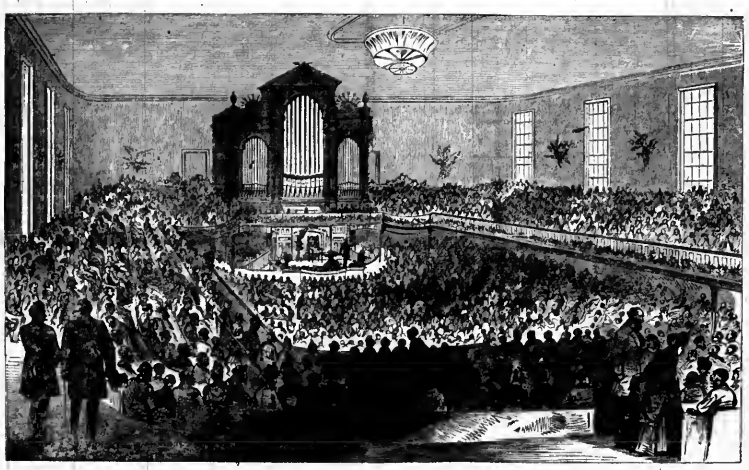
In England again, the holiday season lasts for days, and there is great feasting and rejoicing. The tables bend under their load of roast beef and plum pudding, and the larder shelves are ranged full with big mince pies, game pastries, and rich delicties, waiting for the appetites which have been sharpened by the snowy walk to church, and the merry exchange of Christmas gifts and greetings. Houses and churches, schools and shops, are alike dressed with holly, ivy, laurel, rosemary and mistletoe, and beautiful, indeed, is the greenery which decorates the altars and hearths of this Christian land.

The poor are fed, the sick and suffering remembered, and there are few asylums or prisons, or hospitals, where a Christmas dinner is not provided for those to whom Christ's name is too often only a sound.

Many and curious are the superstitions connected with this season, and some of them are not altogether unknown in our own country. For example, the belief that the cattle in their stalls kneel at midnight on Christmas Eve, in memory of the holy birth in Bethlehem, where an ox and an ass that were in the stable, bent their knees in adoration of the newly-born Saviour.

In America, Christmas is now very generally kept, both after the English and German fashion. We have our gaily dressed trees, our evergreen-trimmed churches and houses, our merry makings, and our well-filled tables. We, too, remember the poor and the afflicted, and give good gifts to each other in the name of Christ our Lord. We brighten the hearts of our little children with song and story, and fill their chubby hands with the toys and the sugar plums that are dear to them, while we ourselves are touched with the spirit of the day, and for a little while, perhaps, go back to the innocence and enjoyment of our own childhood.

Good and fitting are these customs, and they help to make our Christmas Days shine like stars in the long chain of dark and toilsome years. But no Christmas Day can be truly kept, except in direct remembrence of Him whose birthday it is, and who has taught us that it is no time for selfish pleasure only, but rather the day of all others when we should love our neighbor as ourselves, and should write in evergreen letters on the walls of our happy homes, the heavenly greeting, "Peace on Earth; Good Will to Men."



PLYMOUTH CHURCH, BROOKLYN.

Plymouth Church, Brooklyn.

Our illustration this month will give our readers a glimpse into the interior of one of the largest of the Northern churches, and one, probably, of the most famous. It is Plymouth Church, Brooklyn, N. Y., and the pastor, to whom the church owes all its prosperity and rapid increase, is the Rev. Henry Ward Beecher, a man whose name is known in all countries where the English language is spoken.

He is a brother of Mrs. Harriet Beecher Stowe, who wrote "Uncle Tom's Cabin," and who, through her whole life, has shown herself to be a true and warm friend of the colored race. Mr. Beecher himself has not been behind his sister in the interest he has exhibited in the advancement of all down-trodden people, and indeed has never kept his hand back from any good work. His congregation averages about thirty-five hundred, and varies little from one Sunday to another, in fact, the church is always filled to overflowing, and often hundreds are turned away from its doors. At a certain hour, a few moments before the service begins, the crowd is allowed to enter and fill all unoccupied seats, then the aisles are filled up with movable benches, and as many as possible are seated upon them, while every inch of standing room, and even the pulpit stairs are taken by eager listeners. Mr. Beecher is of average stature, and though somewhat past middle age, is almost boyish in his appearance, being quick and active, with all his movements full of the energy which characterizes him. His power over an audience is as great as that of any living speaker, his style being simple, and remarkable for force and strong common sense, while in his personal relations with his people, his influence is almost unbounded. The singing in his church is always congregational, and the immense volume of sound produced from such a body of voices, gives a very grand and striking effect. Few services are held at which the pulpit is not decorated with flowers, and even in the depth of winter, the greenhouses of the wealthier members of the congregation, furnish costly baskets and bouquets of delicate blossoms, which fill the air with their rich, summer-like fragrance, and brighten the whole church with their beauty.

In connection with the audience room, there are also in the church building, large parlors where prayer meetings are held, and the Sunday School meets, and these pleasant rooms etc. are often used for social gatherings while at special seasons and for special purposes, entertainments are given, tableaux, magic lanterns and music, affording amusement both to young and old. Mr. Beecher believes that Christianity should make its followers happy even in this world, and his faith in the power of bright faces, pleasant words, and kind deeds, is very great. His creed is very practical, and he feels and teaches that if our religion does not show itself in our daily lives, it will not show itself anywhere. His great success continues unabated, because he is always in earnest, and the crowds of people whom we see in the picture before us, never lessen, because they are sure that the man to whom they have come to listen, has something true and wise to say to them.

Short Words.

None of the speakers and writers who have used the English language with power have ever allowed themselves to be run away with by *big words*. A clear and simple style in talking and writing is always an admirable thing, and short words hit the mark much oftener than long ones. When the meaning can be expressed in words of one or two syllables, it is more easily received and carries more force with it; therefore, when there is a choice between a long word and a short word, take the short one.

Martin Luther.

Martin Luther, the leader of the great Protestant Reformation, was born in 1483, at Eisleben, a little German town, where his parents were living in extreme poverty. He obtained his education by his own exertions, singing from door to door, in the city where he went to school, and earning in this and other similar ways, the small sums upon which he lived. It was at the University of Erfurt that he first found a complete copy of the Bible, the book which is now in all our homes, being then withheld carefully from the people, who heard its message only from the lips of priests, in whose mouths its meaning was perverted and destroyed. Luther, becoming himself a priest, was soon convinced of the immorality and corruption of the Roman Catholic Church, and brought all his energy and honesty to bear upon its purification. He attacked the wicked lives of the Pope and his priesthood, and soon exposed the falsity of the Romanist doctrines of confession, absolution, infallibility, etc. Numerous and powerful were the enemies he made for himself, but he kept on his way determined, for he was strong in faith, and fearless in action, and imprisonment, or threats of torture and death had little power over him. When he was commanded to appear for examination before the Pope's ambassadors, his friends tried to dissuade him from obeying the command. His answer is famous in all history, he said to his frightened advisers, "Were there as many devils waiting for me as there are tiles on the house tops, still would I go," and those words struck the key note of his whole life. He established the Protestant Church in Germany, and lived to see the fruit of his labors ripen in other lands. After passing through poverty, persecution and danger, his mission was fulfilled, and he died in the little town where he was born, in 1546, being just 63 years old. His illness was only of a few hours, and his last words were, "Father, into thy hands I commit my spirit, thou hast redeemed me, thou faithful God."

Rome.

This famous city, which for centuries stood almost alone in its magnificence and power, is to-day scarcely more than a wilderness of pagan temples and palaces, among and upon whose ruins have risen hundreds of the most beautiful churches and modern palaces to be found in the world. The former are the outgrowth of the Roman Catholic faith, Rome having been always the stronghold of the Pope and his followers, and in many cases a temple originally dedicated to some heathen god, has been converted to the uses of Christianity. The Mausoleums, amphitheatres, baths and palaces of the old Romans, show a grandeur not to be rivalled by the modern buildings which stand beside them, but the treasures of art which these latter contain assist in making Rome the most attractive and instructive city upon the Eastern Continent. Even now, when its glory is departed, and its power is a thing of the past, it remains great by virtue of its history and associations, and is full of interest for all intelligent people.

Temperance Brotherhoods.

Society could not exist unless men were willing to give up a portion of their liberty. Every man is therefore compelled by law to abstain from injuring others. But to the good citizen there is a higher duty than merely obeying law. Positive good is morally enjoined, and evil-doers are to be reclaimed if possible. But every man is daily influencing those around him more powerfully by his example than by his precepts. To make this influence a beneficent one, requires self-denial—a surrender of mere liberty than the laws call for.

It is precisely in this regard that temperance societies are worthy of the highest honor. A body of men voluntarily denying themselves for the sake of their example upon others, is honorable to humanity. Not thinking themselves in danger they feel that their brethren are. Confident in their own powers of self restraint, they are yet willing to sacrifice their appetite for the good of the community. Do not such men deserve applause?

The Slandered Living and Honored Dead.

Most melancholy is the extent to which the practice of abusing political opponents has been carried by some partisan speakers and editors. But what justice, what reason, or rather what sin and folly, in so lashing with the tongue and pen those who will not bow to the Cæsar of our party, being guilty only of thinking and acting for themselves in politics. Oh, the unfairness, the gross dishonesty of lavishing praises on political favorites, "washing them white they are white and whitewashing them where the natural color is black;" but at the same time maligning every political opponent, as though nothing less than a demon incarnate. You all know the crying evil to which reference is made, that the mere nomination, by any party, of a candidate for office, no matter how excellent his qualifications and his character, is the signal for every other party to draw out their tongue as a sword, and open all their batteries against him, there being nothing too sacred for the most scurrilous assault.

But the object of the multiplied strokes of calumny and abuse is laid in the dust. How changed the scene! It is like a clear, soft morning after a dark, tempestuous night; like the mild breath of spring, after rude winter's stormy blasts. Those who had so derided and reproached the man, become emulous to do him honor. Now, the only strife seems to be who can do the most to strew flowers on his grave.

Who, for example, was more denounced and calumniated, more unmercifully assailed, than Horace Greeley living? But the moment of his departure hence, the pencil of caricature is dropped; the pen of abuse is laid aside; the tongue of slander is hushed; Democrats and Republicans grasp hands in fraternal affection around his coffin and over his grave; one of the bitterest of his political antagonists closing his kind editorial with the words, "We will remember only his virtues and his genius." The very men who had been the most severe in their censures, become most eloquent in their praises; glorifying to-day, as a noble patriot, him whom but yesterday they were branding as the vilest traitor.

Now what consistency is there in condemning a man all his life, and then striving to the utmost to eulogize him after his death; thus, as it were, garnishing the sepulchre of him whom, by the most cutting sarcasms and lacerating invectives, they had flayed alive. What! can we deal impartially with a public man only when he becomes cold in death? Cannot we divest ourselves of cruel prejudices against him, until he is covered beneath the sod! Then in this aspect of the case, his death is a joyful event; putting a period, as it does, to the invidious flings and foul aspersions of partisan opponents, and ushering in the reign of justice and of truth.

While therefore experiencing the softening, mellowing influence of a Presidential candidate deceased, may we be led to treat with due generosity and candor the living magistrate, remembering that the abuse which so grates on the nerves, "tremblingly alive all o'er to each fine impulse," affects them not when toriel in the grave; and hence, that if it is sacrilege to mangle the cold, unfeeling corpse, it is worse than sacrilege to harrow up, with the teeth of malice, the living, keenly sensitive soul. Let us then cease to wage against our public men a harassing and merciless warfare, before they cease to feel; deal with them justly, ere they pass beyond the reach of our praise and our blame. It is honorable to bury the animosities against them in their graves. But would it not be more honorable to give them the respect which is their due in the land of the living?

Newspapers.

To cultivate a taste for reading in the young in to ensure to them an abundant and never-failing source of enjoyment so long as they live, and if they are carefully trained by those who have charge of their education in this particular, so that they are able to make judicious selections for themselves, the general literature of the day will form an inexhaustible means of instruction to them. For this reason alone every family should see, and if possible take, one or two good papers and magazines, chosen with a view to their usefulness, as well as the amusement they afford, and many a winter evening may be spent in reading which would otherwise be wasted, or passed in sleep. No one can expect to keep up with the world in these days, who does not read the papers, and the cost of subscription is little in comparison with the solid advantages to be derived from the information and pleasure which a good journal affords. It would be a wise thing, in most cases, for the heads of families to sacrifice some luxury, or even some comfort, for the sake of a good newspaper, and when the expense is felt to be too great, it may easily be divided by several families subscribing and reading in common. It is not merely the good directly obtained which is to be considered, but the fact that a taste for reading grows with cultivation, and lays the foundation for the pleasure of a lifetime.

THE
Southern Workman,
ISSUED MONTHLY.

R. C. ARMSTRONG, RICHARD TOLMAN, } *Editors.*
J. F. B. MARSHALL, *Business Manager.*

TERMS: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.
To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.
For further information, address
J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, JANUARY, 1873.

One year ago this month the "Southern Workman" offered its first greeting to the unknown friends upon whose welcome and codperation it was to depend for its success. Since that time twelve numbers have been issued, and the journal has won for itself the interest of eleven hundred subscribers, while its total circulation has run up to fifteen hundred, a record which is satisfactory for the past and encouraging for the future. To those numbers it has offered to the public twenty-four illustrations of the same class as those published in the best Northern papers, and in connection with them, descriptive sketches and poems, while selections from standard authors and periodicals have opened a wide field of instruction and interest.

The news department has been carefully made up, the agricultural and household items prepared directly with a view to the requirements of subscribers, and the general arrangement of the paper entrusted only to competent hands. No word or allusion has knowingly been permitted in its columns which was at variance with the principles upon which the journal claims to be founded, and the constant endeavor of the editors has been to fulfil as completely as possible the promises contained in the opening editorial of January, 1872. As to the success of that endeavor our friends and subscribers are able to judge for themselves, and the numerous testimonials which we receive of their interest and approval, lead us to believe that they will lend ready ears to the inducements which, as representatives of the "Southern Workman," we are also able to offer them for the coming year of 1873.

The illustrations we intend to continue upon the same scale as heretofore, and the general character of the paper will, we believe, be found rather to improve than to deteriorate with age, while in certain particulars we shall aspire to special usefulness. The opportunity which we offer in our columns for communication between Northern employers and colored people in search of work, will, we trust, be of practical assistance to our subscribers and their friends. We have also offered to answer, so far as in our power, any questions which may be asked by correspondents desiring information, and believe in this way our Agricultural and Household departments may become of real value to farmers and housekeepers. In the former department we have the great advantage of benefiting directly by the experience of the Manager of the Hampton School Farm, being permitted to present to our readers the results of his remarkably successful work.

Our intimate connection with the Hampton Normal School and its graduates, will enable us to obtain and receive accurate information as to the educational condition of the South, and the large circle of friends who favor us with occasional correspondence will do much to make us acquainted with the life of other countries, and arouse us to a more general interest in the great work of civilization. Last, but surely not least, we have no intention of forgetting the children, and our third page will contain such poems and stories and pictures, as are a welcome to little eyes and ears all the world over.

As editors of the "Southern Workman," but still more as friends of the working classes of the South, do we desire to see growing up among them a spirit of intelligent energy which, under the control of Christianity, shall, in due time, change the face of our whole country, and make us a new and great people. Once more, then, we claim this desire as the foundation of our undertaking, and once more we beg for the hearty aid of the working men and women for whom we labor. At this beautiful Christmas season we hope that many a hand will be opened to speed us on our way, and with hearts grateful for the past and hopeful for the coming year, we once more wish our readers, young and old, "A Merry Christmas and a Happy New Year."

Acknowledgments.

We beg to acknowledge the receipt of six valuable plates from Harper Brothers, N. Y., and as many from "The Christian Weekly," N. Y., which will provide us with first class illustrations for some months to come, and illustrate our present number.

Our Circulation.

It may be of interest to many of our readers to know how near we have come to attaining the object aimed at in publishing the "Southern Workman." We would state that nearly three fourths of each edition goes into the hands of the Industrial class of the Southern states.

To Northern Employers and Southern Workers.

We would call particular attention to the announcement in another column, of our purpose to establish a convenient medium of communication between northern employers and southern workers.

There is a great and growing demand for such a medium, and one which has never yet been met. At the North the housekeeping question becomes more serious every year. The factories take more and more of the young people who have formerly gone out to service, and their places cannot be even poorly supplied from the emigrants thronging weekly to our shores. These either gravitate to the large cities, or take Mr. Greeley's advice and go West.

The South, on the other hand, is filled with half-paid, suffering freedmen, anxious for work.

How to bring these two classes together is the question. The freedman is often unable to pay his way North. The northern employer would gladly pay it for him, if there were a guarantee of honesty, and a reasonable hope of satisfaction.

It will take time to mature any system fully meeting these demands. It is our purpose to do so as fast as possible. Among the many applicants for admission to the Normal School from whom we must select those most fitted to be educated as teachers, we can often heartily recommend persons for situations in the North as faithful and competent workers, and we can assure northern employers that all advertisements from colored people in the "Southern Workman," will be accompanied by good references.

To colored people, we say—In all cases send with your advertisement a recommendation from some responsible person—your minister, and if possible one of our agents, an officer of the Freedman's Bank, or a teacher of the American Missionary Association or other benevolent society.

North Carolina Notes.

The colored members of the Legislature voted the other day for A. S. Merrimon, a man who is called a Democrat, for United States Senator. [We are told that they arose in their seats one by one, as their names were called, and explained their reasons for so voting. Never before, in North Carolina, we say, in the political history of the race, has a respectable body of colored men been known to vote for a candidate not called Republican. Some of the local papers speak of the speeches of those men on that occasion, in high terms of praise. The country will honor them for that vote. It is true Mr. Merrimon was not their first choice, but they showed good sense and some courage in voting for him at last. And after all, what's in a name? The Hon. A. S. Merrimon is a scholarly gentleman, and his record is good. His vote in the Senate of the United States will be on the right side, in favor of education, of honest government, and of all things that the South needs.

In this connection we are reminded of a speech Mr. Merrimon made in the Capitol at Raleigh, one evening last October, during the session of the State Fair. He was talking about the difference between the North and the South in common things. Said he, "I can go into any store in Raleigh, and tell where all the boxes that hold the goods came from by the way that they are made. Suppose I wish to buy a barrel of apples. I consider those grown in North Carolina fully as good as any brought from the North. But when I come to look at our native apples in the market, I find they have been put up in barrels that have had in them salt or Indian meal, and so very much against my will, I buy the Northern apple, and pay a double price for them. Now, the reason for all this is that our people are not educated right. We cannot hope to compete with Northerners until we have as good schools as they have."

Certain individuals have been talking for a long time about starting an Industrial school for colored youth at Rocky Point, in New Hanover County. Dr. B. S. Satchwell has recently given twenty-two acres of good land, in a favorable location, about a mile from the railroad station, as a site for such a school. The region is healthy, and as it is but fifteen miles from Wilmington, it would be in a very favorable place for such an enterprise. Leading lumber dealers in Wilmington have promised to furnish enough lumber, free of charge, to finish the school house now building. Mr. James Danforth, late of New Hampshire, is superintending the work. The idea is to establish such an institution as can be duplicated in every county in the South, a result which, if successful education can be gained; also, a knowledge of farming and mechanical trades. Some of the first citizens of Wilmington show deep interest in the matter. One of them said lately, "If we don't take pains to start schools to teach mechanical trades, in a few years we shall have no colored mechanics."

Six colored men at Rocky Point, John Moseley, Thomas Hill, Robert Marsh, Stephen Smith, Arthur Sampson, and Frank Williams, have bought a plantation of one thousand acres, for ten thousand dollars. They paid $500 down, and were allowed six years to pay the balance, the interest to be seven per cent. There are about three hundred acres of cleared land under cultivation. The rest will remain undivided till the whole is paid for, when each one will have an equal share. These men have a great undertaking on their hands. We wish them success.

Election day, we were somewhat amused by a remark made by a voter who was on his way to the polls. It was as follows: "Suppose I'll sell myself? I shall only himself and hang to a mess of pottage."

We wish to acknowledge the receipt of a box of valuable books and cards for colored Sunday-schools from Mr. Moses H. Sargent, of the Congregational Publishing Society, Boston. We print the contents more than ever, now that the place from whence the box came has been so badly damaged by fire. Many a heart will ha gladdened by sharing in that gift.

There is a growing interest in the cause of education among public and private citizens of the State that argues well. The colored people, at least in the Southern part of the State, have for some time been enjoying better public school advantages than the whites. The latter are now waking up to this fact. Everybody is hoping that this Legislature will do something handsome for schools, and that Congress will speedily pass the long-talked for educational bill.

"I sank $270 in the few months that I was keeping that corner store," said a colored man to us the other day. And there are many now who have had as sad experience in similar corner stores. Stop and think it all over, friend, before you set up, for yourself in trade. See if your neighbor, who has tried it, is really making a living. Those who have watched the small traders who have saved up a little money since the war by hard work, and then opened stores, say that they almost always lose all they have in a few months. If you can shove a plane, or lay brick, or shoe a horse, or carry on a farm, or teach school, or preach the gospel, [what's you better let them do the trading?

Thanksgiving services were held at the Christian M. E. Chapel, in Wilmington—an unusual event in a colored church in this region. Rev. H. B. Blake preached by invitation. His theme was our obligations to be grateful, and our responsibilities in view of God's mercies. H. W. B.

Correspondence.

We have received from a Virginia gentleman, the following letter which seems to us to call attention to more than one important fact:

* * * * * It might have a good effect to compliment Virginia with a cabinet position. She is the only Southern State in which reconstruction has been accomplished upon the basis of the congressional policy of perfect peace and order. We have had no Ku-Klux organizations or prosecutions in Virginia. There has been no fraudulent increase of the State debt. There has been no corrupt legislation to bring scandal upon the reconstruction policy, or the party in power. There are no revolutionary transactions here as in Louisiana, Alabama, and other states; our people have substantially accepted the situation; and are recovering their prosperity as rapidly as can reasonably be expected, having passed through several elections without outrages perpetrated upon the blacks, or frauds setting aside the verdict of the popular vote.

COLORED SABBATH-SCHOOL UNION.

A Sabbath-school Union of the counties of Powhatan and Goochland, was organized at Antioch Baptist Church, Powhatan Co., October 27, 1872, and the following officers were elected: President, Daniel Stratton, (Goochland); Vice President, A. Q. Franklins; Secretary, Thomas J. Johnson; Assistant Secretary, Charles Freeman; Treasurer, Joseph Bebbe, of Powhatan. Number of schools represented, five, viz: Antioch and Shiloh, of Powhatan, Amos, Fanguier, and First Colored Baptist of Goochland. The Union held its last meeting at Goochland Court House, November 24, 1872, and the reports of different schools were read, showing that the schools are in a prosperous condition. After singing, recitations and addresses, the Union adjourned to meet the first Sunday in April, 1873, at the First Colored Baptist Church, Dover Mines, Goochland Co., Va.

From one who has seen a specimen brick of our edifice, we have received a letter from which the following is an extract:

"Having got hold of a small piece of your paper the other day, called 'the Southern Workman,' I was much pleased with it, and the whole paper is as interesting as that small piece was. I would like very much indeed to take your paper, but being a long way off I thought that I would write to you and get you to send me one by express. I just want to read one, and I will freely subscribe and send the money right away; moreover, I think that there is no doubt but I shall be able before the year, many subscribers here in this part of the land."

We add, in connection with the above, an extract from the "Educational Journal" of Virginia, which is a pleasant testimony to our usefulness, and exhibits the spirit of fairness in which we are criticised by our Southern friends.

"The 'Southern Workman' is the name of a monthly paper issued from the Hampton Institute. The entire printing work is done by the (colored) pupils, the editing by the Principal and other educational officials. The printing office is in the school building, and is fitted up for general job work. The "Workman" is beautifully printed on a good sized sheet of nice paper, and always has several illustrating pictures in it. The matter is very instructive, and well suited to colored readers. Now and then there is a little more allusion to certain subjects than is need be, but the tone is always courteous, and the general spirit and drift of the paper excellent. Taken as a whole, we know no other periodical so well adapted to the wants of our colored people as this. It might be employed as a useful assistant in our educational work. The price is one dollar in advance; to preachers and teachers seventy-five cents. Orders should be addressed to J. F. Marshall, Hampton, Va. Specimen numbers would no doubt be furnished on application. Many of the graduates of the Hampton Institute are now engaged in teaching public schools in various parts of Virginia, and they write letters to the Workman." All that we have seen published by writers in this most amiable spirit. General Armstrong's policy is for peace and good will. So mote it be."

Hampton Normal School.

The Normal School Farm furnished during the month of December, for one of school and families of teachers, 152 gallons of milk, 250 cabbages, 288 bushels turnips, 3,437 lbs of beef, 184 lbs liver, and 2,096 lbs pork. Sales of milk and produce to outside customers for the month, $109,95.

The Industrial Department has manufactured since October 1st, 752 articles, principally shirts, but also a variety of other garments, while the cash sales have amounted to $152,94, and the order sales to $438,08.

Graduates of the Normal School are reminded of the importance of subscribing for the "Southern Workman," as each number contains information of special importance to them. The price for school teachers is only seventy-five cents, and the value of the paper is ten-fold this amount to those in whose behalf it is partly published. Frequently suggestions are addressed to graduates which it is important they should have. They are therefore earnestly invited to subscribe at once.

SOUTH QUAY, Va., *Dec.* 10.

Editors "Southern Workman,"—As I went to my school-house yesterday I found it in ashes, burned by some incendiary, I don't know who. I left it Friday about four o'clock, and about one o'clock in the night, the Rev. Israel Cross saw the light, and when he got there it was falling in. The slates were found close by on a stump, and the remainder of the school furniture was burned with the house. But there was a house close by, where the white children occupied about two years ago, and I opened school in that yesterday, but the other one was as good and well furnished as any school-house you can find in the country. There are $2,500 offered for the man who burned it, and the trustees say they will pay more. It is said to be some colored person, and I think it was. I have now a full school of forty two scholars, and am getting along finely with them. Miss Florence is close by with a school of thirty-two scholars.

W. H. Lee.

BLACK WATER, LAND OF PROMISE, PRINCESS ANN CO., VA., *Dec.* 1872.

Dear Teacher,—I have just found time to write you of my school. I found London Bridge quite easily, and stopped with Luke Phillips two days. He and I walked the distance of twelve miles before breakfast to Mr. Macon's house, where I passed a somewhat uncomfortable night, with the assertion (from Mr. Macon) that it should be more so the next year, should I make application. He tells every teacher that he shall examine them more closely every time they make application. I have nineteen scholars at present, with a promise of as many more in a very few days. I have no stove in my school, but a fire-place in its stead. We can procure all the fuel we want, as we are surrounded by a dense pine-tree forest. The house in which I teach was formerly a white school, and so the people (white) invented the building. I shall not be at all surprised to go to the site of the school-house some morning and find it not there. However, I shall continue to teach till it has left me.

Yours, very truly.

C. D. JOHNSON.

P. S. Since I began my letter to you I have been disturbed by rumors of the indignant whites, and to-day the man who claims the land nailed up the doors. I start to-morrow to see the authorities of the school.

PRINCESS ANN C. H., *Dec.* 7, 1872.

Dear Teacher,—This is the second time I have tried to send you a letter. I shall accomplish it this time, as I have sat down with more determination not to stop for my one who may come in to have a letter written for or one to read.

I am in school every day until after four; then I either have a letter to write or read for some one; and as I have evening school from seven to nine, I have little chance for writing. I am not complaining, only showing why I have not written before. My scholars are improving very rapidly. When I took the school the majority of them didn't know their letters, now they are spelling words of three and four letters and reading short sentences.

I saw Luke Phillips at the Court House two days ago; we went there to see the trustees, which I didn't like very much.

The cold is not as severe here as it is in Hampton; we have had a small sprinkle of snow. Write soon, dear Miss, and let me know of my mistakes if you don't mind the trouble. Love to all.

JULIA A. RUTLEDGE.

Agricultural.

SOWING PLASTER IN THE WINTER.—When plaster is cheap and the mill is a considerable distance from the farm, and you have no convenient place to stow away the plaster, it is a good plan to draw it in the winter and sow it on the clover at once. If there is not too much snow on the land this can easily be done. Our plan is to put a boy to drive, and a man on each side the wagon box, and one behind, and sow the plaster with a fine hand as the horses walk along. We sow two to three bushels per acre. A little of the plaster may be carried off by the melting snow in spring, or blown in the dust with the drifting snow, but not enough to occasion any serious loss. And it is certainly a great convenience to draw plaster on a sleigh rather than in the spring. If the roads are almost impassable, and the fields so soft that you cannot take a team on to them without injury.

POTASH FOR PEACH TREES.—Dr. Geo. B. Wood, President of the American Philosophical Society, having noticed that his peach trees, after producing a few crops, ceased bearing, and died in a few years; and believing that the cause of decay was owing to the root of the tree, he put into operation a plan for the destruction of the worms. He dug holes five or six inches deep at the base of the stem, scraped away all worms that could be found and filled up with wood ashes fresh from the stove, which of course contained all the potash. This was done in the autumn of 1863, with a result in the following spring as which he was astonished. The trees appeared to have been restored to all their early freshness and vigor—put forth bright green leaves, blossomed copiously, and bore a heavy crop of fruit. On reflection Dr. Wood attributes the favorable results more to the effects of the potash contained in the ashes than to the destruction of the worms.

WINTER PROTECTION FOR PLANTS.—The "Gardener's Monthly" says that earth drawn over plants is an excellent protection in winter. Every one knows how much better cuttings root when taken off in the fall, than when it is deferred till spring—but the fear of having them drawn out by frost seems a greater evil. If the cuttings are put in in the fall, and covered with a few inches of earth, in spring they will be through to the surface; or if not some of the earth can be taken off.

It used to be the fashion with nurserymen to set only young seedling stock in the fall, burying it completely in a heap till spring, covering top and all. Under the new system of earth protection, the young stock is now set out where it is to remain, covering it entirely with earth and uncovering it early in spring. By this means an immense amount of work may be done in the fall in time otherwise unemployed.

EXCLUDING RABBITS.—A correspondent of the "Prairie Farmer," says that he has found tar and coal oil quite effectual for preventing rabbits from eating the bark of young fruit trees. Doubtless the same remedy would answer to protect trees from sheep, inasmuch as they do not like the smelling mouth. The remedy consists in rubbing the bark of the tree to a sufficient height with a bacon skin or piece of pork, the more rancid the better, by taking the skin of the tree in the left hand, and rubbing with the right. He thinks a paint brush and a pan of old grease will do well enough for larger trees. Another correspondent saved the labor of hatcheting days, and rubbed the bark of the trees, to the effectual exclusion of the rabbits, for the efficacy of which the writer vouches, adding that he has tried more than one application of blood is necessary.

CORN STALKS.—"J. F. P.," Fredericksburg, Va., has 100 tons of corn stalks; hitherto he has burned them, but is now at no cashess it; now what can he do to avoid this waste? No one should be ashamed to confess his faults, but confess, repent, and learn better. Here is a better way which has been frequently pointed out by the "Agriculturist," which is to cure them and feed them to stock. This may be done by throwing them to the cattle in a yard or pen, when the finer portions are eaten, and the rest trampled down into manure; or, which is far better, cutting them up, wetting them and sprinkling them with bran or milk feed, when they will be eaten up clean. Horses, cows, and oxen will eat and thrive upon such food, *if the stalks are well cured.*

ANIMALS.—Next to himself and his family, a farmer's thought and attention should be turned to his animals. If we look upon them as machines for the conversion of straw, stalks, roots, hay, etc., into beef, mutton, wool, milk, pork, eggs, etc., we should never forget that they differ very materially from ordinary machines, that we can start and stop when we please, and stow them away when not in use. The animal machine is always running, winter and summer, night and day, and a farmer's first care should be to see that it is always running to some good purpose.

Donations.

From "Friends" in Philadelphia, through A. M. Kimbar, a valuable donation of Bibles, Testaments and Tracts.

Collected by Mrs. Robt. R. Booth, New York, for purchase of blankets, $120.

From Cambridgeport Congregational Society, through Moses H. Sargent, Esq., for purchase of blankets, $80.

From Sewing Circle Rev. H. W. Beecher's Church, Brooklyn, N. Y., Clothing—1 case.

General News.

THE inundations in France and Belgium still continue, and are doing great damage both in the cities and the country.

A SOMBER of Chinese have been engaged to work in Pittsburg, Penn., and many of the white workmen have left.

A SWEDISH lady, the Countess Skeene, has determined to organize a new expedition for the rescue of Dr. Livingstone.

IN Nashville, the lady members of the First Baptist Church have agreed that they will dispense with all finery on Sunday—"wearing no jewels," but appearing hereafter "in plain calico dresses."

MRS. FRANCIS E. W. HARPER spoke recently in the church of Rev. Mr. Thomas (African M. E. Church) in New Haven, Conn., and was heard with great satisfaction. She will probably speak in that city again as, many are desirous of hearing her.

THE celebrated circus and menagerie of P. T. Barnum was burned in New York on the night of December 24, and a large number of valuable animals, elephants, giraffe, camels, etc., were destroyed.

A TELEGRAM from New York announces the departure from that city of 235 Italians, who are coming to Richmond, having been engaged, it is said, to work on a railroad in this State.

AT San Francisco, ships are being loaded with wheat for Great Britain at the rate of a thousand tons per day. Since July, upwards of 100 vessels have been thus dispatched.

PROF. STOWE, the husband of Mrs. Harriet Beecher Stowe, has been seriously ill, and Mrs. Stowe has been obliged to postpone her public readings on that account.

THE wife of the Hon. Benjamin D'Israeli, one of the most prominent among English statesman, has just died. She had been created Viscountess Beaconsfield, in consideration of the great assistance she had given to her husband in the performance of his public duties.

EARTHQUAKE shocks have been felt in this country from Oregon to Washington, and in various parts of South America.

THE Grand Duke (Nicholas of Russia, has been on a visit to the Pope, and it is expected that his uncle, the Emperor of Russia, will soon follow him, in order to obtain the Pope's views respecting the troubles in Poland.

THE Germans are organizing associations to promote colonization and emigration to America, a movement strongly opposed by their own government, as any decrease in the present population of Germany is not considered desirable.

JUDGE OAR, of South Carolina, has accepted the mission to Russia, and will sail about the middle of January.

THE table on which the declaration of Independence was signed, is now in the possession of the Lawrence family of South Carolina, one of their ancestors having been a signer.

THE Faculty of the University of Virginia has sent a letter of sympathy to the President of Harvard College, in view of the losses of the latter institution by reason of the Boston fire, which exhibits a kindly and Christian spirit, and is creditable to the former University.

THE present winter, thus far, has been the most severe known for years, the thermometer throughout the country standing for below its usual range. A severe snow storm Last week proves to have been the heaviest on record for twenty years; railroad travel all over the country has been impeded, and steamboats have also found themselves to be most unsatisfactory conveyances.

KAMEHAMEHA V, King of the Sandwich Islands, died on the eleventh day of December, 1872. He named no successor and there will be some difficulty in the selection. William Lunalilo, a chief of high rank and fine abilities, but of dissolute habits, aspires to the throne. David Kalakaua has been thought of. Mrs. Berenice Bishop, a beautiful and accomplished chiefess who married Charles R. Bishop from Sandy Hill, New York, is generally talked of. Her father, Paaki, the King's Chamberlain, was of enormous stature and a genuine nobleman. Acquainted with interest the fate of the Sandwich Islands, for some of our best men and women have for fifty years been laboring for the elevation of the Hawaiians.

GREAT disasters have been occasioned this season by accumulation of ice in the Mississippi and Ohio Rivers. An ice gorge thirty feet high formed in the Mississippi opposite Randolph, and destroyed many steamers.

EDWARD STOKES, who shot James Fisk in New York, last year, has been sentenced to be hung on the 20th of February.

THERE is great disturbance in the island of Cuba. Revolutionists against the Spanish authority partially burned the town of Holguin before they were subdued by the regular troops. Volunteers are guarding the fortifications of Havana.

THE Emperor of China has recently married four wives; one of whom has been crowned as empress. He is seventeen years old.

THE first Protestant church ever built within the walls of Rome has been consecrated on the 2nd day of this year.

THE Ex-Emperor Napoleon died on Thursday, January 9.

SEVERAL persons belonging to the International Society of Paris have been arrested.

THE health of Senator Sumner is in a very precarious situation.

At Home.

Cooking Stoves in Africa.

It is not likely that any of our housekeepers, says the "Hearth and Home" will ever have to prepare for the table such delicate morsels as an elephant's trunk and foot, or the feet of a hippopotamus. Still, they may like to know how the Africans, who consider these things as very dainty articles of food, manage to cook them.

You may be sure the Africans have no cooking stoves nor ranges like those on which our dinners are cooked. They have an entirely original invention of their own.

When a cook has to prepare the tempting delicacies we have named, he digs in the ground a round hole about four feet in diameter, with perpendicular sides, like a well. In this hole he kindles, and keeps burning for four hours, a fiercely hot fire. At the end of this time the sides of the small well will be red hot, and the bottom will be covered with a mass of glowing embers. Directly upon these coals the cook places the feet and trunk which, protected by their thick, tough skins, will not burn. He then covers the top of the hole by laying across it long sticks of green wood, and lays over them a few armfulls of wet flags, which he gathers for the purpose from the banks of some neighboring stream. He next spreads mud thickly over, and on top of the mud he piles earth and sods, closely beating them down. This is to retain all the heat within the curious oven, as important point, as thirty-six hours are required to properly bake the enormous feet of the elephant and hippopotamus.

When, at last, the anxious cook thinks his viands are ready, he carefully removes the sods. Under these he finds the coating of mud perfectly hard like a thick crust, while beneath this the flags have retained sufficient moisture to prevent them from burning, although the oven is still hot and steaming.

The cook has now to get the assistance of one or two others to lift out the heavy and hot feet, which they lay upon a mat covered with green reeds instead of on a dish.

The great black feet do not, at first seem very inviting, but after "the shoes"—that is, the skins—have been removed, the perfectly white and very tempting looking meat is exposed, which, is said, by those who have tried it, to be delicious, and to speak volumes in praise of this African cooking stove.

The Site for a House.

The position of a house affects very much its sanitary value—how it fronts, where it stands, and what are its surroundings. The rooms most used should be where they can receive the direct rays of the sun at all seasons. Sunshine in the room is just as salutary as sunshine in the heart. Better let the carpet fade and the dies come in than keep out the sunlight. A house that has no sunshine will be half the time a hospital, and a bad hospital, too, where there is more malady than cure. A healthy home will never be placed where anything obstructs the light. As a general rule, we may say that no tree ought to stand within fifteen feet of a house, and no shrubbery that will make any of the rooms dark, or dismal. A dry site for a house, too, is of the utmost importance—that there be no marsh before the windows, no stagnant pools around the doorway. The margin of a pond is not the proper site for a dwelling of a prudent man. The best landscape is not a fair equivalent for the danger of malaria. The good spirit of soundness and health, chooses dry and light places, and finds that there very genial and quickening.—*Exchange.*

Flour.

The Boston "Journal of Chemistry" gives some practical rules for selecting good flour. Look at its color; if it is white, with a slightly yellowish or straw-colored tint, that is a good sign; if it is very white with a bluish cast, or with black specks in it, that is a bad sign. 2. Examine its silkestreness, by rubbing and kneading a little of it between the fingers; if it works dry and elastic, it is good; if soft and sticky, it is poor. 3. Throw a little lump of dry flour against a dry, smooth, perpendicular surface; if it adheres in a lump, it has life in it; if it falls like a powder it is bad. 4. Squeeze some of the flour in your hand; if it retains the shape, given by the pressure, that is a good sign. Flour that will stand all these tests, is recommended as safe to buy.

From Mother's Receipt Book.

"If you only knew how to cook as my mother used to!"

For the benefit of young wives who occasionally hear this remark from their affectionate husbands, we furnish some receipts which are warranted to be from "Mother's Receipt Book."

BAKED PLUM PUDDING.

1 loaf of baker's bread, grated, ½ lb of suet, ½ lb of dried currants, ½ lbs of raisins, 1 tea-cupful of molasses, 3 tea-cups of brown sugar, 1 tea-cupful of milk, 4 eggs, a little cinnamon, clove and nutmeg, one tea-spoonful of soda. Mix well, and bake one hour in a covered dish. Turn out on a flat dish when baked, and serve with a sauce of butter and sugar.

MOTHER'S SWEET POTATO PIE.

1 tea-cup of potato mashed and strained, 2 eggs, 1 table-spoonful of melted butter 2 of sugar, 2 tea-cups of milk, a little salt and cinnamon, a little essence of lemon. Bake with an under crust.

The two hundred students of Hampton Normal School can testify to the merits of this pie on a Thanksgiving dinner table.

UNION CAKE.

4 eggs, 1 cup of butter, 2 cups of sugar, 4 cups of flour, 1½ tea-spoonfuls of cream of tartar, 1 tea-spoonful of soda in ½ cup of milk. Flavor with nutmeg. Bake in 2 pans.

A Visit from St. Nicholas.

'Twas the night before Christmas, when all through the house,
Not a creature was stirring, not even a mouse;
The stockings were hung by the chimney with care,
In hopes that St. Nicholas soon would be there;
And mamma in her kerchief, and I in my cap,
Had just settled our brains for a long winter's nap—
When out on the lawn arose such a clatter,
I sprang from my bed to see what was the matter.
Away to the window I flew like a flash,
Tore open the shutters and threw up the sash.
The moon on the breast of the new fallen snow,
Gave a lustre of mid-day to objects below;
When what to my wondering eyes should appear,
But a miniature sleigh and eight tiny reindeer,
With a little old driver, so lively and quick,
I knew in a moment it must be Nick.
More rapid than eagles his coursers they came,
And he whistled, and shouted, and called them by name;
"Now, Dasher! now Dancer! now Prancer and Vixen!
On! Comet, on! Cupid on! Donder and Blitzen—
To the top of the porch, to the top of the wall!
Now, dash away, dash away, dash away all!"
As dry leaves that before the great hurricane fly,
When they meet with an obstacle, mount to the sky,
So up to his housetop the coursers they flew,
With the sleigh full of toys, and St. Nicholas too.
And then, in a twinkling I heard on the roof
The prancing and pawing of each little hoof.
As I drew in my head, and was turning around,
Down the chimney St. Nicholas came with a bound
He was dressed all in fur, from his head to his foot,
And his clothes were all tarnished with ashes and soot;
A bundle of toys he had flung on his back,
And he looked like a pedlar just opening his pack.
His eyes how they twinkled! his dimples how merry!
His cheeks were like roses, his nose like a cherry!
His droll little mouth was drawn up like a bow,
And the beard on his chin was as white as the snow.
The stump of a pipe he held tight in his teeth,
And the smoke, it encircled his head like a wreath.
He had a broad face and a little round belly
That shook when he laughed like a bowl full of jelly.
He was chubby and plump—a right jolly old elf;
And I laughed when I saw him in spite of myself.
A wink of his eye, and a twild of his head,
Soon gave me to know I had nothing to dread.
He spoke not a word, but went straight to his work,
And filled all the stockings; then turned with a jerk,
And laying his finger aside of his nose,
And giving a nod, up the chimney he rose.
He sprang to his sleigh, to his team gave a whistle,
And away they all flew like the down of a thistle;
But I heard him exclaim, ere he drove out of sight,
"Merry Christmas to all, and to all a good night!"
CLEMENT C. MOORE.

Whose Children are They.

"Whew!" whistled the Winter Wind, as he rushed through the streets, "Whose children are these?" Poverty said they were hers. She had dressed them in rags and dirt, and pinched their cheeks and their noses ever since they were born. Sin said they belonged to him, though he hadn't had much of a chance at them yet, they were so little.

They didn't know much about it themselves, poor little things. All they could have told the Wind if he had asked them, was that Granny had sent them out with a broom to sweep the crossings, and said they needn't ever come back if they didn't fetch more than they fetched yesterday. It was just the day before Christmas, and many counted on a good haul, as she called it, from the crowds that were sure to be out buying Christmas presents.

It was such a nice crossing, too, just where the crowd was thickest on the way to the ferry, through the muddiest street in the whole city. The stumpy brooms flew, and the dirty little hands were held hopefully out to every passer. But every one was in such a hurry to catch the boat and get home to the merry darlings there—and how could one get at a pocket-book under all those big handsome? "We can't get back, Johnnie, and I'm so awful hungry," said Georgie, beginning to cry.

"Don't care; she shut no Granny of corrs, and we've got pennies enough for supper. Come along."

"But where shall we sleep?"

"Oh, some'eres."

So the poor little forlornities glided off down the dirty street, as if they belonged to it, like the sticks that floated on the black river in its gutters. They spent their pennies on peanuts and sour gingerbread. But oh—where was "some'eres?" They thought they had found it once in an empty market stall, but a policeman passed by, and without waiting to be caught, they darted out like a couple of startled mice, and ran without stopping till they found themselves on the edge of the river. There the tired little legs gave out, and they sat down under a great arched door-way to rest for a while. Not for long, you know. They did not feel safe from that policeman yet, and then it was only so cold—the coldest night of the season was commencing, and the next morning the dark river that flowed below would be bound in ice. Too cold to stop there, surely; but gradually the weary heads sank lower and lower on to the drooping shoulder, the ragged sleeves, and, cuddled together like two draggled little kittens, Georgie and Johnny were fast asleep.

Far across the dark river, another Georgie and Johnnie lay warmly cuddled in their soft cribs with Christmas gifts all around them. Santa Claus knows well enough whose children they are, but whose are these?

"Mine," said Poverty, pointing to their rags.

"Mine, surely!" said Sin. "If not today, to-morrow."

But in Heaven, the Gentlest Voice of All spoke, and every other was hushed: "The children are MINE."

Above the little wanderers' heads the stars shone all the night, as once they shone over the house where the young child Jesus lay. And the little ones had gone Home.

Children's Department.

How the Cat Kept Christmas.

BY SUSAN COOLIDGE.

"What a queer name for a story!" said Thekla. "Yes; and it was a queer Cat, too," replied December. "I knew her. Tortoise-shell, with long whiskers, and rather a ragged tail."

"Then he went on.

"The ringers were practising the Christmas chimes in low, muffled tones. High up, the steeple rocked in the wind, the clouds drifted rapidly over the moon, and clear and sharp the frost-film glittered on the roofs. The watchman on his round clapped and stamped to warm hands and feet, as he called the hour, 'Eight o'clock, and all's well!' Hint, to the poor Cat crouched beneath the kitchen window, all was not well.

"'Oh dear!' she sighed to herself, 'what a wretched thing it is to have a step-mother! Once we were happy! The good Papa loved me, and I slept in Gretchen's arms. The fire was bright in those days. Portions of hot milk stood by it, and always a saucer full for me. Ah, dear days!' The moment I saw that move of hers, I knew they were over! Such a move to such a long, Why did the Papa marry her? Men are so foolish. I hissed, I spit, I warned,—nobody listened, and here I am. The good Papa does not protect me, Gretchen weeps, the Step-dame bars the door. Where I shall spend What a Christmas Eve! Poor Gretchen! Poor me!' Overcome by her sorrows, the Cat gave a loud wail, which rang out into the chilly night. Then the door opened softly.

"'Puss! puss!' said a small voice, 'where are you?'

"Puss ran forward into view, and jumped and leaped at her in stress.

"'Oh, my Katchen! wont do the Lill one, how cold it is! You will freeze! you will die. Oh, if I dared but I'd you in!'

"'I scratch her eyes out!' muttered the Cat.

"'Shall I throw my Little rabbit to you from the Window?' continued Gretchen. 'My poor one! my Kitty!'

"'Gretchen!' screamed a voice, 'if you let that good-for-nothing Cat into the house, you shall stick! Mind here!'

"'Gretchen turned pale. 'O Kitty!' was all she said. She gave a sob of despair. Then the door was shut.

"'This is a nice business,' thought the Cat. 'Oh, the witch! I hope the mice will come down to-night, and steal the very teeth out of her head. But I'll have vengeance yet. I'll eat that big gray rat in the cellar. I'll strike a bargain with him,—life and liberty, provided he plagues her to death, eats the linen, claws the jam, gnaws bunglules in the cask, and bites the beer out! Well! well! Meantime, I shall freeze unless something is done. Let me explore.'

"High and low did the Cat search,—over the house, under the wing, but no shelter could be found. The vine was leafless, the fence gave no hilling-place. At last she bethought herself of the roof, which it was easy to mount by means of a long and sloping rain-trough. Perhaps there might be a warm chimney there,—no leaf pillow on a wintry night.

"There proved to be a warmish one said, curling into a ball; Puss laid herself to rest against it. 'Perhaps it was not warm enough, perhaps the remembrance of wrong was too bitter within her; certain it is she could not sleep. She wriggled, she twisted; she sent forth melancholy cries, which rang strangely across the icy roofs, as if some ghost afflicted with toothache had gone there for an airing. Nine—ten—eleven—had sounded before she fell into her first doze,—the clock was on the stroke of twelve, when a scraping and screeching sound close by roused her. Was it some other cat? Or the big rat from the cellar, scaling the wall? Raising herself cautiously, after the manner of cats she listened.

"No: it was neither rat nor cat. Light hoofs as of goats were climbing the tiles, bells tinkled, a small sledge came in view. Swift as light it flew along, paused at the next chimney, and a little old man jumped out. His face shone as the moonlight, like a jolly red apple, his fat body was wrapped in fur, and on his back was a bag. Puss had never seen him before, but she knew him well. It was St. Nicholas, the patron saint of Christmas.

"'Down the chimney he went, with a motion like a bird's; up again as fast. Then sidelong, he scrambled in the moonlight. His kind face looked puzzled. The Cat saw his hesitation and sprang forward.

"'Well, Puss,' said the Saint, 'what cheer?'

"'Bad,' said the Cat, no ways abashed at finding herself in such company. 'But never mind me, if only you've something nice for Gretchen. *Such* a dear child, St. Nicholas, and such a step-mother! Do put your hand in the pouch, and fetch out something pretty for her,—oh do! there's a kind Saint!' And she rubbed her soft fur cunningly against his legs.

"'Ah! a dear child and a step mother, eh?' said St. Nicholas. 'Let me look again. Certainly! here's something for Gretchen. Wake, sweetest! quick a present!' And down the chimney he whipped, a present in his hand,—what, the Cat couldn't see.

"'Come, look,' Now about yourself?' he asked, gathering up the reins. 'What keeps you on the cold roof all night? Something must be done, you know; matters can't be left this way. Wish a wish if you have one. I'm in a humor for pleasing everybody while I'm about it.'

"So the Cat told her story. 'And for a wish,' she said, 'if your Saintship would only re-ad me help in under your furs, and go along, I should be proud and happy. They look very warm and comfortable. I should sleep; or, if not, it would be most interesting to watch your Worship at work. And I take very little room,' she added piteously.

"'Is that all?' Why, jump in at once,' said the St. Nicholas; 'there is room for forty cats like you. My sledge is never full. Ho! ho! it would be a pretty joke if it were!' And he laughed a jolly laugh.

WHOSE CHILDREN ARE THEY?

Our Exchanges.

THE ATLANTIC MONTHLY, J. R. Osgood & Co., Boston, enjoys a solid reputation as the representative of the highest circles of Boston's literary sphere. It is always sure of such names as Lowell, Whittier, and Longfellow, our chief American poets, the learned and charming naturalist Agassiz and his accomplished wife who works and writes with him, the witty essayist, Oliver Wendell Holmes, and many other men and women of genius.

THE FRIENDS' REVIEW, published in Philadelphia, is the organ of a class of Christians who are among the earliest and truest friends of the colored race. The December number is full of good things from which we take this bit of advice to ministers. "Ministers should give heed to the restraints of the Spirit against their desire to speak merely to answer the expectation of the people, and against an over excited imagination."

THE EDUCATIONAL JOURNAL OF VIRGINIA, published in Richmond, begins its fourth volume under the able management of Prof. Harris of Richmond College, and Rev. W. H. Ruffner, State Superintendent of Public Instruction. This combination will give it strength and power. It contains interesting information upon educational subjects, letters from practical teachers, discussions of the difficulties and the best method of teaching, reviews of text books, and reports of schools. It invites brief news letters from schools and colleges, and publishes answers to correspondents seeking information. Such a magazine is of very great value to all teachers, especially those who have district schools. Isolated, often, among people inferior to them in learning, far from libraries and unable to purchase books, perhaps inexperienced to teaching and limited in education, they would find in such a magazine the greatest help and encouragement. Interested as we are in the training of teachers, we say to all who have gone out from Hampton, You really cannot well afford not to pay the dollar which secures you this.

THE NEW YORK OBSERVER is to celebrate its Jubilee by the issue of a valuable illustrated JUBILEE YEAR-BOOK, which the publishers propose to send *free* to every subscriber. The "Observer" has completed its 50th year, and bids fair, judging from the great success that attends its publication, to lead the Religious Press for another fifty years. We can safely say a good word for the "New York Observer" as a family newspaper of the first class, and one that, while in it will be found entertainment and instruction for every member of the household, tends to promote those principles that make valuable neighbors and good citizens. We advise our friends to subscribe for it, and secure the "Jubilee Year-Book." *Gratis.* $3 a year. Sidney E. Morse & Co,, 37 Park Row, New York.

Plants.

HELP WANTED.

WANTED.—A good, trusty colored man to live in my family; his work to be chiefly to take charge of two horses, drive them, and take care of the yard, &c.; a quiet, good-natured boy willing to make himself generally useful. I would pay him well. Address with references,
DANIEL E. DAY,
Providence, Rhode Island.

WANTED.—A young colored man who understands bookkeeping can obtain a good situation at the Hampton Normal School.

SITUATIONS WANTED.

WANTED.—A situation at the North, to do cooking and washing, by a colored woman, with excellent references. A country town preferred. Address Julia Banks, office "Southern Workman," Hampton, Va.

WANTED.—In April or May, a situation as chambermaid and waitress, in the same town with the above, by a colored woman with excellent references. Address Mary Harris, office "Southern Workman," Hampton, Va.

WANTED.—Samuel, Scotland, (colored) of Hampton, Va., 21 years old, a good hostler farmer, and man of all work, desires to go North to secure employment; has a family which he will leave here. Address Samuel Scotland, Hampton Post Office.

Note.—I think this applicant an honest and faithful man. S. C. ARMSTRONG.

THE

Illustrated Christian Weekly,

FOR 1878.

will continue to merit the claim of its critics to be the "handsomest illustrated paper in the world." New portraits of eminent men, equal to those already given of Beecher, Spurgeon, Lowell Mason, and others, are in preparation. Religious work, at home and abroad, social and domestic life, scenes in this and other lands, events of the day, are among the topics which will be illustrated in the best manner by such artists as Darley, Herrick, Beard, Dixon, and others. Each number of the paper will contain seven or more finely executed engravings.

In the literary department, Dr. C. S. Robinson, whose oriental sketches have been an acceptable feature of the paper the present year, will furnish a new series, descriptive of life and customs in the East. On the conclusion of John S. C. Abbotts's fascinating "History of William the Conqueror," our historical sketches from the same masterly pen will be forthcoming. S. E. Todd will give us designs of medium-priced houses, and show how to build them cheaply. Contributions may also be expected from Rev. Drs. Theodore L. Cuyler, Howard Crosby, J. G. Craighead, Cyrus Hamlin, J. E. Rankin, Profs. H. M. Baird and W. C. Wilkinson, Jacob Abbott, A. L. Noble, Mrs. E. L. Bosco, Mrs. A. E. Barr, Mrs. M. E. Miller, Mrs. M. A. Denison, and other popular writers.

Twelve pages weekly. Two dollars a year.

The cheapest Family Paper in the world.

"Now! it was neither rat nor cat. Light hoofs as of goats were climbing the tiles, bells tinkled, a small sledge came in view. Swift as light it flew along, paused at the next chimney, and a little old man jumped out. His face shone as the moonlight, like a jolly red apple, his fat body was wrapped in fur, and on his back was a bag. Puss had never seen him before, but she knew him well. It was St. Nicholas, the patron saint of Christmas.

"'Down the chimney he went, with a motion like a bird's; up again as fast. Then sidelong, he scrambled in the moonlight. His kind face looked puzzled. The Cat saw his hesitation and sprang forward.

"'Well, Puss,' said the Saint, 'what cheer?'

"'Bad,' said the Cat, no ways abashed at finding herself in such company. 'But never mind me, if only you've something nice for Gretchen. *Such* a dear child, St. Nicholas, and such a step-mother! Do put your hand in the pouch, and fetch out something pretty for her,—oh do! there's a kind Saint!' And she rubbed her soft fur cunningly against his legs.

"'Ah! a dear child and a step mother, eh?' said St. Nicholas. 'Let me look again. Certainly! here's something for Gretchen. Wake, sweetest! quick a present!' And down the chimney he whipped, a present in his hand,—what, the Cat couldn't see.

"'Come, look,' Now about yourself?' he asked, gathering up the reins. 'What keeps you on the cold roof all night? Something must be done, you know; matters can't be left this way. Wish a wish if you have one. I'm in a humor for pleasing everybody while I'm about it.'

"So the Cat told her story. 'And for a wish,' she said, 'if your Saintship would only re-ad me help in under your furs, and go along, I should be proud and happy. They look very warm and comfortable. I should sleep; or, if not, it would be most interesting to watch your Worship at work. And I take very little room,' she added piteously.

"'Is that all? Why, jump in at once,' said the St. Nicholas; 'there is room for forty cats like you. My sledge is never full. Ho! ho! it would be a pretty joke if it were!' And he laughed a jolly laugh.

"So Puss jumped in. 'You must hurue out in the morning early,' said she, 'because Gretchen will be anxious.'

"'Oh, yes!' replied the Saint, smiling queerly. 'I'll let you out in one morning. I'm like a bet, you know, and never fly except by night.'

"Off they went, the magic stillness of the night broken only by the tinkling bells. First one chimney, then another; bag after bag full of toys and sweets; here a doll, there a diamond ring, here only a pair of warm stockings. Everybody had something, except in a few houses over whose roofs St. Nicholas paused a moment with a look half sad, half angry, and left nothing. People lived there who knew him little, and loved him less.

"Through the air,—across towns—more villages. Now the sea was below them, the cold, moon-lit sea. Then again land came in sight,—towers and steeples, halls and hamlets, and the word began to grow. A wild longing to explore seized the Cat. She begged the Saint to take her down one specially wide chimney on his shoulder. He did so. The chimney within looked strange and foreign; but the little sleeping face in bed was like Gretchen's, and Puss'y felt at home. A whole bag full of presents was left here. And then, hey! presto! they were off again to countless homes; to roofs so poor and low that only a Saint would have thought of visiting them, to stately palaces, to cellars and toll-gates and lonely attics; at last to a church, dim, and fragrant with ivy-leaves and twisted evergreen, where their errand was to feed a robin who had there found shelter, and was sleeping on the topmost bough. How his beads of eyes sparkled as the Saint awoke him! and how eagerly he pecked at the store of good red berries which were *his* Christmas present, though he had hung up no stocking, and evidently expected nothing. To small, to great, to rich and poor alike, the good Saint had an errand. Little ones smiled in their sleep as he moved by, birds in hidden coverts twittered and chirped, the faintly tinkled and chimed as in a dream, the air sent up incense of aromatic smells, flying fairies made room for the sledge to pass; the unconsciousness of what it did, breathed benediction, and in turn received a blessing as it slept,—a Christmas blessing.

"Off again. More sea, tumbling and tossed; then a great steamship, down whose funnel St. Nicholas dropped a parcel or two. Then another country, with atmosphere heavy with savory scents,—of doughnuts, of pumpkin pies, of apple turnovers, all of which had been eaten the day before. These dainties stay on earth and are eaten; but their smell goes up into the clouds, and the ghosts dine upon it. The Saint sniffed and sighed. Flying gives appetite. 'When morning comes,' she thought, 'Gretchen will snuggle me a breakfast.' But morning was long in coming, and there were many little ones to serve in that wonderful new land.

"And now another continent passed, another ocean came in view. Island after island rose and sank; but the sledge did not stop. Then a shore was seen, with groves of trees, fan-shaped and curious; with rivers whose waters bore fleets of strange misshapen boats, in whose masts hung many-colored lanterns; and cities of odd build, whose spires and pinnacles were noisy with bells. But neither here did the sledge stop. Once only it dipped, if you have one. I'm in a humor for and fragrant with ivy-leaves and twisted pleasing everybody while I'm about it.' evergreen, where their errand was to feed a robin who had there found shelter, and was sleeping on the topmost bough. "Wee, soft, fairy footsteps outside in the hall,
Then the words of baby musically fall.—
"Going to kiss my papa, first one of them all!";
On Christmas Day, so early in the morning.
GEORGE COOPER.

For "The Southern Workman."

Watching the Old Year Out and the New Year In.

Oh, year! so nearly passed,
If thou shouldst be my last,
Before thou stand I part,
Life's work half done.

So quickly has thou fled,
That I had scarcely said,
Ere long this year I'll tread
Within upward bonds.

Then to I my course run run;
Ere I next world begun
Thou thine hast done,
Swift flying year.

Whatever I may say,
Soon there will bear away
The record of each day,
What'er it be.

Days full of idle dreams;
Days like the lightning gleams;
Days when life's truest work seems
To be forgot.

Days with sweet sunshine bright;
Days like the darkest night;
Days with the hallowed light
God's presence given.

Father, accept what's right,
And, as the year takes flight,
What's wrong in thy dear sight
Forgive, I pray.

New Year, I cannot see
What thou dost bring to me;
But I will trust to thee,
And to my God.

Then come, year, with thy May,
With spring's fair blossoms gay,
And with the bird's sweet lay,
Yes, year, bring May.

And come, year, with thy June,
Lest flowers fade too soon;
Thou art the year's bright noon.
Then come, Oh June!

And bring November sad,
In sombre garments clad;
E'en though thou wait'st not glad,
November, come.

Come with December's frost;
If my will by God's be crossed,
Thou let my will be lost;
God's will be done.

In pleasure's soft caress,
Or sorrows deep distress,
Father, this New Year bless.
In thee I trust.

DELL DAVIS.

A Happy New Year.

This is the salutation with which we greet all our readers. Let the foundation of the year be so well laid, that the added days and weeks and months, the whole superstructure of the year, shall be moulded and shaped after the noblest pattern. May the hnd of the year's first purposes and acts be so Christlike, divine and heavenly, that the fruit shall all partake of that blessed character. Standing on the threshold of the New Year, as it were, at the loom of life, how important that the threads fastened to that loom, to be woven into the texture of the year's life, be not the dark threads of sin and woe, but the bright golden threads of grace and salvation, so that this may be to you, in the highest and best sense, a Happy New Year.

Christmas Observances.

"Oh don't you remember, 'tis almost December,
boy,
And soon will the holidays come.
Oh 'twill be so funny, and I'll have some
money,
And will buy me a sword and a drum."

It were well if such boyish thoughts were confined to children; but alas, how "many children of a larger growth," grown men and women, like children, look forward to Christmas only as a time of merriment or dissipation. "Christmas comes hnt once a year," is often urged to excuse the riotous behavior that is sometimes seen on such occasion. But let me ask, what day of what month does come more than once a year? If its coming hnt once a year is any reason for getting drunk, might we not get drunk every day in the year for the same reason?

Christmas is celebrated, where it is observed at all, in commemoration of the coming of our Blessed Lord into this world to save sinners. Now, if this be the purpose of keeping Christmas, is it right and proper to observe it in a time of merriment or dissipation. "Christmas comes hnt once a year," is often urged to excuse the riotous behavior that is sometimes seen on such occasion. But let me ask, what day of what month does come more than once a year? If its coming hnt once a year is any reason for getting drunk, might we not get drunk every day in the year for the same reason?

Christmas is celebrated, where it is observed at all, in commemoration of the coming of our Blessed Lord into this world to save sinners. Now, if this be the purpose of keeping Christmas, is it right and proper to observe it in a time of merriment or dissipation, to defeat the object of his coming, in a way that is likely to lead to our destruction rather than to our salvation? If, then, the day is to be kept at all, let it, by all means, be done "decently and in order," and not in childish mirth or what is worse, in wicked frolicking.

As to the propriety of celebrating the day, Christians are not agreed. There is certainly no intimation given in all the teachings of Jesus that it is His will, that His birth day should be observed by His disciples at all. And then there is not the slightest evidence that He was born on the day usually celebrated, the 25th of December, nor even in that month. On the other hand, there is a great variety of opinions among learned men, as to the time of year; some say Christ was born in February, some in March, some in April, some in June, and some in October! Now, as it is plain that He was born at a season of the year when "shepherds were abiding in the field, keeping watch over their flocks by night," and as it was not their habit to do so to keep watch in the winter, the strong probability is, that Christ was born in the summer. Still, as that day has been observed for hundreds of years, it is not likely that any evidence to the contrary will change the custom. But it is certain that to keep the day as it is usually kept by carousing and dissipation is, to say the least, very unchristianlike. Let me, then, as one and earnest my readers, if they will observe the day, to do so in a manner that will be consistent with the dignity and holiness of the Divine Saviour, and not in the heathenish way so often seen among us.

Strong Words on Intemperance.

BY C. FOWLER, D. D.

This monster has the "world" for a home, "the flesh" for a mother, and "the devil" for a father. He stands erect, a monster of fabulous proportions. He has no head, and cannot think. He has no heart, and cannot feel. He has no eyes, and cannot see. He has no ears and cannot hear. He has only an instinct by which to plan, a passion by which to allure, a coil by which to bind, a fang with which to sting, and an infinite maw in which to consume his victims.

* * * * *

The public mind has only to glance at this criminal to be certain of his guilt; for he goes about armed with all malignity, concealed behind all craftiness, seeking with infinite cunning to entrap the unwary and destroy the feeble. Like a blood-hound, he scents his victims afar off, tracking them with patient and infallible instinct across fiery sand-fields, and over the barren rock-waste. Once on a young man's track, with one sniff on his heel, nothing hut the running stream of living water can check his pursuit and give the fugitive rest. In dark rooms and dingy cellars, in secret conclave, he devises his plans and mixes his drugs. By night and by day he draws out the catalogues of crime. With hands polluted with blood, and looks that, wriggle and crawl and hiss; with purpose fixed for slaughter, and with heart unpitying and unrelenting, he pursues his infernal work. With the gold his crimes have brought him he seeks to secure friends in the halls of legislation; to put his judges upon the bench, his advocates at the bar, his witnesses on the stand, and, to make surety doubly sure, his views in the public mind. He would control, if he could, not only our almshouses and prisons, but also our legislative halls and our public presses. He would fill not only our cells and grave-yards, but also our judgment-seats and our police commissions. This is our foe—cunning as a fox, wise as a serpent, strong as an ox, bold as a lion, merciless as a tiger, remorseless as a hyena, fierce as the pestilence, deadly as the plague.

* * * * *

I call upon you, in the presence of this great criminal—in full view of his malignant character; of the vileness that stamps the poison itself; of the fiends that are practiced in its manufacture; of the deadly counterfeits that deepen its maliguity; of the insanity that makes the victims fly to rum; of the 1,000,000 wrecks that stagger, and bone, and lead, and bleat, and fester, and fall downward; of the 60,000 poor creatnres that yearly fill drunkard's graves on their way to the drunkard's doom; of 2,000,000 children that are left worse than orphans, cursed with an inheritance of poverty and shame; of the 3,000,000 of women who have millstones tied about their necks and urns that cast into the social sea; of the 200,000 brokenhearted ones that yearly march to the poor house; of the 2,00,000 convicts that are annually sent to jail; of the 200,000 orphans annually bequeathed to public charity; of the 450 suicides that are caused by this evil spirit; of the 700 murders that horrify the year; of the 1,350 rapes that are committed by this demon; of the 12,000 lunatics that are made in this fire; of the great company of idiots that are spawned by this monster; of the millions of homes ruined, and all the homes threatened, by this invader; of the public schools robbed of 2,000,000 children; of seven eighths of all the crimes of the land, committed by this evil inspiration; and of the enormous sum of $2,607,491,866 annually taken from the public comfort and expended in wretchedness and crime—in the presence of all these fearful facts, I call upon you, in this day of probation, in this house of God, by the absolute need of prompt action, by the utter failure of indecision, by the worse than failure of many substitutes, and by the right of self-preservation: I call upon you, in the name of the countless victims who are bound in this wretched habit, in the name of the weeping, watching mothers whose sons are imperilled, in the name of some young men here to-night who may yet wreck all beauty for a time and all hope for eternity, in the name of some fair and hopeful maidens here to-night who may yet mourn and pine in the squalor and misery of the drunkard's hovel, in the name of earth desolated and heaven forfeited by this crime, and in the name of the Almighty God, whose eye is upon us, and at whose judgment bar we must shortly stand—I call upon you to take a bold and decided stand. Out of these awful regions of hellishness we cry from our hearts forever and forever, "Everlasting war against rum, and eternal death to alcohol!"

Gems.

HOLY IN GOD.—The sailor on the midnight sea, if he would behold the star that alone would guide him across the trackless deep, must look not on the dark troubled waves, but at the clear blue heaven. If the sky is overcast, and the star veiled with clouds, he can turn to his compass, and its needle, ever true to the pole, will point to the star, though it be all hidden from his vision. So we, tossed upon many a billow, if we would see heaven's guiding light, must look, not on the waves of temptation, that dash and break around, but above to God. Should darkness and clouds gather in the sky, let us turn to the Bible, and it will point to Him who shines beyond the clouds in unchanging glory.

It is not necessary that we travel down into the valley to find the Pool of Siloam, and wait for the coming of the angel to trouble the waters, and for some strong man to lift us and put us in. No; the fountain is all around us, and flows divinely clear. The Son of God is waiting at this very moment to wash all our sins away. Have you a single stain upon your heart? Come to the fonntain. Have you trouble and sorrow? Come at once and receive joy and comfort.—*Bishop Simpson.*

A lady applied to the late benevolent Mr. Reynolds, on behalf of an orphan. After he had given, she said, "When he is old enough, I will teach him to name and thank his benefactor." "Stop," said the good man, "thon art mistaken: we do not thank the clouds for rain. Teach him to look higher, and thank Him who giveth both the clouds and the rain."

A cheerful and benign temper, that puts forth pleasant blossoms, and bears sweet fruit for those who live within its influence, is sure to produce an undying growth of green remembrances, that shall flourish after the present stock is decayed.

There is a power in the direct glance of a sincere and loving human soul, which will do more to dissipate prejudice and kindle charity than the most elaborate arguments.

There are moments when by some strange impulse we contradict our past selves—fatal moments when a fit of passion like a lava stream lays low the work of half our lives.

True glory consists in doing what deserves to be written; in writing what deserves to be read; and in so living as to make the world happier and better for our living in it.

Christians, see your position—debtors to grace; show your gratitude by earnest, Christ-like lives, and as God has hidden jon love, see to it that you live in earnest.—*Spurgeon.*

It would be well if we learned early in life what a tyrant is behit. Every time we do anything in thought or actioh it not only becomes easier to do next time, but harder to do it.

Trifles.

An old fellow who was noted through the town for his stuttering as well as for his shrewdness in making a bargain, stopped at a grocery and inquired:

"How m-m-many t-t-t-turkeys have yon g-g-got?"

"Eight, sir," replied the grocer.

"T-t-t-ough or t-t-tender?"

"Some are tender and some tough," was the reply.

"I k-keep b-b-b-boarders," said the new customer. "P-pick out the f-fonr t-t-toughest t-t-turkeys, if you please."

The delighted grocer very willingly complied with the unusual request, and said in his politest tones:

"These are the tough ones, sir."

Upon which the merchant coolly put his hand upon the remaining four, and exclaimed:

"Ah! t-t-take *th-th-th-these!*"

The story is told of Ben Butler's earlier days that a townsman once came to him with the question how he should go to work to recover the value of a ham which a neighbor's dog came along and ate. He was advised to prosecute and recover for damages.

"But the dog was your'n," said the sharp Yankee. Butler opened his eyes a little, asked him what the ham was worth, was told five dollars, paid the money, and then demanded a ten dollar fee of the astonished native for legal advice.

A good deacon who was naturally a high-tempered man, had been used to beat his oxen over the head, as all his neighbors did. It was observed that when he became a Christian, his cattle were remarkably docile. A friend inquired into the secret. "Why," said the deacon, "formerly when my oxen were a little contrary, I flew into a passion and beat them unmercifully. This made the matter worse. Now, when they do not behave well, I go behind the load, sit down, and sing Old Hundred. I don't know how it is, but the psalm tune has a surprising effect upon my oxen."

Affectation always looks well—in a monkey.

Ambiard, the Frenchman, in whose house the Duke of Orleans was boarding, while at Boston, was a sailor. Having made a pair of pantaloons for Dr. Lamb, but forgetting the name of his customer, he went into the market, and taking hold of a leg of mutton, inquired of the butcher: "Vat you call dis?" "That is mutton." "Is mutton, is it! Vel, vat you call mutton's baby?" "Lamb." "Oui" said the Frenchman, "dat is him. Monsieur Lamb is de vera man vat for I make de pantaloons."

A little bit of a thing, who had just got back from a party, was asked by her mamma how she had enjoyed herself. "Oh mamma!" she said, "I am so full of happiness; I couldn't be happier without I was bigger."

A rich young lady recently got married and settled all her property on her husband. On being expostulated with for so doing, she replied: "But I've always been told that I should husband my means!"

An Indiana farmer offers to wager that "his hired man can take longer to go the harvest field, get back to dinner quicker, eat more, do less, and bear down harder on a panel of fence than any other man."

An English traveller says, "Put an American baby six months old on its feet, and it will immediately say, 'Mr. Cheirman,' and call the next cradle to order."

When you "strike ile" stop boring. Many a man has bored clean through and let the "ile" run out at the bottom.

TAKE NOTICE,
NORTHERN EMPLOYERS
AND
Southern Workers.

Advertisements from colored people wishing situations at the North, will be inserted in the "Southern Workman" free of charge, if accompanied by references from responsible persons.

Advertisements from Northern employers for colored servants will be received at our usual charge of 25 cents a line.

Until further notice, parties leaving the South, or wishing to communicate further with each other on this subject may do so by letter to the "Southern Workman."

INFORMATION WANTED!

Mr. Jordan Williams, of Norfolk, Va., desires to obtain information of Rosetta Roy, SILAS WILLIAMS, who very mysteriously left home one year ago, and who has not been heard from since then. Rosetta is a white woman of age last May; of dark complexion; about four feet in height; smart, active and rather timid in conversation, with head down while answering with an air of modesty.

His father and mother are very anxious to hear as to his whereabouts. It was reported that he was in Petersburg, but as certainty as to the above statement can be obtained.

Any information as to the above will be thankfully received if addressed to

JORDAN WILLIAMS,
Norfolk, Va.,

Care of M. L'HOMMEDIEU.

INFORMATION WANTED!

Information is wanted as to the whereabouts of a lad supposed to be lost. He strayed from his home in April, 1865, having been about 13 years of age. His name is SAMUEL DAVIS. His master's name was George Lawrence. Any news will be gladly received by his mother if addressed to,

GEORGE GODWIN,
Norfolk, Va.,

Care of M. L'HOMMEDIEU.

LAND FOR SALE
On the Peninsula.

I have for sale 300 acres of land between Williamsburg and Fort Monroe, Virginia. This section of the County is fully and accurately described in the language of Captain John Smith: "Within is a country that may lasse the prerogatives over the most pleasant places known, for large and spacious navigable rivers, havens and harbs for shipping, agreed better by nature for pleasure and profit, which were it fully manured and inhabited by industrious people. There needs no more but peaceable villeryes, rivers, and brookes, with most pleasant dwellings built in a wholesome and pleasant but for the wealth with fruitful and delightsome land.—Captayne John Smith."

WILLIAM S. HOWARD,
Hampton, Va.

THE FREEDMAN'S SAVINGS & TRUST COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,351,307.67, being an increase of 41½ per cent. on the balance due depositors at the close of the previous year.

There are no stockholders in this Company, and all the profits, over and above expenses, go at each semi-annual period to the credit of the depositors on interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $218,214.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $6,000,000 deposits.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by Post-Stock only. Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.

Certificates of deposits issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED,

at request of depositors, from localities where kept by any other Branch without risk or trouble, and without loss of interest.

For full information about the Bank address the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information or suggestions may be promptly addressed to the President, J. W. Alvord, Esq., or D. L. Bates.

FORT MONROE,
Old Point Comfort, Va.
GENERAL FORWARDING,
FIRE & LIFE
INSURANCE
Agency.

THE SOUTHERN WORKMAN

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH

VOL. 2. HAMPTON, VA., FEBRUARY, 1873. NO. 2.

Seedtime and Harvest.

BY JOHN GREENLEAF WHITTIER.

As o'er his furrowed fields, which lie
Beneath a coldly-dropping sky,
Yet chilled with winter's melted snow,
The husbandman goes forth to sow;

Thus Freedom, on the bitter blast
The seeds of thy seed we cast,
And trust to warmer sun and rain
To swell the germ and fill the grain.

Who calls thy glorious service hard?
Who deems it not its own reward?
Who, for its trials, counts it less
A cause of praise and thankfulness?

It may not be our lot to wield
The sickle in the ripened field;
Not ours to hear on summer eves
The reaper's song among the sheaves;

Yet when our duty's task is wrought
In unison with God's great thought,
The sow and future blend in one,
And whatso'er is willed is done!

And ours the grateful service whence
Comes, day by day, the recompense—
The hope, the trust, the purpose staid,
The fountain and the noonday shade.

And were this life the utmost span,
The only end and aim of man—
Better the toil of fields like these
Than waking dreams and slothful ease.

Our life though falling like our grain,
Like that revives and springs again;
And early called, how blessed are they,
Who wait in Heaven their harvest day!

For "The Southern Workman."

The Plow.

At the head of our long list of modern agricultural implements stands the plow, with its pedigree of thousands of years, its claims of usefulness to many generations before our own, and its promise of increased usefulness to the generations to come. If we trace back its history, we find roughly drawn upon the monuments of Egypt, what was possibly the father of plows, formed of the limb of a tree, or the leafy and tough root of a sapling, the lower end hewn to a wedge, and forced through the earth by the foot of the plowman, or more often drawn by a team of two women harnessed with rawhide or hempen thongs. For centuries no better plow than this was used, and even at the present day there are countries, Palestine and China, for instance, where the farmers know nothing of any more convenient and powerful instrument, but plough and sow their seed as the two Syrians are doing in our beautiful picture. The first decided improvement in the manufacture of plows was made in England in the beginning of the seventeenth century, and a four coultered plow, invented about that time, was a marked advance upon anything which had gone before it. In 1634, we find that an act was passed in the Irish Legislature forbidding the cruel custom of "plowing by the tail," a practice then very common, the animal being tied by the tail to the draft-pole, and led by one man while another guided and pressed the plow. The introduction of the new plows put an end to these cruelties, and about 1780, James Small, a Scotchman, succeeded in manufacturing a plow so nearly fulfilling all the requirements, that it is still used in many parts of Scotland. In our own country, one of the first improvers of the plow was Thomas Jefferson, third President of the United States, who attempted to solve the mathematical problem of the true surface of the mould-board, and to lay down intelligible, practical rules for its formation. He tested his theory by experiment, and used his plows upon his own estates in Albemarle and Bedford counties, Virginia, until he became entirely satisfied as to their practical utility. The first cast-iron plow ever made in America was the invention of Charles Newbold, a New Jersey farmer, who spent upward of $30,000 upon it, and then gave it up in despair on account of the strange superstition of the farmers of that day, who insisted that the cast-iron plow poisoned the land, and prevented the growth of rocks. After this time, a variety of plows appeared in rapid succession, but were none of them of especial use, until in 1819, the well-known plow of Jethro Wood was introduced, and did more than any other to drive out the clumsy, old-fashioned implements which had preceded it. The next great cheage in the manufacture was the substitution of sheet-steel for cast-iron, and though this material is expensive, it is in many respects an improvement, as it reduces the weight of the plow without lessening its strength. In these days of careful and intelligent farming, a plow, to be really successful must combine many good qualities, for the difficulties to be overcome are many. It must be of light draft, producing as little friction as possible, which will depend upon the material, and the arrangement of the mould-board and the instep. Then, it must be durable, for plows are too expensive to be replaced frequently without materially affecting the profits of a farm, and for this reason, a good, solidly-made plow will be found to be cheaper in the end, than one at a lower price which is not thorough in workmanship, or first-rate in material. Another desirable quality in a plow is that it should "scour" easily, so that it may be used as well in prairie and sticky soils, as in rough, stony land, and this again will depend upon the material employed.

Our second-page illustration for this month shows the neat, comfortable home, the trim fences, the pleasant, fruitful fields, the well-kept horses, the neat, solid plow, and the energetic, industrious farmer, whose clear head and ready hand have produced the fertility and comfort which surround him. Good farming will rarely fail to yield a good profit, and there is no one thing that the South needs more than thorough practical farmers, who know how to work both rich land and poor, and can drive their plows just where they ought to go.

For "The Southern Workman."

Peace.

Among the greatest of our common blessings, and among those of which we habitually think least, is the blessing of public peace. When our homes are secure, our interests protected, our necessities as citizens supplied, we go on day by day, without acknowledging, without indeed realizing, the importance to us and our children of all this security, which, while it lasts, seems only a matter of course. Not to us, who have so lately known the desolation of war, there is much in our present condition which is worthy of thought and of thankfulness, and it will do us no harm, to stop now and again to consider the deep contrast between the evils of war, and the advantages of peace. Any child in the South can tell us something of the misery, the want, the bitter sorrows which follow closely in the track of contending armies, and rarely are there a few men and women who have escaped some personal experience of the suffering and loss attendant upon battles and sieges. Property, life, health, love and hope, all are sacrificed to the passions which war enbridles, and though the end attained may be often noble and worthy, ought we not as Christians and even as prudent men, to ask ourselves whether that end might not be reached by some shorter, cheaper, and less bloody road? Peace gives back to us all that war takes from us, and are we not true prodigals when we waste our own and our Father's substance upon fleets and armies whose work, when it is done at all, is done usually in opposition to the highest civilization, and rarely in opposition to the spirit of Christ? The only expense for the making of war, is when it can be truly said that some great, general good can be obtained in no other way; but this is by no means the excuse commonly put forward. We talk of a nation's aggrandizement, of the protection of its honor, of its retaliation of injuries, and we make all these things reasons for putting away from us the blessings of peace; but are not the nations of Christendom outgrowing the necessity of settling such questions by sword and cannon? Is there not to be found a better way? The recent settlement of the difficulties between England and America by means of arbitration, gives good hope that the better way is even now found, and found to be practicable, and many wise men are beginning to believe that the gulf between differing nations may be more easily crossed by outstretched, friendly hands, than by murderous rifle balls.

And each of us has some responsibility in this matter, we must learn to love peace and pursue it, for ourselves and for our country, remembering that when we choose war, we choose auntterable, inevitable horror; and remembering too, that Heaven's final gift is the "peace which passeth understanding."

SEEDTIME AND HARVEST.

For "The Southern Workman."

George Washington.

On the 22d of February, 1732, just one hundred and forty-one years ago, was born, in the county of Westmoreland, Virginia, George Washington, the Commander-in-chief and first President of the United States of America. He came of a good English family, and the early death of his father left his mother, who apparently retained him in his youth to habits of gravity and thoughtfulness, for at a time when most boys are thinking principally of their own amusements and personal interests, he was already one of the adjutants-general of Virginia. His first active employment as a soldier was during the war between the French and English, in 1755, when, under Gen. Braddock, he served with marked brevery. Some three years after he retired from service on account of his health, married, and by the death of his elder brother, inherited the Mount Vernon estate on the Potomac river, where he lived for fifteen years, devoting himself to agriculture, and to his duties as magistrate and member of the State Assembly. When the disputes broke out between the colonies and the mother country, Washington at once took a firm and decided stand in favor of the former; was elected a member of the First Congress, which met at Philadelphia in 1774, and was on all the committees appointed to consult upon means of defence. When it was finally determined to raise a general army, he was unanimously chosen as Commander-in-chief, and was at once put at the head of the 14,500 men who were lying entrenched near Boston, preparing to meet the British, who were in force at Bunker Hill. The history of his great services is too well known to need a detailed description here, but there can be little doubt that to his prudence, bravery, and military sagacity, the struggling colonies largely owed their ultimate success. In 1781, the surrender of the British army under Lord Cornwallis, virtually ended the war, but by no means ended the perplexities and trials of the newly-established government, these, indeed, having but just begun. The well-known honesty and the great influence of General Washington enabled him at this time to be of the greatest assistance in disbanding the army, and keeping peace between contending parties. He made farewell to his officers in New York in 1783, in a manner, the dignity and tenderness of which have became famous, then passed southward to Annapolis, where Congress was sitting, and delivered an account of all the public money received by him while in arms, a sum amounting in eight years to less than $80,000, nothing being charged for his personal services. The public gratitude toward him at this time was so great, that he could scarcely have asked for anything which would not have been granted, but in contrast to most modern officials, he made no requests, either for himself or his family, but merely recommending to Congress some young officers without fortune, who had served under him, he retired to Mount Vernon, once more occupying himself with agriculture and the general improvement of his native state. The period that followed was one of great danger to the country at large, on account of the jealousies and opposing interests of the various states. Washington felt the result of this condition to be so threatening, that he spared no exertion to impress the leading men of the country with a sense of their position, and a general convention was finally called at Philadelphia in 1787. This convention, under the Presidency of Washington, recommended a new form of government, and the constitution drawn up, having been accepted by eleven of the States, George Washington was unanimously elected first President of the United States. He accepted the difficult position, and after the first four years of office expired, was re-elected, and served for four years longer, when, being sixty-six years of age, he refused to resume the Presidential seat for still another term, and resigned his authority to his successor, Mr. Adams. For eight years the country had prospered under the guiding hand of its first ruler, and these had been eight years of no common danger and uncertainty; wars had threatened on every hand, political complications of all kinds had arisen, internal difficulties had alarmed the people, but through them all, the calmness and wisdom of Washington had prevailed to keep the country safe and at peace. Two years after his resignation, he died suddenly, leaving no children to perpetuate his great name or inherit his honors, but having made for himself a place in the hearts of all true Americans, where his memory will be forever green. No man has ever been a more faithful servant to his country, or less avaricious of greatness for himself, and no better example of a good citizen can be shown to us in these days of political greed and falseness, than George Washington, our first President.

God asks, not "To what sect did he belong?" But "Did he do the right, or love the wrong?"

The Southern Workman.

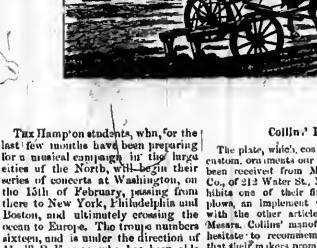
HAMPTON, FEBRUARY, 1873.

THE second month of the New Year opens with no special change at home or abroad. The death of the ex-Emperor Napoleon is perhaps of as general interest as any event of the month, though it is so, rather as an historical fact than on account of its present political importance. Our own Congress is largely taken up with the examination of the Credit Mobilier scandel, which is yet far from a satisfactory explanation, and as the elections are safely over, the various state governments are occupying themselves with their own affairs, in which there is, in most cases, plenty of room for improvement. We cannot forbear, at the risk of monotony, to repeat once more in this connection that the necessity of organizing some system of public schools at present more and more closely upon the majority of the Southern States. If it cannot be done in one way it must be done in another, for there is no appeal from the just demand of our people, and they will not be long in finding out their rights in a matter so important as this.

As bearing upon the above, we express our conviction that the value, in an educational point of view, of properly managed Sunday-schools, is by no means generally appreciated. An organized Sunday-school, whether in connection with a church society, or on an independent basis, has opportunities for reaching all classes of young people, which can be made to serve the best and highest purpose. The appliances of pictures, lesson cards, simple books and papers, etc., which are now a-days within the reach of the poorest school, are powerful weapons against ignorance and vice, and in the hands of earnest teachers may be made to extend their influence far beyond the actual limits of the school. Not only, too, is the moral nature of the pupils cultivated, but they may on Sunday be inspired with an honest ambition to improve themselves, which will go with them through the week and produce unlooked-for fruit. We must remember always the law of political economy, which declares that the demand must precede the supply, and that therefore we cannot expect our educational wants to be adequately met, until we, ourselves, are fully conscious of our need, and thend our demand upon our desire. We believe, therefore, in Sunday-schools not only on account of their value in the propagation of Christianity, but also because they may be made to create a desire for general knowledge which will quickly increase the facilities for obtaining it.

THE poverty of certain districts of the South is so well known as to be taken almost as a matter of course, and it is therefore all the more necessary to impress upon the inhabitants of such districts, especially if they are landowners, the fact that the value of their lands is increased in rapid proportion, by intelligent cultivation. Farmers who nourish their land and their stock generously, will find that their outward ones to them both in the immediate interest on the money invested, and in the increased value of the land and stock in which they invest. Careless farming will ruin any country, and it is only in the most fertile regions and for a brief number of seasons, that a man can expect to take from his fields and plantations, what he never returns to them. Intelligent industry can farm Southern lands profitably; unreasoning sloth will find stones in place of bread.

THE annual meeting of the Trustees of the Hampton Normal and Agricultural Institute, was held in the school building on Thursday, January 23d, and was attended by the Trustees of five Counties, among whom were numbered many well-known names, besides several visitors and friends of the Institution. After the business of the morning session had been transacted, the gentlemen adjourned to the large assembly-room, where the full corps of students and teachers were gathered, and addresses were made by Dr. Ruffner, Superintendent of Education of the State of Virginia, by Gen. Howard, of Howard University, and by Dr. Haigh, of the state Normal School, Meridan, Conn. Dr. Ruffner spoke at some length and with great ability upon the original development of the white and colored races, stating very clearly that the usual interpretation of the division of these races is not the correct one, and that the curse which anciently rested upon the sons of Canaan has long ago been fulfilled, the degeneracy of the African people being the result of their abandonment of God, and not of God's abandonment of them. Gen. Howard followed Dr. Ruffner with a speech full of the broad charity which characterizes him, and expressed in strong language his conviction that the fact that all men are children of one Father, and redeemed by one Saviour, should overshadow all minor distinctions and obliterate all ignoble prejudices. Dr. Hatch, of Connecticut, then expressed his satisfaction and surprise at the excellent working of the Hampton School, and closed his brief remarks by saying that the Yankees would have to look out for themselves, or Old Virginia would get ahead of them after all. The choir of the school then sung several hymns and choruses, doing credit to themselves and their Director, Mr. T. P. Fenner, and the meeting broke up, the whole party of visitors repairing to the Teacher's Home, where a plentiful lunch was prepared for them by the ladies of the Institution. After luncheon, the remainder of the afternoon was devoted to business, until at the usual hour, prayers were held in the assembly-room, and the gentlemen left for Fortress Monroe, expressing themselves well pleased with the condition and promise of the school.



THE Hampton students, who, for the last few months have been preparing for a musical campaign in the large cities of the North, will begin their series of concerts at Washington, on the 15th of February, passing from there to New York, Philadelphia and Boston, and ultimately crossing the ocean to Europe. The troupe numbers sixteen, and is under the direction of Mr. T. P. Fenner, who has been able to provide from the materials at his command, a large and interesting *repertoire* of the hymns and choruses peculiar to the colored people of the South. The really striking beauty of the music is enhanced by the costume which the voices of these students have received, and their rendering of their native melodies is as remarkable as anything of the kind that has yet been offered to the public. The object of the campaign is to procure funds for the erection of a new dormitory for girls, which is greatly needed, and ought to be put up before next winter. Some $75,000 will be required for this purpose, and we earnestly hope that the Hampton Troupe will command the audience they deserve, and return to their fellow-students laden with the dollars which they are so boldly going out to seek.

Preachers' Associations.

How much ought a preacher to know? All that he can learn, like all other men, of course, but what things should one study that he may be a preacher? It depends very much where he is to preach. If the people are learned the preacher must also be learned, but if the congregation is made up of plain, country people who are contented with plain preaching it is not necessary for the minister to study Greek and Hebrew, and many other things that are taught in schools of Theology.

There are many young men all through the South who are anxious to become preachers. There are many older men, also, who are preachers now, who wish to improve themselves so that they may become better preachers.

Most of us can remember the time when anybody who chose could preach, even if he could not read. But it is not so now. Preachers must keep up with the times, or the people will not listen to them. They must be as well educated as the people, and a little better.

But what shall they learn and how shall they learn? They have not time nor money to stop preaching and go to school, and how shall they read, what would become of the people meanwhile?

A preacher should be a good reader. Now there are three things that make a good reader. He must read so that he can be *heard*, so that he can be *understood*, and so that those who hear may *feel* the force of what he reads. A preacher should be able to read the Bible well, to call all the hard names correctly, and to bring out the power there is in God's Word. He should also understand the correct use of language, that he may speak properly. And in order to do this well need of study grammar.

As he has opportunity, the preacher will wish to read as many books pertaining to the Bible as he can obtain, and at all times he will be diligent in the study of the Bible itself.

A plan has been suggested whereby many preachers might gain much instruction in respect to the things we have mentioned. Let all who are or wish to be preachers in any neighborhood, form themselves into an association and hold regular meetings for study. In most cases, someone could be found to give lessons in reading and grammar. At all events, the class could help each other in studying. At the same time they could each give a short account of the sermons last preached, and talk over some point of Theology. This is what educated ministers do in their meetings all over the land.

This plan is being tried in North Carolina. There has been such an association in Wilmington for some time. The meetings are held once a week. This season, another association, with monthly meetings has been formed in Robeson County, at the suggestion of Rev. H. B. Blake. It is the custom to read a chapter from the Bible at each meeting to explain what is read to have a lesson in grammar and to hear plans of sermons.

Sometimes a preaching service is held at night. The members of the association are furnished with books to take home and read. Much enthusiasm was manifested at the last meeting. One man came twenty miles in a buggy to attend.

The want of suitable books on Theology, to put into the hands of Southern preachers has long been felt. We are very glad that a distinguished clergyman of South Carolina is thinking of writing such a book, with some such title as this: "A Manual of Doctrine and Duty." We hope he will speedily undertake the task.

Hampton Normal School.

HILO, HAWAII, *Dec. 20, 1872.*

GEN. S. C. ARMSTRONG,

My Dear Friend,—The Hampton Normal Institute is a favorite pet of mine, and there was no one place in the United States which Mrs. C. and I left without visiting with so much regret as Hampton. We were greatly interested in the Howard University at Washington. I formed a high opinion of that institution and of its noble President.

I believe that your Agricultural Institute is destined to be a grand success. It has a good "outlook" the picture of the building is fine. Let your new buildings go up. The bank of Heaven is good for any amount well and wisely employed. I hope your Institute will outrun Harvard, Oxford and Cambridge, in numbers and in real usefulness. And I rejoice greatly in the efforts you and your friends are making in the line of Sabbath-schools for freedmen. "Fight it out," General, "on that line." You are sure that freedom's right and light will gain the victory under such weapons and tactics, for God will bless all such labors done in his name.

I have for our little church, in the hands of Rev. S. T. Humphrey, 84 Washington Street, Chicago, fifty dollars. This amount, we hope, will help the Church voted yesterday to your discretion either to use it for the circulation of Christian literature in the Sabbath-schools of Virginia, or in the freedmen of the Institute.

Our S. S. supports one missionary and family in Micronesia, and our little congregation contributes from $60 to $150 at our monthly concert. The whole amount of their contributions for the year ending May, 1873, was $1000. They are poor in worldly wealth but rich in resolution to work in Christian efforts, and I trust some of them are rich in faith." Seven churches, including the foreign church, have been organized out of my parish, and my little central, or mother church has five branchings around it, besides the central edifice. So we make quite a show of white spires and merry bells.

T. M. COAN.

LIBERTY, VA., *Jan. 16, 1873.*

Prof. S. C. Armstrong, Principal Hampton Normal Institute;

Dear Sir—Your esteemed favor, postmarked the 9th inst., reached me on the 13th. I have been prevented by sickness, confining me to bed, from an immediate reply.

The graduates from Hampton Institute, employed in this county, are John Hampton Carter, Tazewell. Ebenezer Hines Lewis Dennis Williams, William Henry Wilkins, and Mary Hopkins. I have visited the schools taught by Wilkins and Williams, and am highly pleased with what I saw and heard. The other parties are teaching in remote districts, which I have not yet had opportunity to visit; but I am satisfied, from information received from school officers and others, that all are doing well, and proving themselves efficient in their work. I am glad to say that so far as I am advised, the conduct, morality and general influence of all of them have been beyond reproach.

As a result of careful observation my impressions are that the colored race is capable of apprehending first principles with great readiness. How far they may prove themselves capable of advancing much beyond is a problem time only can solve.

I have written thus briefly under great debility, and must beg your indulgence for any disappointment in respect of manner or matter.

Very respectfully,

S. L. DUNTON.

P. S. Can you send me *immediately* a teacher for a colored school? One you would recommend can get $40 per month and board cheaply. S. L. D.

OTTSVILLE, Bedford Co., Va., } *Jan. 15, 1873.* }

Dear Teacher,—Your letter was received in due time. A few days ago, as according to request I now sent myself to comply with it. I left home on the 15th of October, 1872, accompanied by my friend Lewis B. Williams, in search of a school. We took the train in Norfolk at 7 o'clock A. M., and arrived at Liberty, Bedford Co., Va., at 1 P. M. We went at once in search of our friends and schools mates, T. E. Hines, Alvin Carter, and Mary Robinson, who enabled us to the house of Mr. Lewis Miller, where we remained until Tuesday morning, October 15th, on Monday morning we were called to school of T. E. Hines' Esq. at Bunker Hill which was and is still flourishing under his command and skillful direction. Mr. Wm. appointed by the Church Esq. for us as an assistant, acted very satisfactorily. He said that he was pleased with the system of teaching at the Hampton Normal School and Agricultural Institute, and that he was glad to see so many young there was a chance for us to distinguish ourselves in the elevation of our race. Monday, October 21st, 1872, I organized school at Otterville, with only eight scholars now numbering forty-five, with an average of thirty-three a day. There has never been a school in this section before, and the people seem to have a strong desire that their children may be educated. The children are progressing finely in their studies, and they seem to have a liked for education, and they appreciate the school very much. It has been remarked by several white gentlemen, that my school is the best in the county, white or black, and some of the white people are eager to have lessons in keeping order under me. I have also a very fine Sunday School in my school house every Sunday, which is conducted by myself with the aid of two of my most advanced scholars, and which, I think will add to the morality of the people. I shall commence night school next week. I can testify to my scholars' on the importance of obtaining an education. The parents of the children are very poor, and at times they are compelled to keep their children at home to work, and to help them about the farm. Some of them own small places of their own upon which they cultivate corn, and the filthy weed, tobacco, which constitutes the farmer's crop in this section of the country. I am doing what I can for the education of them physically, morally and mentally.

I was over to Sal m in the Christmas to see Miss Nottingham and S. C. Winsor, who were well, and teaching very good schools.

Yours, with respect, the s teacher and principal, WM. H. WILKINS.

TUAXTON'S, Bedford Co., Va., } *Jan. 10, 1873.* }

Dear Teacher,—I write, having heard that you wanted information about the schools taught by the teachers sent from your institution. I teach school about three miles from Thaxton's Switch. The people are all very anxious to have the children learn, now that their minds are aroused. When I first came they all said that they could not stop their children from their work to go to school; that they had got along without an education and their children could do the same. Then, as they seemed unwilling to give up their children's services to school every day, I asked them to Sunday school. Some agreed to send them, others said it was too far. On Sunday when I got to the schoolhouse (that is, if it could be called one), I found a little log house, plastered inside with mud. It had no desk, a few planks, with holes bored in each end, and two sticks put in, formed the seat. The windows were there p ves of glass, tacked in the sides of the house. The floor had open places in it so large that you could see under the house very good. I found about fifteen children and a few old people waiting to see what that new teacher would do. They had been having Sunday school during the summer, taught by the preacher's daughter, but very differently to what I had seen it taught. They all had their spelling books the same as when they went to the day school, excepting five, who had test ments. They had a little singing, after which they said the Lord's prayer, then they said their lessons. After their lessons they said they repeated the 23d Psalm. Then I got up and said what I could to get them to send their children to school. One got up and said he was glad I was going to ad them; another asked would their children be allowed to teach if they learned enough. As I told them they could some of them teach, they thought they might spare them a few Christmas if not before. I thanked them, and asked them, please to send all their small children that were not at work to-morrow, as I wanted to open a day school. They said they would, and some said they would see about it. On Monday I started for the school-house, which fortunately, was but a quarter of a mile from my boarding place. When I got there I found one boy, the only scholar there. I was a little disappointed, I will own; anyhow, I went in, swept up, and the boy made the fire. After waiting about an half an hour, 15 more came. With them I commenced school. After the morning exercises was over I went around to give out the lessons. I asked one little girl what class she was in when she went to school. "I won't in any class; I sat on the bunch," she replied. As I had finished giving out the lessons, I told all to go home and said you may be sure I was surprised to hear all speaking out each word aloud, of course. I could not put up with that. After a while I succeeded in stopping them. They said that their teacher taught them to study so, that he might know they were saying their lessons. At the end of a month I had 25 scholars. The children were very anxious to learn, so they learned very fast. Some of them learned such a les in a day. I did not have but three that took over two days to learn their Letters. The children's parents were so pleased with the progress of their children that they sent them from their work. As soon as they perceived learning good, I told them if they would have the place I gave them to board on Christmas eve, their parents might come and hear them say them. So on Christmas Eve I had quite a nice exhibition. The people said never heard of one before, so the house was filled to see what an exhibition was. They were very much pleased with it. They are so much pleased with my teachings that they want me to open a night school. My school now numbers 40. I have applications to join my school every day, and wish I was able to take them but I have as many as I can teach. I only seem very anxious to learn. I have talked to them about drinking whiskey and using tobacco. One got my pocket what did and tried to make it for the use? Another said he had used it for forty years, and it never had injured him. Another said he would as lief give up his God. Some of my scholars have been to my first exam, but I stopped them. I is very well satisfied with their progress. A great many can make their letters that could not write at all. I think education is very necessary for the elevation of this race. I have written this letter myself, without any help of having no books. The scholars never have any papers or cards or nothing of the kind. We are trying to make a collection now. We have some papers and books. Some of the people have a little land and a plank house, but the most of them are living on the white people's land in little log houses, some with no windows or anything to give light. The people have treated me very well. Both white and colored. Some of the whites are very much opposed to free schools and colored teachers, but they have always treated me with respect, I am happy to say.

As ever,
your friend, and scholar,
MARY C. ROBINSON.

General Intelligence.

ALTHOUGH the German government discourages emigration to the U. S., it is said that the following notable accessions in other forms. The semi-tendon and muscular have been added to the list. Those so to speak have emigrated from themselves back. Two districts of Hanover have petitioned the government and will be allowed to use different bells in calling individuals.

MAINE expects to reduce her State tax to ten mills on the dollar, for the ensuing year. The Governor's annual report thanks a unexpanding income to thank in Maine that it may soon be entirely out of the possession in the driving word, which, being interpreted, accounts for her great governmental prosperity.

SIR BULWER LYTTON, the great English novelist died in London on the 18th inst., at his age of 69.

A MISTAKE.—Tribune "compositors has doubled to ask printing clerks all over the world. Our paper tribune warrant type to be sent as a statue to be placed near Horace Greeley's grave.

A TRIANGLE collision took place in the English Channel on the night of the 17th inst., between the steamer Lisbon and a sailing vessel, from the effects of which the Lisbon sank in a few minutes, and over 40 lives were lost.

HOLY WOOD IN OREGON threatens an eruption.

THE balances in the National treasury, at the close of business on January 20th, were: Currency, $4,384,246; coin, $44,684,661; total in the Treasury, $49,068,907. The amount of special deposits for the redemption of coin certificates, $23,320,020.

A GREAT anti-slavery meeting has been held in Madrid, Spain, and the committee of the society for the abolition of slavery in Porto Rico estimate that 15,000 people will be present. Delegates will be in the island, as is usually for their property.

THE rate fall in England during the year was a brute 1-8th and a great deal in any of the five years from 1869 to 1873, or by one word, 40 to 60, 40 to above the usual 47 page.

IT is recorded that a negro of Australia went to the U. S. state, has been in negro in New Orleans, when, strange, noticed that among the fast faces and temperaments of the white men, few of the people of the distinctive, rang of as 6 ft as to diagram. This statement were published in the N. O. papers in Australia, of a proposal to accommodate all that it thought, who in such a way of transportation may be made a poem any account.

Collins' Plow.

The plate, which, contrary to our usual custom, ornaments our second page, has been received from Messrs Collins and Co., of 212 Water St., New York, and consists of a cut of Collins' manufactory, we do not hesitate to recommend. They fulfil all that their makers promise for them, in respect to durability, convenience, utility, etc, and are available in almost any kind of soil. No farmer can afford to buy poor implements of any description, and those who, unadvisedly true economy desire the best, may safely purchase from the firm above mentioned.

WILLIAM BARTLETT.

Pear Culture on the Peninsula.

Few persons know what a profitable business the Pear Culture might be made in this part of the State. To give a little idea of this, I have on my farm near Big Bethel, seven small Bartlett pear-trees, occupying one twenty-fifth of an acre of land, having been set out twelve years and the trunks do not average more than six inches in diameter. This year I picked from them thirty-seven boxes of pears, shipped them to Boston, and sold them for three dollars and fifty cents per box. After paying freight bills, commission etc., I received over one hundred dollars as the product of my trees. If I had that acre covered with pear-trees, it would be more profitable than any other acre of land on my farm or in the vicinity. I have within two years set out several hundred more pear-trees, and hope in a few years to have pears in abundance.

WILLIAM BARTLETT.

North Carolina Letter.

[Our readers may be interested in hearing something of the good work being done by our former editor, Mr. Blake, from whom we subjoin a short letter]:

WILMINGTON, *Jan. 15, 1873.*

With my day-school and teacher's institutes and general Sunday-school work, and County Bible Agency, and normal and theological studies, my hands are full. Last Saturday, father and I went into the country to meet the teachers. We gave them two lessons, and he returned to town. I spent the night. Sunday walked five miles, examined a Sunday-school, made suggestions, etc., in the morning, and harangued the parents at night; left in a cart after taking orders for Bibles and Testaments and school-books. I spent most of the night in a cabin by the fire; took the 2:30 A. M. train, and arrived home at 3:45, and went into school at 9.

H. W. BLAKE.

SEVEN MILE FORD, VA., *Jan. 14, 73.*

Gen. S. C. Armstrong, Principal Hampton Normal and Agricultural Institute

Dear Sir,—Yours of the 20 inst. to hand, contents noted, I hasten to reply. There is certainly a great work ahead of the educators of the land, when we consider the fact that the colored race, together with the heavy influx of foreign whites, are comparatively illiterate. Besides, we have our own children to educate. I say when we consider these facts, we are forced to the conclusion that the work of educating all these is not enough to keep ahead or even apace with the filling up of our extensive territory. Is indeed, a serious case. But passing over these general ideas, I will say that so far as my experience goes, your school is doing a vast deal of good in meeting the demand for teachers in the colored schools of the State.

I have been superintending schools here for more than two years, and I have been able to get no teachers that have been a credit to the colored race, save those who have been educated at Hampton. I will except one who was educated in New York. The colored teachers from your school have been well instructed in all the rudimentary branches taught in our public schools; in fact, better than many white teachers, who are employed in our schools. Besides, those under graduates have been properly trained in morals, etc., and their influence is perceptible in the schools where they teach. Joseph D. Ricks, and Stephen A. Ricks did me good service last year. S. A. Ricks is still teaching. I wish I had more of your pupils for my colored schools. The more you can send, educated in the common English branches if they are to make citizens in the government. Our free institutions demand it. We must have an intelligent citizenship, if we are to have a happy, strong, and prosperous government.

It is an admitted fact that slavery is eternally dead; that the colored race is a race of moral and intellectual intelligences, that the negro can be taught to read, write, and work in figures; and that he can be instructed to the principles of political economy, morals, and religion. Therefore, the better he is instructed in these things the better citizen he will make, and the more able will he be to govern properly a ruling which is the life of a stable government. Hence it becomes the duty of every man, and of the government itself, to assist in the amelioration of the condition of the negro race. If we are to have free suffrage, we must have free education. We must educate or our republican fabric will fall like Roma did; only ours will be so much the greater as our advantages and privileges are greater. These views of mine have been hastily written, not having time to revise them.

Very respectfully,

D. C. MILLER,
Sept Smith Co.

It makes a woman tired and sweet,
It has a pleasure and a pain,
Of happy complaint too there.

6- Hand inside the body did send
Of dripping water.—sensing wisely—
Of which how it perched on an equal hill.

Or rely that it Paul's die but,
Or why-handed Paul's die but,
His actions, beckoning in present.

The fellet that he shyly blend,
Twixt thrench the air—lights on the list
Of acknowledgments, seems to be heard.

Two merry hearts that brightly blend,
Pierced with a feather-headed rated,—
A Cupid tugging here's just mend.

Love comes in something true
If love my face, in her love raise?"
Is still my only Valentine.

Ah! Phillp, do you adore think
Of painted shell,—a mill-pond brink,—
Forget-me-nots in shales stick?

'Tis well to love; 'tis well to pray
That God will give me luck, some day,
You and the heart you took away.
Godey's Monthly.

What Madam Talbot Saw.

BY MRS. HALLIE QUOTES.

It was my eighth birthday, October 25, 1797, and I was spending it at grandfather's, to me the most pleasant place in the world, because, being so far away from my home in Maryland, I had never before visited it, and, according to my notion of such things, it was as grand as a palace.

He lived in Alexandria, an old town in Virginia on the right bank of the Potomac, and eight miles below Washington city, then an insignificant village with scarcely more than the foundation flag of the now magnificent Capitol. Grandfather was a stage-and-coach builder and the big yard just behind his stone house was constantly filled by blacksmiths, trimming, and paint shops while within it stood great, heavy-looking, new and old family coaches in every condition, from the brand-new with polished panels and silver hinges that shone like mirrors to the tumble-down and nearly almost unfit for service. This was long before the invention of cars and railroads you know, as the only mode of travel was in some kind of a wheeled vehicle drawn by horses, or on a horse's back; and there were few families in Virginia who did not own at least a buggy or gig.

My playmate during the entire morning had been Anthony Harper, a boy from next door, only two years my senior, and so full of real sliding fun that the very sight of his face, even when in clumsy, would make me want to laugh.

It was four o'clock in the afternoon, when, all of a sudden, with playing wicked, diabolical practice, "Hot Butter in mine," and leap-frog, Anthony suggested: "O, let's play ball-ed. You be the Indians, and I'll be Daniel Boone!"

"My wife had returned in part by this time, and I hurriedly exhibited: "Anthony, pshaw! me. it's my birthday. We were playing Indians, and I got lost. Quick! come also me to grandma! I am not lonesome."

"Ice chile's got to go!" dora grandmammy," said old aunt Jean, putting down the I never, never seen in her unsteady arms. How I reached upon her broad bosom!

"No, you ain't no such thing, you poor little lost thing; but I wonder who you is anyhow. No, Nick, don't skurb middle tonight," as the pair lifted where a broad gravel walk he ached to the right and left. "Hit take her to my room and clean her face first."

It was not the first time I had been in the "nigro quarters"; in South-ern plantation, but none that I had ever seen like Miss Nelly Custis's, whom he laughed a great deal frequently looking at me, and then saying something in a language I did not understand. He was a large Washington Lafayette, possibly a few weeks at Mount Vernon with his tutor before he returned to his home in France. The General sat in a high-backed, leather-cushioned armchair, whose carved top of dark mahogany rose slightly above his beautiful white head. I remember thinking how black his voice was and when he smiled, which was once or twice at something Miss Nelly said, the expression of his entire face changed from grave to almost joyous. Miss Nelly had lovely brown eyes with little short curls hanging low over her forehead; while the body of her hair was drawn up into a loose knot and fastened upon the very top of her head with a white comb shaped like a butterfly.

Breakfast was soon over, and, Miss Nelly bidding me follow her, I went across a broad hall, in which hung a lamp that I asked like a small church, to the drawing-room. A fire was burning in the wide chimney. There was no carpet on the floor, but the dark boards shone as if they were varnished. One great window, that I thought had a hundred panes of glass in it, was open, and through it I saw the General with his cane in his hand, hat on, and a brown overcoat with broad pocket-flaps, talking to three colored men, who, standing bareheaded before him, seemed receiving orders. A little black boy about my size, with red caps on his straight fuzzy woolen shirt, was tumbling somersaults in the grass. The General poked at him two or three times with his cane, which made him squirm with laughter. Presently Miss Nelly said, "Would you like me to play for you, Patsy?"

The harpsichord before which she sat was the first one I had ever seen. Grandma had a *spinet*, but it was much smaller, and squeaked like a fine, cracked voice. Miss Nelly's sounded full and clear, and I thought the music most beautiful. There were two immense vases on the mantle-piece, painted like the Pot chromatic were now always, and between the m a candelabra with many candle-holders fringed with pendants of glass prisms around them, which sparkled in the sunlight like hundreds of rainbows. The mantle was oak, and very clear. Pretty soon Mrs. Washington came in, and, taking a big bellows from a nook in the child's-toy size, which stood inside a brass-wired border, she began to blow the smouldering fire into a bright blaze.

I felt entirely at home, somehow, for all about me was wonderfully quiet and pleasant; yet, child though I was, I instinctively knew that nothing vulgar or coarse could intrude there.

Being free and unreserved in my temperament, I chatted with the ladies familiarly,—little dreaming what distinguished personages history and coming years would make of them, or how I would one day regard this rare episode in my long life.

A tall, unhungary clock, standing in the hall with gilded Roman pendant on top of it struck nine, as Nick, mounted on a white horse, rode up to a block in the rear of the portico.

"Missus says, bring the little girl up to her, please, Miss Nelly," said a colored girl whom I had not seen before. Following my guide (whom by this time I had begun to love) up a staircase and along a wide entry, we entered a bedroom. I have an indistinct recollection of half curtains at the windows, through whose parted folds I caught a glimpse of the Potomac River, flowing at the foot of the hill, and of a large, dark bureau, with brass handles tied in bow-knots, and a pyramidal top wreathed in leaves and oak-leaves carved out of the same dark wood, and standing between the windows. A chest, quite as large as the bedroom in a seaside cottage, opened out of this chamber. Mrs. Washington advised me to take from it, and trying a plaid shawl of blue worsted and a small straw hat, which had doubtless been Miss Nelly's.

Patting these on me with a motherly fashion peculiar to great hearts such as hers, she said, "The roads are so muddy, little one, we will send you home before Nick, on a pillion. In the basket which he carries is a letter for your grandma and a lunch for you; should you get hungry on the way. You have been a brave girl, but be careful where you fall asleep next time."

It was the General himself who lifted me on the pillion, bidding Nick ride gently; and his beautifully unjointed figure was the last I saw, as we slowly rode down the hill to the ferry. I heard the tinkle of cattle bells through the woods, and passed a carriage containing two gentlemen, which was lumbering up the avenue; then the horse beginning a swift canter, we were soon beyond the precincts of Mount Vernon.

Seventy-three years between my first and last visit to that hallowed spot! Can you imagine a life-link so long; or with what varied emotions I again stood, only last summer, upon the identical room where those kindly, soft fingers fell shadowed my youthful form? More than two-thirds of a century had elapsed. Nineteen Presidents of these United States had filled their allotted period of public trust and honor, while the ashes of the greatest and best of them all (save one) lay in the marble sarcophagus on the hilltop beneath the shadow of his own loved home. In that very room, now so large and empty, I had played and the only thing within it on which I could fasten a thought was a framed newspaper containing a full account of his death, Saturday, December 14, 1799.

The lawn was there in the more then verdal loveliness of that October morning; but the hundred or more people scattered over it were, in the fashion of to-day, and seamed with idle curiosity the belongings of a new home, now but the relic of a past century.

The old clock still ticked the flying hours on the first landing of the winding staircase; To me it said, "Then and now, then and now;" and above the locked and always silent harpsichord I leant, a withered old woman, just where the merry little adventuress of only eight years had stood looking up into the blooming face of Miss Nelly Custis, and the old lady overcome by the one I had last seen on General Washington, hung on exhibition behind the glass doors of a huge cupboard, and before an antique mirror in the western parlor stood the very globe over which I had so delighted to pass my childish hands in the General's library, that long-ago morning. Externally, few things were changed. The carriage house, Mattie Ray's quarters, the walled-in garden, even the ivy and honeysuckle bushes, appeared just as they did to my youthful vision; but when I sat, pulling his mother's dress, said, "Look how often that old woman wipes her eyes," and she replied, "I guess the light hurts them," they little dreamed I was weeping over the tender and blessed memories of my resurrected childhood.—*Our Young Folks.*

The Story of a Nautilus.

I am the oldest nautilus alive. The youngest of my readers knows what a paper nautilus is. My home is a pearly shell. When the sea is smooth, and the sky is bright, I use my shell for a boat. I set my sail, and float over the waters as proudly as the swift ships of New York or Boston. When the clouds look black, and

the waves rise, I furl my sails and draw in my oars, and sink down among the coral groves at the bottom of the ocean. So my little vessel never fears the storms in which great ships are sunk.

It is not dull at the bottom of the sea. There are waving forests of fan coral of strange shapes. Great beds of bright sponges are spread over the sands, and a thousand sea-plants of all colors make our home as bright as the woods in fall. The purple mullet and gold fish are there; and many a bright creature darts about like a flash of light. There we see the wonders of the deep. The shark rushes by us, and we hide among the rocks. The cuttle-fish darkens the water with the inkstand of his ink; and there are mollusks who say they have peeped into the lair of the sea-serpent. Sometimes a great ship comes down among us, and we float in between the decks and play with her guns and her freight. But it is not to us as stout sailors dreamed with their vessels.

When there is a long storm, we tell each other about these wonders, and about wrecks and sea-fights. We love to hear about the old naval heroes of England—about Sir Richard Grenville and Sir Francis Drake and Humphrey Gilbert, who dared to cross the ocean in a boat of tentons. We were never tired of hearing how the brave Blake "lit his pipe near to heaven by sea as by land." We have heard of Blake, too, and of many a famous sailor besides. We know these things as well as your fathers and mothers do. You will wonder how we know them. But I will tell you that when a brave deed is done, or a brave word is spoken, the fishes in the sea, and the birds in the air hear of it and are glad of it. And when a hero dies, the winds among the pines on the hill-tops and the waves on all shores, repeat the great man's name.

I had always wished to see such a sea-hero and a naval fight, and I had my wish on a bright day in October.

The shadow of huge ships darkened the sea, and as I rose to the surface I heard the thunders of two great fleets closing in action. The vessels in one fleet were French and Spanish. The smaller fleet carried a flag with the cross of St. George. On the quarter-deck of one ship I saw a man with one arm and one eye. He wore a number of stars on his breast, and they were not needed to show him as a leader, for he looked like a King, and every sailor turned toward him, as if the fate of all rested upon him. Just as his ship came by me a new signal was run up. This is what the young nautilus must have heard it a hundred times. It was:

"England expects every man to do his duty."

I never shall forget the cheers that rung from the deck of every vessel, when the men saw this signal. I knew then that the Englishmen would beat.

For more hours I heard the smoke and darkness. The guns flashed and roared, but I could see nothing. When the smoke rose, I saw that many of the French and Spanish vessels were wrecks. Others were striking their flags. Some were crowding on all their sails to get away. One ship was without a flag, and I heard the one-armed commander forbid his men to fire on her. Just as they stopped firing a bullet from this ship struck him and he fell. His men carried him below. The battle went on, and many prizes were taken. I heard the sailor tell another that the wound of their leader had proved mortal. The wounded hero had called to his captain and said: "Kiss me, Hardy," and then died. His last word was "duty." I could not hear any more. The sky grew dark and the waves became rough, and I sank down to the bottom of the sea.

That night we mollusks met in the cabin of a great French ship-of-war, and talked over the fight. Then the oldest of the mollusks spoke. He used to tell us wonderful stories of the great sea-fights of other days. He said: "You have seen Lord Nelson of the Nile. He is the greatest sea-leader that I have ever seen, and as gentle as he is brave. All England will mourn for him." Then he told us that Nelson when he was young, took a vessel from a Plymouth captain. His friend had no fee to tender. When the captain told him that he was poor and needed the vessel to support his wife and children, Nelson gave her back.

The old Nautilus told of Nelson taking the fleet of Denmark. When his commander made a signal to retreat, Nelson turned his blind eye toward it and gained victory after victory. He was wounded and to come to see the last time and meet this great foe, he doubted about coming. But the lady that he loved told him to go. Then Lord Nelson said to her: "My choice were more Emmas there would be more Nelsons," and he came and died. "Now," said the old Nautilus, "your laws seem a little safer than I have ever seen, and you shall live till you have seen a greater naval hero than Lord Nelson."

That night the old sea-fires died.

A few years before this battle, I had seen a flag in my native sea bearing thirteen stripes and seventeen stars. It had added many stars since. When I first saw this ensign, it was before a pirate city in one of the Barbary States. I could tell you many stories about Stephen Decatur. They taught the pirates to respect those States. They set at liberty many slaves. When I saw this flag again, it was on a ship-of-war called the *United States*. She met a frigate named the *Macedonian*. She carried a gold crown flag. For the first time, I saw that flag hauled down. The stars and stripes rose above it.

I learned to love those stars.

After many years, I sailed, for the first time, across the Atlantic. Rounded to the shore of that dreary fog. I sailed along the gulf of Mexico till I reached Mobile Bay. Great forts were thundering from the shore. A fleet, with the flag that I loved was entering the bay. On the main-top of the fort most vessel I saw an old man lashed to the mast. He gave orders to his men, and guided the whole battle. I saw the light in his eyes, and a cold chill ran through me. Then I knew that I should die very soon, for I had been a greater naval hero than Nelson. But I knew also, that before I died, the FLAG which was borne by FARRAGUT should wave by land and sea over every inch of the old AMERICAN UNION.

THE SOUTHERN WORKMAN.

[For the Southern Workman.]

The Two Ways.

In a place where two ways meet
I stood at early dawn,
Glistening beneath my feet
Was the bright dew of the morn.

One way was rough and rocky;
The other path met flowers sweet;
A low voice bade me choose the one,
Toward the other pressed my eager feet.

Gaily I wandered onward
Mid the beauties of each young flowers,
Giving little heed in my pleasure
To the worthy during hours.

I stood in the gathering twilight,
Of that path I and another day,
While garlands of withered flowers
Around my tempted lay.

"To-morrow," I said, "shall find me
In the path where duty leads;
For there's a neglect but fading joy
In all those flowery meads."

Gadly I rose in the morning,
And early I took my way,
And patiently up the rocky heights
I toiled the live-long day.

At even I stood in the twilight,
And as I knelt to pray,
A voice of matchless sweetness said,
"Well hast thou done to-day."

DALL DENNIS.

Religion in Daily Life.

It is a great error to regard religion as something distinct from common duties; as a concern for the Sabbath, and not for the week-day; as belonging to the sanctuary, and not to the store, the shop and the field. Some seem to be religious only at certain times and places, while at other times and places, they act as if wholly free from their obligations to God.

A man who had overloaded his horse, and was beating him unmercifully, when reminded by a neighbor that such conduct was inconsistent with his religious profession, replied, "Religion has nothing to do with it," as though in his view, religion applied to the services of the Sabbath, not to the occupations of the week; had to do with worship, not with any secular employment.

Another man, being reproved for some dishonorable transaction in business as inconsistent with religion, replied, "What has religion to do with business?"—just as if it pertained exclusively to our devotional exercises, and not at all to our business transactions, and, as if consequently, there were no incongruity in one's holding his place in the church, while he could not be trusted in the market.

A convert, speaking of his supposed change to a friend who had been one of his patiently-waiting creditors, that friend hinted that now perhaps he would see the propriety of paying up. "Oh!" was the instant reply, "I don't know about that; religion is religion, and business is business,"—thus overlooking the fact that it is as much a part of one's religious duty to pay his honest debts as to pray.

Now, it would doubtless be pleasing to the great adversary of souls to thus exclude religion from the daily life; to have it restricted to Sabbath and sacraments, chained, as it were, to the church and the altar, leaving men at all other times and in all other places, to live as they list, to slander in the social circle, to loiter in the field, or lie and cheat and steal in the market.

A superstitious Gypsy mother in Spain, said to her children, "You may go and steal, now that you have said your prayers." She thought that they had done with religion, and religion had done with them, as soon as they had gone through their appointed forms of prayer, so that they might steal as they pleased, until the time returned for repeating their forms of supplication. How opposed is such conduct to the religion of the Bible! This, so far from being a religion of mere ceremony, confined to any particular time or place, is a matter of all times, of all places, of all occasions, touching man's character and relations at every point, whether in the church or in this state; at the altar, the plough, the bench or the counter; the Divine command being, "Whether, therefore, ye eat or drink, or whatsoever ye do"—whatsoever within or without the walls of the sanctuary, pertaining to your devotional exercises, or business transactions—"do all to the glory of God." We are thus taught that religious has to do with us in each department of life; that, so far from ever sinking the Christian in the farmer, the trader, or the politician, we should be Christians in everything; ever having the sublime purpose of glorifying God, animating and controlling the whole man.

It is an utter mistake to suppose that we can set our supreme affections on the world in the hour of work, and then give the heart to God, as we ought in the hour of worship; that we can cheat our fellow-men six days in the week, and truly glorify our Maker on the Sabbath. As half a watch is no time-keeper, so religion thus cut, as it were, in twain, is no religion at all.

Why, what is religion but serving the Lord just as he requires? If, then, the Lord requires us to serve him only by faith and prayer, than that is the whole of religion. But if the Lord requires us to serve him by works as well as by faith, in business as well as in prayer; to live, as he teaches us in his word, "soberly, righteously and godly in this present world," amid all its temptations and toils and cares, as well as in the retirement of the closet, and amid the hallowed influences of the sanctuary, then one is as really a part of religion—a part of religion, too, in which we may as truly glorify God, as the other.

A Christian woman, who attended to her multitudinous domestic engagements as a part of the service which God required of her, remarked, "Oh! how glad it is to work all day for God, and not shut up the work and the world, and the heart and the soul, and the mind in her daily cares and occupations, when doing all with a single eye to the Divine glory. She testified that, performing her secular duties with such a high end and exalted spirit, helped her on toward heaven as well as prayer. And it is a precious truth that, not only amid woman's domestic drudgery, but also amid all the bustle and din of man's out-of-door avocations, there may be that spirit of devotion to the Master, which ennobles and sanctifies the whole, stamping it with the very image and superscription of heaven. And, in order to bless and save the world, it is of the highest importance to have Christianity thus translated into the daily life, applied to all the details of human affairs.

For the "Southern Workman."

Be Happy.

To be so, is the desire probably of every being that God has made capable of enjoyment. It is certainly the desire of mankind. Everybody wants to be happy, and yet, probably, the larger portion of the human family fail, to a certain extent, in their efforts. Why is this so? Is it because happiness is really beyond their reach? or is it that the way in which happiness is to be found is misunderstood? I think everyone may be happy even in the midst of adversity, if they would only seek their object in the right direction. One reason of our failure is the lack of observation, as to how happiness is to be found.

Probably ninety-nine out of every hundred persons have no other idea of happiness than that it is, somehow or other, associated with gain. "If I am rich, I shall be happy." Yet facts constantly prove, that there is really more enjoyment of life, among the poor than the rich! I suppose this arises from the fact that poverty oftener disciplines our minds to contentment with our lot, than wealth does. Hence the poor man is oftener content with his lot than the rich man, is with him, the true secret of happiness, then, is to be satisfied with the lot in which Providence has placed us. So says the Scripture: "Having food and raiment, therewith be content." So Paul learned and was happy. "A contented mind is a continual feast."

The Gospel of To-day.

BY HENRY WARD BEECHER.

What if some robustious Christians are always thundering out from their conscience censorious remarks about other people; what if other men are narrow and sharp and stringent in their faith; what if other men are oppressed by God rigorous; what if other men lean and gaunt like an empty sack; what if other men are like a plump barrel too much filled; what if there are all manner of characters that lack the Christian graces, does anybody seeing their good works, want to glorify the Father which is in heaven? Do you suppose that when I see a frozen man I am wormed to glorify God? When I see men who profess to be religious, but whose life is devoid of the spirit of true religion, do not I say with all my heart, "Deliver me from religion, if that is religion!" But if I see a man who knows how to do good; if I see a man who, doing good does it from the love of doing it; if I see a man who, when reviled, reviles not again; if I see a man who is full of gentleness and sweetness and hope and faith, and who, when other men are alarmed, still goes about good, sweet, true, pure, loving, gentle, faithful to the end, I bow down at his feet, and say, "Where got you that spirit? Your God shall be my God." The gospel that we want to-day is the gospel of sweet manhood. We want a truly transparent gospel. We want a gospel that is translated. We want the gospel in its living forms.

One Drop at a Time.

Have you ever watched an icicle as it formed? You notice how it frose one drop at a time, until it was a foot long or more. If the water was clear, the icicle remained clear, and sparkled in the sun; but if the water was but slightly muddy, the icicle looked foul, and its beauty was spoiled. Just so our characters are forming; one little thought or feeling at a time adds its influence. If such thought be pure and right, the soul will be lovely and sparkle with happiness; but if impure and wrong, there will be deformity and wretchedness.

A straight line is the shortest in morals as in geometry.

General Intelligence.

A Look around the World.

Latest and best authority gives the population of the globe at 1,350,200,000: in America, 72,800,000; in Europe, 297,000,000; in Asia, 796,500,000; in Africa, 188,000,000; in Australia and Polynesia, 2,800,000. These people speak about 3,600 different languages, and are cut up into 1,000 different religious sects. The adherents of the principal religions, counting the whole population, are supposed to be nearly thus: Greek Church, 69,692,700; six other Oriental Churches, 6,500,000; Roman Catholics, 195,000,000; Protestants, 97,130,000; Mohammedans, 160,000,000; Buddhists, 340,000,000; other Asiatic religions, 260,000,000; Pagans, 200,000,000; Jews, 6,000,000.

The whole number of languages and dialects into which the Holy Scriptures have been translated is two hundred and fifty-two. Of these, two hundred and five are versions prepared since the origin of Bible Societies, at which time the Scriptures had been translated into only forty-seven different languages. The two great Bible societies of the world, the British and foreign, and the American, have issued, of these, two hundred and forty-three. The greatest work of the American Bible Society has been the preparation of the Arabic Bible, by the Rev. Drs. Smith, and Van Dyck, which will go to 150,000,000 of Arabic-speaking people, and the Slavonic and Bulgarian Testament, which will supply 80,000,000

CHINA AWAKE.—The plan of the Chinese Government which sends one hundred boys to be educated in Massachusetts and Connecticut is significant. Its importance cannot be apprehended, nor can its results be foretold even by the most gifted seer. It indicates that at last such an impression has been made on the adamantine civilization of centuries, and that the traditional pride of a great people has been so sapped that it is willing not only to learn from, but to be educated by "outside barbarians." These boys are to be the future rulers of China, as statesmen, educators, or managers of industrial organizations. Wisely it has been decided to educate them in New England families, that they not only learn but be trained. Great is the responsibility of these families to whom the providence of God may bring these heathen. A greater than the Chinese Government is saying unto them, "Take this child, and nurse it for me, and I will give thee thy wages."

Japanese, Chinese costumes and Bedouin Arabs from ostrich pens to tea stores, work nearly as rapidly as their fingers. Short and cramped as ours are in their stiff leather shoes, we have scarcely any will power over them. But the Chinese and Japanese workmen actually pick up tools with their toes, and work with them thus inspelled, while other operations are conducted with other instruments in their hands. In Constantinople, we have often seen shawls held by a long handle with the left hand, while the toes guided the cutting edge in turning beautiful forms in a lathe. Arabs braid reins with their fingers and toes, laboring in concert.

Gems.

The Bible teaches as the best way of living, the noblest way of suffering, and the most comfortable way of dying.—*Flavel.*

What does happy mean? A little girl lately said it is "to feel as if you wanted to give all your things to your little sister."

The poorest education that teaches self-control, is better than the best that neglects it.

Wisdom is, I suppose, the right use of knowledge. Many men know a great deal, and are all the greater fools for what they know. There is no fool so great a fool as a knowing fool. But to know how to use knowledge is to have wisdom.

He that refuses to forgive an injury breaks the bridge that he will one day want to cross himself. He who has not forgiven an enemy, has never yet tasted one of the most sublime enjoyments of life.

A clergyman once said: "When I come to die I shall have my greatest grief and greatest joy; my greatest grief that I have done so little for my Lord Jesus, and my greatest joy that my Lord Jesus has done so much for me."

HEAVENLY MINDEDNESS.—Consider a heavenly mind (says Richard Baxter) as a joyful mind, this is the nearest and the truest way to comfort; and without this you must needs be uncomfortable. Can a man be at a fire and not be warm? Can your heart be in heaven and not have comfort? What could make such frozen, uncomfortable Christians, but living so far as they do from heaven? If we would keep but these hearts above, what a spring would be within us; and all our graces be fresh and green!

Temperance.

THE WHOLE TRUTH IN A NUT-SHELL.—At a temperance meeting, an honest German was asked to speak, and after some hesitation did so in the following exhaustive manner:

"I shall tell you how it was. I put my hand on my head, was von big pain. I put mine hand on my body, and dere was another. There was very much pains in all my body. Then I put mine hand in my pocket, and there was nothing. Now there ish no more pain in my head. The pains in my body are all gone away. I put mine hands in my pockets, and dere ish twenty tollars. So I shall sthay mid de temperence." Aside from the moral aspects of the question, the Dutchman's "experience" tells the whole story.

PRESIDENT LINCOLN'S SERMON.—It is a good one, and we wish that all our young folks, especially the boys, would heed it. Here it is:—"Don't driuk; don't smoke; don't chaw; don't swear; don't gambla; don't cheat. Love your fellowmen, as well as God. Love virtue and be happy.

BLACK BUT BRAVE.—A mastercooper called upon a block men in Ohio, and wished to purchase some stave timber. The black asked for what purpose he wanted the timber, and received for an answer, "I have a contract for a thousand *whisky* barrels."

"Well, sir," was the prompt reply, "I have the timber for sale, and want money, but no man shall hay a stave from me for that purpose."

The cooper was indignant to meet with such stern reproach from a black, and called him a "nigger."

"That is very true," mildly replied the other. "It is my misfortune to be a negro; I can't help that; but I earn help selling my timber to make whisky barrels, and I *mean to do it.*"

AN EYE OPENER.—"I will tell you," said a gentleman not long since, when conversing with a friend on temperance, "how much it cost me to open my eyes on this subject. I commenced housekeeping with a bountiful supply of liquors; I continued in this way until my son became a drunkard. *Then* my eyes were opened."

He who never tastes liquor cannot be a drunkard. There is no danger to one who never touches; there is no safety to anyone who begins to taste.

Let the youth who stands with a glass of liquor in his hand, consider which he had better throw away, the liquor or himself.

As a gentleman was telling his friend that a mutual acquaintance was sent to the penitentiary for grand larceny, the latter was asked why he did not bail him out. "Bail him out!" he replied, "why, you could not pump him out."

A liquor dealer at Niagara Falls, last week thought to make a hit in the advertising line by hiring a peripatetic Hibernian to carry about the streets a transparency setting forth the goodness and abundance of his liquors. A temperance party, however, chartered a boy to follow with a transparency reading: "Cursed be he that putteth the cup to his brother's lips." It was the general conclusion that the boy behind was ahead of the boy in front.

FACTS CONCERNING TOBACCO.—The New York "Commercial Advertiser" furnishes the following catechetical statement relating to the consumption of tobacco:

"Mr. A., how many kiuds of tobacco do you recognize in commerce?"

"Two; chewing and smoking."

"How about snuff?"

"That's included with the chewing tobacco."

"To what countries do we export tobacco?"

"We send about 25,000 hogsheads to France (a hogshead weighs from 800 to 1600 pounds), 10,000 to Spain, 15,000 to Italy, 15,000 to Germany, 5,000 to Austria, and from 30,000 to 40,000 to England."

"How much tobacco do we consume in this country simply for chewing and smoking?"

"140,000,000 pounds. This at 15 cents per pound, would amount to $21,000,000, which goes into the hands of the producer. $40,000,000, I should say, goes to the retail dealer. This for chewing and smoking alone, and that is only the commencement of the story. You would despair at the smoking statistics."

"Well, how many cigars were smoked last year?"

"According to Gen. Pleasanton, who collected the tax on them, there were 1,332,246,000 cigars used last year. These 1,332,246,000 cigars were undoubtedly retailed at 10 cents a piece. So we smoked up, in this country last year, $133,224,000 worth of tobacco."

"How much was spent for flour, then?"

"Oh, I suppose about $200,000,000."

"Now that little $133,224,000 was paid out for cigars only; how much would it be for chewing tobacco, snuff and cigars?"

"As near as I can estimate it, about $250,000,000."

Trifles.

THE UNIVERSAL SCRATCHER.—The time-honored story about the Rev. Sidney Smith is always in season. He used to say: "I am for all cheap luxuries, even for animals. Now, all animals have a passion for scratching their backbones; they break down your gates and your palings to effect this. Look! there is my universal scratcher—a sharp-edged pole, resting on high and low posts, adapted to every height, from a horse to a lamb. Yan have no idea how popular it is. I have not had a gate broken since I put it up. I have it in all my fields."

There is a Western story of a man who was too lazy to work, and whose neighbors, being tired of keeping him, determined to drown him. Meeting the Squire, his pity was touched. "Set him down," he said: "I'll give him a load of corn to keep him alive." The victim raised his head from the hiers of Shelled, Squire?" No. The head dropped again. "Drive on, boys, then."

A citizen of Rutland, Vermont, standing near some platform scales, asked a colored individual, "Can a nigger weigh hogs?" To which the colored man replied, "Put yourself on dem scales and see if he can't."

Wants.

HELP WANTED.

WANTED.—A good, trusty colored man to live in my family; his work to be chiefly to take charge of two horses, drive them, and take care of the yard, &c.: a quiet, good-natured man, willing to make himself generally useful. I would pay him well. Address with references,
DANIEL E. DAY,
Providence, Rhode Island.

WANTED.—A young colored man who understands blacksmithing can obtain a good situation at the Hampton Normal School.

SITUATIONS WANTED.

WANTED.—A situation at the North, to do cooking and washing, by a colored woman, with excellent references. A country home preferred. Address Julia Banks, office "Southern Workman," Hampton, Va.

WANTED.—In April or May, a situation as chambermaid and waitress, in the same town with the boys, by a colored woman, with excellent references. Address Mary Harris, office "Southern Workman," Hampton, Va.

WANTED.—Samuel Scotland, (colored) of Hampton, Va., 21 years old, a good butler, farmer, and man of all work, desires to go North to secure employment; leaves family which he will leave here. Address Samuel Scotland, Hampton Post Office.

Note.—I think this applicant an honest and faithful man.
R. C. ARMSTRONG.

JOHN T. BENTLEY,
WATCHMAKER
AND
JEWELLER,
Watches, Clocks, Jewelry, Silver, and Plated Ware Sold and Repaired.
Fancy Goods of all kinds constantly on Hand.
Cake, Candy, Confectionary, and General Furnishing Store.
Baltimore Wharf, Fort Monroe, Va.

FOR SALE.
A HOUSE AND LOT OF LAND on easy terms, situated on the south side of Hampton Creek, near the Hampton Normal School. Address
WARREN HALL,
At Marion Railway,
Hampton, Va.

INFORMATION WANTED!

Mr. Jordan Williams, of Norfolk, Va., desires to obtain information of his lost boy, DILAN WILLIAMS, who very mysteriously left home one year and a half ago, and has not been heard from since that time. He was thirteen years of age last May; of dark complexion; about four feet in height; small, active boy; rather timid in countenance, having his head down a little enveering to any one.

His father and mother are very anxious to learn as to the whereabouts of their child, as he left in Petersburg, but no certainty as to the above statement can be ascertained.

Any information as to the above will be thankfully received if addressed to
JORDAN WILLIAMS,
Norfolk, Va.,
Care of M. L'Hommedieu.

THE
Illustrated Christian Weekly,
FOR 1873.
will continue to merit the claim of its critics to be the "handsomest illustrated paper in the world." New portraits of eminent men, equal to those already given of Beecher, Spurgeon, Lowell Mason, and others, are in preparation. Religious work, by Joseph Cook, social and domestic life, scenery in this and other lands, events of the day, are among the topics which will be illustrated. Also, fine stories by such artists as Darley, Herrick, Beard, Dixon, and others. The number of the paper will contain seven or more finely executed engravings.

In the literary department, Dr. C. S. Robinson, whose oriental sketches have been an acceptable feature of the paper the present year, will furnish a series descriptive of life and customs in the East. On the conclusion of John S. C. Abbotts's fascinating "History of William the Conqueror," other historical sketches from the same masterly pen will be forthcoming. S. E. Todd will give us descriptions of medium-priced houses, and show how to build them cheaply. Contributions may also be expected from Rev. Drs. Theodore L. Cuyler, Howard Crosby, Jas. G. Craighead, Cyrus Hamlin, J. E. Rankin, Profs. H. M. Baird and W. C. Wilkinson, Jessie Ashton, A. L. Noble, Mrs. E. L. Beers, Mrs. A. E. Barr, Mrs. M. E. Miller, Mrs. M. A. Denison, and other popular writers.

Twelve Pages Weekly.
Two dollars a year.
The cheapest Family Paper in the world.
Agents Wanted. Specimen Copies Free.
AMERICAN TRACT SOC., Publishers,

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.
The Seventh Annual Report of this Company has been published.
The year has been a prosperous one. The gain in deposits has been $1,257,267.87, being an increase of *fifty per cent.* on the balances due depositors at the close of the present year.
There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent., and the amounts paid since March, 1871, has been $218,213.17. The past history of the Bank is a matter of fact, liable to all correspondents, depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $2,000,000 deposited.
The Bank pays six per cent. interest
on Savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.
Special arrangements are made for receiving business accounts payable by check, and bearing 4 per cent. interest.
Certificates of deposits issued bearing interest and available anywhere in the United States.
ACCOUNTS TRANSFERRED,
at request of depositors, from Branches where kept in any other Branch without risk or trouble, and *without loss of interest.*
For full information about the Bank address the Attorney at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent on any one application.
Investments made in Government Bonds and real Estate Securities only.
The Central office of the Company is in Washington, directly opposite the U. S. Treasury.
Any information required may be procured by addressing the President, J. W. Alvord, Esq., or B. L. Eaton.

TAKE NOTICE,
NORTHERN EMPLOYERS
AND
Southern Workers.
Advertisements from colored people wishing situations at the North, will be inserted in the "Southern Workman" free of charge. If accompanied by references from responsible persons, the fact will be stated. Advertisements from employers for colored servants will be received at our usual charge of fifty cents.
Until further notice, parties North and South, wishing to communicate with the Editor of this paper, can do so by letter to the "Southern Workman."

INFORMATION WANTED!
Information is wanted as to the whereabouts of a lad named Jacob Hunt. He strayed from his home in April, 1869, being then about 14 years of age. His home is in Danville, Davie County, N. C. Any one giving Lambert any information on the subject may do so by letter to the "Southern Workman." Any news will be gladly received by his uncle, if addressed to
GEORGE GODWIN
Norfolk, Va.
Care of M. L'Hommedieu.

THE
SOUTHERN WORKMAN,
DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. 2. HAMPTON, VA., MARCH, 1873. NO. 3.

For "The Southern Workman."

Hearth and Home.

In the tender hours of the springtime,
When the life of the year is young,
To a wonderful heavenly music,
The harp of the earth is strung.
On chord is of children's laughter
And the rustle of birds on the wing,
And one of the violet's whisper
And happy voices that sing.
Strong and sweet is the music
Floating up to Heaven's blue dome;
And it carries our thanks to our Father
For His blessings of Hearth and Home.

In days that are golden with sunshine,
In nights that are dewy and sweet,
When through the long, scented grasses
We wander with lingering feet;
When the garden is crimson with roses,
And the fields with the daisies are white,
When the earth is so fair that we fear
To be blinded with too much light,
Strong and sweet is the music
Floating up to Heaven's blue dome,
And it carries our thanks to our Father
For His blessings of Hearth and Home.

When the grapes hang in purple clusters,
When the corn in the ear is gold,
When the toiler comes home from the harvest
And the sheep lie safe in the fold,
Tired hands may rest from labor
Under skies that are soft with haze,
Peace on earth brings hope in heaven,
Happy homes are God's best praise;
Strong and sweet is the music
Floating up to Heaven's blue dome,
And it carries our thanks to our Father
For His blessings of Hearth and Home.

Swift at last sweeps down the storm-king,
Rough child of the summer's grave,
And the frost, with crisp, cold fingers,
Veils in snow the earth's dead face.
Close we gather round the hearth-stone,
Faithful hands clasp close and warm;
Love and Duty, strong, fair angels,
Guard the home from sin and harm;
Strong and sweet is the music
Floating up to Heaven's blue dome,
And it carries our thanks to our Father
For His blessings of Hearth and Home.

The Royal Picture.

The six distinguished personages in the picture before us are well known to the whole civilized world, either by reason of their high rank or their brilliant achievements in the service of their respective governments. The three who are sitting in the foreground are the emperors who, at present, rule the three great European countries, Austria, Germany, and Russia. Behind the sovereigns stand the chief officials of their kingdoms, Prince Bismarck of Germany, Count von Beust of Austria, and Prince Gortschakoff of Russia. The picture was taken at a time during the past summer, when the emperors and their ministers had met together for a State Council in one of the smaller German towns, and the portraits are faithful representations of their originals. The Emperor William, of Germany, is the oldest of the group, being something over seventy years of age, but in spite of this he was constantly in the field during the late Franco-German war and endured himself greatly to his people by his energy and courage. The reign of the Emperor Alexander, of Russia, has been made famous principally by his emancipation of the serfs or slaves who, until a few years ago, could be legally held in all parts of the Russian dominion. The Emperor of Austria is not a man of great ability, and since his accession to the throne there have been no great events in the history of the Austrian kingdom.

Of the three ministers, the most celebrated is Prince Bismarck, whose diplomacy and astuteness have gained for him a great name in the political history of Europe, while his capacity for work is enormous, especially when his advanced age if considered. In fact, all these men are hard workers, for their position rather increases than decreases their responsibilities, and no one need envy them on account of their fancied ease and luxury. They have their full share of the trials of mortality; and the great English poet Shakspeare, showed his knowledge of human nature and its temptations, when he wrote his famous line,

"Uneasy lies the head that wears a crown."

Simple Laws of Health.

On rising in the morning, the first thing to do is to throw open the bedclothes. As soon as you are dressed, carry them to an open window, with the pillows and night-dress, so that they all may have a thorough airing. If you sleep on a hair matress, it should be turned every day before the bed is made up afresh. If on a straw or feather bed, it should be thoroughly shaken and beaten. Once a week, it and the pillows — the cases taken off, should be exposed to the sun for several hours on a board or sheet, because the sun and air carry off all the impurities of the skin — perspiration, etc., which get into the bedding — and make it pure and sweet.

Once a day, in the morning before dressing, every part of the body should be washed in clean water. It is better to use it with the chill taken off, especially in winter, for then no strength is lost in getting upon reaction. Sponge quickly, using either a sponge or wash cloth, and rub briskly with a coarse towel afterward. It is more comfortable to wash one part at a time, an arm or a leg, for instance, and then dry that, before taking another part. The face and hands should always be washed in cold water.

Be very particular that the ears and nails are cleaned every morning; for the latter a blunt ended pair of scissors, or a blunt knife blade may be used — never anything sharp, as that injures the nail.

The teeth should be brushed with a soft brush twice a day; once in the morning, with some simple tooth powder, and again at night with pure water only. Great care must be taken to brush thoroughly around the back teeth, so that no particles of food be left in them, as that causes their decay almost sooner than anything else. In brushing, brush up and down mostly, as brushing sideways is apt, after a while, to wear the teeth in ridges. If a pick is used, let it either be of quill or a small, pointed piece of smooth, soft wood. On no account ever pick your teeth with a pin, as the metal of which pins are made, is injurious to the enamel covering the teeth, and causes them to decay.

Brush the hair well at night, and in the morning combat oil put it up neatly. The brushing keeps the head clean, and prevents the hair from falling out. The brushes and combs should be washed every fortnight. Put twenty drops of hartshorn into a basin of cold water, and agitate the brushes and combs in it until all the dirt is cleansed from them. It takes but a few minutes. Then rinse them thoroughly in cold water, wipe, and put in the sun to dry. If you have flower beds, the water in which the brushes have been washed makes an excellent manure for them.

If possible, secure a full hour for dressing in the morning, even if you are obliged to get up earlier than you otherwise would, so as to dress without a scramble. It is a very good plan to put your clothes which you take off at night neatly upon a chair, so that they will be ready to put on without delay in the morning.

Chew well in eating, eat slowly, and take small mouthfuls. There is a juice in the stomach, which takes hold of the food as soon as it enters, called the gastric juice. It prepares the food for further digestion. Now, if the food be sent into the stomach by slow degrees, and in small pieces, this gastric juice has a chance thoroughly to act upon it; whereas, if the food comes bolting into the stomach in a lump, only the outside gets the benefit of the action of the juice, it goes out of the stomach indigested, and then you suffer from dyspepsia, which is only another name for indigestion.

When you require medicine, by all means apply to a regular doctor, then you will be safe; and, whatever you do, never, under any circumstances use the quack remedies we hear so much of. In nine cases out of ten the people who have used them have been made worse instead of better. It is a very dangerous thing to do. The men who have them only want to make money, and put in they do not know what, nor you either. So be warned, and let them entirely alone.

The dress should always be loose, so as to give free play to the organs — lungs, heart, etc. We are very delicately put together, and a pressure about the waist shoves the organs out of place, and then follows inflammation and much suffering. Sensible people do not think a small waist a beauty at all; quite the contrary.

In our variable climate, warm underclothing is very necessary; nor is it quite safe to leave them off even in summer; then very thin ones should be worn. They are a great protection against such diseases as dysentery.

The feet should always be kept warm and dry. On going out, should the ground be the least damp, india rubbers should be worn, and if it be wet, india-rubber boots are the best things to wear.

Unless you are especially delicate, you should take a brisk walk every day. When it storms, you need not stay at home, but be sure to protect yourself properly, and go out. Twenty minutes at least, should be spent in the fresh air, daily.

Avoid draughts as much as possible. If you are liable to sore throat, put half a tea-spoonful of salt into a tumbler of water, and gargle with it freely night and morning. That will strengthen the throat.

A ROYAL COUNCIL.

Napoleon Bonaparte.

This great hero of modern history was born in the island of Corsica, August 15, 1769. He was educated in various military schools, and as soon as he attained his manhood, entered the French army, with which he served through the Revolution of 1792. At that time he was strongly democratic in his views, and his brilliant conquests and well-planned campaigns gave him such influence over the French people, that in 1799 he succeeded in causing himself to be proclaimed first consul of the republic, which was just then established. His policy soon became evident, and his immense ambition for himself and for France, startled the whole world, for he hesitated at no measure, at home or abroad, by means of which he fancied he could attain his ends. In 1802, he was proclaimed consul for life, and to this period of his reign France owes much, for he devoted himself to her real interests, introducing a new code of civil law and organizing schools and colleges upon a liberal basis. In 1803, England proclaimed war against him, and, in 1804, he reached the summit of his desires, and was crowned in the Cathedral of Notre Dame of Paris, "the high and mighty Napoleon I, Emperor of the French." Upon this bold act, followed that succession of European wars which convulsed the continent until, in 1814, the allied armies of Europe overcame the French forces, and entering Paris took Napoleon prisoner, banishing him to the island of Elba. He had, a few years previous to this, divorced his wife, Josephine, and married Maria Louisa, an Austrian princess, by whom he had one son, who was born in 1811 and died in 1822 without succeeding to any of his father's greatness. In 1815, Napoleon escaped from Elba, and rejoining his army in France, marched triumphantly to Paris, deposed the king Louis XVIII, reorganized the government, and once more prepared to meet his enemies. On June 18th, he encountered the allied armies once again, and on the field of Waterloo, was entirely defeated by the English under Wellington. On the 22d of the same month he signed his final abdication, and was carried as prisoner of war to the island of St. Helena, where he died in 1821.

"Though more than half the world was his,
He died without a road his own,
And borrowed from his enemies
Six feet of ground to lie upon.
He fought in many a thousand wars,
And more than half the world was his.
And some where now in yonder stars,
Can tell, mayhaps, what greatness is."

History.

In order to be capable of judging of the progress of mankind, of the growth of civilization, the prospects for the future, or the needs of the present, an acquaintance with history is indispensable, for in its pages do we find recorded for us, the facts from which we draw the conclusions that enable us to benefit by the experience of past generations. Without a knowledge of the history, not only of his own country, but of all countries and all ages, no man is fit to deal with the questions which are constantly arising in national and even in local politics, and this branch of education is one, which it is fortunately in the power of each individual to follow up for himself or herself, without the direct aid of teachers or school facilities. A habit of intelligent reading is all that is required, for so many excellent and trustworthy books are now published, and easily attainable that all who have the desire may, without much difficulty, become well-read in general history, both ancient and modern. In this way the great events and famous characters of the world become familiar, and from the mistakes and successes of the past, may be drawn lessons of immediate, practical value.

THE
Southern Workman,
ISSUED MONTHLY.
R. C. ARMSTRONG, } Editors.
RICHARD TUMAN, }
J. F. B. MARSHALL, Business Manager.

TERMS: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are needed in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, Business Manager.

The Southern Workman.

HAMPTON, MARCH, 1873.

We know that most of our readers will feel it to be cause for congratulation that the last month of winter is fairly past, and that we may now begin in earnest our preparations for spring. Since the opening weeks of December we have had a continuance of severely cold and stormy weather which has broken up, to a greater or less extent, all the ordinary means of communication throughout the country, and greatly taxed the resources of the people, to many of whom three months of such unusual weather as we have this year had, means three months of real suffering and privation. Illness is more frequent and fatal in such extreme seasons, work is more difficult to get and to do, all the expenses of a family increase, and there are never any terrifying advantages of any kind. Therefore we are all of us inclined to welcome the return of spring with real gratitude and open our doors and windows to the reviving sun with a thankful consciousness that the most trying months of the year are over and done with.

Turn is, or should be, a busy time for all classes of working people, and in our Agricultural and Household columns may be found some useful hints in regard to the labors of the farm and the household. Cleaning needs to be done outside the house as well as in, at this season, and no farm or garden is so small but that an early crop may be got from it by good management and foreknowledge. There are few faults more dangerous than procrastination, and if we put off beginning our work in the spring it will get so far ahead of us that we shall not overtake it through the year, but shall drag on in a shiftless fashion, doing to-day what ought to have been done day before yesterday, until we have to appreciate the fact that lost time is never found again. The new-born activity of the natural world ought to inspire us too, with new energy, and we should throw off the sleepiness of winter as the trees and plants throw off the bands of frost, and like them too we should be able in good season to show the fruit of our timely labors, so that in August we may not have to regret the neglected duties of March.

The congregation worshipping in the Bethesda Chapel at Hampton were highly favored the last Sabbath in February. In the morning, that noble Apostle of Temperance, Rev. Dr. Chickering of Washington, preached an excellent sermon on the proper care of the body, taking for his text, *1 Cor.* 9:27—"I keep under my body." We regret that, as the paper is now ready for press, we have not space to insert such a sketch of this sermon as its merits demand. It was so apt in scripture quotations, so replete with anecdotal illustrations, so rich in telling hits against the evils resulting from the want of proper dress, ventilation and cleanliness, and from indulgence in narcotics and intoxicating drinks; so forcible in reasons for presenting the body a living sacrifice to God, as to be admirably fitted for good.

In the evening we were highly gratified also in hearing Rev. Mr. Porter of Lexington, Mass., discourse upon Palestine, the land of the Bible, where, in his travels, he had gathered many incidents illustrating and confirming the sacred record. The address was a very happy one, of charming freshness, serving to quicken an interest in God's Word, and deepen our impression of its precious truth.

On Friday, Feb. 7th, an Investigating Committee of the House of Delegates, viz., the Hon. Peter K. Jones, Hon. John W. B. Matthews, Hon. Peter J. Carter, Hon. John G. Brown, and Hon. James H. Noble, visited the Hampton Normal and Agricultural Institute, inspected all its departments, listened to several recitations, and declared themselves much pleased with all they saw. At the close of the afternoon session Mr. Jones addressed the school in some remarks which we regret not having room to report in full. He compared the situation of those before him with his own condition in early life; expressed his approbation of our industrial training, and urged the scholars never to be ashamed of labor. Mr. Matthews and Mr. Brown followed; and all were listened to with great interest. Mr. Carter who was called for energetically by his former colleagues, declined to address them, but promised always to do what he could for the benefit of the school.

The committee left after expressing their complete approbation of all that they had seen, and their intention to give cordial support to the Institution and the cause which it represents.

The Freedman's Bank.

The January interest paid at the Norfolk branch of this bank amounted to $3,374.72; the interest paid for the year ending January 1st was $6,563.09; and the total interest paid since the Bank opened in 1865, has reached the handsome sum of $221,531.92. These are certainly *interesting* facts, and speak volumes in praise of the depositors, who have made such facts possible.

The Hampton Students.

Many months ago, it became apparent to the Trustees of the Hampton Normal and Agricultural Institute that the rapid increase of the school produced by the eagerness of the colored people for education, would speedily necessitate the erection of new buildings, and the unexpected rush of applicants for admission at the beginning of the present term, made delay seem almost criminal. As the school settled into shape, it was found that the special need was for a chapel, dining-room, and girls' dormitory, to be under the same roof, and provide accommodation for 300 boarders, and the plans for a edifice building for these purposes having been obtained, the expense of erection was estimated at about $75,000. To whom were we to look for such a sum as this? How, when and where were we to gather it, so that the bounteous result might not be too long deferred, were questions which stared us in the face, and drove us finally to the conclusion upon which we are now about to act, and of which we desire to say something to the friends of the Hampton School. Encouraged by the advice and experience of others, and made bold by faith, we have organized from among our students, a band of singers, sixteen in number, who are now about to make their *début* before the public as The Hampton Students, and in the name of their school and their people, beg a few minutes' hearing from you, to us the money which is so greatly needed. They will appear in New York and Brooklyn, at Steinway Hall, Academy of Music, and at other places, to be advertised in the City papers. They will go from New York to Boston, and if success is in store for them, will ultimately test the resources of the European continent. All who have heard them, believe that their music has an intrinsic value and power which can scarcely fail to attract attention and draw profitable audiences, for the training which they have received, has developed and harmonized their voices without detracting from the originality, which is their chief charm. Their collection of songs and "spirituals" is very large, and has grown in a curious fashion from the old associations and vivid recollections of the singers. One by one new treasures have been added, from a quaint hymn, unpremised in some moment of supreme joy or danger, and caught up by some listening child; there, a resonant chorus, whose wild strength has been echoed back from the walls of some lit eglise, and the stillness of half-tropical forests. "I'm weary; good-night, good-night," was brought to us by one of our boys who tells very simply his own remembrance of it: "This was first sung," he says, "by a man, who, during the war, ran away and left two children; soon afterward he returned for them, and as he crossed the creek which lay 'tu his path, he sang in a whisper to the friends that he felt were standing on the other side. I have never heard of him since, but as we stood on the bank he took my hand and said, "I'm weary; good-night." By such natural channels as these our songs have come to us, and we feel that many of them have some story or special interpretation which greatly enhances their effect. "Hammering" tells in strange alternation of mourning solo and dull, wailing chorus the story of the Crucifixion, and carries in its mournful minors the unmistakable impress of its origin. "Then my little soul goin' to shine, shine," is full of that joy of assured redemption which was not seldom granted to a people whose experience of life led them to look beyond it for their happiness, and indeed, these hymns, with their melodies, furnish almost a history of the days when slavery marked men and women with its terrible seal. Those days are past, but much of the need which they created still remains, and it is, so far as may be, to supply that need, that we send our students out, asking for them at the outset, the attention which we feel they and their cause deserve. It is no small task that has been set before them, but we trust they will find a warm welcome waiting for them, whereby they may be encouraged to do their best, and by dint of honest work, to earn for themselves and their school, tangible evidence of the approval of the Northern public.

On behalf of the Trustees,

S. C. Armstrong,
Secretary and Principal.

[We make no apology for occupying so large a space in the columns of "The Southern Workman" with notices of the Normal School band of which we have so recently left us, believing that all our readers will be interested to learn of their movements, of the way they have acquitted themselves, and the reception they have met. Below will be found extracts from Washington and Philadelphia papers, where they have given concerts.]

THEIR FIRST APPEARANCE.

On Thursday, the 13th, the Hampton Students started for Washington, where they gave their first concert. For several days previous there had been some excitement felt and expressed over the departures of "our singers," and although the skies were unpropitious, they started off in good spirits, followed by the cheers of the school, and a short ride to Washington brought them to their journey's end, and they were soon comfortably settled at the Howard University, where they have been hospitably entertained. Saturday morning they had a rehearsal in Lincoln Hall, and from there went to the White House, where an interview with the President had been arranged. They were introduced by Gen. Howard, and after having sung several of their hymns, Gen. Armstrong made a short speech, in the course of which, he appealed to the President, as one who knew what emancipation was, for sympathy for our Hampton boys who have been living in tents during the winter. The President seemed much interested, and made the following speech to the students.

PRESIDENT'S SPEECH.

"It is a privilege for me to hear you sing, and I am grateful for this visit. The way you have begun to live is excellent, not only good for *your* people, but for all the people, the nation at large. The education you aim at, will fit you for the duties and responsibilities of citizens, for all the work of life.

"I wish you abundant success wherever you go, and success to those you represent in reaching a high degree of knowledge and usefulness."

Although the evening was unpleasant, the students went to a well-filled house and an appreciative audience. The "Milk-White Horses," "In Search of Liberty," "If you want to see Jesus, go in the Wilderness," and "Gideon's Band," "Farewell," were greeted with rounds of applause, and they were obliged to repeat them. It was certainly remarkable that young singers who had never appeared before an audience, should have been so free from stage-fright and embarrassment, and the perfect time they kept without the aid of an instrument, spoke well for the training they had received. In every way, they made an excellent beginning, and there is every reason to hope for their success. Gen. Armstrong and Gen. Howard each said a few words at the close of the concert, and were enthusiastically cheered.

On Monday morning the Students went to the Capitol, and having visited the House and the Senate, climbed up into the dome, where they sang "The Church of God;" the effect was wonderful, and the people came thronging into the rotunda to listen and gave them the heartiest applause. They then went out on to the old rafters, but they threw them back gloriously, and seemed to ring triumphantly through the halls.

The Hampton Students are to give two more concerts in Washington and then will start for Philadelphia reaching New York the 1th of March.

CONCERTS OF THE PRESS.

[From the Washington "Chronicle," Feb. 14, 1873.]

The Hampton Students sang last night to a crowded house, and made an impression that the citizens of Washington will not forget. The opening chorus, "Hail! Hail! Hail!" was sustained by over thirty voices, and made the hall ring. "Milk-White Horses," "Milk-White Horses," a strange, weird, wild improvisation, held the audience under a magical spell. A beautiful "Farewell" was sung by the Choral Song, and afforded a pleasant variety. It was rendered by male voices most effectively. "In Search of Liberty," a most touching, spiritual, closing chorus brought down the house. It was irresistible, and demanded and received an encore. We need not mention all the rich and beautiful variety, but cannot forbear noticing an exquisitely pathetic rendering of "Coming Home," a curious and intricate round, "The Mill Wheel," and the "Great Glittin'-up Morning." The last named chorus is a most wonderful thing as we ever heard of the kind. The words are an epic —a remarkable specimen of a literature nearly unknown to the public—while the music was an expression of passionate earnestness that to Washington audiences is refreshing enough. Those who failed to hear these wonderful songsters have missed a rare chance, and can only return disappointed by attending the concert which will come off next Tuesday and Wednesday evenings, at Lincoln Hall.

[From the Washington "Chronicle," Feb. 17, 1873.]

A large and appreciative audience gathered in Lincoln Hall last night to listen to the second concert of these interesting young vocalists. The first piece on the programme, "De Winter 'll Soon be Over," and the second, "Humble Yourself, de Bell dun Rung," though pleasing renderings, were not remarkable merely, but the next piece, "Dust and Ashes fly over my Grave," with its chorus, "He Rose from the Dead," was really beautiful, and very effectively rendered, as was also the fifth, "I Hope my Mother will be There," which was enthusiastically encored. "John Saw de Holy Number Sittin' on de Golden Altar," "Roll Me, Chariot, Roll Me," and the most characteristically African chorus, "In de Great Glittin'-up Mornin'," and a freedom song, air "Dearest May," solo, sung with much spirit, and with noticeable distinctness of articulation, filled up the first part.

The most noteworthy things in the second part were the "Hailstone Chorus," a marvel of male voices, in which the skillful management of the falsetto and the rich bass were specially effective; a solo, "Going Down with Willie," was warmly encored; "De My Little Soul Gwine to Shine," and "Who'll Join de Union." The chorus of "Hammering," and one or two of the others, afforded as rich a harmony of voices as we have often listened to. In fact, without indulging any invidious comparisons with other troupes, we would say that all who enjoy nature as to music should not fail to avail themselves of the last opportunity, for the present, at least, of hearing this troupe this evening; to say nothing of the fact that everyone who patronizes them aids one of the most deserving institutions for education of freedmen. Considering that this is their first appearance in public, their correct time, skill, and taste in rendering so truly wonderful, with their numbers, and the manner in which the parts are balanced, enable them to render their performances in a manner altogether unique than is possible with a smaller troupe.

[From the Philadelphia "Bulletin," Feb. 22, 1873.]

The transplantation of the Southern plantation songs into the fields of Northern music seems to promise a prosperous growth. The concerts of the Fisk University Singers of Nashville were very successful all through the North, for besides their novelty they furnished music that deserved and needed help, they gave the public a new musical sensation. The African has been heard in opera, in concert, in the Italian, and to many it proved more pleasing than the German music of the past, the present or the future.

Last evening a new corps of colored singers, nineteen in number, from the Normal School at Hampton, Va., gave a Concert at Horticultural Hall, and their singing heightened the sensation made by the Fisk singers. They give the real old plantation melodies with the fervor and the swing of the plantation prayer-meeting. The performance is altogether unique, just as picture is, or as is any physical phenomenon, that is represented by no technical or arbitrary symbols. The motion of the music and the rhythm of the melodies may be put in print, but they would still fail to be comprehended, just as they were sung in the style that is given with the utmost naturalness and fidelity by the Hampton singers. The wierd, the wild, the grotesque, the pathetic, the religious, and the comic elements in the African nature seem to be all represented in the songs they sing. No language can portray the effect of such songs as "Dust and Ashes," "Swing Low, Sweet Chariot," "I Hope my Mother will be There," "John saw de Holy Number Sittin' on de Golden Altar," "Roll Jordan Roll," "Come my little Soul gwine to Shine," "Religion is a Fortune," and several others given last evening. If Meyerbeer ever heard the songs he could have introduced them into his operas with a stranger and more striking effect than any element in his "Prophet or Huguenots." For most of these wild airs, with their queer choral refrain, mine be of African origin, and they impress very singularly and quite refreshingly the ear that has been tried with too much of the sentimental music of the European school. Extremes sometimes meet, and the most progressive and scientific music of civilized lands seems to be in sympathy and blending with the music of barbaric lands. The Wagnerites and other advocates of the music of the future might do well to make overture to the representatives of the music of the past, who sang last night. A compromise between the two might produce very pleasing and novel music for the present.

There are no individual voices among the Hampton singers that are strikingly good. The basses are the best. But the singing of all in combination is singularly pleasing. The effect cannot be described. A second concert is to be given on Friday evening, and a matinee on Saturday afternoon, at the same place. The singers are hoping to raise money to aid the normal school at Hampton, where they are pupils, the accommodations of which are so small that many boys live in tents this winter, and many girls live, nowhere. Gen. Armstrong Armstrong, Principal of the school, who accompanies them, was a gallant soldier in the war, and since then has devoted himself to the education of the emancipated slaves.

Debate in the House of Delegates upon the Oyster Bill.

Under a motion by Mr. Riddlebarger, Wednesday afternoon, Jan. 22d, to reconsider the vote by which the House had just refused to dismiss the pending oyster bill, Mr. P. J. Carter, one of the colored members from Northampton, obtained the floor and said, Mr. Speaker, we "oystermen" have done everything we could to get our rights in this bill, and they have been refused us. We have petitioned, we have implored, we have begged our rights from this House; but our pleadings have been disregarded, and we have been overridden by force in what the gentlemen on the floor have proposed by those who understood the oyster question. Our rights have been trampled on, our very bread is taken from us by this unjust legislation. I, Sir, am a practical oysterman, and know the labor and hardships of that life. We have to face the cold blasts of the western winds and the driving sleet of the ocean in order to obtain from it sustain our families and our own lives. The people I represent are as patriotic as those from the valleys and mountains, even Mt. Sinai itself. They have shed their blood for their country in its late war, and now you propose to crush them down with your onerous taxations. You have as much right to take the birds from the trees, the fe'quiles, counties as you have to tax the oysters. If you tax one, tax the other. You say they all belong to the state. In question—Sirs that I will not comprehend. Mr. Speaker, during the last session, I always voted with those intelligent gentlemen who did. I followed that party which looked to the "Sinews of War" for aid. Yes, sir; when the bond-holders swarmed around this Capitol last session like Joshua and his army around the gates of Jericho, "oysterman" was the cry. I fought and fought to the last ditch; but now they are going back on us, and want to tax our very life blood.

There are some gentlemen here who think they know all about the oyster. Now, sir, I will tell a few facts that no man can gainsay, be he a Solomon, a Jeremiah, or a *Daniel*. If a man plant fifteen hundred bushels of oysters, and fortunes if he realizes eight hundred bushels therefrom. There is a disease among oysters known as the *green gill* which is more destructive to them at times than the smallpox would be in this House (for I believe everybody has been vaccinated). Let me have the old oyster bill rather than this burdensome, hateful, contemptible one.

If you insist on this bill as it is, with its burdensome and unjust tax, I will advise my constituents to go to Maryland, where they can get their rights. Dismiss this bill and let us have the old one as it now is, and the state will reap a much larger revenue. My people are not going to submit to this iniquitous tax, and if you impose it, there will be a worse year than a year of wrong. Why will you not send this bill back to the committee? Are you afraid to trust it to an investigation? This bill calls for the least pound of flesh and the last drop of blood. "Sir, sir, we won't stand it. We are determined to fight this bill from "July to a turnip patch." We have as much "gas" as the mountain men, and intend to use it.

Mr Carter concluded with some rather severe animadversions on the illiteracy, as he termed it, of the mountain men, and hoped the House would dismiss the bill.

The pending question, being to reconsider, was then put and rejected.

Methodist Protestant Church, Norfolk, Virginia.

The members of this church, whose church building, erected on Scott street in 1852 was destroyed by fire in December, 1872, have already relaid the edifice in brick, with basement and galleries. The work is so far completed that they now occupy the basement for services. The dimensions of the new building are 66 feet long by 40 feet wide, and when finished it will cost about $5,000. The Trustees and officers return thanks to the good people of Norfolk and vicinity who so generously assisted them. Rev. Wm. Lewis, superintendent of the work, by whose energy the new building, as well as the one destroyed, has been erected, desires us to say that as they are anxious to pay off their $1,000 debt, any further contributions will be thankfully received, and may be left with him or with Mr. Percy at the Freedman's Bank.

Wilmington Letter.

Wilmington, Feb 23d, 1873.

Dear Workman,—How unfortunate for all schools and teachers that Washington's Birthday comes on Saturday this year. Our holidays are not so many that we can afford ourselves to be defrauded of one without a sigh.

But we all enjoy the day, nevertheless, so bright in sunlight and graced as it is with flowers that are the harbingers of spring. It is pleasant to see the old flag flung out to the breeze along the river's bank and to think of the changes that have come to the city since the flag came back to town eight years ago to-day. Since then it has waved over none but freemen, and to-day it smiles upon a happy, industrious and progressive people.

The bitterness of the past is very much forgotten, and an era of harmony and general good feeling seems to prevail. Many projects for the material and intellectual improvement of the people are being discussed. Much is now said about the need of cotton factories in this section. They would certainly be a great blessing to this region, for there is plenty of raw material, as it is always found in large quantities here in the city awaiting shipment North, and there is an abundance of labor at present going begging. Shall it, if all the cotton factories of the South pay well. The largest in the state is in Richmond County. It contains one hundred and twenty-six looms and employs sixty hands, and makes six thousand yards of cloth per day. The workmen are all white. If a mill should be built here it is probable that colored labor would be used.

We are soon to have a new Savings Bank, and ex-Mayor Martin will be the president. This bank will loan money to those who need it most. For instance, if a man can't afford to rent or cannot buy a little land by using the bank, when the land has been bought the bank will lend him enough money to build a small house.

It is quite likely that this bank will have a branch at Lumberton and perhaps other places in the state.

The recent establishment of city schools is one of the things upon which Wilmington should be congratulated. I believe no other city in the state has a system of city schools. It is proposed to tax the property holders $\frac{1}{2}$ per cent on the hundred dollars for these schools, and they will also receive the same amount from the county tax.

There are a number of private schools in the city and a large number of children of the school age in proportion to the population. There are nearly four hundred and fifty children in the Williston colored school.

The four-months schools in the county are about closing. It is quite the fashion to have a public dinner on the day of examination and to gather in the people for miles around to participate in these festivities. Sometimes the people of both races sit down to the same table on these occasions. This is very likely to be very useful in promoting the cause of education.

We have lately received a visit from Rev. P. J. Stobel, State Bible Agent. The gentleman has visited eighty-six counties of the state during the ten months he has been engaged in the work. He was listened to very attentively by the colored people here. No effort is being made to supply the county with Bibles. Mr. Strobel, who is a Southerner, expressed himself very strongly in regard to the proper treatment of the colored people. He said to me, "I tell our people that they seem to forget that the black man is free and has rights."

Our Preachers' Meetings here in the city is growing in interest. Last week the question arose whether Satan really did personally appear among the sons of God when Job's character was being considered. A lively debate ensued.

Considerable depression is felt among farmers in the vicinity because peanuts are so low. They do not bring over seventy-five cents a bushel, and not always as much. That price does not pay the cost of raising them and large quantities are left in the hands of the planters.

In town, new buildings are all the time going up, and other improvements are being advanced.

Our political condition is especially good: Both parties and both races are well represented in the city government, and we claim a local administration that is loyal to the country and free from taint. The patriotism of the whole people is growing. They begin to say less about the "South" and more about "Our common country" and the glory of being an American.

H. B. Blake.

Hampton Normal School.

[The two following letters are from superintendents of Public Schools in Virginia, and show the good work that Hampton is doing. Both of the gentlemen whose communications we quote are Southern men, by birth and sentiment.]

Hampton, Va., *Jan. 16*, 1873.

Gen. S. C. Armstrong, Prin: Hampton Normal School:

Dear Sir—It affords me much pleasure to bear testimony to the worth and efficiency of the teachers graduated at the Normal School under your control. As county superintendent of these counties, many of them have been and are now employed under my supervision, and I have uniformly found them remarkably thorough in all the branches required to be taught in the public schools of this state. As a general thing they display in the discharge of their duties that zeal and energy which bear the impress of the institution from which they come. Their conduct has always been unexceptionable; and the moral and intellectual influence they exert upon their race cannot be estimated. I have only to add that from my official connection with the graduates of the Hampton Normal School, I believe that institution is doing a work for the moral, social, and intellectual elevation of the colored race in the South, equaled by no enterprise, secular or religious, of which I have any knowledge.

I am, very truly yours, etc.,

G. G. Peek,
Co. Supt. Pub. Schools.

Wytheville, Va., *Jan.* 13, 1873.

Gen. S. C. Armstrong:

Dear Sir,—Yours of Jan. 24 only came to hand this morning. In reply to your inquiries as to the general character, etc., of the colored teachers employed in this county, who have been pupils in the Hampton Normal and Agricultural Institute, allow me to answer as follows:

1. I cannot from memory say (now) which of these teachers were *full graduates*.

2. I may not be able to mention by name all who have been at your college, for our Public School system has been in operation three years, and besides I do not always know from what institution a teacher has graduated.

3. From memory, I would say that in *every instance*, these colored teachers who have had the advantage of a course in your college have stood higher examinations, and made better teachers than any others.

4. The very best teachers (colored) I have had employed are those who came from Hampton.

5. The three colored teachers this year —J. C. Shuffy, H. W. Arrendell, and Geo. L. Pryor, from your institute, are the very best colored teachers I have ever had.

6. James Ricks, who taught the first part of the year and is now finishing his course at Hampton, was also a most excellent teacher.

7. All these teachers sustained or sustain good moral characters.

8. I am sure from the experience of the past that the teachers coming from Hampton are to exercise a most beneficent influence in the education of the colored race in Virginia. Virginia will with her colored people enfranchised, must educate them, and she can find no more efficient auxiliary than Hampton Normal Institute.

Respectfully,

Jas. D. Thomas,
Co. Supt. Pub. Schools, Tyler Co.

FROM A GRADUATE.

Harpers, Va., *Jan.* 16, 1873.

Dear Teacher,—At your request I write you this letter with pleasure, and am happy to know that I can do something for the satisfaction of my teacher.

I feel it my duty to do all I can for the benefit and welfare of the institution, and, God being my helper, I intend to do so.

Since I left the institution I have been working very hard for the elevation of my people; and since I have been teaching I have been treated as well as one could wish to be treated, both by scholars and the old people.

The people are, for the most part, in a poor condition, but their eagerness for education is worthy of praise. Some of the larger scholars have to walk many from school two and very often three days in a week to sustain themselves the rest of the time.

They show that they value the privilege bestowed upon them by being great lovers to, by making good the time they have.

It seems as if those who are the most needy are those who are most eager, and those who are working most earnestly for an education. The scholars advance so fast that I think you shall have to add a few more names to your school record next term.

The old men and women are beginning to know the value of education, and are sending their children to school in great numbers.

Our Sabbath-school is getting along very well and increasing in number every week; we are going to have an exhibition in which our friends can see how fast the little children are progressing.

I feel proud to know that I can do something in the way of enlightening those who have been so long in ignorance.

Hoping that you may be pleased with what I have done.

I am yours, most respectfully,

Joab W. Williams.

At Home.

Grandfather's Barn.

O don't you remember our grandfather's barn,
Where our cousins and we went to play;
How we climbed on the beams and the scaffold so high,
Or tumbled at will on the hay;
How we sat in a row on the bundles of straw,
And riddles and wits all were told,
While the sunshine came in through the crack at the south,
And turned all the dust into gold?

How we played hide-and-seek in each cranny and nook,
Wherever a child could be stowed;
Then we made us a couch of a hogshead of rye,
And on it "Boston" we rode;
And then we kept store, and sold barley and oats,
And corn by the bushel or bin,
And straw for our sisters to braid into hats,
And flax for our mothers to spin.

How we tottered and swung, and played meeting and school,
And Indian, and soldier, and bear!
While up on the rafters the swallows kept house,
Or sailed through the soft summer air.
How we longed to peep into the curious nests!
But they were too far overhead;
So we wished us were giants, or winged like the birds,
And then we'd do wonders, we said.

And don't you remember the racket we made
When selling at auction the hay;
And how we wound up with a keel-over leap
From the scaffold down into the hay?
Whom we went into supper our grandfather said
If he had not once been a boy,
He should thought that the Hessians were sacking the town,
Or an earthquake had come to destroy.

How the years have gone on since in grandfather's barn
To play with our cousins we met!
Our eyes have grown dim and our locks have turned gray,
The golden, the brown and the jet;
Yet still in my heart there's an ever green nook,
Where childhood's sweet memories stay;
And no music to me has a charm that can thrill
Like the voices of children at play.

GREENFIELD GAZETTE.

It is a high place to be sister in a family of brothers.

No doubt, in the sight of angels, it is a highen place than the President's. So much depends on the sister. Sometimes I think her influence is more than the mother's because boys will make a confidante of a loving sister, in a way that they will not of their mothers. They can tell the sister everything, and she can smooth over their fancied insults, and exhort them to kindness and forgiveness, and she can make them more manly and noble and generous. I call it an exalted work, to cook good wholesome dinners on time, to give the brothers clean underclothing, and warm woolly socks and mittens, and see that they don't creep into beds not made, or only "spread up;" see that they have good books to read, that they use no vile or profane language, or slang phrases. Try and make their homes so attractive that they'll say, "There's not another spot on earth like this."

If father scolds, smooth over and make allowance for his hasty speaking words, and do all in their power to make them temperance men, and upright, pious men who will reverence women.

Indeed, I think the best way to make men reverence and think highly of women is, for the sisters to set a good example themselves.

There is no end to a sister's duties; her work is far-reaching, and glorious is its good results.

I feel my eyes snap when I hearan upstart of a girl call housework drudgery; I see no such a thing as drudgery in this social life of ours, and the woman who calls the labor of love and duty by that disrespectful word, is to be pitied.

To Freshen Dry Loaves of Bread even if a Week or Ten Days Old.—

Dip a dry loaf two or three times in a pail of water, put it in the bread pan in a moderately hot oven and let it remain half an hour, turning it after once, letting the heat of the oven gradually diminish, and the bread will come out just as good as new. I would recommend that only one loaf at a time be renewed. To save a trip down cellar with the loaf after supper, it may be wrapped in a damp towel.

I have learned some things about the temperature of water that all young housekeepers may not know. If you put any kind of meat on to cook in hot water it toughens it, and extracts all the nutriment, but it is well enough if you want the water for soup or gravy.

If you put it on to cook in boiling water, it softens it and does not bring out the nutritious juices into the water.

Just so! If washing a discolored tablecloth; drop it into boiling water and it brings out the stains; into hot water and it sets them.

If cooking meat that is too strong or too salty, put it on to cook in cold water, and leave it in until the water begins to boil, then change it. And in churning, if cream is very cold and you put in warm or hot water, the butter will be white and soft, when if you add enough briskly boiling water to bring the cream to the right temperature, the butter will not be similarly affected but will be hard and yellow.

I think this fact is not generally known among housekeepers, for I see so much soft, frothy, nasty-looking butter.

Hunter.

BY F. P. CHAPLIN.

Sometimes he was called "Busytool," but that was after his character for philanthropy became known, and he began to be famous as a searcher for lost ones. If poets could have known our old friend, surely many pleasant rhymes would have commemorated his brave deeds. As a puppy, he was externally, far from attractive; a ridge of coarse hair stood up about his throat, grizzly and stiff, often making us laugh at his grotesque appearance; but he had a thoughtful, serious air, and an eye of unusual depth and power. Some of the neighbors severely criticised the wisdom of Rob's purchase, but he had a way of his own, and without a struggle, gave in exchange his best knife and last year's sled. Before night a rough but comfortable kennel received the pet. Rob spent the evening "getting acquainted," and the most amicable relations were immediately established.

He lived with us some months before his "mission" declared itself. We had observed his good temper, and his tenderness and patience with children, but never dreamed of such out-reaching sympathies as he afterlife developed. It commenced, as far as we knew, by his coming in late one balmy September evening with a small black dog as ugly-looking and scrawny as can be imagined, and now they have a new one, King Lunalilo I.

Their language is beautiful, and the old stories are very pretty. Those who read Dr. Coan's interesting letter from Hawaii in the last "Southern Workman," will be pleased to read a few of these curious legends, and to know that they are translated into English now for the first time, expressly for the "Southern Workman." To those prove acceptable, perhaps we may have some more.

HUNTER AND HIS FRIEND.

Hunter was a powerful creature, possessing "breadth and swing" quite fearful for strangers to look upon, and he cared his guest as cats do their kittens and laid him gently down upon the floor of his straw-carpeted house; and there he watched and tended him some days with pastoral solicitude. His cares carried across the yard and the invalid was caressed like a sick baby. It attracted so much attention in the neighborhood that Hunter began to be respected.

When Lilliput (for that was the name Rob gave Hunter's pet) was quite well, a new home was found for him, but the two often visited each other and exchanged in their own fashion, the greetings of the season!

One morning Hunter, and indeed the whole family were aroused by shrill barks outside the gate Rob espied Lilliput, who in remembrance of kindness shown him had come in a time of need to ask for aid. How he told the story remains a mystery, but presently the two dogs trotted down a long green lane, Rob following cautiously. What he saw should surely be chronicled, if it was not "intelligence." I should be glad to have some philosophar name the word that can explain it.

A poor, tired mother-dog lay by the roadside, nursing piteously, two puppies, not many days old, were in their drunk, blind fashion crawling over her, wondering no doubt what had happened that she no longer fondled them. A hedge, upon which a few broken rails lay loosely piled, partially shielded them, and peeping through, Rob saw the two friends in evident consultation over the case. Perceiving that she could not be moved, they did the next best thing, provided food until she died, apparently exhausted by excess of pain. Rob thinks she had received a heavy blow. When in a few hours she ceased to breathe, Hunter took one puppy, carrying it tenderly, as she had Lilliput, but did not in this case leave the mourning lodge in his kennel; no, indeed, the misses' lap was chosen, a gentle-eyed, loving woman, whose face he had read aright and learned to trust. As soon as Rob's mother began to pet the fuzzy little thing, Hunter knew that all was right, and was off in a twinkling for the other. Beside it Lilliput still watched; this one was also taken and commended by Hunter's great, human eyes to better care than he could give.

After an absence of two days, Rob's brave friend surprised us all by bringing in a lovely Maltese kitten, and the creature whose nature it was to wage war upon his kind, seemed to regard him with decided affection, and looking up into Hunter's great, speaking eyes as much as to say, "Pray do'nt leave me among strangers!" But she never lacked friends, and became a great pet with us all.

But Hunter's grandest feat was when he saved an emigrant woman and baby from starvation. Neither of these could be bring home as he had the dog and cat; thinking it over (as he must have done), and recognizing the impossibility of accomplishing his purpose after his usual fashion, he planned another, and deliberately tore a piece from the woman's dress. She afterwards told us, she cried out with fear, supposing he was about to devour them both, but suddenly looking into his wonderful eyes, she felt assured that no such fate would befall them. With the scrap of calico, the wise old fellow trotted home and laid it on his mistress' lap, barking most solemnly and walking rapidly back and forth between her and the door. Rob was called, and was at once satisfied that Hunter had come upon a case of suffering, and was soon ready with a basket of comforts to follow where the dog might lead. The next step seems the strangest of all; up to this moment Hunter had manifested no desire for food or rest, and now as Rob stood, basket in hand, and whistled for his missionary pioneer, lo, the creature lay stretched upon the piazza, panting and panting as if greatly exhausted; this brought us in a measure to our senses, but not wholly, until Uncle Bailey, who is well versed in canine ways, read out the whole story.

"Why, Rob," said his father, "don't go on foot, take the buggy, my boy—Hunter is half breathless—he has run a long way, and see, this is a scrap from some woman's dress, you may be sure he has had his own sadness bringing this along."

It was a study well worth attention to note the satisfaction with which the dog watched the harnessing of Whitefacee into the low, light carriage—he actually hurried them, and started with a lone in his mouth, leading the way down the Felway road. After a time he accepted an invitation to ride, and sat beside his master solemnly surveying the prospect until Blount woods were in sight, when he jumped out, and basking cheerily, ran to a corner of the highway, where was a sort of rude hut, such as woodcutters arrange for temporary conveniences. Here Rob found the poor woman and her moaning baby.

Hunter has a longer record of "lives saved" than this. He seems to have devoted himself to such deeds of kindness, being off now much of the time, returning to rest and be refreshed, and sometimes lovingly bringing his burdens with him.

You may be sure he is highly respected in town; indeed his friends are arranging to purchase for his shaggy neck a medal which shall at once connect him with the "National Humane Society." No one deserves it better. —*Christian Weekly.*

Legends of Hawaii.

[Translated by Rev. Mr. Forbes, and simplified by Dr. Atkinson.]

A legend you know is a wonderful old story that no one supposes is true, but that is curious and interesting because it has come down to us from very ancient times when people perhaps believed it. Every nation has its legends, and here are some strange ones of the Hawaiian people who live in those beautiful Sandwich Islands in the middle of the Pacific Ocean. Till the missionaries from America went there, fifty years ago, the Hawaiians or Kanakas as they call themselves, did not know how to write their own language, and had kept these old legends only by reciting them, and singing them, handing them down from father to son. They did not know the true God and were idle and ignorant people, and have an independent government. Perhaps you know that their old King Kamehameha IV, died not long ago, and now they have a new one, King Lunalilo I.

Tradition of the Sun.

The days at the Hawaiian Islands are nearly equal, summer and winter, but they used to be as short in summer as in winter or rainy season. This troubled Hina, a goddess, the mother of Maui, from whom the island of Maui is named. The sun did not stay up long enough to dry the fibres of the bark of which she made cloth. Maui resolved to cut off the feet of the sun, that he might not move so fast. Restraining himself, however, for fear the world would be burned up, he accepted advice from his noble mother, who gave him fifteen cords, and told him to go to his grandmother for one more very strong. His grandmother was the Sun's cook. She prepared his breakfast every morning, living on a hill, "Haleakala, or "House of the Sun," from behind which he rose. Knowing his habits, she could instruct Maui how best to take him prisoner. So Maui climbed the mountain at midnight, and went to the large, will-will tree—the house of his grandmother, where she dwelt and fed the Sun. At five o'clock in the morning he saw her coming with a large bunch of bananas. She was very large and quite blind, and held her head away, smelling and wriggling her ears. She kindled a fire, and placed a large bunch of bananas on it. Maui took them away. Not finding them she poked after them with a stick. She placed them on the fire. She smelled and poked, and not finding them also, she called to the thief: "Where art thou, mischief?" Lovingly the grandsun replied, and told her his errand. She then gave him a strong cord and a stone, and told him to get behind the will-will tree, and as the Sun put forth his rays or feet, to lasso each with a cord, and bind it to the foot of the tree. The Sun was now hungry for his bananas. He began to stretch himself, putting out one foot at a time, walking over the hill. Maui tied each in succession, the last one with a strong cord. When the Sun found his feet caught, he tried to godown again, but Maui took a turo with the rope around the tree, and he found it impossible to fall back. Gradually the Sun rose, till his whole body appeared. Then Maui seized the big rock to destroy him. At last, however, they came to an understanding, so amicable, that the Sun consented to shed his beams profusely six months of the year, on condition that he might retire early during the rainy season, when he could not but feel that the clouds were insulting. Thus, Maui became the benefactor of mankind.

Tradition of the Origin of Fire.

The Hawaiians formerly produced fire by rubbing a piece of hard wood upon a softer one, until the heat, engendered by the friction, produced combustion among the fine, tinderlike particles of the softer piece, which fell to the ground, dislodged by the action of the harder piece. The soft piece was usually placed on the ground, while the harder piece was held firmly with both hands in a standing position, and the necessary friction produced by rubbing the end of it smartly upon the softer piece in a longitudinal direction. The pieces used in the land was called the Aalhua, and that on which the fire was produced was called the Amaki.

Hawaiian tradition states that there was a time when fire was unknown to this people, and refers their first knowledge of it to the common mud hen, or coot, so abundant in most of the ponds and marshes of these islands. Whoever has observed these birds has noticed a fleshy spot on the front part of the head, at the root of the beak. In some it is of a clear white, in others, of a bright, crimson color. The latter are the birds originally the possessors of fire. The acquisition of it is connected with the name of Mani, a celebrated personage of ancient history.

This Mani was the son of Hina and Akalana, and dwelt with his parents at Kipahulu, on East Maui. Akalana was his foster father. There were also three other sons, "Mani-mua, Mani-hepe, and Mani-kil-kii (Mani first, Mani next, and Mani lig-bellied).

Mani Akalana grew to manhood, being fed only on uncooked food, for they had no fire in those days, and what they ate was prepared by burying it in the ground. There were potatoes and kalo, and yams, and ti-root, but there was no way of cooking them. Mahi, therefore, asked Hion, his mother, one day, "How shall we cook these things?" She answered, "Fire will cook them."

"Who has fire?"

"The Alae (mud hens) have it."

"Then I will go and get it."

"When thy strength and swiftness are great thou mayest get it."

"I am able," answered Mani.

Then he and his brother often went out a fishing in their canoes. And as they were fishing they often saw the fires which the Alae had kindled on the land to cook their food.

And Mani often landed and pursued the birds to obtain the fire; but when he came near them, lo! in a twinkling they gathered up the fire, the embers, the wood and the bananas, and flew away, reviling him, and saying, "Ah! now, indeed, thy food will be cooked, thou mean-looking coward. Swift, indeed, is the son of Hina." Then, he and his brothers pursued their way, fishing as they went, until they arrived at Waianae on Oahu.

There, again, they saw the fires lighted on the shores. Thus it continued for five successive days. Then, said Mani, "I am going after the fire."

"You will not get it, for those to whom the fire belongs are birds. I will get it. Stay you here and fish while I go."

"But the birds will discover your absence from your canoe."

"I will set up my fish-line, calabash, is the end of my canoe, and they will think it is a man. So they consented, and when they went a fishing, Mani proceeded inland toward the place where the birds were. When he was near the spot he hid himself behind a rock. And the birds counted the men in the canoes, and saw, as they supposed, five men as before. Then they lighted a fire and proceeded to cook their bananas as before. While they were thus cooking their food, Mani suddenly sprang from his hiding place, and seized one of them with the wood and the bananas. At this the rest took alarm, and brushed the fire out with their wings, and even swept away the wishes. Mani, then, tied the feet of his bird, and was about to wring its neck in revenge for this disappointment, when the Alae called out, "Kill me not, or you get no fire!"

"Then, give me the fire," demanded he. "Go and rub the stem of your taro leaf for your fire," was the answer. So he obtained a taro leaf and rubbed away, and the hollow made by his rubbing, remains in the stem to this day. "Again, he demanded of the Alae, "Give me fire; if not, you die, is no escape."

"Go and rub the stem of the ti leaf," replied the bird.

So he rubbed away at the stem of the ti leaf, but no fire appeared, though this also made a hollow which remains in the stem to this day. His wrath flowed over, and he went back, determined to kill the bird. But the Alae again spoke, saying, "Kill me, and you lose your fire."

So he demanded once more the secret of the fire. Then said the Alae, "Go and rub the wai." Now, wai means water. So he rubbed and rubbed the surface of the water but without success. "Now thy death is sure. Thou shalt mock me no longer," said he to the bird. But the Alae replied, "It was your own fault; I did not mean wai-maoli (water), but the tree called 'waimea.'" So he tried the wood of waimea tree and at last obtained fire. And as a punishment for mocking him, he seized the bird and rubbed its head on the ignited wood until the raw flesh appeared on its forehead; wherefore, the bird is called Alae, (burning forehead) to this day.

Our Exchanges.

The African Repository published by the American Colonization Society, gives some interesting statistics in the January number of the Society's operations. In the fifty-four years of its existence it has sent out to Liberia an average of three hundred and eighty colored people, paying their passage, supporting them for six months after their arrival, and giving them land enough to live upon. The Republic of Liberia is at present about three times the size of Massachusetts, with a population of six hundred thousand. It has many schools, fifty churches and a college. The soil is fertile, and the climate healthy to the people. In the present critical transition state of the colored race in America, it is probable, and we trust, that the majority of those who can secure an education will feel called to stay here and help elevate their brethren to the proper standard of citizens in their native land, but, as the editor remarks, this great country can afford to Africa who has nowhere else to look for aid in her developments, such of her sons as may choose to go to her.

The American Educational Monthly, published by J. W. Schermerhorn & Co., New York, is one of the best educational journals in the United States. Its reviews of books, especially of text-books are good and very valuable to teachers. It is bringing out now an excellent series of articles investigating the various causes of disease in schools. Lack of ventilation in the school-rooms, lack of proper exercise, unsuitable and uncomfortable seats are the causes first to be mentioned. School seats should never be too high for the child's feet to rest upon the ground, or if possible, without a back, and the desk should be carefully suited to the seat in height.

Oliver Optic's Magazine, published by Lee and Shepard, Boston, is another of the charming monthlies devoted to the entertainment of "Our Boys and Girls." The February number is unusually rich in attractive articles and pretty vignettes. The fifth chapter of a serial by Elijah Kellogg, "The Turning of the Tide," contains a very interesting description of the process of making steel which we shall try to find room for some day, for as the author remarks, "It would be very ridiculous if a good-looking nice-feeling boy in the high school being asked what made his knife cut, should have to stick his thumb into his mouth, look like a dunce, and say, "I don't know."

The New National Era of Jan. 23d, contains an interesting and eloquent speech by its editor, Hon. Fred. Douglass, in favor of the annexation of San Domingo. The prospectus of the paper for the new year is attractive. In speaking of its educational department, he says, "By education the people of a free government such as ours is intended to be, are better qualified to discharge their duties to the state, and to one another. The nation will ever find its surest safeguard in the intelligence of its voting masses, and the journal which would promote the highest good of government and people must lend its energies and its power to the work of educating the people."

General News.

A bill to increase the salaries of the President, Vice-President, Chief Justice, Members of Congress, and others, was introduced into the House of Representatives, and defeated by a vote of 120 to 81.

The franking privilege has been abolished by act of Congress.

In both Houses, resolutions congratulating Spain on her becoming a Republic were introduced, but objection being made, were laid over.

The President sent a message to the Senate, calling attention to the possibility of a conflict between the Federal and Territorial authorities in Utah.

Senator Pomeroy, of Kansas, who was lately defeated in re-election, was charged by a member of the Kansas Legislature with an attempt to bribe him by buying his vote for eight thousand dollars, seven thousand of which were paid over before the election. The Senator denies the charge, but the evidence is against him.

The Committee having the Crédit Mobilier matters under investigation, have made a report and recommended the expulsion of Messrs. Brooks and Ames.

Lt.-Gov. Pinchback of Louisiana, a colored man of good ability, is in Washington, claiming a seat in the U. S. Senate for which there is another claimant. The Senate have not yet decided in the case.

The Virginia Legislature has passed a usury law, making more than six per cent. illegal.

At Richmond, on the 13th inst., there was a grand demonstration in honor of the arrival of the first through train from the Ohio River over the Ohio and Chesapeake Railroad. A long procession, composed of the city officials, the military, and fire departments, met the train on its arrival, which was saluted with artillery, the ringing of bells, and sounding of all the steam-whistles of the locomotives.

During the last year, 2,718 photographs of the Sun have been taken at the Kew Observatory, England.

Spain.—King Amadeus the "imported" sovereign, after a reign of three years, abdicated his throne on the 8th inst., and a republic was declared by a vote of 201 to 32. The flag of the republic will be violet, white, and red.—The royal palace is to be converted into a museum of art.—Figueras has been elected President of the Council.

Brazil.—The yellow fever is raging violently at Rio de Janeiro.—By the census of Brazil just completed, the population is ten millions.

Hawaii.—Prince Wm. C. Lunalilo has been elected King of the Hawaiian or Sandwich Islands, by a unanimous vote, under the title of Lunalilo I. His election is a triumph of the American party. The new King is well educated and talented, but of very dissipated habits, which it is hoped he will now reform.

A singular disaster at Smyrna is reported. The water had undermined a Cafe located on the gulf shore, when suddenly the establishment sank with between one and two hundred persons, mostly Greeks.

It is understood that the newly appointed Peace Commissioners, who, with General Canby as military advisor, are expected to patch up our little trouble with the Modocs, have reached the scene of hostilities, and opened negotiations through the Indian wife of one of the settlers. There is said to be a division of opinion among the Commissioners, so that even if Captain Jack is willing to treat, there may be some difficulty in adjusting matters to reconcile their civil and military beliefs.

President Grant has called an extra session of the Senate, to assemble at Washington at noon on the 4th of March, at which time the special business which makes such a session necessary will be officially announced.

THE SOUTHERN WORKMAN.

My Father's House.

BY J. E. RANKIN, D. D.

My father's house, I see it yet!
Although my deathbed eyes are wet,
To think that I shall nevermore
Thy threshold press and shut the door;
That I shall never roam the lands,
In which that country homestead stands.

Like some sweet picture 'neath the hand
Of patient ark, ready to expand,
By touch on touch, till it has grown
In height and depth, color or tone,
And from the canvas seems to stand,
True sky, and tree, and solid land!

Across its threshold could I walk,
I should not hear my father talk;
I should not see my mother's form
Eager to give me a welcome warm;
Nor could I, with old laughter, a swoop
Upon the clustered household group.

Strange, that through all these later years,
Still so distinct that home appears;
Strange, that so oft I catch its beams
Steaming across my manhood dreams;
Although I know, between, there waves
The grass upon so many graves!

Is it because 'tis the type
Of joys in heaven, more sweet, more ripe?
Because of that which Christ prepares,
Each earthly home the meaning bears?
The substance there, the shadow here,
Dawning upon faith's vision clear?

My Father's house before me stands,
Amid the radiant morning-lands!
They gather there, the loved of old,
Walking in white those streets of gold:
Knowing no sickness there, nor pain,
Nor dreading there to die again.

Praying and Working.

We should beware of separating what God has joined together. According to his Word, "Whatsoever we ask, we receive of him, because"—what? we simply ask? No! Because we *act* as well as *pray*; because, he is declared, "we keep his commandments, and do those things that are pleasing in his sight." It is this living as we pray, this application of works as well as of words, that puts the stamp of sincerity on our petitions, and gives them currency before the throne.

PRAYING AND PUMPING.

In a time of peril, a pious captain said to his men, "Now, men, pump and pray, and pray and pump." They heeded the word, and escaped the threatened danger. While the ship was leaking fearfully, they did not think that it would be of any avail to pray without pumping. Of no more avail will it be for us to ask any blessing of God, without using the appointed means of obtaining it.

PRAYING AND STUDYING.

When read of two school-girls, one of whom always said her lessons well, but the other always failed. The last asked the first how she succeeded, and was told that it was by praying over her lessons. She tried it also, but the next day failed worse than ever. In tears she complained of being deceived. The other asked her if she had tried to learn her lesson. She confessed that all she did was to pray, and supposed that that was enough. The next day she prayed and studied too, and succeeded. As well may we expect a harvest without sowing the seed, as expect success in prayer when unaccompanied by appropriate effort. God will not thus put a premium on laziness. We must then work as well as pray, if we would secure the blessing of heaven.

PRAYING AND GIVING.

An aged African woman, who had for a long time been praying for the advancement of Christ's Kingdom in the world, but on account of her age and infirmity, could do little else, came one morning, hobbling upon her staff, with two chickens in her hand for an offering, saying, "It seems as if de Lord would not hear my prayer till I do someting." As her missionary friend took the chickens from her hand, she lifted up her dim eyes to heaven, and with a countenance expressive of unearthly satisfaction, while the tears trickled down her sable cheeks, she exclaimed: "Bless do Lord, I can now pray, Dy kingdom come."

An Easy Place Wanted.

LANCASTER, [illegible].

REV. HENRY W. BEECHER:

Sir,—I hardly know how to address so great a man. You said in a sermon some time ago, that honesty ought to be rewarded. I am honest with my fellow-men, myself my God. Can get recommendations (the best) from lawyers, doctors, preachers, etc. Get me an easy (as) situation, that honesty may be rewarded.

To which I append my reply:

My Dear Friend,—The proper way to address a great man is the way in which you would address any man who has good common sense. Never begin by telling him that he is a great man. If he is one, he probably found it out before you did; and if he is not one, you will not be apt to make much by tickling his vanity by so cheap a compliment.

Surely a man as honest as you are has been rewarded already. What "honest with your fellow-men, yourself, and your God!" There are few men who can say as much. Honest with your fellow-men! Is your conduct without knots, windshakes, or cracks! How long has it been so? Do your neighbors all think so? Have you come to it gradually, as a winter apple ripens, or has it always been so? Excuse these questions, for really I am deeply interested. You have few fellows on earth. Indeed, when you add that you are honest with yourself, I cannot keep your company. You are ahead of me, and that last clause—honest with your God takes you entirely out of my sight. Why do you come to me? I ought to sit at your feet. You are my master.

No doubt you can get recommendations from lawyers, doctors, and preachers. You place those gentlemen, doubtless, in the order of their honesty, ending in a climax. Lawyers are proverbially honest. Doctors never deceive, preachers always practice what they preach. Any recommendations from these would smack of self-laudation. Every one praise their own virtues. Get someone not so heavily afflicted to commend you. Are there no editors, no members of Congress in your neighborhood?

But I come now to the most important part of your letter: "Get me an easy situation that honesty may be rewarded." I am ready to do all in my power for you. Had you signified the sort of easy place you would prefer I should have been less perplexed. Let me see.

How would a good farm suit you—with fifty head of neat stock in the barns, and twenty horses, one hundred head of hogs, cribs full of corn, and twenty stacks of good Timothy hay, besides all that the cattle can eat stowed away in the barn? I propose giving you this. But, on reflection, I am sure it would not be easy enough for you. Hired men must be looked after—fences, tools and buildings want continual repair. Summers are very hot; winters are very cold, and farming requires a man to be up and about it in all seasons. No, I am sure that a good farm will not be an easy place!

I give up this project more willingly because I thought of manufacturing. Would you like to own large cotton or woolen mills? A great deal of money has been made (and some lost) during the last ten years in manufacturing. But, just now, I am afraid there is some embarrassment in the business. The place is not easy enough. I would not if I were you, go into manufacturing, nor merchandising, nor speculation. There is too much agitation just now.

I could send you to Congress. Everything is easy enough there! But the singular honesty which you possess would make you lonesome. Congressmen are all, or most all, honest; but not so honest! and you might find yourself an object of jealousy and envy, which would take from the ease of your position; all the more because it would bring you so near to the White House.

Now, my dear fellow, that is the very place for you! Your peculiar virtue of honesty would exquisitely fit you for that place. The White House has been often re-furnished, but never with that which you would carry to it with one late exception. It took the nation four years to get used to honesty in a President; and then, alas, just as people began to like it he and it disappeared!

You are a born President! All parties are looking out for you. They want a man "Honest to fellow-men, to himself, and to his God." What a time it is that to run a race with! Thus far they seem not to have found just the man. If I were to divulge your name, no doubt you would be ravished away to Washington in spite of your protests, and made President of the United States. And the only reason why I do not disclose your whereabouts, is that I fear the presidency would not prove that "easy" place, which you so justly think is due to your honesty!

In fact, I believe it is a hard place; we read of many patient martyrs. Men have sung in the flames, and been broken on the wheel and rack without a groan, and have worn a heavenly countenance while arrows were piercing them or stones plumping down upon them. And all these might be. But shall we ever see a holy martyr whose faith will sustain him in the presidential chair? Can a man be tormented by office-seekers, praised by parasites, teased by widows, overrun by Congress, carved and pierced by both parties, flayed by newspapers, cajoled, deceived, and finally, tormented by a cabinet, who treat him to advice as consolatory as that which Job received from his friends—and yet be a saint? Can there be peace in the White House? You are the very man for a president, but the presidency is not the place for you. It is not "easy."

Perhaps you would like to come to New York and take Mr. Astor's place, or Mr. Stewart's. Let me advise you not to do it. They have riches; but, as yet, no search has been able to find for them, that rare and precious stone—content. Both of them have builded a good deal. But though they can keep out the weather—the winter's cold, the summer's heat, and exclude light, and sound and dust, as yet, they have not been able to keep out care, sickness, sorrow and heartache. No! I cannot conscientiously recommend you to become a very rich man. It is not "easy" to do, and is still less "easy" after it is done.

Don't be an editor if you would be "easy." Do not try the law. Avoid school-keeping. Keep out of the pulpit. Let alone all ships, stores, shops and merchandize. Abhor politics. Keep away from lawyers. Don't practice medicine. Be not a farmer, nor a mechanic; neither a soldier nor a sailor. Don't study. Don't work. None of them are easy. Oh, my honest friend you are in a very hard world. I know of but one real "easy" place in it. That place is the grave.

How is it in Lancaster? Can they not serve you there? Even graves are very dear about here. Try and get suited at home.

"A Smile."

Words have rights that we are bound to respect. I do not mind Josh Billings's caricaturing of them by bad spelling, nor Mrs. Partington's comical substitutions. I can pardon, as human imperfections, their awkward arrangement in a bad style, and even enjoy the harmless and adroit improvement of them into double service, in a pun. But when it comes to gross perversions and misapplications, in the interest of vice and misery, I am disposed to raise the voice of protest against the wrong.

A *smile* is a pretty thing to see—an index on the countenance of a joyous tone in the heart. It is the undertaughter of gentle, amiable dispositions. It brightens a plain face into beauty, and adds charms to the most beautiful. It elicits a sweet, spontaneous sympathy from beholders, mirroring itself on all faces. No wonder that, poets delight to use its colors in their word-tuisuing of flowery fields, of sunrise, and of the clear heavens.

But when this word is applied, in monstrous perversion, to fighting whiskey, or to any of the villainous compounds of the grog-shop, one shudders at the profanation. Thus desecrated, it is added to the long list of terms current in the slang dialect of the bar-room, that are intended to conceal the dangers that lurk in the intoxicating draught, and to banish the thought of the wrongs and miseries to which it leads. So a man is called "high" or "elevated," when low and degraded are the words that describe his condition, and "tight" while every good quality of manhood is on a wild stampede, and while mind and conscience, as well as limbs and tongue, are in the worst condition, unable to perform their proper functions.

A smile! a "ghastly smile" it is when beheld in connection with the effects it produces on the unhappy man who drinks it, and on others through him. A stupid smile does it bring on his, perhaps, manly and intelligent face, like that idiotic one that hangs flabbily on the face of a simpleton. It is a libel on a good and lovely word to call the drunkard's draught a smile. A home is desolated by that potent poison; a loving wife's tears and anguish are its effects. Children are hungry and ragged in consequence of it. Health is destroyed by it, virtue is expelled, hope is extinguished, life is sacrificed, souls are lost. And yet there are those who bear the human form, who, standing before the bar, will offer, and, behind the bar, will administer the fatal draught to their fellow-men—to the thoughtless youth, unaware of his danger, and to the inebriate, already its victim.

I have heard the intoxicating draught called double-distilled damnation. The expression is harsh. The idea suggested by it is terrific; yet on the score of fitness, and in view of the miseries and crimes resulting from intoxicating drinks, even that rough style of comparison can scarcely be deemed an exaggeration. If the bottle horrors are to be fitly labelled, let these be the words, rather than "a smile."—*Christian Instructor*.

Gems.

If God be on our side, we *need* not fear the *greatest* adversary; but if he be *against* us, he can *make* us fear the *least*. 1 *Kings*, xi: 14.

Industry is the way to preferment. 1 *Kings*, xi: 28.

The meal and the oil multiplied *not* in the *hoarding*, but in the *spending*. There is that scattereth, and yet increaseth. 1 *Kings*, xvii: 16.

There is nothing lost by being kind to God's people and ministers. 1 *Kings*, xvii: 15.

It has been the lot of the best of and most useful men to be counted the *troublers of the land*. Even Christ and his Apostles were thus misrepresented. *Acts*, xvii: 6; 2 *Kings*, xviii: 17.

If God do not rule us, our enemies will; a rebel to God, is a slave to all besides. 1 *Kings*, xx: 4.

Many a man's possessions have been his snare. 1 *Kings*, xxi: 1.

Discontent is a sin that is its own punishment. It makes the spirit sad, the body sick, and all the enjoyments sour.

It arises not from the condition, but from the mind.

Paul was contented in a prison; Ahab is discontented in a palace. 1 *Kings*, xxi: 14.

A false balance is abomination to the Lord; but a just weight is his delight.—*Prov.* xi: 1. The dishonest forfeit God's favor.

Whoso is partner with a thief, hateth his own soul.—*Prov.* xxix: 24. The soul is wrecked by dishonesty and fraud.

Better is a little with righteousness, than great revenues without right.—*Prov.* xvi: 8. A little, honestly acquired, gives more enjoyment than much obtained by dishonesty.

It is naught, it is naught, saith the buyer; but when he is gone his way, then he boasteth.—*Prov.* xx: 14. Deceit and craft in the buyer are as bad as in the seller. It is mean to call an article bad before it is bought, and afterward boast of the bargain.

Shame is a great restraint upon sinners at first; but that soon falls off, and when men have once lost their innocence, their modesty is not like to be long trenchlesome to them.—*Tillotson*.

It is one of the worst species of folly to run in the way of temptation. Thousands of young persons have been ruined by an over-estimate of their powers of resistance, and gone down to dishonor and crime.

It is not possible for him to be rich who is not wealthy in his soul.

Dr. Johnson used to say, "He who waits to do a great deal of good at once, will never do any."

How often do we sigh for opportunities of doing good, whilst we neglect the offerings of Providence in little things, which would frequently lead to the accomplishment of important usefulness!

Trifles.

An invalid once complained to a neighbor of a shanghai which the latter kept. The bird was a terrible nuisance, and gave him no peace day or night. "But," said the skeptical owner, "my cock only crows four or five times a day. I don't see how that can annoy you so much." "Because," replied the sufferer, "you don't take into account all the times *when I am expecting him to crow!*"

"Six feet in his boots!" exclaimed Mrs. Beeswax; what will the impudence of this world come to, I wonder! Why, they might as well tell me that a man has six heads in his hat!"

The pioneer Methodist, Peter Cartwright, uttered many wise and odd and witty sayings. He was often much annoyed at one sister, more noisy than pious, who would go off on a high key at every opportunity. At an animated class-meeting, one day, she broke out with, "If I had one more feather in the wing of my faith, I could fly away and be with the Saviour." "Stick in the feather, O Lord, and let her go," fervently responded Brother Cartwright.

In early times in California, military titles as handles to the name were very common. John Phœnix tells the story that he was one day leaving San Francisco by the steamer. Everybody else was taking leave of friends—but he did not know a soul in the crowd. Ashamed of his loneliness, as the boat sheered off, he called out in a loud voice, "Good-by!" and, to his great delight, every man on the wharf took off his hat and shouted, "Colonel, good-by!"

One style of bonnet is called the "Mensard," because it takes a great deal of "Man's hard" earnings to pay for one of 'em.

The most striking difference between a fool and a looking-glass is, that the fool speaks without reflecting, and the looking-glass reflects without speaking.

"When was Rome built?" asked a school-committee man of the first class in ancient history. "In the night," answered a bright little girl. "In the night," exclaimed the astonished examiner. "How do you make that out?" "Why, I thought everybody knew that Rome wasn't built in a day."

ELOQUENT PASSAGE.—The light of the lamp was dying away in the socket; the midnight clock swung heavily aloft and its brazen tones sounded loudly on the frozen air. It was the hour when disembodied spirits walk, and when murderers, like the stealthy wolf, prowl for their prey. The lonely watcher shuddered as he heard a slight noise at the door. Big drops stood on his pale brew—the door gently opened, and in came a strange cat.

JOHN T. BENTLEY,
WATCHMAKER
AND
JEWELER.
Watches, Clocks, Jewelry, Silver, and Plated Ware Sold and Repaired.
Fancy Goods of all Kinds constantly on hand.
Cake, Candy, Confectionery, and General Furnishing Store.
Baltimore Wharf, Fort Monroe, Va.

A
National Savings Bank.
THE
FREEDMAN'S
SAVINGS & TRUST
Company,
Chartered by Congress, March, 1865.
PRINCIPAL OFFICE,
WASHINGTON, D. C.
NORFOLK, Va. BRANCH
IS LOCATED AT
NO. 116 MAIN STREET,
Corner of Atlantic Street.
Bank hours, 9 A. M. to 3 P. M. Open also Saturday nights from 6 to 7 o'clock.
SIX PER CENT. INTEREST
is now paid, beginning monthly. Dividend days July 1st and January 1st. Interest compounded if not drawn. Special arrangements made for receiving accounts payable by check.
Certificates of Deposit, bearing six and four per cent. interest issued.
Deposits of any amount received from any person, and repaid on demand.
J. W. ALFORD, Treasurer. H. C. PERCY, Cashier.

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.
The Seventh Annual Report of this Company has been published.
The year has been a prosperous one. The gain in deposits has been $1,257,967.67, being an increase of fifty per cent. on the balance due depositors at the close of the present year.
There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors' interest. The rate the past year has been six per cent. and the amount paid since March, 1865, has been $124,311. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report 6% on our depositors.
The Bank pays six per cent. interest
on Savings deposits, compounded in January and July of each year, so as to draw it by Pass-Book only.
Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.
Certificates of deposit issued bearing interest and available any where in the United States.
ACCOUNTS TRANSFERRED,
at request of depositors, from Branches where kept to any other Branch without risk or trouble, and without loss of interest.
For full information about the Bank address the Secretary Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.
Investments made in Government Bonds and real Estate Securities only.
The Executive Committee of the Company is in Washington, directly opposite the U. S. Treasury.
All information desired may be procured by addressing the President, J. W. Alford, Esq., or D. L. Eaton.

TAKE NOTICE,
NORTHERN EMPLOYERS
AND
SOUTHERN WORKERS.
Advertisements from colored people wishing situations at the North, will be inserted in the "Southern Workman" free of charge, if accompanied by satisfactory testimonials from responsible parties.
Advertisements from Northern employers for colored servants will be inserted at the moderate charge of ten cents a line.
Until further notice, parties North and South wishing to communicate further with each other on business may do so by letter to the "Southern Workman."

INFORMATION WANTED.—Milly Francis Hall, who was brought from the orphan asylum at Ferry Point, Virginia, about eight years ago, desires to find the whereabouts of her sisters, Amelia F. (that name Hall), her brother, Elijah Hall, and half-relations, Mrs. Lucy Ann Braxton, "Georgiannes and Charles Wilsons. They were formerly the slaves of John Goodrich Hatton, near Portsmouth, Virginia. Any information respecting them will be thankfully received if addressed to
MILLY FRANCIS HALL,
Centerville, Bucks Co., Penn.
Care of JOSEPH STAPLER.

HELP WANTED.
Advertisements not exceeding five lines in length will be inserted in this column at fifty cents for one insertion and twenty-five cents for each additional insertion. The money should in all cases accompany the advertisement.
WANTED—A cook, nurse girl, and a man for farm work, to go to Colorado to whom good wages and steady employment will be given. Apply at office of "The Southern Workman."
WANTED—A colored woman to go to Chicago with a child from three to six months old, to act as wet nurse. Good references required. Apply immediately at office of "The Southern Workman."
WANTED—A man and wife without children, on a place ten miles from Philadelphia. Man to milk a cow, clean horses and carriages, etc.; woman to work in the kitchen. This is a rare opportunity to those wanting situations at the North. Apply at this office.
WANTED—Near Germantown, Penn. A girl to cook, wash, iron, etc. Also a boy about sixteen years old to milk and take care of stable, do errands, etc. Apply at this office.
WANTED—A young colored man who understands blacksmithing can obtain a good situation at the Hampton Normal School.
WANTED—An honest, industrious young man to work on a farm. To a suitable person a good home and steady employment will be given. Apply at this office.

SITUATIONS WANTED.
WANTED—A situation as light porter, or to do general work, at a hotel, from the middle of June until the 1st of October. Good references given. Address GEORGE COLE, Normal School, Hampton, Va.

staff, with two chickens in her hand for an offering, saying, "It seems as if de Lord would not hear my prayer till I do something." As her missionary friend took the chickens from her hand, she lifted up her dim eyes to heaven, and with a countenance, expressive of unearthly satisfaction, while the tears trickled down her sable cheeks, she exclaimed: "Bless de Lord, I can now pray. Dy kingdom come."

An Easy Place Wanted.

LANCASTER, ——

REV. HENRY W. BEECHER:

Sir,—I hardly know how to address so great a man. You said in a sermon some time ago, that honesty ought to be rewarded. I am honest with my fellow-men, myself my God. Can get recommendations (the best) from lawyers, doctors, preachers, etc. Get me an easy (*sic*) situation, that honesty may be rewarded.

To which I append my reply:

My Dear Friend,—The proper way to address a great man is the way in which you would address any man who has good common sense. Never begin by telling him that he is a great man. If he is one, he probably found it out before you did; and if he is not one, you will not be apt to make much by tickling his vanity by so cheap a compliment.

Surely a man as honest as you are has been rewarded already. What! "honest with your fellow-men, yourself, and your God!" There are few men who can say as much. Honest with your fellow-men? Is your conduct without knots, windshakes, or cracks? How long has it been so? Do your screams, and made President of the United States. And the only reason why I do not disclose your whereabouts, is that I fear the presidency would not prove that "easy" place, which you so justly think is due to your honesty!

In fact, I believe it is a hard place; we read of many patient martyrs. Men have sung in the flames, and been broken on the wheel and rack without a groan, and have worn a heavenly countenance while arrows were piercing them or stones plumping down upon them. And all these might be. But shall we ever see a holy martyr whose faith will sustain him in the presidential chair? Can a man be tormented by office-seekers, praised by parasites, teased by widows, overrun by Congress, carved and pierced by both parties, flayed by newspapers, cajoled, deceived, and finally, tormented by a cabinet, who treat him to advice as consolatory as that which Job received from his friends—and yet be a saint? Can there be peace in the White House? You are the very man for a president, but the presidency is not the place for you! It is not "easy."

Perhaps you would like to come to New York and take Mr. Astor's place, or Mr. Stewart's. Let me advise you not to do it. They have riches; but, as yet, no search has been able to find for them, that rare and precious stone—content. Both of them have builded a good deal. But though they can keep out the weather—the winter's cold, the summer's heat, and exclude light, and sound and dust, as yet, they have not been able to keep out care, sickness, sorrow and heartache. No! I cannot conscientiously recommend you to become a very rich man. It is not "easy" to do, and is tion. The expression is harsh. The idea suggested by it is terrific; yet on the score of fitness, and in view of the miseries and crimes resulting from intoxicating drinks, even that rough style of comparison can scarcely be deemed an exaggeration. If the bottle horrors are to be fitly labelled, let these be the words, rather than "a smile."—*Christian Instructor.*

Gems.

If God be on our side, we *need* not fear the *greatest* adversary; but if he be *against* us, he can *make* us fear the *least*. 1 *Kings*, xi: 14.

Industry is the way to preferment. 1 *Kings*, xi: 28.

The meal and the oil multiplied *not* in the *hoarding*, but in the *spending*. There is that scattereth, and yet increaseth. 1 *Kings*, xvii: 16.

There is nothing lost by being kind to God's people and ministers. 1 *Kings*, xvii: 15.

It has been the lot of the best of and most useful men to be counted the *troublers of the land*. Even Christ and his Apostles were thus misrepresented. *Acts*, xviii: 6; 2 *Kings*, xviii: 17.

If God do not rule us, our enemies will; a rebel to God, is a slave to all besides. 1 *Kings*, xx: 4.

Many a man's possessions have been his snare. 1 *Kings*, xxi: 1.

Discontent is a sin that is its own punishment. It makes the spirit sad, the body sick, and all the enjoyments sour.

It arises not from the condition, but from the mind.

Paul was contented in a prison; "Manasseh," because it takes a great deal of "Man's hard" earnings to pay for one of 'em.

The most striking difference between a fool and a looking-glass is, that the fool speaks without reflecting, and the looking-glass reflects without speaking.

"When was Rome built?" asked a school-committee man of the first class in ancient history. "In the night," answered a bright little girl. "In the night," exclaimed the astonished examiner. "How do you make that out?" "Why, I thought everybody knew that Rome wasn't built in a day."

ELOQUENT PASSAGE.—The light of the lamp was dying away in the socket; the midnight clock swung heavily aloft and its brazen tones sounded loudly on the frozen air. It was the hour when disembodied spirits walk, and when murderers, like the stealthy wolf, prowl for their prey. The lonely watcher shuddered as he heard a slight noise at the door. Big drops stood on his pale brow—the door gently opened, and in came a strange cat.

HELP WANTED.

ADVERTISEMENTS not exceeding five lines in space will be inserted in this column at fifty cents for one insertion and twenty-five cents for each additional insertion. The money should in all cases accompany the advertisement.

WANTED—A cook, nurse girl, and a man for farm work, to go to Illinois to whom good wages and steady employment will be given. Apply at office of "The Southern Workman."

WANTED—A colored woman to go to Chicago with a child from three to six months old, to act as wet nurse. Good references required. Apply immediately at office of "The Southern Workman."

WANTED—A man and wife without children, on a place ten miles from Philadelphia. Man to milk a cow, clean horses and carriages, etc.; woman to work in the kitchen. This is a rare opportunity to those wanting situations at the North. Apply at this office.

WANTED—Near Germantown, Penn. A girl to cook, wash, iron, etc.; also a boy about sixteen years old to milk and take care of stable, do errands, etc. Apply at this office.

WANTED—A young colored man who understands blacksmithing can obtain a good situation at the Hampton Normal School.

WANTED—An honest, industrious young man to go to Connecticut, to work on a farm. To a suitable person a good home and steady employment will be given. Apply at this office.

SITUATIONS WANTED.

WANTED—A situation as light porter, or to do general work, at a hotel, from the middle of June until the 1st of October. Good references given. Address GEORGE COLE, Normal School, Hampton, Va.

VOL. 2. HAMPTON, VA., APRIL, 1873. NO. 4.

The Coral Grove.

Deep in the wave is a coral grove,
Where the purple mullet and gold-fish rove;
Where the sea-flower spreads its leaves of blue
That never are wet with falling dew,
But in bright and changeful beauty shine
Far down in the green and glassy brine.
The floor is of sand, like the mountain drift,
And the pearl-shells spangle the flinty snow;
From coral rocks the sea-plants lift
Their boughs, where the tides and billows flow;
The water is calm and still below,
For the winds and waves are absent there,
And the sands are bright as the stars that glow
In the motionless fields of upper air.
There, with its waving blade of green,
The sea-fan stands through the silent water,
And the crimson leaf of the dulse is seen
To blush, like a banner bathed in slaughter.
There, with a light and easy motion,
The fan-coral sweeps through the clear, deep sea;
And the yellow and scarlet tufts of ocean
Are bending like corn on the upland lea.
And life, in rare and beautiful forms,
Is sporting amid those bowers of stone,
And is safe, when the wrathful spirit of storms
Has made the top of the wave his own.
And when the ship from his fury flies,
Where the myriad voices of ocean roar,
When the wind-god raves in the murky skies,
And demons are wading the wreck on shore;
Then far below, in the peaceful sea,
The purple mullet and gold-fish rove,
Where the waters murmur tranquilly,
Through the tinkling twigs of the coral grove.
—*J. G. Percival.*

brief account of the processes employed will not be out of place in our pages, and would gladly see some interest awakened in the subject, for it is highly desirable that the immense seaboard and the innumerable streams, ponds, creeks and lagoons of the Southern States should be utilized in this way as soon as possible.

Certain species of fish are more easily cultivated than others, and while salmon and trout can be bred at a large increase, they are more difficult to manage and much less productive than shad, the former producing 2,000 eggs to each pound of their own weight, the latter giving, with a little care, some 20,000; and we shall therefore select the processes employed in the cultivation of shad, for description in this article. When the fish are ripe, as it is called, they are caught, the spawn carefully extracted, and put in boxes with iron sieving on the bottom, which boxes are placed in such a position that the current of the river strikes the bottom at an angle, by which means the eggs are kept in rapid

Now as to the difference between the natural and artificial methods, a bare statement of figures will prove the most powerful argument that can be offered in favor of the introduction of the latter, and we are able to supply these figures from the Reports of various State and National Commissioners.

If a shad deposits, by the natural method, 60,000 eggs, the chances are that, at the outside, not more than one hundred and twenty will hatch, and of this number probably not more than one quarter will come to maturity, which gives us a final return of thirty fish for two or fifteen for one. On the other hand the artificial method preserves the entire 60,000, hatches and starts them in life well out of reach of their enemies, and if one quarter of them reappear, as is calculated in the previous instance, we have then 15,000 fish instead of thirty. Keep up such an increase as this and in a few years every river on our continent which is suitable to the purpose, could be so stocked with fish that fill profitably small cost; and these comparisons justify scientific men in declaring that fish-culture is yet to add a very large proportion to the wealth and resources of the world, and especially of this continent, where our rivers and inland lakes offer such great advantages for breeding. At present our great lakes are entirely neglected, and in the more thickly settled portions of the country, many of the streams and smaller ponds have absolutely no edible fish in them, while as a matter of fact there is no reason why they should not abound not only with the old and well-known varieties, but also with new, which can easily be introduced from other countries, as there is no difficulty whatever in sending fish eggs from one end of the world to the other.

It is well known that the fisheries of our coasts are among the most valuable commercial interests of the country, for millions of money are invested, and hundreds of thousands of men are employed in them, so that their protection and increase is a matter of universal interest, and ought to be and directly diminish the price of living to the poor.

Professor Spencer F. Baird of the Smithsonian Institute, Washington, &c. now the National Commissioner of Fisheries, and has spent much time in the examination of the reasons for the alarming decrease of fish in American waters, and of the best methods of fish culture. His forthcoming report will undoubtedly be of very great practical value, and there is no reason why State organizations should not now supplement the national bureau, and furnish all the information and assistance necessary to put the industry upon a safe, commercial basis. We commend these suggestions to the consideration of our readers, and once more remind them that we have it in our power to annihilate the fish trade of the country, or so to increase it by careful cultivation that a reasonable supply of fish food may be within the reach of every family in the land.

A Garden of Fishes.

In all the large towns of Europe glass box or succession of boxes, partly filled with water and tastefully arranged mosses, shells, bits of rock, sand, pebbles, and delicate, graceful waterplants. Here, in these pretty little glass houses live large and queerly mixed families; crabs, lobsters and oysters crowl about on the bright sand, or attach themselves to the motionless pieces of rock, while numberless small fish dart and glide through the quiet water, or hide among the green mosses and seaweeds, and strange creatures whose very names are unknown to us, rush hither and thither, or wriggle slowly along the pebbly bottom. It is hard to imagine anything prettier or more attractive than a well-kept aquarium, and even an ordinary observer can learn much about its inhabitants, by watching their movements patiently through the clear glass of which the boxes are made, and noticing the habits of the different varieties. We trust that it will not be long before our American cities will be able to show us some of these wonders so that all of us may see for ourselves how beautiful

The purple nullet and gold-fish rove
Where the waters murmur tranquille,
Through the living twigs of the coral grove.

—*J. G. Percival.*

brief account of the processes employed will not be out of place in our pages, and would gladly see some interest awakened in the subject, for it is highly desirable that the immense seaboard and the innumerable streams, ponds, creeks and lagoons of the Southern States should be utilized in this way as soon as possible.

Certain species of fish are more easily cultivated than others, and while salmon and trout can be bred at a large increase, they are more difficult to manage and much less productive than shad, the former producing 2,000 eggs to each pound of their own weight, the latter giving, with a little care, some 20,000; and we shall therefore select the processes employed in the cultivation of shad, for description in this article. When the fish are ripe, as it is called, they are caught, the spawn carefully extracted, and put in boxes with iron sieving on the bottom, which boxes are placed in such a position that the current of the river strikes the bottom at an angle, by which means the eggs are kept in rapid motion much as if they were boiling. In a few days the young shad issue from the egg, the boxes are tossed out into mid-stream, away from the small but dangerous shiners, dace and minnows, which in shallow water would quickly drown the helpless little shad; and these latter are then at once turned loose to find their own way to the ocean, which they do by gradually floating down stream, keeping their heads to the current to catch such food as may come along, and feebly wagging their tails to acquire strength and activity.

In two years the males return weighing something under a pound, and in three years they reappear males and females, the magnificent fish of from two to five pounds, that are so welcome at our tables.

Now as to the difference between the natural and artificial methods, a bare statement of figures will prove the most powerful argument that can be offered in favor of the introduction of the latter, and we are able to supply these figures from the Reports of various State and National Commissioners.

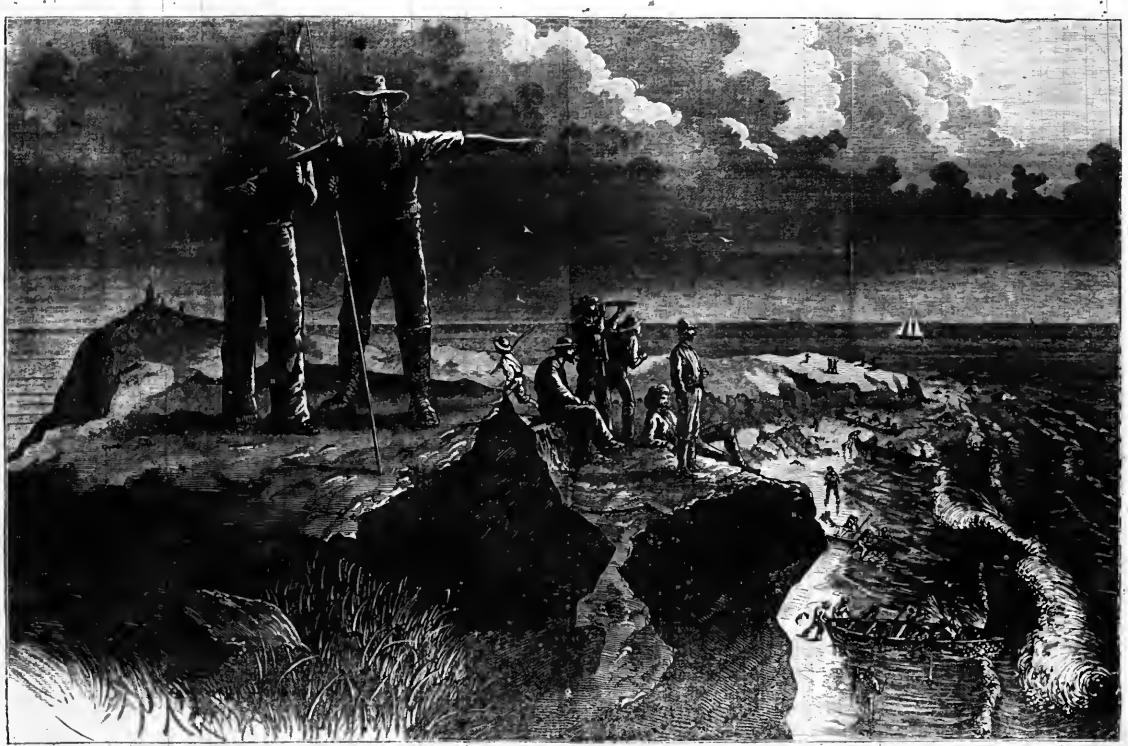
If a shad deposite, by the natural method, 60,000 eggs, the chances are that, at the outside, not more than one hundred and twenty will hatch, and of this number probably not more than one quarter will come to maturity, which gives as a final return of thirty fish for two or fifteen for one. On the other hand the artificial method preserves the entire 60,000, hatches and starts them in life well out of reach of their enemies, and if one quarter of them reappear, as is calculated in the previous instance, we have then 15,000 fish instead of thirty. Keep up such an increase as this and in a few years every river on our continent which is suitable to the purpose, could be so stocked with fish that all processes would be out of place in our pages, very small cost; and these comparisons justify scientific men in declaring that fish-culture is yet to add a very large proportion to the wealth and resources of the world, and especially of this continent, where our rivers and inland lakes offer such great advantages for breeding. At present our great lakes are entirely neglected, and in the more thickly settled portions of the country, many of the streams and smaller ponds have absolutely no edible fish in them, while as a matter of fact there is no reason why they should not abound not only with the old and well-known varieties, but also with new, which can easily be introduced from other countries, as there is no difficulty whatever in sending fish eggs from one end of the world to the other.

It is well known that the fisheries of our coasts are among the most valuable commercial interests of the country, for millions of money are invested, and hundreds of thousands of men are employed in them, so that their protection and increase is a matter of universal interest, and ought to be and directly diminish the price of living to the poor.

Professor Spencer F. Baird of the Smithsonian Institute, Washington, as now the National Commissioner of Fisheries, and has spent much time in the examination of the reasons for the alarming decrease of fish in American waters, and of the best methods of fish culture. His forthcoming report will undoubtedly be of very great practical value, and there is no reason why State organizations should not now supplement the national bureau, and furnish all the information and assistance necessary to put the industry upon a safe, commercial basis. We commend these suggestions to the consideration of our readers, and once more remind them that we have it in our power to annihilate the fish trade of the country, or so to increase it by careful cultivation that a reasonable supply of fish food may be within the reach of every family in the land.

A Garden of Fishes.

In all the large towns of Europe there are, at the present time, collections of rare animals and plants, brought together principally as the object of scientific experiments, but also for the amusement and instruction of the people at large. The animals are of course caged or confined in some way, and are fed as far as possible, upon their natural food, so that their habits and peculiarities may be fairly studied. The plants are arranged out of doors or under glass, in water or earth just as may best suit them, and the result of all this care is usually a very beautiful and interesting exhibition of curious things which by most people could never be seen, except under such circumstances as these. Among the chief attractions of these collections is always an aquarium, which means a large glass box or succession of boxes, partly filled with water and tastefully arranged mosses, shells, bits of rock, sand, pebbles, and delicate, graceful water-plants. Here, in these pretty little glass houses live large and queerly mixed families; crabs, lobsters and oysters crawl about on the bright sand, or attach themselves to the motionless pieces of rock, while numberless small fish dart and glide through the quiet water, or hide among the green mosses and seaweeds, and strange creatures whose very names are unknown to us, rush hither and thither, or wriggle slowly along the pebbly bottom. It is hard to imagine anything prettier or more attractive than a well-kept aquarium, and even an ordinary observer can learn much about its inhabitants, by watching their movements patiently through the clear glass of which the boxes are made, and noticing the habits of the different varieties. We trust that it will not be long before our American cities will be able to show us some of these wonders so that all of us may see for ourselves how beautiful a thing a fish-garden may be made.



LAUNCHING THE MACKEREL BOATS.

For "The Southern Workman."

Pisciculture.

Our illustration for this month is not only in itself a beautiful picture, but also furnishes us with a text upon which we have for some time been desirous to speak. The artificial production of fish, or "Pisciculture" as it is technically called, has but lately developed its importance to the country at large, for although some knowledge of this industry has existed for centuries, the first attempts which produced any really practical results were made in France quite recently, and it is the entire success of the systems tested there and in England which have raised fish-culture into an art promising to become of incalculable benefit to the human race. We feel that a

tective laws could be abolished, and the people at large might catch and eat, when, where and how they pleased. The process is neither expensive nor difficult, and even in the case of salmon and trout the original cost is not to be considered in comparison with the immense profit to all classes of the community, for it must be remembered that these statements are not matters of conjecture, but fortunately are now well-established facts, beyond the necessity for further experiment. An acre of land requires manuring, working, planting and harvesting; an acre of water requires only the latter; an acre of land will produce corn enough to support one human being; an acre of water can be made to supply a large number of persons at a forced upon the attention of our legislatures, in view of the fact that it is almost impossible for individuals to act with success in this matter. For the time being protective laws are necessary, and such liberal general legislation as should enable properly appointed Fish Commissioners in each State to put the already existing varieties of fish under healthful influences, to protect them from unreasonable disturbances, to let them breed in peace, to assist them by artificial aid, etc., until the waters both salt and fresh are fully stocked, and cheap fish made the *order* of the day. If the first cost of doing this were a hundred times as great as it is, the people of this country need not grudge it, for they can by this means develop a new food resource,

---

The nearer the air breathed within doors approaches in purity and freshness to the free and open atmosphere, the better will it conduce to health, strength and length of life. Three persons sitting in a tight room eight feet high, and twelve by fourteen square, will make impure all the air in it in two hours. If they use light, the air will be spoiled much quicker. Various fevers, scrofula, cholera and consumption, are the result of breathing impure air.

Paper Lampshades. — Two cases have occurred in Germany where persons using green glazed paper lamp-shades were poisoned by the arsenic of the coloring matter. The heat of the lamp drew out the essence, and made the small quantity present very dangerous.

THE SOUTHERN WORKMAN.

THE

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, RICHARD TOLMAN, } *Editors.*
J. F. B. MARSHALL, *Business Manager.*

TERMS: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers, Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To ensure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and names of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. Marshall, *Business Manager.*

The Southern Workman.

HAMPTON, APRIL, 1873.

The late Report of the Commissioner of Education at Washington offers to the public some curious and interesting facts, which would well bear repetition in the columns of every journal in the country. The statistics of education, for example, ought to be known by all intelligent citizens, for they tell a story whose meaning is of importance to all of us, being at once a warning and encouragement.

In regard to the relative civilization of the different states of the Union the Report informs us that Massachusetts takes the lead, for she raises the highest amount per head for education, while Nevada follows close upon her lead, North Carolina, we regret to say, footing the list and allowing rather less than half a dollar per head for her population, colored and white.

The direct relation which exists between education and crime, is shown very clearly in the Commissioner's collection of statistics bearing upon that point, and our readers will, doubtless be somewhat startled at the figures he presents. Eighty per cent. of the criminals in New England have no education; more than eighty per cent. have never mastered any trade, for industrial education seems to be almost as powerful as academic education in warding off the assaults of that arch fiend

"Satan, who finds mischief still,
For idle hands to do!"

and that intemperance does its full share in the evil work is shown by the fact that ninety-five per cent. of imprisoned criminals, are intemperate, and many of them habitual drunkards.

In the reform schools, penitentiaries, etc., it is found that ninety-five per cent. of the juvenile offenders come from idle, ignorant, and drunken homes, proving that a majority of the criminals whom we look upon with such abhorrence and contempt, have in reality, never from the beginning of their miserable lives, had a chance to do anything but criminals. They have not, when good and evil were set before them, deliberately chosen the evil, but have rather been forced into the paths of sin because they saw no other alternative, goodness, truth and purity, being to them things unknown. This class of unfortunates can conceive of no duty which they owe to the State, because they are aware that for them the State has had no thought; they have been left, without an effort on the part of their fellow-citizens, to the fate which the circumstances of their birth seem to doom them, and having received nothing feel that they owe nothing.

It would of course, be useless to reiterate these painful facts, if it were not that as we have already said, they offer us encouragement as well as warning, giving us every reason to hope as well as every reason to fear. There is so much to be done to remedy this condition of things, and the way, at the outset at least, is so plainly marked, that we have nobody to blame but ourselves, if the average of crime in our state or county reaches an unusually high figure. When we learn that the school-house is less expensive than the prison, we shall have taken a great, practical step in advance, and that, in effect, is the burden of all the testimony which we can collect upon the subject. Educate in virtue, and your scholars will be slow students in crime; keep body and mind actively employed in honest work, and dishonesty and vice will have little chance at the victims whose ruin has hitherto been so easy. Although the results of these laws may not show themselves at once, yet they are just as surely inevitable, and the state that pays little or nothing for the education of its citizens will, in process of time, find itself outstripped in every way by the State whose liberality has made ample provision for her children.

The Hampton Students.

[Criticisms etc., of the Philadelphia and New York Papers.]

THE HAMPTON STUDENTS' RECEPTION.

PHILADELPHIA.

Horticultural Hall was crowded to overflowing, last evening, on the occasion of the first concert given by the Hampton Students. Many prominent white as well as colored citizens were present. Every piece sung was encored, particularly the two entitled "I Hope my Mother will be There," and "Roll me Clegist, Roll me." Mr. S. C. Armstrong, the principal of the institution, delivered a brief address, in which he stated the object of the students, that of freely establishing a Normal school and Agricultural institute at Hampton, Va. for the education of colored teachers of the colored race, including an industrial education. The speaker was frequently applauded. The whole affair of last evening was as eminently satisfactory as it was successful.

CONCERT BY THE HAMPTON STUDENTS.

The Hampton Students, a troupe of sixteen or seventeen colored singers from the Hampton Normal and Agricultural Institute, Fortress Monroe, Va., gave a second concert at Horticultural Hall last evening. The hall was more than half filled with a high-class audience, and a great deal of enthusiasm prevailed. These people proved not inferior in any respect to the celebrated Jubilee Singers. Like the latter, they are endeavoring to raise a large sum of money for the erection of a needed addition to their college buildings. They appeal therefore to the benevolent traits of our citizens as well as to their musical sensibilities. Their singing is remarkably sweet and expressive, the chastened earnestness and feeling with which even the quaintest of their singular slave songs and hymns are rendered, being especially noteworthy. Among the best and characteristic of the selections given by them last evening were, "Oh! won't dat a Wide Riber!" "Nobody knows de Trouble I see," "Glory, Glory, New Born Again," and "In dat great Gittin'-up Mornin'" the latter being a most eccentric plantation hymn, having sixty verses with a chorus. Here is a specimen of it:

"Blow your trumpet, Gabriel,
Lord, how loud shall I blow it?
Blow it right calm and easy,
Do not alarm my people,
Tell dem to come to judgment.

In dat great gittin'-up mornin'—
Fare you well, fare you well,
In dat great gittin'-up mornin'—
Fare you well, fare you well."

There was not the least levity or irreverence about the manner of their singing where only original words and others still more peculiar, to the wildest and most characteristic of slave melodies. Nearly every song was encored. These people give a matinee concert at Horticultural Hall at two o'clock this afternoon. But, tween the two parts of the programme last evening, the agent accompanying the troop made a short address, describing the condition of Hampton Institute, and appealing for support.

A HINT TO MUSIC LOVERS.—THE GENUINE TALENT OF THESE STUDENTS.

TO THE EDITOR OF THE PRESS:

Sir,—Will you allow me through your columns to call public attention once more to the singing of the Hampton Students, now in our city. It is well worth while for the lovers of music to attend without fail to avail themselves of this opportunities to do so which the present week offers. Those who have heard the Fisk Jubilee Singers will find the repertoire of the present band much the more varied and extensive, while there are also among them voices of greater power and sweetness than were possessed by any of the Tennessee singers.

It can scarcely be necessary to do more than call attention to the great merits and the great needs of the institute from which they come. It is a educating town for the whole of the Southern Atlantic States. It is training skilled and intelligent laborers to go forth through the whole South, educating and directing others, that the desolate lands may be made fruitful and blooming, and that the people of both races may dwell together in peace and prosperity. Southern men are alive to what is in their power to make it a success. Colored men and women are bearing hardship and suffering cheerfully for the sake of admission to its privileges. Through all this hard winter forty of the students, for whom there were no other accommodations, have been encamped in tents, and the trustees are compelled to refuse admission to a multitudes of applicants, because their buildings and endowments are wholly insufficient. Yet the whole country needs that these people should have the advantages of such instruction as the Hampton Normal and Agricultural Institute supplies. Shall we not give at least such help as full attendance at these concerts can bestow?

There is a weird and wonderful pathos in many of their melodies—the sole outlet and expression of the sadness and suffering of a race in bondage. To-day, with the memories of their darkened past not wholly effaced, they stand in the light of the new dawn risen upon them, singing these old melodies to remind us how lately the light has come to them, and how greatly our aid is needed in helping to fit them for the responsibilities and duties of the coming day.

On Monday of this week the Hampton Students sang at Dr. Hawes' church, Eighteenth and Green streets; on Tuesday, at Dr. Furness' church, Tenth and Locust streets; on Wednesday at Athletic Hall, and on Thursday at Germantown. On Friday they leave for New York City, to try their fortunes there.

S. E. D.

March 2, 1873.

NEW YORK.

The musical critic of a leading New York paper, after a column of criticism of the Italian Opera in which Lucca and Kellogg, two of the leading female singers of the world, sang, says:

"Better of its kind is the singing of the Hampton colored students, who have come here for the laudable purpose of raising money with which to add new buildings to their excellent college in Virginia. Ten young men and seven young women, half of them thoroughly African, appear and sing those plantation songs that deeply interest because of their origin and their sadness. 'Why, I think,' negro songs are funny,' exclaimed a foreigner present at the second concert, 'instead of which they are all about Jesus.' It is this deeply religious element that gives character to the songs. Picture slavery, listen to these melodies,—prayers of the bondmen, and the frequent calls upon Jesus touch the heart with so quieted tissues from the outset to the end. peculiar force as the simulated passion of Italian opera. Homely, quaint metaphor, peculiar to the camp meeting, illustrates the one aspiration of these people, whose barbaric melodies are in the minor key.

"Those New Yorkers who abstain from hearing the national music of slavery will lose an entertainment no less suggestive than unique."

Nine Days in the Woods.

BY JOSEPH P. WEAVER.

During the war of the Rebellion, there were a great many people who lived in the woods, in order to keep out of the army. There were also many others who stayed principally at their original homes, but would dodge out into thick places, whenever any disturbance arose in the neighborhood.

The former were principally whites, who were liable to be forced into the army; but the latter were colored people, whose labor was needed at times to build fortifications.

Whenever bands were needed for such a purpose, a company of soldiers would be sent to take as many as were required. The most striking time that I experienced, was in the latter part of March, 1865. At that time, a large body of soldiers came from Georgetown, to a place in North Carolina, called Hill's Bridge, where they intended to put up a very extensive breastwork.

At their arrival, they immediately began to, take the men and boys of that vicinity, to do the work. But there were many who did not care to aid the confederacy, nor to work without pay, so they dodged it by slipping into the bushes.

I left home one Friday evening with four other men, who did not intend to go to Hill's Bridge. We took lodging the first night in an old house in a pine thicket where we tarried until the next evening. Though Saturday was a beautiful day, it seemed to me the longest that I ever saw.

After dark, we put off for another place, where we knew that no one would suspect us. We were piloted in by a man named Edwards, whose wife was to look out for us and keep us in provision.

Next morning, as soon as it was light, we commenced raising our tent, which we completed in a very comfortable manner. It was dark, Sabbath morning, and about sunrise it began to rain and continued through the day.

I remember that Monday was a fair day, and that we spent much of our time in perambulating our new home. About sunset, one of our men (W. H. Keen), said that he was going home, and prevailed with two or three more to join him, which I did. When we arrived at his house, his mother was just ready to take supper. She was much alarmed to know that we were so venture some, and as soon as we had eaten she hurried us away. We went just back of the field into a little shanty which William had built among the reeds and briers for his own purpose.

Tuesday was the most lonesome day that I ever witnessed, for my friend William did nothing but sleep, while I watched and awaited the setting sun. When the day had passed we went back to our tent where we found the boys whom we had left the evening before.

We had a very cheerful company who, after all, kept a very lively time. Whenever we felt lonesome, or wanted exercise, we would walk about in the woods, and sometimes slip up to some neighbor's house and inquire for the news. While in camp we amused ourselves by playing games, joking, telling ancient tales, etc. When we felt drowsy we would take a nap, and thus the time passed away.

On Friday one of our men ventured to go home, and on Saturday out went another. Now we were only three. Our pilot continued to come in every night to bring us the news and our rations. He came in on Sunday and stayed with us nearly all day. When he was ready to go out, he told us that if he did not come back that night we might come out next morning. How glad we were that he did not come.

On Monday morning we arose very early, packed up our things, tore down our tent, and went to our respective homes.

For "The Southern Workman."

Make Haste and Make Ready.

BY JOHN SCOTT.

The colored people of this State of North Carolina, wherever I go are manifesting a healthier and better interest in education than ever before in their history.

Immediately after the war everyone went headlong after education. Soon, to a great extent, the novelty wore off, and I have never seen harder work done than the teachers of colored schools have been doing these last few years to get the people to prize education enough to take anything like suitable interest in their own instruction or the instruction of their children. True, there would be quite a number in every neighborhood who kept their interest without great abatement, and a few deepened their interest. But I do not know of a teacher among the many that I know who has not had to go out and "drum up" scholars or leave a large number of them untaught, and who has not often seen these children eating cane by the roadside, or peanuts, or something worse, at the same time they were telling you they could not get ten cents to pay you for a week's tuition.

At first, they rushed ahead of your own interest like a team of fiery horses, hurrying on night and day with their eagerness to gain the elements of knowledge. Soon they cooled down to a more moderate pace; and coaxing and spurring would hardly make them start.

The reason for this change is, that the interest at first was a borrowed interest. It came from an imagined power and scope which it was to give to their freedom, and the absence of any such distinguished ones from the whites; and it was deepened too, by the example and words of their Northern instructors; and it was not the result of their own digested estimate of the value of education to themselves or their children. After the dizzy rush into the primer, they began to ease down, and to ask, What have we started to do? In this effort tending to? In the meantime, the labor of these people has given them a possession to be cared for and disposed of, and the pressing need of some education to do this has been forcing itself upon them. They have raised cotton and because they did not know how to sell it, have seen it pass with a business sagacity like the result of their labor and dispose of it whether right or wrong; and like the cats in the fable, who trusted the ape with their chestnuts, they have watched and waited for their portion in vain. Now their interest in education begins to be their own. They begin not only to hear what others have told them, but to *feel* the need of it. The father looks at his poorly clad family as the winter comes on and wonders why they are not better prepared when he has worked so all summer. Now comes a better enthusiasm; it comes out of the *needs* and experience of the people and *will not die out* like the other.

Wherever I go, the people come to me to get them teachers. Here in Wayne County the other day, a man came and said, "Can't you get us a teacher? We have never had a school and we have built a house and will pay to board a teacher and pay him." In Johnson, Alamance and Guilford counties similar requests are made every few days. One place in Johnson there are forty children and would be a colored teacher twenty-five dollars per month, exclusive of state money, and boarded him besides.

Still there are and will be many indifferent to their own interests. In studying this change I see in it a call clear and earnest upon the students at such institutions as the Hampton Normal and Agricultural Institute. There never was a greater work or more philanthropic work than this. The school buildings are waiting for you; the eager minds of those to angle of childhood are waiting for you; equip them for the manifold duties of life; and many suffering families are waiting for the power you alone are to give them to guide their ungoverned and wayward heads that may manage their labor and relieve their poverty. Greater responsibility is upon you in some respects than upon any other class of teachers; for you have not so much as in most cases they do in the education of their children. They can furnish you with tools to work with, but this is all. You are to be the centre of inspiration of heart and mind. Too much cannot be done to get ready. Yet I have seen some teachers who were not Christians, some graduates of normal schools who could not pass examination for common schools, and some who is no way appreciated the greatness of their responsibility.

Hampton Normal School.

OFFICE SUPT. PUBLIC SCHOOLS, JAMES CITY, YORK, &c., *Jan. 27, 1873.*

GEN. S. C. ARMSTRONG:

Gen.—I regret to say that the trustees of this district have not been able to procure the services of a single graduate of your college. M. R. Wallace, who attended your college for a short time, and has taught in James City last session. His discipline was exemplary, and he was an excellent teacher for one of his acquirements.

I have called a Teachers' Institute in Yorktown, in the Mission School house, Feb. 20th. I shall be happy to have you meet with us and give us the benefit of your experience.

Yours truly,
JAS. H. ALLAN.

SPEEDWELL, WYTHE CO., *Jan. 24, '73.*

Dear Teacher,—I received your letter some days ago, and should have answered it before now; but, although I thought I could not make it convenient to write in the day, and I don't write nights for fear of straining my eyes, I have quite a fine school here. Have now about fifty scholars. I am now building my last month at this place. I can't tell where the Supt. will send me next. Everything has passed off quietly since I've been here; not even a person has attempted to disturb me whatever. The scholars have learned very fast. I wish you could see how anxious they are to answer questions while they are reciting their arithmetic lessons. I can only say that though the spokes in the ladder are far apart, that the majority of the children of Speedwell are trying to climb it. As to the parents of the children, they are very poor; not one colored person in this district owns a house of his own to my knowledge. Again they have no chance to purchase if they wanted to. They say that the owners of the land wont sell. So you can plainly see they have no chance especially when they work for fifty cents per day and board themselves. Though they are poor, they seem to be very kind to a teacher. The houses which they live in are open; but they have plenty of covering. They have treated me kindly. The Sunday-school numbers about forty scholars, but the winter is so cold, and the church so open, that they don't meet regularly. Some have to walk five miles. Such things you will like this, but the winter and I have tried to get them to meet regularly, but they will only meet warm days when there is no snow on the ground. That is the only objection I have of the place—the schoolhouse is so open. I can't explain myself to you as I wish to, therefore I hope you will excuse my mistakes. I like to forget to tell you that the people are very religious out here. I am sorry to tell you that there is a great deal of whiskey drank around here by both white and colored.

SPEEDWELL, WYTHE CO., VA.,
March 10, 1873.

* * * * I finished my first school in this district the 7th of Feb. Had much success. I have a new school now in the same district. Commenced Monday, 3d of March. Have only twenty scholars. Am getting twenty-five dollars and board per month. This school house was built principally by a colored woman, who went to the mountains and helped to haul the logs and helped to hew them. Paid out about thirty dollars cash on it, and is now sending six children to school. She wants her children educated, does she not? I like this place much better than I did the other. I don't have to walk so far to my meals. I have to walk about a mile and a half, when I used to walk two and three. * * * I shall have about fifteen of my old scholars, which will be quite a comfort to me.

My school house is situated on the left bank of Cripple Creek, which is quite a pretty place. I can stand in my door and see the iron Mountain. Seeing the water so often it reminds me of Hampton, when I was only of the Q.

* * * * Please excuse repetition.

Your most obedient servant,
HENRY WASHINGTON ABERDELL.

JERUSALEM, *Jan.* 1873.

GEN. S. C. ARMSTRONG:

Dear Sir,—It is with much pleasure that I write you. Your letter was gladly received, for I wanted to hear from the Normal School very much indeed. The place I stopped this summer is called Rock Springs and the people are entirely destitute of school, so I went to work and got a log house from my uncle that was not every far from the one he lived in himself. I made the benches myself, and the teacher's desk; I then opened Sunday-school and charged the children one cent a piece. That was to pay the rent for the lumber the benches were made of. My Sunday-school number fifty-eight. When I first opened school only five out of the fifty-eight could read. I put my whole attention on my Sunday-school and when I closed school the greater part of my scholars could read very well considering the chance they had. The people the most of them asked me to teach day school the month of August. So the first day of August I opened the school. My number was small, but the children learned very fast. So now I am trying all I know to get the trustees to have a school-house for me. The people were very kind to me when I was there, but they are very ignorant indeed. I have left Rock Springs and come to Jerusalem to teach school. I would have opened the school before, but I have been sick. I came here Monday to teach. I will open school next Monday morning. The people here have had a better chance to learn than they have got, as there are schools here. Schools have been going on here for three years. General, I wish to myself that I could do something to elevate my race more than I am doing, although I am doing all that is in my power to do. The white people of this part of the county admire the intention of the Hampton Normal School. I heard a great many of them speak of it and say they wish there was one in the country for the white boys and girls. They say the Normal School of Hampton is the best school in the country for the elevation for the colored people. To General, I am doing all I can to show to the people the Normal School is the *school* of the country. It is the school that turns off a smart class every year of self-helped boys and girls.

No more at the present.

Your true, affectionate friend,
JOHN K. BRITT.

P. S. Address your letters to Jerusalem, Southampton Co., Va.

Notice!

Hereafter, the "Southern Workman" will be mailed to subscribers on the first day of every month.

The Progressive Band of Portsmouth, Va.

The undersigned members of "The Progressive Band of Portsmouth, Va.," being deeply afflicted by the loss of a much loved and very active and efficient one of our band, Miss Francis Reed, have sent us a grateful tribute to her memory, closing with the words:

"Sweet day! so cool, so calm, so bright,
The bridal of earth and sky;
The dews shall weep thy fall to-night,
For thou must die.

May God bless and save us all for Christ's sake."

MARY A. SCOTT,
ELIAH H. BOLDEN.

[There has been received an account of a "Drinking Experiment," which we think it unwise to publish, lest any should be thus led to repeat the same act of folly and wickedness. We do not believe in taking any kind of poison into the system to judge of its effects; or in tasting, like Eve, of any forbidden fruit in order to know the evil of it. We would rather follow our great Exemplar, who did no sin, but who went about doing good, and good only.]

Liberal Donation.

We have the pleasure to acknowledge the donation from Messrs. Hoe and Co., the celebrated manufacturers of Printing-presses, of one of their most valuable printing-machines, a No. 9, Hand Stop-Cylinder, valued at $2250.

Ever since the opening of our printing-office in Oct. 1871, we have been laboring under disadvantages for want of a better press, and we have not only been obliged to turn away job work, but the great labor involved in printing the "Southern Workman" and other work on the second-hand Washington press, which was the best we could afford to purchase, has seriously worn upon our foreman and his assistants in the office. How to remedy this difficulty has been the great problem, and various expedients have been suggested by which we might raise money enough to purchase a $1200 press without diverting any of the streams of benevolence on which we rallied for the support of the school. None of our plans for raising the needed funds seemed feasible, and now when we were almost discouraged, the generous and kind friend of our need, generously determined to give us "the least Hand-Cylinder press made," thus more than realizing our most sanguine hopes. We are now able to do our work in the printing line that may be offered in as good style as can be done anywhere; and we confidently hope that the next number of the "Southern Workman" will compare favorably with any illustrated paper in the country. Messrs. Hoe and Co. have our most grateful acknowledgements for their timely and munificent gift.

Agricultural.

SCRATCHES or grease may very often be cured by washing the legs with warm water and soap, and, after drying thoroughly with a soft cloth, applying glycerine or lard perfectly free from salt. If this does not avail, a pound of "concentrated lye" or carbonate of potash may be dissolved in two quarts of water and put into a bottle. A quarter of a pint of this solution should be put into a pailful of cold water, and the horse's heels bathed with it night and morning. The legs should be dried immediately after the bathing, but considerable moisture will exude from the skin afterward. The stable must be kept clean, and no snow or ice allowed to remain on the legs.—*American Agricultural.*

HOW TO TEST THE PURITY OF MILK.—The purity of milk may easily be determined by ascertaining the percentage of cream and solid matter which it gives. Genuine milk will average ten per cent. of cream and twelve per cent. of solid matter. Any milk with less cream and solid matter than this has been skimmed or watered.—*Massachusetts Ploughman.*

AN OPEN SHED FOR STOCK.—A warm shed, open at the place large enough for ingress and egress, is a better place for stock than is generally thought. By right management the cows may be kept in such cleanliness as to favor the continuance of the natural system. We can bring to mind not a few such cases where a shed, closely boarded and ceiled, with folding doors to open, and leading to the east or south, afforded a comfort that is a pleasure to think of. The place was warm, made warmer by the stock, with bedded and well aired (by their own breath) without much circulation; thus comfortable in the coldest weather, and in storms, of course a perfect protection. But your stock must not be crowded. We have had occasion, in our early experience, to separate the most unruly members, and thus found all peaceable and harmonious. Racks for feeding were provided along the inside of the building, giving plenty of space, as the whole shed was thus arranged. There was straw used for catching the urine and dung, and this removed as required.—*Massachusetts Ploughman.*

Spring made which saved well the substance of the manure, and converted readily the straw into the same.—*Ex.*

SAVE THE BEST FOWLS FOR BREEDING.—It is the worst possible policy to kill all the best and handsomest fowls, and save only the mean and scraggly ones to breed from. This is precisely the way to run out your stock; for like tends to breed like, and the result is, that by continually taking away the best birds and using the eggs of the poorest, your flock will grow poorer and poorer every succeeding year.

It would seem so, though this was too plain to be insisted upon, but in fact, "line upon line" is needed. It is the crying want of the poultry upon the farms the country through—this careful and intelligent selection of the best for breeding.

Nothing is lost by a little self-denial to start with. The extra pound or two of poultry flesh that you leave on the legs, instead of sending it to the market is a good seed, and will bring forth ten-fold and twenty-fold in your future broods. Save your best stock for breeding.—*The Poultry World.*

A SCRAP BOOK.—Every farmer should keep a book in which to paste agricultural scraps. Every one, in reading a paper, will see a number of things which he will wish to remember. He will perhaps see suggestions, the value of which he will desire to test, or hints which he will want to lay governed by in future operations. Another, after reading the paper he will throw it down and will probably never see it again. In such a case all the valuable articles will be lost. To prevent such a loss, every reader should clip from the papers such articles as he desires to preserve and remember and paste them in a scrap book. Such a book, at the end of a year or two, will be very interesting and valuable.—*Massachusetts Ploughman.*

Our Exchanges.

THE AMERICAN FARMER'S ADVOCATE, published in Jackson, Tennessee, is devoted to the interests of the National Agricultural Congress, an organization of farmers the object of which is to extend the knowledge of agriculture and to influence legislation in its favor. The "Advocate" contains valuable official reports from the Department of Agriculture at Washington and from farmers' clubs all over the country, and a great deal of useful and practical information for farmers, with interesting correspondence and the latest market reports. The great want of the country is a race of intelligent farmers. The more the farmer knows about improved methods of culture, the rotation of crops, the best implements of farming, and the management of stock, the more he will get out of his land in crops and money. No farmer ought to be without access to a good Agricultural journal. If he cannot afford to subscribe for one alone, let several club together and send for one. It is always economy to do things in the best way.

OUR DUMB ANIMALS is the appealing title of an interesting little sheet published in Boston by the Massachusetts Society for the Prevention of Cruelty to Animals. This society and others like it have done a vast amount of good in this direction, especially by influencing public sentiment in favor of showing mercy to those who cannot ask for it. A correspondent from South Carolina declares that "All animals there are miserably poor, ill kept, and ill used. I could harrow the feelings of a whole Society for the Prevention of Cruelty to Animals by telling half I know of broken-spirited mules and stunted little oxen in single and double carts that draw such loads of wood to town and wait at hitching posts all day, while the masters spend the proceeds of the wood, drinking and cursing everything more respectable than themselves." Rather a bad record for South Carolina, but we fear that the picture might be sometimes looked upon nearer home.

THE CHRISTIAN UNION—New York—Henry Ward Beecher, editor. Henry Ward Beecher is one of the powers of the age, and it is doubtful whether his influence is as great even in Plymouth pulpit to which thousands throng every week to hear him preach, as in this little paper which carries his words to so many more thousands all over the land. His contributions to it are its chief attraction of course, though its standard is good in all its departments. The reports of his Lecture Room Talks to his own people, are always excellent. These more familiar "talks" seem to take his hearers into his own heart and into a nearer communion with the Father. He says, "I have had some glimpses of the presence of God, but I know it is like a little lake, as compared with a full vision of the infinite, shoreless, fathomless, measureless ocean of the divine nature. And I shall be amazed when I see it, that I ever know anything about it. Yet I shall not be disappointed for me. I shall see God himself and I shall be satisfied then for the first time in all my life." His answers to correspondents are often very interesting, too. People in all kinds of mental trouble write to Mr. Beecher and get sympathy and advice. A pastor writes to ask what he shall say to a young man who has become skeptical because he has contracted a habit of drinking and has several times fallen before the temptation after praying against it and reforming for a time. Mr. Beecher says, "His doubts found themselves on the disappointment of a false expectation. By whatever means contracted, the appetite for strong drink is a physical disease, and the treatment should be partly moral and partly physical. Abstinence is the chief physical remedy, a general strengthening of the moral nature the next. Teach him the real use of prayer in such cases. Do not hide from him the fact that the battle will be long and hard, that defeats may not be wanting—that God will not deliver him by a miracle, but will strengthen and lead him to victory at last, as he does other tried souls. Teach him that he is the better for every brave endeavor, even though it may not be successful." Mrs. Henry Ward Beecher, and Mrs. Harriet Beecher Stowe who has done more for the cause of freedom than any other woman perhaps, and whose "Uncle Tom's Cabin" has been translated into almost every spoken language, are regular contributors to the "Christian Union."

THE MARYVILLE MONITOR is a paper owned and published by colored men, in Maryville, Tennessee, and edited by the well-known Friend, Yardley Warner, "in the interest of the Freedmen, Education, and Religion." Sympathizing fully as we do in these objects, we wish the little sheet all success in its second year on which it has just entered.

At Home.

For "The Southern Workman."

Sunday.

FROM THE GERMAN OF RICHENDORFF.

The night is hardly done,
A single lark upsprings
Through the still air and sings.
Whose is his early song?

The trees in the garden bow,
And gaze for o'er the land,
By the quiet house they stand.
For whom are they waiting now?

The flowers in beauty clad
Like little children fair
With dewy tears on their hair,
Look up in welcome glad.

"For whom this bright array
O little brides?" I said.
One softly answer made,
"Be still; it is God's Day."

"Now is the dear God here,
He blesseth wood and fell"—
Out rang the morning bell.
I knelt, in happy fear.

M. F. A.

LOOK TO YOUR HOMES.—The study of agriculture may be very interesting, but the business of farming can never be pleasant and attractive until more of our people learn to make their homes in the country more agreeable.

Ride through the State and see the ordinary farm houses. The front yards are destitute of flowers and shrubs. There are no pleasant verbenas, that captivate the eye, as much as they add to the pleasantness of the house. Books are scarce, so that, during rainy days or bad weather, the boys have to retire to the barn and catch rats for instruction, or shell corn for amusement.

Stingy and penurious are many such farmers. They complain of an inability to do these things, and yet permit their hirelings to go forty or a hundred yards from the house to get drinking water from a rickety old well, and so lose time enough during the year, to work a flower-garden. Their cribs are placed on one part of the farm, their stables on the other. With no toolhouse the tools are left where the work is ended, and when wanted again must be vexatiously hunted up.

No wonder there is a distaste for agriculture when such things are permitted. Let our people make their homes pleasant and beautiful, set out trees and shrubs, vines and flower-beds, buy a book today and a picture to-morrow, and without visibly entrenching upon their income, their homes will soon be arrayed in beauty, and make the hearts of the children rejoice.—*Nashville Union and American.*

HANGING BASKETS.—Very beautiful and choice looking hanging baskets, suitable for a window, can be made of any empshipped sea-shell. The ear pearl shells are prettiest because of the beautiful variety of colors in the pearl. Suspend the shell by means of fine copper wire passed through holes bored near the edge. This wire will not rust, and is much better than cord, which decays and breaks, by reason of the constant moisture. Fill the shell with rich loam, and plant in it Lycopodium, which in a species of running moss, showing a rich bluish green color on its upper side, and a clean green on the under. This is much prettier than what is called Lycopodium moss; a plant of similar structure, but lacks the lovely variegated hue of Lycopodium proper. Either of these will flourish in a shell, and in a short time be of sufficient length to twine around the wires and hang over the sides. Shower it abundantly, as constant moisture is an essential requisite to its growth. This moss will not die down in the winter season; but be green and fresh as when first planted, if regularly and thoroughly watered and kept in a temperature not lower than fifty degrees. It does not require sunshine, and the light just inside the window in not too strong for it, but if exposed outside to strong light and sunshine, it will soon become brown and faded. It is not necessary to bore holes in the bottom of the shell, as the retained moisture in not any too much. I have a cunning little accompaniment to one of these handsome ornaments. It is a tiny basket with a handle, cut out of a single English walnut-shell, and suspended beneath the large shell. It is filled with a sprig or two of moss, growing in it as vigorously as in the other.—*Exchange.*

TO DESTROY ANTS.—1. Pour copiously, hot water as near the boiling point as possible, down their burrows and over their hills, and repeat the operation several times.

2. Entrap the ants by means of narrow sheets of stiff paper or strips of board, covered with some sweet sticky substance; the ants are attracted by the sweets, and, sticking fast, can be destroyed as often as a sufficient number are entrapped.

3. Lay fresh bones around their haunts; they will leave everything else to attack these, and when this accumulated, can be dipped in hot water.

4. Pour two or three spoonfuls of coal oil into their holes, and they will abandon the cost.

5. Bury a few slices of onions in their nests, and they will abandon them.

Who's Afraid?

BY MRS. E. L. BEERS.

"Wall, I tell you, Carl, that somebody will find it out. Somebody always does," and Jimmy Keeper raised his old suspender off his shoulder with his thumb, slipping it back and forth uneasily.

"They wont either," and the black eyes of the born poacher shone under his shabby hat with an avil light.

"Aint I knocked over more rabbits and kilt more pigeons than you can count? and nobody ever saw me either. I aint afraid like you milksops. You dassent coax a gon to save your life. An' you'd faint away to try to wring a bird's neck off. You'd better set in the corner and knit, you had."

"Aint afraid outher, but I say it's naughty mean to go sneakin' round into folks' barns and yards, stealin' the things folks has set their hearts on."

"Well, Jemima, I'm goin' to call you Jemima now 'cause you haint no more pluck than a girl), it's going to be a fine moonlight night, and we Robin Hood's men are going to have a great feast over in Fern Hollow. Jim Davis will bring watermillions, ah I aint they sweet now! Bill Bolton gits taters and salt to put on 'em, and

CHRISTMAS STEALERS.

a pot to bile supper in, and they 'pend on me to bring the game and I'm goin' to do it. If anybody 'pends on me I never disappints 'em, no, never. Now if you're a mind, you and Ben, to come an' watch round Deacon Filer's barn while I go in after somethin' I want, very well. If you don't, I jist walks up to your daddy, and says I, 'Your Jim stole them peaches off the Widder Low's tree last week, and Ben helped the lantern all the while.'"

Poor Jim looked troubled enough. He had been led on by this bad boy, who belonged to a family of queer outlaws living at the edge of the village limits, yielding now to one bad suggestion now to another, until he felt quite in his power. When his mother looked at him tenderly or kissed him good-night softly, he felt as though he could not live without confessing and amending, but the brave hour never came, and though he both hated and feared Carl Keyser he was his slave.

"D'ye hear, Keeper—slurp seven; now mind—no sneakin'. O way, just think what a supper we'll have in the Holler, an' you and Ben shall have a plenty. You can come so easy, sleepin' in the little room, with a winder you can get out of jest as easy as the boy knew his manny. I'll expect you," and Carl went off singing,

"I'm the captain bold of a troop as fine
As you'll see on a summer day-s-s."

"O Ben!" said Jimmy as they trudged softly homeward. "Oh! isn't it awful, I dares n't tell mother, and I dares o't make Carl mad, for I don't know what father will do—and I would n't mind a lickin' so much, but you know how mother will look when she finds it out. Alot it dreadful, Ben!"

"O Jimmy, I'm as scared as anything, for I heard our Ann say that Carl had sold hisself to tha Old Nick, and he would come after him some time. What if he should come to-night?"

"Well, I'll tell you what, Ben, I'm goin' to get through this to-night, and then I wont go with Carl any more. I'll let him tell if he's a mind to, and I'll stond the lickin.' This is goin. to be the last time."

CHAPTER II.

"Good-night, boys, mother's got the best boys in the land; they have brought her in wood and water, fed the old hen, and shut the pig up—good-night, little men, God bless you!"

It was almost more than the boys could bear to hear the pleasant words they did not deserve at all, and when they got in their little room they looked at each other und Ben whispered, "It's too bad, aint it? Do n't let 's go."

"But Carl will make such a row. Yes, I'm goin' this once. Now be still and make believe gone to sleep; the winder 's up, aint it?"

"Yes."

An hour afterward Jimmy and Ben met Carl in the spot of shadow beside Deacon Filer's barn. Ben softly unbolted the great wooden bar by reaching his little hand through the gaping crack and pushing up the stick which held it in place. Carl had already secured a hare for the feast, which he gave to the boys to hold while he climbed up the rough ladder to the chicken loft. The bright, full moon streamed in the little window and showed two very white faces, as the trembling boys kept guard. Before Carl had quite come down again, they heard a little sound just behind a rough door near them and whispered as much to Carl.

"Pshaw! I mint nfreid of nothin'," and then he whistled the air of the "Captain bold."

Just then there came three knocks. There was no mistake this time. All three of the boys heard it very plainly and Carl turned quickly, "Who's that?"

There was a sound of shuffling feet and a double-knock at which sound Carl dropped his gun and ran for the nearest corner.

"Maybe it's old Nick comin' fur him," piped little Ben softly.

Then there was a great stamp, another knock, and the door began to move inward a little way, and a series of short, gentle, regular taps, was heard.

Carl's bravery oozed out of his fingers' ends, for he was the very image of terror as he stood saying scraps of outlandish prayers to the saints of his queer calendar, and when he heard Beany whisper hoarsely,

"It's him! I see his horns!" he sank down in abject fear crying like a baby.

The two fearful horns were plain to be seen now, and the boys could not stand it longer, but with a subdued yell ran wildly out at the open door never stopping until they reached their homes, each fully persuaded that the Evil One had come to claim his own.

After this, Carl's power was over, for by daylight Jimmy and Ben were up, and standing by the breakfast-table, made full and fair confession of their sin, and were forgiven on promise of future amendment.

Carl had lost his authority evermore, for he could be a hero no longer in their eyes, and so sought new retainers who had never seen him cry with terror or flinch in danger.

It was many months afterward before it was discovered that the horns that had figured as those of Satan belonged to an old goat who was quietly pursuing his own employment of gathering up anything desirable that came in his way. Finding a nice bandanna of Deacon Filer's choice cabbage-sprouts in the corner, he had solaced his wakefulness with their juicy coolness, pursuing the scattered leaves up to, and through the opening door, his horns hitting the door at every mouthful.

The remembrance of the night of terror remained long after its cause was known, and though there was many a weak hour of temptation and some wavering by the way, they tried to deserve the charecter their partial mother gave them with her good-night kiss.—*Christian Weekly.*

Legeod of the Silkworm.

The name of the silkworm is *Bombyx mori. Bombyx* means silkworm, and *mori* is the Latin word for *mulberry*, so that the two names mean the *mulberry silkworm*. This worm has a remarkable history. Its ancestors lived in the world thousands of years before their value was known. All this time they lived in the woods, spinning away their silk, but without attracting any attention from man. At length, as the story goes, a long time before even Noah, the thought of building the ark, 2,600 years before Christ was born, one of the queens of China, while walking in the royal grove, noticed one of the cocoons of this worm, and plucking it from its fastenings, she took it to the palace. Examining the threads of which it was composed, she admired them for their fine quality, and discovered that she could separate them and wind them in a ball for use. She then collected a great number of cocoons, and wove the threads into fine cloth for wearing apparel.

This was a very important discovery, because up to that time the clothing of the Chinese was made from the skins of animals. And there was not enough of skins to supply the wants of the increasing population of that country. There was, therefore, a great demand for some other fabric out of which good clothes could be made, and the silk of this worm was so employed. It was a great thing for this neglected and despised worm, that had been kept away from the habitations of man for more than 1,400 years, to be raised at once to the rank of a special favorite of queens and royal ladies. But so it was.

I do not say that this is a true story, but the Chinese believe it, and they say that the name of the queen was *Sing chi*. Now, if ever such a woman lived, it is well to remember her name, and the Chinese have done well to tell us who she was. Her husband the story says, built an inclosure joining his palace, where the mulberry was planted, and the silkworm raised. So every day the queen went into that inclosure with her maids of honor, and she and they fed the worms and gathered the cocoons, and the finest pieces of silk were always woven by her own hands. She was an industrious queen, and the Chinese regard her as one of the best of their race.—*Our Monthly.*

General News.

THE INAUGURATION.—On Tuesday, the 4th inst., General Grant was inaugurated President of the United States for his second term. The day was one of the coldest of the season, yet a fine display was made by the military and others. The inaugural was, as is usual with Gen. Grant's documents, brief. Among the promises made for the future, those in reference to civil-service reform, the re-establishment of our commerce, the removal of burdens from internal trade, and the protection of our Indian population, are the most prominent.

THE ALABAMA CLAIMS.—The Geneva Award goes over to the next session, Congress having been unable to agree upon any measure providing for the distribution of the money to the Alabama claimants. This result was expected when the widely-differing opinions on the subject became known. The money will be due until September 12th, so that the delay does not really affect the matter much, if Congress at the next session will be any more likely to agree upon a plan of distribution than at the session just closed. When the money is received it is to be used in redeeming five-twenty bonds, and to represent the award, an equal amount of new five per cent. bonds are to be set aside, subject to the future disposition of Congress, so that whatever interest may accrue by the operation will be for the interest of the United States.

THE NEW SENATE.—The Senate of the Forty-third Congress consists of seventy-one Senators, there being three vacancies, one from Massachusetts, one from Alabama, and one from Louisiana. Politically divided, there are forty-four republicans, twenty democrats and seven liberals, the latter being Senators Sumner, Sprague, Tipton, Fenton, Hamilton (of Texas), Ferry (of Connecticut), and Schurz. The vacancy from Massachusetts will be filled by the legislature of that State in a few days with a republican, probably either Secretary Boutwell or Representative Dawes. The Louisiana vacancy is contested by ex-Lieutenant Governor Pinchback, republican, and General McMillan, democrat, and how it will be filled, depends upon the settlement of the still unsettled Louisiana trouble. The Alabama vacancy is contested by George E. Spencer, republican, and F. W. Sykes, democrat.

MORE ANNEXATION.—A number of San Francisco speculators have bought the Islands of Samoa, Upola, Savii and Tutuili in the Pacific Ocean. These islands are very productive in sugar, coffee, tobacco, indigo, arrow-root and other tropical riches, including a great quantity of cotton. A petition has been got up asking for the annexation of the islands to the United States.

THE WORK OF THE 42d CONGRESS.—The work of the Forty-second Congress is concluded and may be summed up as follows: All the general appropriation bills were passed and received the President's approval together with the following among others of importance: Bill repealing the franking privilege; bill for the revision and codification of the pension laws; bill amendatory of the act codifying the postal laws; bill amending and codifying the laws relating to mints and coinage; bill reducing the internal revenue force; bill for the revision of the statutes of the United States, the report to be made in December; bill authorizing the construction of ten sloops of war; bill providing for the sale of coal lands; bill paying awards of the Southern Claims Commission; bill to carry into effect the articles of the Treaty of Washington relating to the fisheries; bill providing for the deposits of the Geneva award in the Treasury of the United States, this being a substitute for the House and Senate bills providing for the immediate distribution of the said award; joint resolution congratulating Spain on the establishment of a Republic. Considerable general legislation was engrafted upon various appropriation bills. Among the most important measures thus enacted being those relating to the Union Pacific Railroad Company in regard to the Credit Mobilier transactions and the provisions raising the salaries of the President, Vice-President, Judges of the Supreme Courts and members of Congress.

YELLOW FEVER.—The South American steamer brings news to Lisbon that the ravages of yellow fever in Brazil are abated. At Rio Janeiro the deaths were from thirty-five to forty per day, and the epidemic had spread to Bahia and Pernambuco. A number of English residents returned in the steamer, and others were preparing to leave the country.

THE VIENNA EXPOSITION.—The times of the trials of agricultural machinery at the Vienna Exposition have been announced. They will take place on the Leopoldstadt estate, about eighteen miles from Vienna, commencing on June 18th with hoes, root cutting, chopping and crushing machines; on June 20th with grass mowers, reapers and rakes for grass or wheat, barley, pasture and clover on July 14th with threshing machines, straw elevators, corn cleaning and separating machines, and on July 30th with steam plowing, sowing, harrowing and rolling machines. Three hundred and five English acres have been appropriated for the trials of the reapers and mowers. This class of implements have been especially developed in the United States, and those manufacturers who intend exhibiting should take care that their shipments are not made so as to arrive too late for competition.

THE SOUTHERN WORKMAN.

Life's Heroes.

Not those who with bugle and banner
March bravely amid's conflicts to win:
But souls who, unknown and in silence,
Wage far nobler warfare with sin.

Not those whose fair speeches are laudasored
As foremost in science and art;
But souls who shall leave their life's record
Deep graven on human heart.

Not those for whom voices exulting,
The world's pæans of victory swell;
But souls who, perseved and forsaken,
Shall fulfill life's journey, "Tis well."

Not those who, with vigor undaunted,
Achieve what man reckon great deeds;
But souls who forgetting self quietly,
In bye-ways and hedges sow seeds.

For there's coming a day when all worldlings,
Though rich in all manner of lore,
Shall count best as dust in the balance
When weighed on eternity's shore.

But the patient, the meek and the faithful,
Who've lived for our dear Lord alone,
Shall glean in heaven's brightest of jewels
When Jesus shall make up His own.

— NEW YORK OBSERVER.

Rev. William Taylor.

This veteran in the Christian ministry, pastor of the First Baptist Church (colored), of Hampton, died on the sixth of March, at the age of 72 years and 5 months. He had been a preacher 51 years; working, during the week, at the trade of a carpenter. He, could truly say with Paul, "These hands have ministered unto my necessities." By his own earnings he bought his freedom for $1200 and the freedom of a son for $500, and by the timely aid of *friends*, being held in the highest esteem by all classes of citizens,—he paid also for a daughter no less than $1720. Judging from this, he must have performed no small amount of manual labor, in addition to all his duties as preacher and pastor.

These duties were indeed manifold, since he had a church of more than twelve hundred members. Being of commanding personal appearance, a born leader of his race, he was emphatically the overseer of his large flock, guiding and controlling them with a wise, but firm hand. As a preacher, he was not so famous for getting up the "pousouents," as for calmly instructing his people in the things of Christ. As a pastor, he is spoken of as most diligent and faithful, so that if he heard of any brother walking disorderly, he would be sure to go right to him, and use every effort in his power to reclaim him—"watching for souls as they that must give account."

And, it is cheering to know that the gospel which he so long preached to others was found to be exactly suited to his own need; helped him in difficulty, comforted him in sorrow, supported him in death, so that going home was, as he expressed it, "going from labor to refreshment;" "just going from one room to another," from the humble abode of earth, to a glorious mansion in heaven.

He had been ill for many months, calmly and cheerfully waiting to depart and be with Christ. There rested on his last days a "soft and pensive light, a sort of Sabbatic calm. There seemed to be a mellowing of the spirit as of the sun toward his setting; a maturing of meekness and faith and charity; a ripening of the whole man for heaven, until the Master said, "Come up higher." And, could he return, and speak again through those lips of clay now sealed in the silence of death, would he not say to all his surviving friends, with a more earnest and heavenly spirit than ever before, "Be ye followers of me, even as I also am of Christ?"

The funeral services were on Sabbath afternoon, the ninth of March, at the new and commodious church edifice, for the erection of which he had so long and earnestly labored. It was appropriately draped in mourning, and filled to overflowing, long before the commencement of the services; the multitude outside greatly exceeding the throng within. Rev. Mr. Thornton preached the sermon from *Acts*, 20: 24—"But none of these things move me, neither count I my life dear unto myself, so that I might finish my course with joy, and the ministry, which I have received of the Lord Jesus, to testify the gospel of the grace of God." Addresses were made afterward by Rev. Messrs. Parker, Smith, Adams, and Tolman. At the close, the audience sung the hymn, beginning:

"Servant of God, well done,
Rest from thy loved employ."

"And I heard a voice from heaven saying unto me, Write, Blessed are the dead who die in the Lord from henceforth: Yea, saith the Spirit, that they may rest from their labors; and their works do follow them."

The Plague of Fraud.

This is not merely local, confined to Washington. Would that it were. But this painful fact is that the plague, to a sad extent, pervades and permeates the nation.

Think of the prevalence of fraud in almost every department of business; the cheating in articles of trade as to *quantity*. The paper of carpet tacks labelled one thousand, and counting but seven hundred; the piece of tape sold for twelve yards, and holding out but seven; quart cans, so called, which will hold only a pint and a half; the imperfect weights given over some counters, the deficient loads of coal, the wood "short at both ends;" these are specimens of the flagrant violations of the Divine word, "Ye shall do no unrighteousness in judgment, in metyard in weight or in measure."

Then the cheating as to the *quality*, as well as the quantity of the articles of trade is, it is to be feared, as common, and if possible, more nefarious still. I allude to the paste and paper in the soles of shoes, the shoddy in coats and hats, the cotton in professedly all-wool cloth, the watered milk, the butter mixed with strong lard, and mutton tallow, so that a certain butter company actually proposed to make a pound of butter out of only a single pint of milk. And so shameful is the fraud in lard that, by the use of alkaline carbonate, more than forty per cent. of water is often put into it. Scores on scores of acres of chicory are cultivated in California for adulterating *coffee*; and in China, where they cultivate the willow for adulterating tea, no less than 40,000 pounds of willow leaves were used last year in this abominable process of cheating. So notorious moreover is the adulteration of intoxicating liquors by pernicious drugs, that the same amount of habitual drinking which formerly made one what is called a drunkard in twenty years, will now produce the like degree of disease and intemperance in three years. Most humiliating indeed is the fact that so many are seeking upon such various wicked and cruel devices to cheat and defraud their fellow-men, and to poison their very life-blood for the sake of gold.

And since the plague of fraud has eaten so extensively into the daily business of life, is it any wonder that it should break out among the officials of the nation, occasioning the fall of some of the stars of our political firmament? Is it strange that some of our rulers should be infected, in a measure, with the vices of the people? Congressional corruption is but a symptom of the too common disease of the body politic; a disease not only of the upper ten, but of the lower million.

We should therefore beware of seeking to find a cover for one guilt, in the exposure of another's; but each rather heed the Divine word, "Let him that thinketh he standeth, take heed lest he fall;" "Wash you, make you clean, put away the evil of your doings from before mine eyes;" ever praying with the Psalmist, "Gather not my soul with sinners—in whose hands is mischief, and whose right hand is full of bribes."

This and That.

POWER OF IMAGINATION.—An amusing incident recently occurred at Williams College, which is thus related by a correspondent of the "Springfield Gazette":

The Professor of Chemistry, while administering in the course of his lectures the Protoxide of Nitrogen, or, as it is commonly called, laughing gas, in order to ascertain how great an influence the imagination had in producing sensations consequent on inspiring it, secretly filled the India rubber gas bag with common air instead of gas. It was taken without suspicion, and the effects, if anything, were more powerful than upon those who had really breathed the pure gas. One complained that it produced nausea and dizziness, another immediately manifested pugilistic propensities, and before he could be restrained, tore in pieces the coat of one of the bystanders, while a third exclaimed "This is life. I never enjoyed it before." The laughter that followed the exposure of this gaseous trick may be imagined.

Sir Humphrey Davy, being once about administering this gas to a person afflicted with paralysis, applied the bubble of a thermometer to his mouth, in order to ascertain the temperature of his system. The patient being ignorant of the manner of taking the gas, felt instant relief, and by holding the thermometer for a short time longer in his mouth, a complete and permanent cure was effected.

SELFISHNESS.—The never-reaching cunning of selfishness of superiors over inferiors was well exemplified in the case of the white man and the Indian, who agreed that while hunting they should share the game. One night their bag contained a fine turkey and a carrion buzzard. "Well," said the white man, "we must now divide what we have taken, and therefore, I'll take pieces. I will take the turkey and you shall take the buzzard, or else you may take the buzzard and I will take the turkey." "Ah!" said, the native, shaking his black, shaggy head, "*you no like turkey for poor Tonee!*"

JOSIAH AND TOBACCO.—The New York "Methodist" tells us that a preacher somewhere in Connecticut when tobacco is getting to be a staple production, in discoursing on cleanliness as being akin to Godliness, remarked that he was of the opinion that Josiah was a nice, wholesome sort of an old man, who neither "smoked nor chewed," from the fact that the whale retained him *so long* in *his stomach*. If the fish had swallowed some of the members of this congregation, or even some of our members, as *sure* as they profess to be, he would have vomited himself to death in less than no time!

The "Watchman and Reflector" has an article on the recent Congressional developments, in which it tells some wholesome and unpalatable truths. We copy from it as follows:

We are a nation of Sabaths and sanctuaries, and Sunday schools and powerful revivals. Still, our people can't be trusted with the handling of money. Those who seem the strongest easily yield to temptation. We are startled at some great fall, and cry, Who next? only to find the next, perhaps, still more startling. Moreover, right along in speculation and trade, men who stand high in society and oftan in the church, too, conduct their business on principles that would not stand any moment for a moment. The truth is, our youth grow up fair outwardly, but with feeble consciences; with a great deal of negative virtue, but with little positive; beautifully innocent, perhaps, up to the hour of trial, but with no sturdy moral conviction as led the tempted Joseph to say, How shall I do this great thing and sin against God? The fault is found partly in our homes, in the method of training; but it falls back largely on those who have been called of God to expound and enforce truth in all its bearings, and who have been solemnly set apart to do just this. They do not sufficiently preach Christianity in its applications. They do not emphasize enough that righteousness which consists in right doing. They magnify the Gospel at the expense of the law. They take too much for granted that the seed deposited in the heart will, with but little further care, yield all manner of precious fruit in the life. And when the case demands it among the heavy contributors, there is not enough of that unsparing fidelity by which the Baptist incurred the vengeance of Herod, and which made Felix tremble before his prisoner, and which roused the Pharisees to pursue our blessed Lord to the death. The consequence is a childish piety, that wants religion to be a thing of amusements, picnics, fairs and festivals; a piety that fails at the first trial, instead of standing amid the assaults of temptation as the oak stands amid the tempest, toughening all the while its fibre, striking its root deeper, and ever lifting its top higher toward heaven.

Gems.

It is one of the beautiful compensations of this life that no one can sincerely try to help another without helping himself.—*C. D. Warner.*

On earth we have nothing to do with success or with its results—but only being true to God and for God; for it is sincerity and not success which is the sweet savor before God.—*Robertson.*

The future character of the nation and the church is bound up in the little people of to-day. Are we moulding and training them for God?

A loving heart and a cheerful countenance are commodities which children should never fail to keep on hand. They will best season their food and soften their pillows. Sour faces and cross words make everything go wrong. Keep in the sunshine of God's love, and don't give the frowns a chance to deepen into wrinkles.

"Get out of my way—what are you good for," said a cross old man to a little bright-eyed urchin who happened to stand in the way. The little fellow, as he stepped aside replied very gently: "They make men out of such things as we are."

"A wise son maketh a glad father, but a foolish man despiseth his mother."—*Prov.* xv: 20.

"To send an uneducated child into the world," said Paley, "is little better than to turn out a mad dog or a wild beast into the streets."

It is of small practical use talking of God's love to you if you forget the working of God's love in you.

No man is good unless others are made better by him.—*Welsh Proverb.*

It is an evidence of great hardness to be more concerned about our sufferings than our sins.—*Anon.*

He that will believe only what he can fully comprehend must have a very long head or a very short creed.—*Colton.*

An evil mind will be sure to put the worst construction on another's actions. Who can stand before envy? If you feel angry, beware lest you become revengeful.

"Nothing can harm us that quickens our earnestness and frequency in applying to the throne of grace. Only trust the Lord, and keep close to Him, and all that befalls you shall be for good."

There is more bitterness following upon sin's ending than ever there was sweetness from sin's acting. You that see nothing but weal in its commisson, will suffer nothing but woe in its conclusion. You that sin for your profit, will never profit by your sins.

John Bunyan was once asked a question about heaven which he could not answer, because the matter was not revealed in the Scriptures; and he thereupon advised the inquirer to live a holy life and go and see.

"The question is not, How may I pass through life with the least inconvenience, but, how may my little span of life be made most subservient to the praise and glory of Him who loved me and gave Himself for me?"

The spirit of true religion breathes gentleness and affability; it is social, kind, and cheerful; far removed from that gloomy, illiberal superstition and bigotry which cloud the brow, sour the temper, deject the spirit, and impress moroseness on the manners.

Trifles.

FALLING OVER A WHEEL-BARROW.—If you have occasion to use a wheelbarrow, leave it, when you are through with it, in front of the house, with the handles toward the door. A wheelbarrow is the most complicated thing to fall over on the face of the earth. A man would fall over one when he would never think of falling over anything else; he never knows when. He has got through falling over a tither, for it will tangle his legs and his arms turn over with him, and rear up in front of him, and just as he pauses in his profanity to congratulate himself, it takes a new turn, and scoops more skin off of him, and he commences to evolute anew, and limap himself on fresh places. A man never ceases to fall over a wheel-barrow until it turns completely on its back, or brings up against something it cannot upset. It is the most inoffensive looking object there is, but it is more dangerous than a locomotive, and no man is secure with one unless he has a tight hold of its handles, and is sitting down on something. A wheel-barrow has its uses, without doubt, but in its leisure moments it is the great blighting curse eu true dignity.—*Danbury News.*

A Virginia paper describes a fence which is made of such crooked rails that every time a pig crawls through he comes out on the same side.

A Western editor, in acknowledging the gift of a peck of onions from a subscriber, says: "It is such kindnesses as these that bring tears to our eyes."

A shoemaker who is not as skilled as most editors in deciphering manuscripts, is racking his brain over an order sent him by one of his illiterate customers for "a pare of Easy toad shuz."

Among the saddest episodes in the late storm in Minnesota, according to a Western paper, was the freezing of the hands, nose, forehead, everything except the *check*, of a life insurance agent.

An advertisement taken from a county newspaper reads as follows: "Lost or strade from the subscriber, a sheps all over white—one leg was black and haf his body. All, persons shall receive $5 to fetchhim.

"Didn't you guarantee, sir, that the horse wouldn't shy before the fire of an enemy?" "Na more he wont, T'isn't till after the fire that he shys."

An old farmer said of his clergyman, whose sermons lacked point, "Ah, yes, he's a good man, but he will rake with the teeth upward."

Josh Billings says; "There is one thing about a hen that looks like wisdom—they don't cackle much until after they have laid their eggs. Sum phokks are always a bragging and a cackling what they are going tew do beforehand."

The little son of a prominent Baltimore minister said to his father:

"Pa, St. Paul was a Southerner."

"How do you know that, my son?"

"Why, sir, in the eighteenth verse of the eighth chapter of Romans he says: 'For I reckon.' None but Southerners say reckon."

Jenkins told his son, who proposed to buy a cow in partnership, to be sure and buy the hinder half, as it ate nothing, and gave all the milk.

"Do you think I am a fool?" a violent man asked the late Rev. Dr. Bethune. "Really," replied the Doctor, "I would not have ventured the assertion; but now that you ask my opinion, must say that I am not prepared to deny it."

A prudent clergyman, unwilling to accuse a citizen of lying, said he used truth with penurious frugality.

At a concert recently, at the conclusion of the song, "There's a good time coming," a country farmer got up and exclaimed: "Mister, you couldn't fix the date, could you?"

The time to possess your soul in patience is when your hat blows off in the street, and your eyes are too full of dirt to see which way it goes.

We have heard much of the laziness of the modern workman, but are inclined to think this statement of an indignant employer, a slight exaggeration. He says: "I have seen a man, who had his pick in air, knock off work and leave it there, rather than waste time to put it down after twelve struck."

A
National Savings Bank.
THE
FREEDMAN'S
SAVINGS & TRUST
Company,
Chartered by Congress, March, 1865.
PRINCIPAL OFFICE,
WASHINGTON, D. C.
NORFOLK, Va. BRANCH
IS LOCATED AT
NO. 116 MAIN STREET,
Corner of Atlantic Street.
Bank hours, 9 A. M. to 3 P. M. Open also Saturday Nights from 6 to 7 o'clock.

SIX PER CENT. INTEREST
is now paid, beginning monthly. Dividend days: July 1st, and January 1st. Interest compounded if not drawn. *Special arrangements* made for receiving accounts payable by Check.
Depositors at Norfolk, bearing six and four per cent. Interest respectively.
Deposits of any amount received from any person, and repaid on demand.
J. W. ALFORD, *President.* M. C. PERRY, *Cashier.*

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.
The Seventh Annual Report of this Company has been published.
The year has been a prosperous one. The gain in deposits has been $1,237,262.67, being an increase of *fifty per cent.* on the balance due depositors at the close of the present year.
There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1865, has been $100,000. The past should be to us all a matter of just pride to all—trustees and depositors alike—and its future is fruitful promise. Before the annual meeting we shall be able to report $2,000,000 due depositors.

The Bank pays six per cent. interest
on Savings deposits, compounded to January and July of each year, to be drawn by Pass-Book only.
Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.
Certificates of deposit issued bearing interest and available anywhere in the United States.
ACCOUNTS TRANSFERRED,
at request of depositors, from Branches where kept to any other Branch without risk or trouble, and without loss of interest.
For full information about the Bank address the *Secretary* at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and by-laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central Office of the Company is in Washington, directly opposite the U. S. Treasury.
Any information required can be procured by addressing the President, J. W. Alford, Esq., or L. L. Eaton.

TAKE NOTICE,
NORTHERN EMPLOYERS
AND
SOUTHERN WORKERS.
All correspondents from colored people wishing all news at the North, will be inserted in the "South ern Workman" free of charge, if accompanied by references from responsible persons.
All communications from Northern employers for colored servants will be received at our usual charge of one dollar per line.
Until further notice, parties North and South wishing to communicate with each other in regard to this subject may do so by letter to the "Southern Workman."

JOHN T. BENTLEY,
WATCHMAKER
AND
JEWELER.
Watches, Clocks, Jewelry, Silver, and Plated Ware Sold and Repaired.
Fancy Goods of all kinds constantly on hand.
Cake, Candy, Confectionery, and General Furnishing Store.
Baltimore Wharf, Fort Monroe, Va.

INFORMATION WANTED of Isaac Gordon, who left his home in Camden Co., N.C., in 1862. He was formerly owned by Mrs. Wiley Barrikee. The last information concerning him was in 1865, when he was in Philadelphia. Any information concerning him will be thankfully received by his father and mother. Address
THOMAS GORDON,
Kempsville,
Princess Anne Co., Va.

HELP WANTED.
ADVERTISEMENTS not exceeding five lines in space will be inserted in this column at fifty cents for one insertion and twenty-five cents for each additional insertion. The money should in all cases accompany the advertisement.

WANTED.—Two girls to go to Pennsylvania; one to do general housework, the other to take care of a child. Apply at the office of this paper.

WANTED.—Six or eight honest and industrious men to go to New York. Good employment until December. For further particulars apply at office of this paper.

WANTED—A man and wife without children, on a place ten miles from Philadelphia. Man to milk a cow, clean horses and carriages, etc.; woman to work in the kitchen. This is a rare opportunity to those wanting situations at the North. Apply at this office.

SITUATIONS WANTED.
WANTED.—A situation as light porter, or to do general work, at a hotel, from the middle of June until the 1st of October. Good references given. Address GEORGE COLE, Normal School, Hampton, Va.

Hampton Business Directory.
J. S. DARLING,
Hampton Steam Mills. Meal and Feed Planing and Sawing done promptly.
TENNIS & GATEWOOD,
Groceries, Provisions, Paints, Oils, Oars, Rigging, &c.; TABB'S CORNER.

Stoves, Heaters and Ranges; CORNER 18TH AND RIDGE AVENUE, PHILA.

THE
SOUTHERN WORKMAN,
DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. 2. HAMPTON, VA., MAY, 1873. NO. 5.

The Voice of the Grass.

BY SARAH ROBERTS.

Here I come creeping, creeping everywhere;
By the dusty roadside,
On the sunny hillside,
Close by the noisy brook,
In every shady nook,
I come creeping, creeping everywhere.

Here I come creeping, smiling everywhere;
All round the open door,
Where sit the aged poor;
Here where the children play,
In the bright and merry May,
I come creeping, creeping everywhere.

Here I come creeping, creeping everywhere;
In the noisy city street
My pleasant face you'll meet,
Cheering the sick at heart,
Telling his busy part—
Silently creeping, creeping everywhere.

Here I come creeping, creeping everywhere;
You cannot see me coming,
Nor hear my low, sweet humming;
For in the starry night,
And the glad morning light,
I come quietly creeping everywhere.

Here I come creeping, creeping everywhere;
More welcome than the flowers
In summer's pleasant hours;
The gentle cow is glad,
And the merry bird not sad,
To see me creeping, creeping everywhere.

Here I come creeping, creeping everywhere;
When you're murdered with the dead
In your still and narrow bed,
In the happy spring I come
And deck your silent home—
Creeping, silently creeping everywhere.

Here I come creeping, creeping everywhere;
My humble song of praise
Most joyfully I raise
To Him at whose command
I beautify the land,
Creeping, silently creeping everywhere.

Kindness to Animals.

In many of the large cities of our own and other countries, there have been formed, during the past few years, societies for the prevention of cruelty to animals, and it is impossible to walk through the crowded streets of any town, or even to watch the treatment of the live-stock upon most farms, without feeling that the need for such organizations is very urgent. People are constantly guilty of cruelty to the dumb beasts that are dependent upon them for care, and this cruelty is oftener the result of ignorance and thoughtlessness than of any real hardness of heart. There are, to be sure, brutes in human form who are capable of willfully and habitually abusing helpless animals, but such cases are infrequent, and the commonest cause of the sufferings of our domestic animals is to be found in the ignorance of their owners, who know or think little of their duties in this respect. Over-driving, over-loading, under-feeding, uncleanliness, etc., are prolific sources of suffering in stable and farm yard, and yet there are few instances where a little thoughtful effort will not remedy or prevent these wrongs. The societies mentioned above are not only a police force, organized for the purpose of detecting and punishing those who are guilty of intentional and unnecessary cruelty to the animals in their power, but they are also, by means of the personal influence of their members, and the publications which they issue, directly useful in educating the public mind to a truer view of the responsibilities of human beings towards their fellow-laborers of the brute creation. In this way much interest has grown up in the important question of the rights of animals and the old indifference to their comfort and improvement is slowly passing away, for careful observers soon see for themselves that intelligent kindness toward live stock of all descriptions, soon brings its own reward. Improvement in breeds and in individuals is one result of careful treatment which is immediately profitable in hard cash, and such profit is, perhaps, the most powerful argument which can be used at present in favor of a general reform among stock owners and employers; but there is also a direct reward granted to all who show kindly interest in the animals which play so large a part in the business and pleasure of our lives. Almost every one knows something of the capacity for affection of dogs, horses, birds and numerous other animals, both wild and domestic, and the remembrance which they show of gentle deeds and acts of kindness. The picture for this sunny month of May, which we offer upon our first page, is full of that sunshine of kind thoughtfulness which may easily be made to brighten many a dark place, and bears pleasant witness to the value of an education which teaches even little children to love the animals whose life here is due, even as our own is, to the wisdom of an all-loving Creator. The kindness that we show to animals often returns to us, and our love for them is never wasted, for not only do they themselves frequently appreciate it, but the reaction of such kindness upon our own natures is always salutary and full of wholesome enjoyment. Christianity and common sense both teach us that even the semblance of cruelty to animals should be avoided, for their interests and our own are not far divided.

THE MORNING CALLERS.

The Central Park.

The city of New York, the largest city on the American continent, is built upon the island of Manhattan, which lies between the Hudson and the East Rivers, and at the head of New York Bay, one of the finest harbors in the world. The upper part of this island was originally rocky and barren, with here and there swamps or small ponds, and here and there slight but abrupt elevations. Out of the centre of this unpromising tract were taken, several years ago, some eight hundred acres, which were put into the hands of competent landscape gardeners, to be laid out as a public park for the use of the inhabitants of the great, crowded city whose noisy, dirty streets had then no outlet into green fields and pleasant groves. The very roughness of the ground chosen fitted it for the purpose, and in a singularly short time the citizens of New York were able to enjoy the wholesome delights of a large, well-regulated and beautifully laid out park. The swamps were converted into artificial lakes, on whose surface, during the mild season of the year, float graceful, brightly decorated boats, mingling their gay flags and streamers with flocks of snowy swans, and the variegated plumage of strange varieties of ducks and water fowl. In winter these same ponds are covered with thick coats of ice, and thousands of skaters fly back and forth over the sparkling white fields, presenting a brilliant and attractive scene. Excellent roads have been made, with bridle paths for equestrians, and miles of narrow, shady rambles for people who like to make the most of the space at their disposal by walking from one pretty spot to another, and lingering to feast their eyes upon the beauties lost upon those who only look at the general effect from their carriages. Little brooks run from one pond to another, now and then leaping merrily into foaming cascades, or rippling under graceful, rustic bridges, and past pleasant, quiet summer houses. In order that the vast traffic of the city may not be disturbed, three of the main avenues run through the Park, but are sunk so far below the general level of the ground, as to show nothing of the carts, omnibuses and business vehicles which are constantly passing along them, but are allowed nowhere else in the Park. Over these sunken avenues have been thrown bridges of stone, marble and wood, that are so beautiful as to form a striking feature in the scenery, and add greatly to the variety of the views. Near the largest lake has been built a fine stone terrace, on and about which are numerous fountains and water jets, whose sparkling showers fall into carved basins, half hidden by masses of green leaves and bright blossoms, while close beside, at the end of a long, straight avenue, called the Mall, stands a gay pavilion, surrounded by numerous seats, where a band of well-trained musicians plays on certain days of the week, to the great delight of the crowds who gather eagerly to listen.

The water supply of the Park which is so plentiful, and so greatly increases the beauty of the landscape, is obtained from the large reservoir which also supplies the city itself, and which, lying at the upper end of the Park, is well worth a visit. The aqueduct, and the system of reservoirs that make New York unrivalled in respect to the quantity and purity of its water supply, are examples of engineering skill which deserve a more detailed description and illustration than can be given here, for their practical value is almost inestimable, the health and prosperity of any large city being closely dependent upon the cheapness and purity of the water that it supplies to its citizens.

An addition to the attractions of the Park, which promises to be very important, is found in a Zoological Garden, a collection of foreign and native animals, which are kept in buildings and inclosures arranged for the purpose, and furnish objects of great interest and amusement to the public at large. Elephants, monkeys, tigers, camels, lions, bears, and a variety of less familiar animals fill the cages, and attract each day a fresh crowd of sight-seers, the younger portion of whom are very apt to consider this exhibition to be the most exciting entertainment to be found within the limits of the Park.

As a whole, New York has undeniable reason to be proud of the beauties of the Central Park, and it would be a good thing for the health and the morality of every city in the country if such breathing places were supplied to the over-worked and over-crowded denizens of narrow, dirty streets, whose lives are so rarely blessed by visions of blue skies and green grass.

Flowers.

At this season of the year, when every spot of earth is covering itself with fresh verdure, Nature herself seems trying to remind us of how much we can do to adorn our homes by a careful use of the beautiful gifts which the Creator has lavished upon his children. At an expense so small that it need scarcely be counted, we can fill our gardens with plants whose growth and blossoming will be a delight to our eyes all through the long summer days, while the care which they require, in our genial climate, is so small as to be an amusement rather than a toil. If the earth of the garden is properly prepared in the first instance, there are many varieties of hardy plants and shrubs which will grow in luxuriance if the weeds are kept away from them, and they are watered during the summer droughts. The annuals, which grow from seed, are many of them so strong and full of life that they need scarcely any care at all, while many flowering shrubs will grow luxuriantly for years with no assistance beyond that to be obtained from a little manure spaded in around their roots. A neat, attractive garden before a house, however small the space inclosed may be, will add greatly to the aspect externally, and will increase the pleasures of the home within, while the occupation it affords is so healthful and full of instruction, that it should need no recommendation. Such labor as it involves may be made, for the young especially, a valuable means of education, and there can be no loss in undertaking the improvement of any little corner of earth which Providence may have intrusted to our keeping, for the perfume and beauty of the flowers which we assist in producing, are very sure to reward us for any small investment of time or money that we may be called upon to make.

The Pyramids of Egypt.

The famous pyramids of the ancient Egyptians are situated on the west bank of the River Nile, beginning a short distance above the city of Cairo, and extending, in groups, for some sixty or seventy miles up the river. As many as sixty-nine have been counted, the ruins of many more are to be seen, and there is no doubt that many have disappeared entirely in the long period of forty centuries which has elapsed since they were built. In these pre-historic ages, the rocky hills which lie between the valley of the Nile and the Great Desert, were honey-combed with the burial-places of the common people, and the great pyramids which uplift their mighty heads nearer the river side, were the tombs of the kings, and their royal relatives and officers. In the centre of each is a sepulchral chamber, over which were laid the courses of masonry, leaving a very narrow and low passage, through which access was obtained to the central chamber. At the death of the monarch the work ceased, the last layers were finished off, the embalmed body was laid away in state in the dark chamber, and the passage way was closed up, not to be re-opened until thousands of years had passed, and the solid stones themselves were crumbling into dust. The largest pyramid now standing is near Memphis and covers an area of twelve or thirteen acres, the side of its square measuring 746 feet, and its height being 450 feet, 9 inches. The four sides face the cardinal points of the compass, and it is built of immense blocks of granite, so large as to show that an astonishing amount of mechanical skill must have been necessary to transport and adjust them in their proper places. Its interior has not yet been thoroughly explored on account of its great size, but several chambers have been discovered, in one of which was a sarcophagus of red granite which probably contained the mummy of some great king, who intended that his name and fame should last while the world stood. There is still much to be learned in respect to the design and workmanship of these wonderful structures, and the volumes already filled with their history count by hundreds, while they are visited every year by thousands of curious travelers, who spend the warm Egyptian winter in wandering among these royal tombs.

THE
Southern Workman,
ISSUED MONTHLY.
S. C. ARMSTRONG, } *Editors.*
RICHARD TOLMAN, }
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen & School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who will circulating that paper.

Specimen copies sent upon application.
To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.
For further information, address

J. F. B. Marshall, *Business Manager*

The Southern Workman.

HAMPTON, MAY, 1873.

THE past month has been more than usually remarkable in respect to the number of accidents which have occurred both by land and sea and have resulted in such painful loss of life. The wreck of the steamer *Atlantic* while endeavoring to make the harbor of Halifax, is known in its details by all readers of daily papers, and is certainly more terrible than anything of the kind that has happened for years, the circumstances having been of the most heart-rending description. Although we can scarcely realize how near such or similar dangers are to all of us, yet occasionally the fact is brought home to us, and we believe that it is not out of place here to make grateful mention of the narrow escape of our Hampton *troupe* during their late journey from New York to Boston. A train which preceded theirs by ten minutes met with an accident fatal to many of its passengers, and the escape was more striking because the express train upon which were our students had the right of way for that time, and was only saved by a temporary detention of which the ill-fated way train took advantage, thus incurring the risk which would otherwise have fallen upon the express. Without any desire to escape misfortune at the cost of the suffering of others, it is impossible, in view of the magnitude of the enterprises which they have undertaken, not to be earnestly thankful for the preservation of our Hampton singers, whose success is of such great moment to the cause of popular education in the South.

One of the most noticeable events of the month has been the occurrence, within our national limits, of a massacre so cold-blooded and treacherous that it might to, and probably will modify the whole policy of the government in regard to its perpetrators. The murder of General Canby, and his assistant commissioners by the Modoc Indians, fully demonstrates the uselessness of expecting any permanent peace in our western territory (except such as can be maintained by force of arms), until the remnants of Indian tribes still remaining are either civilized or exterminated, and the present heavy expense, both of money and valuable lives, must continue until we cease to trust to the reason and honor of a faithless and barbarous enemy. While we may be entirely humane and even philanthropic in our treatment of the border tribes, it is folly for us to endow them theoretically with virtues which they never practically possess, and true wisdom seems to suggest such action on the part of the government as shall protect, as far and as economically as possible, the majority, viz., the white settlers and frontiersmen, against the violence of a barbarous minority. It is a fact, which by force of contrast is somewhat painful, that our present relations with the Indians are so expensive that a dozen such institutions as Hampton might be endowed from the outlay of a single year, as outlay too, which is apparently entirely profitless.

"American Music."

We sincerely respect the feeling which leads some of our colored friends to object to the singing of the old-time plantation songs. Were the purpose to stir up any revengeful feeling, or kindle any unholy passion; or were the effect to repress, in the least degree, the aspirations after a higher and nobler life, we should object in like manner. But when we consider that these songs are so fresh and unique, that they constitute, as is claimed, "the only American music;" that they are also so rich in scriptural truth, so full of Jesus and of heaven; having thus served to cheer the slave in his captivity, to lighten his toil, to solace his woe, to make earth's dark places bright, and earth's rough places smooth, and earth's sunshine more beautiful and blessed,—we have abundant reason to cherish them. Besides, in appealing for aid in behalf of the lately emancipated race, the melodies which were born in the house of bondage, which were the heart-utterances, the soul-cries of the slave cabins and the slave plantations, telling in so touching and thrilling a manner of patience and faith, are peculiarly fitted to move the heart and open the hand.

May God therefore bless the Hampton Students on their Northern mission, and help them *sing up* the much needed building for our educational work.

The Hampton Students.

Our Normal School singers met such a cordial reception in New York and vicinity that they remained in that city till the 16th of April, when they left for Boston, where they are now comfortably established for the present with very good prospects for success. We continue our extracts from leading New York papers, that the readers of the "Southern Workman" may know the impression made at the North by the class of music offered by our students to their enlightened and critical ears.

[From the "New York Tribune."]

"The second concert, of the series of three, to be given by the students of the Colored Normal Institute, at Hampton, Va., attracted a crowded and most enthusiastic audience to Steinway Hall on Tuesday evening. As at the first concert, the greatest amount of interest was manifested throughout the interpretation of the programme by these sable melodists, who sing with an earnestness of purpose, and sympathetic intensity of feeling, that carries their auditors with them. This was especially marked on Tuesday evening, when nearly every piece of the twelve on the programme was persistently redemanded, the audience discovering sufficient novelty and gratification in the entertainment to hold it intact until the very last piece was sung, which is an exception in the general rule of the majority of regular concerts.

"The peculiarity and originality of the traditional melodies of the Southern colored race, whether as songs or hymns, is well known to the American public through the gleams they have had of it during the last thirty years—but it is seldom that the North has been favored with the presence of truly native Southern singers. The majority of these songs and chords are singularly touching in their pathetic sympathetic simplicity; nearly all of these *genuine* slave melodies of unknown origin are pervaded by a vein of sorrow rendering them closely akin to the lamentations of the children of Israel when held in bondage; and despite the grotesqueness of the words to which they are wedded, at once enlisting the cordial sympathy of the hearer.

"The third concert of the Hampton Students was given last night at Steinway Hall. It was various to mark the deep sympathy of the crowded and cultivated audience with the rude verses and almost equally rude tunes brought by these young freed people out of the land of bondage. The reminiscences of the dark and cruel days of Slavery seemed to touch singer and listener alike. The pathos of these wild hymns, with their burden of sorrow and their brightening of faith and hope, kept home to every heart. For the songs of this interesting company of students are not the weak ditties of the burnt-cork minstrels, nor are they the ordinary chants of the conventional church—they can hear at any time. They are genuine slave songs, rendered, nobody knows how, among the plantation cabins and camp-meetings Their words are almost invariably of a religious character, sometimes simple and even beautiful, sometimes grotesque."

[From the "Liberal Christian."]

"The singing of this band of twenty pupils—half men, half women—is very instructive and affecting. It is the simplicity of prisoners and bondsmen who, denied for a hundred years any hope of justice or favor from this world or our country, turned all their longings and hopes to another tribunal and another world, and learned and gladdened their hearts by the exercise of an enthusiastic faith in God and heaven and in the love of Jesus. It is the songs they sung in their slavery that we catch the echoes of in their new freedom. They have not yet forgotten their chains, and life has not yet become prosperous and easy enough to tempt them to abandon the high fervor of religious hope. It is wonderful how well trained they have been in bringing their wild music into order and moderation. They excel in the softer strains and really equal in their *pianissimo* the most skilled choruses of the clubs and theatres.

"The honest, intelligent, well-mannered young men and women in this singing band inspire us with great sympathy and respect. It is plain that their contact with disinterested, cultivated and religious whites has worked a rapid change in their imitative natures. Happily, only the noblest and best whites have gone to Hampton as teachers and guides. The founders or leaders of that school have engaged in the work from deep religious and high political convictions. No one could have heard Gen. Armstrong, at the first concert, unfold the principles of this manual labor school, without feeling that neither statesmanship, political economy, nor enlightened charity had anything to teach him. There does not appear to be a flaw in his policy, his motives or his philosophy. To help prepare by their own labor and earnings a class of colored teachers to educate their negro brethren and sisters—this is the whole scheme. It combines sound sense, true economy and real benevolence, as well as Christian faith, patience and charity. We commend the cause of this school to all enlightened patriots. Over two hundred students of both sexes are in it, and a hundred or more of applicants are excluded by want of accommodation. Fifty graduates are already welcomed to the schools of the South, and a cry for more such is general here. Forty-five thousand dollars are needed to put up dormitories and other buildings at Hampton, are to be begged and sung out of the North by Gen. Armstrong and his band. Let us hear this interesting choir, and listen to Gen. Armstrong's story, so clear, manly and incontrovertible, and then deny some generous portion of his superfluity if he can and dare!"

The New York "Weekly Review," a Journal devoted to Literature and Music, devotes several columns to the subject in an editorial article extending through two numbers, from which we have only room for a few extracts.

"At last the American school of music has been discovered. We have had accomplished virtuosi, skillful vocalists and talented composers. They have, however, all trod the beaten track. It has remained for the obscure and uncultured Negro race in this country to prove that there is an original style of music peculiar to America. This school is found in the chaos of music of the Southern blacks, and they have been but lately made familiar to Northerners by the efforts of two groups of colored singers who have lately given concerts in our principal cities. Both of these bands of wandering minstrels are working in aid of meritorious educational institutions.

"The success of the Jubilee Singers seems to have inspired a number of the pupils of the Hampton, Va. Academy to "go and do likewise," and a band of nineteen members has started out on a similar mission. Mr. Butterfield, the foreman of our Printing-office, reports the press as perfect and satisfactory in every respect. This number of the "Southern Workman" is printed on it at the rate of 800 an *hour*. Our April number was worked off by students, on our old Washington Press, at the rate of 1000 per *day*. Our readers can judge what a saving of time this is, and how much more work can be done by us than was possible with the former facilities. The largest steam presses made by Hoe & Co., such as are used by the principal daily papers of our cities, give 20,000 impressions per hour. The following extracts from an article in the "Springfield (Mass.) Republican," will be of interest to our readers, as showing the present magnitude of the business of Messrs. Hoe & Co., and from what small beginnings it has sprung:

Correspondence of the Republican.

NEW YORK, *January*, 1872.

AN OLD STORY RE-WRLY TOLD.

"I have just been through the immense up-town establishment of the Messrs. Hoe & Co. where printing-presses are wont to be made. In connection with what I have there seen, I occurs to me that the 'new departure' of the 'Republican's' mechanical department, in putting on a bright and beautiful new dress of minion type, with over-skirt of nonpareil, new head-gear, and full-face, italic, and 'display' trimmings throughout, will be of interest to the introduction of a new four-cylinder Hoe press, capable of producing 10,000 papers an hour, is a fitting occasion for giving a brief sketch of it from here, regarding the establishment that it and has long been the theatre of the active operations, and of the men who are and have been the active workers in the great field of genius and skill, which, in their wonderful developments, have kept the printing-press—mechanically speaking—always in the van, in the world's great march of progress and civilization. The teeming brains of invention, the business nerve and power, and the marked mechanical ability combined—characteristics of manufacturing presses and printing material. About the year 1829, the building of power-presses was commenced, but, for a considerable time, with only indifferent success. The Treadwell press, and its Scotch rival, was found to promise better results than those built in New York, and after considerable expenditure of time and money, for those days, the two interests were combined, and power-presses were quite rapidly and successfully built after that time. In 1830, Mr. Hoe retired from business, and was succeeded by his sons, Richard M., Robert, and Peter S., who successively, from time to time came into the firm, and these are now the active elements of the house."

R. HOE & CO.'S HAND STOP-CYLINDER PRINTING PRESS.

THE INVENTOR OF THE ROTARY PRESS.

"The achievements of the elder Hoe, in the invention and manufacture of printing machinery, were great, but it remained for his succeeding generation to invent and perfect the crowning glory, so yet, of the house, in the successful completion of the rotary press, one of which they have just finished for the Republican," and there are four, eight and ten cylinders, capable of producing from 10,000 to 20,000 printed sheets in an hour, they are constantly duplicating. As fast as newspapers became to be something more than almanacs, and began to acquire large circulations, hand presses, of course, were out of the question, the Adams press and single-cylinders were too slow, and double-cylinders, even, were not fast enough. The inventive genius and skill of Col. R. M. Hoe, however, were equal to the emergency, and kept the wants of the publishers supplied, by means of improvements to his double-cylinders, until 1846, when he invented the four-cylinder, or type-revolving, or, as it is sometimes designated, the lightning press. The germ of the idea which finally grew to the invention of this press, came to him, one evening, at his house, while attempting to work out some improvements to his presses then in use. The first one of the rotary presses was built in December, 1846, for Mr. Swain of the Philadelphia "Ledger," and the last, and 150th one, in December, 1871, for Samuel Bowles & Co., of the Springfield "Republican." The second one was built for the New York "Sun," and others soon followed for the New York "Tribune," "Herald," Boston "Times," and so on, until they are now buzzing 'at 5 o'clock in the morning,' in every city of importance from sunrise to sunset."

THE PRESS-ROOMS AND SOW.

"The rapid strides which have been made from the hand press to those of the present day, have been the quiet and but little noticed developments of mechanical skill and genius, probably without parallel as regards the importance and magnitude of their usefulness. And this has all come from the accretion of small, practical ideas, the persistent appliance of well-directed labor, coupled with long-suffering patience and indomitable perseverance, which combined have finally won most enduring fame and success. The Messrs. Hoe & Co. have for years eminently been the leaders of the advance guard in the great march of improvement in printing machinery, although others, from time to time, have taken a position in the ranks, and, in some specialties, moved forward to success. It is not mine to press, however, that the Messrs. Hoe give their attention. There is nothing used, or wanted, or thought of in a printing-office, that they do not make or furnish, and their daily consumption of raw material, and annual productions, are quite enormous. They are also very large manufacturers of saws of all kinds, and have an excellent and world-wide reputation for their presses in that line. Detailed figures would be too prolix in connection with the subject, and I will not attempt to use them."

Our Illustrations.

The handsome pictures which ornament our first and third pages this month are from "The Illustrated Christian Weekly."

North Carolina Letter.

WILMINGTON, *April*, 1873.

DEAR WORKMAN.—We have, at this season of the year, as usual, a session of law, which is now being published in pamphlet form and scattered over the State. I suppose it will be many a year before we shall have a law that will not need, in the opinion of the incoming Legislature, radical amendments. The law of '72 was a poor one, and gave general dissatisfaction, although its framers had the best interests of the schools at heart. It allowed fifty cents a month to all teachers for each pupil in school. The State will not be anxious to try such an experiment again. The new law does away with this feature, and provides that every teacher shall be paid according to a contract previously made with the committee. There are to be three grades of teachers: the first grade will be entitled to receive two dollars a day, the second a dollar and a half, and the third a dollar. It seems unwise to limit the pay of a teacher in any such way, and also a pity if such competence cannot be secured. Shall he competent to decide what a teacher's services are worth. The trouble is that North Carolina does not feel able to pay her teachers a fair price, and all our school laws seem to be framed with the tacit understanding that if a teacher is to realize a fair support he must "pass round the hat," and persuade the people to contribute something more than the law allows. The leading provisions of the law are: that if the general school fund due to any county is not large enough to maintain a four months' school in every township in the county, a special tax shall be levied sufficient for the purpose, provided the majority of the voters approve; that no committeeman shall be a teacher; and that teachers shall, besides keeping a register of average attendance, also make a daily record of the scholarship and deportment of their pupils, marking on a scale of five.

An attempt is being made to raise the standard of qualifications required of teachers. The Superintendent of Public Instruction uses strong language on this point, in a recent circular to County Examiners. He says: "When examiners yield to the idea that certificates must be given to a sufficient number to teach the public schools—to incompetent persons if competent cannot be found—they simply yield to the idea that if the school money cannot be used, it may be wasted. I beg the examiners to adopt the idea, and stick to it, that every teacher's certificate given to an incompetent or unworthy person is a license to obtain money under false pretenses. The rule should not yield to the extent of authorizing incompetent teachers for colored children. It is no more degrading to instruct colored children in a school than it is to preach to them in a church, or to instruct them to work on a farm, or in a manufacturing establishment. I think colored people should have the preference in teaching their own race wherever they can be found qualified. If those who are well qualified cannot be found, I think the Board of Examiners should advise and encourage white teachers, who are well qualified, to teach colored children. Let the standard be high, and equally high for both races."

There in New Hanover county there has been considerable discussion this winter of the question, "Who will teach our colored people?" The answer seems to be, "We must do it ourselves." I think another season will find one or two native white teachers, of undoubted position in the community, engaged in colored schools, and the example once set will doubtless be followed by others.

Our annual teachers' association will convene here in the city about the middle of May. We propose to devote the first two weeks of the session to drilling primary teachers in the common branches. Then we hope to spend a week in discussions and such studies as will give the greatest mutual benefit. The semi-annual examination of teachers in this county will take place at the close of the session.

Perhaps some of your readers may have a personal interest in the following recommendations of Prof. McIver's examiners.

"Every applicant for a third grade certificate should stand an approved examination on the sounds of the marked letters, giving all the sounds of each vowel, the marks by which they are distinguished and words in which they occur. He should be required to spell some twenty words in writing, and if the misspells more than one-fourth he should be rejected. Every applicant who cannot read intelligently and fluently, and express the sense and meaning of what he reads by proper emphasis and intonations of the voice, should be rejected. No should fail in any one who fails to write a good copy hand, or explain the principles of addition, subtraction, multiplication and division, recite the multiplication table, and the tables of denominate numbers, and explain the principles of vulgar and decimal fractions, or who does not know how to make and keep a school register."

Applicants for a second grade certificate should be examined in English grammar, descriptive and physical geography and map-drawing, English composition, history, book-keeping and arithmetic completed. Those holding a first grade certificate must be prepared to teach what are known as the higher branches. How far these recommendations will be carried out I cannot say. By publishing them you may assist some who wish to teach in this State.

H. W. BLAKE.

General News.

ON a news summary is necessarily short this month, as the room is needed for more important matter. It cannot be called an unlucky month, as it has been characterized by frightful accidents, and bloody murders. Perhaps the latter name will cover the whole month of accidents.

WRECK OF THE ATLANTIC.—This terrible disaster took place on Meagher's Rock, twenty-two miles west of Halifax, N. S., on the morning of April 1st. The news was at first regarded with doubt, on account of the day, but it proved sadly true. This noble steamship left Liverpool on the 20th of March with more than eight hundred passengers on board. She had a rough voyage, and her coal giving out on the 31st of March, Captain Williams resolved to put into Halifax to replenish his supply. By a wrong calculation, he ran upon the rocks and the steamer became a total wreck in a few moments. Five hundred and forty-six lives were lost, and but a woman or child was saved.

THE MODOC TREACHERY.—Capt. Jack and his band who have so long defied the government proved themselves a fiendish set of rascals by displaying a white flag and then coolly murdering the officers who came to answer it. Gen. Canby, one of the victims, was a gallant officer distinguished for his administrative ability. Dr. Thomas, his companion in this murderous, was a Christian minister on an errand of peace. The Government will deal harshly with these outlaws, and have already punished them quite severely.

THE RICHMOND ACCIDENT.—Of the morning of the 19th, the Steamboat train for Providence, R. I., plunged into the Pawcatuck river. The bridge had been carried away by the freshet. All but the smoking car and one passenger car took fire, and many who escaped drowning were rescued for the flames. Seven persons were killed and many others were injured. Our Hampton Singers would have been on the train but for a delay caused in New York.

At Home.

Once in the heyday of my girlhood, I was passing an humble cottage in the edge of a wood in Coshocton county, and I grew very enthusiastic over the bean and cypress and morning-glory vines that festooned the windows, and draped the posts of the rustic porch, and curtained and made "living green" the bare, gray walls. I never saw such luxuriance and beauty as those riotous vines afforded. We rode very slowly, that I might prolong my enjoyment.

I could see by the surroundings that the wife and husband were not both admirers of the beautiful in nature.

While I was gazing, the husband came out of a tumble-down wagon-shed, with a load of old, rusty harness on his shoulder.

I said, "Do you live here?"

"Yaas-sa," was the reply.

"Does your wife keep house, and 'tend to everything herself?"

"Yaas-sa."

"Well, I wish you'd tell her that I say, she's a real lady, and I love her."

"Wy?" said he, winking fast.

"Oh, 'cause she makes everything so beautiful about her little home-nest."

"Huh! you're as big a fool as she is," said he stiffly, through his ugly, fat nose.

That was just what I expected.

I want husbands praised their wives more than they do. If they only knew how precious every little thank was, they wouldn't be so chary of them. Oh, I have seen wives who would cheerfully toil until they were exhausted, and feel richly rewarded if their husbands would only say, "You are very kind;" or, "How very thoughtful you are;" or, "I thank you, dear."

I've seen gruff, lordly husbands that I just longed to shake as I would a sneaky sack—men who would eat to repletion, and gorge and guzzle, and then go snarling off from the table and dump down as glum as the boa-constrictor did after swallowing his blanket. How easy to have remarked, "How good your bread is!" or, "What delicious tea!" or, "My! what a wife for such an unworthy fellow!"

Weak words of praise they would have been to put new life into the tired little mortal, and would have cost nothing at all.

I want to suggest a plan to those making new rag carpet that will be found excellent. I was over at Goose Creek church to a prayer meeting the other evening, and the woman with whom Elder Nutt boards, Sister Hartman, told me of it. Tell the weaver just exactly how long your strips will need to be, how many yards from one end of your room to the other, and let him keep correct measure, and when the strip is long enough, leave off the filling in of rags, and weave eight or ten times across with coarse tow yarn, or thread like the chain. That will serve for a binding; all you need to do will be to turn it in like a hem. I think binding carpet is tiresome work; still, if you prefer to sew on a binding, don't use woolen goods; the moths will find a lodgment there. Drilling the color of the carpet is preferable. After sewing on and turning in a carpet binding it is well to sew across it once, good honest back-stitch.

In sewing strips of carpet together, the stripes or figures will always match easily if the edges are sewed together that came at the same side of the loom. Frequently one side of a web will be smooth and even while the other side is loose and uneven. The fault lies in putting it on the yarn beam carelessly.—*Luther's Home Magazine*.

FROM MOTHER'S RECEIPT BOOK.

Mother's Cup Cake.—One cup butter, two of sugar, three eggs, four cups of flour, one of milk, one tea-spoonful of soda, two of cream of tartar. This may be made into a delicious cream cake or "Washington Pie" by baking it in thin layers with a cream made of one pint of milk, one egg, three table-spoonfuls of sugar, and two of cornstarch. Add a pinch of salt.

German Toast.—Cut into slices a loaf of baker's bread, soak them ten or fifteen minutes in a pint of milk, two eggs, and a little salt. Fry them in equal parts of lard and butter, till they are of a light brown on both sides. Then pour over them a sauce made of two cups of sugar, half a cup of butter, and two small eggs beaten well together, and stirred quickly into one and a half cups of boiling water. Flavor with lemon or vanilla.

Baked Indian Pudding.—One large spoonful flour, two of Indian meal, four spoonfuls of molasses, a little salt, and a little ginger. Boil three pints of milk and pour over these ingredients, stirring briskly. Bake slowly two hours and a half.

Tomato Catchup.—Catchup made by the following recipe is excellent. Housekeepers should try it, unless they may have a spare day and better one: tomatoes, one half bushel; salt, six ounces; allspice, ground, six drachms; yellow mustard, ground, one ounce, five and a half drachms; black pepper, ground, three ounces; cloves, ground, six drachms; mace, ground, three drachms; Cayenne pepper, ground, two drachms; vinegar, one gallon. Cut the tomatoes in pieces, boil and stew in their own liquor until quite soft. Take from the fire, strain, and rub through a middling fine sieve, so as to get the seeds and shells separated. Boil down the pulp and juice to the consistency of apple-butter (very thick), stirring all the time; when thick enough, add the spice, mixed up with the vinegar, boil up twice, remove from the fire, let cool, and bottle.

Sunderland Puddings.—One pint milk, three eggs, eight table-spoonfuls of flour, a little salt. Bake in small cups, in a quick oven.

This quantity makes eight cups. Serve with sauce.

Who Are You!

Bow-ow-ow! Ki-yi, ki-yi!
Where can Mother Mopsey stay?
Did you ever?
Well I never!
Since I opened first my eye
That must be a month at least!
Met with such another beast!
Such a sprawling,
Creeping, crawling,
Bossy,
Stony
Creature in a puppy's way.
Bow-ow-ow! Ki-yi, ki-yi!
Who's afraid? It isn't I!
Let me scramble up your back—
Just to get a better view;—
Now you'll be a little bolder
When you feel me on your shoulders!
At him! Go it, my! At him Jack!
At him, seize him,
Bite him, tease him,
Take him by the throat and shake him,
Catch him by the tail and make him
Tell us all he came to do.
Poh! you're scared,
Never dared.
Though you'd Caesar at your back.
Bow-ow-ow! Ki-yi, ki-yi!
Let me speak a minute now.
Don't you hear me
Don't you fear me?
Turn your little tail and fly!
Who are you?
Tell us, do,
What's your name,
And why you came,
Who's doing such a tramper?
Oh! he's coming—let us scamper—
Hurry,
Scurry,
Ki-yi, yi! Bow-ow! Bow-ow! H. W. H.

The Wishing-ring.

A young farmer, whose farming did not prosper particularly well, was sitting resting on his plough for a moment as he wiped his brow, when an old witch crept up to him and said, "Why do you toil so hard, and all for nothing? Walk straight before you for two days and you will come to a large fir-tree, which stands alone, towering over all the other trees of the forest. If you can but fell it, your fortune is made."

The farmer did not wait to be told twice, but, taking his axe on his shoulder, started on his way. After walking two days, he came to the fir-tree, and immediately set to work to fell it. Soon it toppled and crashed to the earth, when from the top branches dropped a nest containing two eggs. The eggs rolled on the ground and broke; as they broke, forth came a young eaglet from one, and a small golden ring from the other. The eaglet grew visibly, till it reached half the height of a man, shook its wings, as if to fly them, raised itself from the ground, and then cried, "You have released me! as token of my gratitude, take the ring the other egg contained—it is a wishing-ring. Turn it on your finger, speak your wish aloud, and it will immediately be granted." But the ring has only one wish; when that is accomplished, it will lose all power and become as more than any other ring. Therefore, reflect well on what you wish for, so that you may not have to repent afterward."

Having so spoken, the eagle rose high into the air, swept, for some time, in wide circles over the farmer's head, and then, like an arrow from a bow, shot swiftly toward the east. The farmer took the ring, put it on his finger, and started homeward. Toward evening, he reached a town. At the door of his shop a goldsmith stood whichad many valuable rings for sale. The farmer showed him his ring, and asked him what was about the value of it.

"Mere trumpery," answered the goldsmith. The farmer laughed heartily, telling the man it was a wishing-ring, and of more value than even rings in his shop put together. Now the goldsmith was a false, designing man, so he invited the farmer to stay all night at his house, saying, "It might be some good luck to entertain a man who is the possessor of such a precious jewel, so pray remain with me." He accordingly entertained him well with plenty of wine and civil words, but when he went to sleep at night, he drew his ring stealthily from his finger, and put on it instead a common ring quite like it in appearance. The next morning the goldsmith found him heavily wait, with any degree of patience, till the farmer had taken his departure. He awoke him in the early dawn, saying, "You have so far to go, you had better start early." As soon as the farmer was safe on his journey, the goldsmith went into his room, and, having shut the shutters that no one might see, he bolted himself in, and, standing in the middle of the room, and turning the ring on his finger, exclaimed,

"I wish to have a hundred thousand silver crowns immediately!"

Hardly were the words spoken, when bright five-shilling pieces began to rain down from the ceiling; shining, silver crowns poured down so fast and hard that at last they began to beat him unmercifully about the head, and shoulders, and arms. He tried to run away, but could get but a little to the door, but before he could reach it and unbolt it, he fell bleeding to the ground. Still the rain of silver crowns did not cease, and soon, under the weight of it, the flooring gave way, and the unfortunate goldsmith and his money fell down into a deep cellar. And still it rained on, till the hundred thousand silver crowns were completed, and then the goldsmith lay dead in his cellar, with the mass of money upon him. Attracted at last by the noise, the neighbors rushed to the spot, and, on finding the goldsmith dead under his money exclaimed, "It really is a great misfortune, when blessings rain down like cudgels." Then the heirs came and divided the spoil.

Meantime, the farmer went happily home, and showed the ring to his wife.

"We shall now never want for anything, dear wife," he said; "our fortune is made. But we must consider well what we must wish for."

The wife had a bright idea ready at hand. "Let us wish ourselves some more land," said she; "we have so little. There is just a nice strip which stretches into our field. Let us wish for that."

"That would never be worth while," replied the husband; "we have only to work well for a year, and have a moderate share of good luck, and we can buy it for ourselves."

And the man and his wife worked hard for a whole year, and the harvest had never been so plentiful as that autumn, so they were not only able to buy the strip of land, but had money to spare.

"You see," said the husband, "the land is ours and the wish too."

Then the good woman thought it would be a capital thing to wish themselves a cow and a horse.

"Wife," answered the husband, again clinking the surplus money in his pocket; "it would be folly to sacrifice our wish for such a trumpery thing. We can get the cow and the horse without that."

And sure enough, in another year's time, the horse and the cow had been well earned. So the man rubbed his hands cheerfully, and said,

"Another year has passed, and still the wish is ours, and yet we have all we want; what good luck we have!"

The wife, however, began to be very impatient, and tried seriously to induce her husband to wish for something.

"You are not like your old self," she said crossly; "formerly, you were always grumbling and complaining, and wishing for all sorts of things; and now, when you might have whatever you want, you toil and work like a slave, are pleased with everything, and let your best years slip by. You might be king, emperor, duke, a great rich man with loads of money, but no—you can't make up your mind what to choose."

"Pray do cease continually worrying and teasing me," cried the farmer; "we are both of us young and life is long. The ring contains but one wish, and that must not be squandered. Who knows what may happen to us, when we might really need the ring? Do we want for anything now? Since the ring has been ours, have we not so risen in the world that all men marvel at us? So do be sensible, and amuse yourself, if you like, by thinking what we shall wish for."

And so the matter was allowed to rest for the present. It really seemed as if the ring brought blessings on the house, for barns and granaries grew fuller and fuller, from year to, year; and, in the course of time the poor farmer became a rich, and prosperous one. He worked all day with his men as if the whole world depended upon it; but in the evening, when the vesper bell sounded, he was always to be seen sitting, contented and ready-to-do, at his threshold, to be wished "good evening" by the passers by. Now and then, when they were quite alone and no one near to hear, the woman still reminded her husband of the ring, and made all sorts of propositions to him. He always answered there was time enough to think about it, and that the best ideas always occurred to one last. So she gradually fell into the way of mentioning it less often, and at last it rarely happened that the ring was ever alluded to at all. The farmer, it is true turned the ring on his finger twenty times a day and examined it closely, but he took good care never to express the slightest wish at the time.

And so thirty and forty years went by, and the farmer and his wife grew old and their hair snow-white, and still the wish remained unspoken. At last it pleased God to show them a great mercy, and He took them to Himself both in one night. Children and grandchildren stood weeping around the coffins, and, as one of them tried to withdraw the ring from the dead man's finger, his eldest son said,

WHO ARE YOU?

"Let our father take his ring to the grave. There was some mystery about it. Probably it was some love token, for our mother often looked at the ring, too; perhaps she gave it him when they both were young."

So the old farmer was buried with the ring which should have been a wishing-ring, but was not one, and yet had brought as much good luck to the house as man could desire. For it is strange, as regards the true and the false, but a bad thing can be turned to better account in good hands, than a good thing in bad.

Learning.

BY "TRUE."

I should like to say a word to all of you who are about that troublesome, pleasant work, of learning to read and write. In the first place, you can hardly guess what a pleasure it is to know, when Jeanette first came to us, she knew all her letters, and was beginning slowly to pick out the words. And as soon as she got a Bible of her own, she would have liked to read from morning to night.

"To think that I have lived so long, and never could read the Bible till now!" she said. And so every spare minute was given to make up for that lost time. She would sit and study with the Bible open in her lap, or if she was washing, or would hear little Eliza reading it aloud to her; and Jeanetta could listen and catch many of the sweet words, through all the noise of her work.

Sunday of course, was a great day.

"My eyes get so tired, I have to go away sometimes," she said to me; "but I just rest 'em a little bit, and then I come back. Everywhere I open my Bible, I want to read." And Jeanette's Bible was as full of marks as any one you have often seen. Slips of paper, and ends of ribandl, and bits of card, were put in to keep some beautiful looking new place, or old one that she loved. Truly could she say with the psalmist of the Lord's people: "O, how I love thy law! It is my meditation all the day."

Seven years ago, just as November was almost gone, Buckner and John came to us from the South. Both could read a very little, but neither could write. They had never even taken pen in hand to try. When they had been with us two or three weeks, in December, I set them their first copy of straight marks. It was at night, for all day the men were busy. Now I suppose many of you know what crooked things straight marks are to make at first; and some of theirs were crooked enough. Then it was so hard to hold the pen, and to point it to the shoulder, and to sit up straight, for I made them begin all right. Of course the first thing in good writing is to have it easy to read, but then it is best to go on and learn to write handsomely, too, not sitting with your head down on the paper, or with the paper twisted half-way round.

Well, they worked on, from straight marks to pothooks, and from pothooks to letters, and from letters to joining hand.

"Do you think we'll ever learn?" they asked me many a time; and Buckner used to talk of pounding his fingers to make them limber. One night, as a great favor, they begged me to give them their own names for a copy; and this was so interesting that it was very soon learned. A few days after this, Buckner went to the village on business for us, and having to receive an express package, was called upon to sign his name to the receipt—and he could do it! And Buckner came back a happy man.

I told you that it was December when we began our lessons. Well, in the following March, John and Buckner could write their own letters home. They had three months of trouble, and a great reward.

The Story of Three Matches.

I live near the large seaport town of Cardiff, where ships are daily coming. A few weeks ago, a ship came into Cardiff docks, with fourteen men on board, who had been picked up at sea. These men had started in a ship of their own, from Rio Janeiro; they had gone some distance, when they were overtaken by a storm, which soon became so violent, that they found themselves obliged to leave their ship, and repair to the long-boat, which they filled with provisions; they staid by their ship until they saw her go down, and then they rowed away in their boat; they got on very well for about three days, but then their supply of water became very scarce, and they were reduced to a tea-cupful each a day; on the fifth day they could only have a wine-glassful, and in a few days they had none left at all. At last one of the sailors could bear his thirst no longer, so he drank salt water, which made him mad; on the tenth day he died; on the next day another died from the same cause.

By this time they had quite given themselves up for lost, and they only wished to die, for they had to endure the dreadful heat of the sun by day, and intense cold by night. However, they managed to keep alive until the fourteenth day, when they saw a ship in the distance: they immediately put up a sail, and they could, and tried to attract her attention in every way that they could think of, but she did not appear to take any notice and sailed on.

They then made up their minds that there was no hope; but all at once a sudden thought occurred to them. They had in the boat what is called a "flare up," that is a small pan filled with oil, which when it was once set alight made a very bright light, and could be seen some miles. The captain had most fortunately put three matches inside his shirt; so all the men sat round in a ring to keep off the draught, and then the captain most carefully struck the first match; it flickered a little while, but then went out. The captain produced the second match, and the men watched most anxiously, but alas! it had got damp, and would not catch fire. Now they had only one remaining, and on that single little match the lives of those poor men depended. You may imagine with what breathless anxiety they watched their captain as he struck it—it blazed up, and they set fire to the "flare up." The people on the ship they saw them, and immediately came to their rescue, and brought them safely to Cardiff.

This is a perfectly true story, and it shows on what little things the lives of men may depend.

Parisian Rag-pickers.

Who has not seen in Paris, toward six in the evening in winter, rather later in the spring and summer seasons, the prowling figure of a muddy man, who stops to consider the heaps of refuse emptied by the side of the pavement, fumbles amid them with a crook, and transfers as much of their contents as he thinks worth the while into a deep-mouthed basket on his back? He is the *chiffonnier*, or certificated ragman—a person whose existence is involved in just enough of nocturnal mystery to make him an object of wondering interest to the grown-up world, and of hideous terror to misbehaved small people. His clothes are an amalgamation of blouse, patches, rents and strings, such as Mot or Gavarni might have sketched for him; his caps belong to the fashions of no recorded time or people; he has some such *sobriquet* as Bijou or Bibi, which fits him oddly, like a misfit on a countenance that is often as not illustrated with a red nose and a black eye. Follow him, however, and you will not see him deviate from that mechanical course which is the outward sign of sobriety. He slinks by, straight, silent and stealthy as a shadow. If darkness has set in, the lantern which dangles by a rope from his left hand, gleams in the distance like a will-o'-the-wisp; and, if you ask any question of the man, he will answer you civilly, but curtly, and pass on. Foreigners, policemen new to the work, or people against whom he has accidentally run at a street corner, have occasionally treated Bijou or Bibi as a vagabond; but this is a mistake. He is no vagabond. He carries in his pocket, and carefully imbedded in a case which is the only clean thing about him, the license which is at once the charter of his independence, the cause of his eventide civility and soberness, and the patent which raises him during the hours when he applies his professional vocations to the level of a municipal functionary. Before Bijou receives his patent of appointment, some three months or more pass; for the *chiffonniers* are a close corporation, numbering in all, men and women, no more than four hundred and fifty souls. These then are the preliminaries through which Bijou has had to wade before he becomes licensed to rake for valuables in dust-heaps. At first the *chiffonniers* were a disconnected body, plying each man his vocation for his own sole behoof; but in time this system was found to be unproductive, and so the *chiffonniers* organized themselves into a community, like those of the mendicant monks in former days, or the Greek brigands in ours.

In every quarter of Paris—and there are eighty quarters—exists a depot whither the *chiffonniers* carry, after sorting them, all the good things they have been able to find in the evening—bits of old iron, brass, rags, cloth cuttings, old pomatum pots, glores, battered hats, shoes, bones, etc.; and the district depots in their turn forward all these treasures to a central depot, where their value is appraised, and the sum divided equally among the members of the brotherhood. Of course there are things which the ragman is allowed to keep for his own private use; of such are cabbage stumps, carrot shavings, and other vegetable refuse, of which, one is sorry to say, he makes soup; but, taking account of these deductions, the average earnings of a *chiffonnier* still range from 2f. 50c. to 3f. a day.—*Pall Mall Gazette*.

William Cullen Bryant.

During the last month the Normal School has been honored by the visits of several of its friends, who have turned aside from their homeward route from the far South, to show their interest in its welfare and progress, and to encourage us in our labors by their words of cheer.

Among these distinguished visitors was the venerable poet, Bryant, whose writings are household words with every lover of nature. Mr. Bryant examined the various departments with interest and apparent gratification and seemed especially pleased with the printing-office and its complete outfit, and the "American music" which the students furnished. The visit was a source of much gratification to both teachers and students, and will long be remembered.

A Valuable Donation.

We have just received nearly three hundred dollars' worth of type, etc., from the foundry of Messrs. Farmer, Little & Co., of New York, presented to us through our Financial Secretary, Rev'd T. K. Fowsenden.

Our Exchanges.

THE AMERICAN AGRICULTURALIST, New York. No practical farmer should be without access to a good agricultural paper, and this is one of the best. These "hints about work" are useful to all: "The true remedy for 'hard times' is hard work. It is not true that we are producing too much wheat or too much good beef, mutton, cheese, butter and wool. Wheat will be very scarce before next harvest. Our alm as farmers must be not to produce less, but to produce a better article at less cost to ourselves. There is nothing in the present outlook to discourage a good farmer."

THE NATION, New York. The success of a weekly paper which should entirely ignore the popular demand for gossip and sensation, and devote itself to solid criticism and review, was for a long time a doubtful question in America. More than one effort to establish such a paper failed before "The Nation" succeeded, and it has done very much toward educating an audience for itself. Its able editorials and critical discussions of the events of the day, and the topics of literature and art are always instructive and valuable. In considering the movement now going on in several of the states to amend or reconstruct their constitutions, "The Nation" sees in the general tendency to restrict the legislative power, "merely a repetition of a very old and familiar movement which has been taking place in all countries for many centuries to limit the power of the sovereign. In monarchies the Executive is the sovereign; in a republic the People is the sovereign, and the legislature its representative. It has always been a fundamental maxim of politics that any sovereign who has absolute power, will before long abuse it—whether he be a king, an emperor, a house of peers, or a dictator. It remained for America to strengthen and confirm the truth of the maxim by demonstrating that it is equally true where the Sovereign is a sovereign people."

THE NEW YORK EVANGELIST, one of the leading representatives of the Presbyterian church for many years, is still successfully conducted by its able editor, Rev. Henry M. Field. Its very full ecclesiastical intelligence makes it particularly valuable to ministers in the denomination it represents, and some of the most eminent of them are among its contributors. An interesting article upon the chorus of Hampton Students, by the Rev. Theodore Cuyler, recently filled one of its columns. Dr. Cuyler says, "Lafayette Avenue Church was crowded to welcome the band of colored students from Gen. Armstrong's Hampton Normal Institute, near Fortress Monroe. We wept and we laughed under the strange spell of their pure, native minstrelsy. Gen. Armstrong is doing a good service to the colored people of the South by coming up to raise funds for his Hampton Institute. And he is doing us a great favor too, in permitting us to hear the only pure, native school of musical performance which America has yet produced."

OLD AND NEW, Boston. One of the most interesting papers in the May number of this able and original magazine is an article by its editor, Edward Everett Hale, upon the contemplated revision of the English version of the Bible by a convocation of the most distinguished scholars in every religious body, both in England and America. Mr. Hale rejoices as must all lovers of the grand old version with which we have been familiar from childhood, that the convocation has no purpose of innovation, but means merely to correct errors and substitute accurate readings upon which the whole church is agreed. It is grand, as Mr. Hale enthusiastically says, to see that "in this homage to the truth practically all Christians are uniting. Behind, the clamor of party, behind the method of administration, appears now the determination that we will come together and work together in the love of God, in drawing near to God in the discovery of the truth, and in homage to the truth. To show that this is the central desire of all sects is the crowning victory of this experiment."

THE SOUTHERN WORKMAN.

One by One.

One by one we cross the river,
One by one we're ferried o'er;
One by one the crowns are given
On the bright and distant shore.
Youth and childhood oft are passing
O'er the dark and rolling tide,
And the white-robed angel-boatman
Is the dying Christian's guide;
And the white-robed angel-boatman
Bears them o'er the rolling tide.

One by one we come to Jesus,
As we heed His gentle voice;
One by one like vineyard enter,
There to labor and rejoice.
One by one sweet flowers we gather,
In the glorious work of love—
Garlands for the angel-boatman
To convey to realms above;
And the white-robed angel-boatman
Bears them to the realms of love.

One by one the heavy laden
Sink beneath the moonlit sun;
And the aged pilgrim welcomes
Evening shadows as they come.
One by one, with sins forgiven,
May we stand upon the shore,
Waiting till the angel-boatman
Takes the helm and guides us o'er,
And the white-robed angel-boatman
Lands us on the shining shore.

The First Death at Hampton Institute.

Though this Institute was opened with twenty scholars April, 1868, and the number has been constantly increasing until now the total enrollment is two hundred and thirteen, it certainly speaks well for the health of the location, and for the wisdom of our sanitary regulations that the first death among the large number of our boarders, during the five years of our school organization, has just occurred,—that of Thomas Noble, of Danville, Va. His disease of the heart, complicated with a disease of the lungs, was one from which he had suffered before he came here. After many weeks of sickness—varied now by a hope of recovery and then by a discouraging relapse—on Friday evening of March 28th, the silver cord was loosed and the golden bowl was broken. "The Lord gave, and the Lord hath taken away." Trying as it was to part with him, we yet rejoice in the evidence that he for him to live was Christ, so for him to die was gain; rendering it fitting for us to sing at his funeral,—

"Asleep in Jesus! blessed sleep!
From which none ever wake to weep;
A calm and undisturbed repose,
Unbroken by the least of foes."

As he died at the early age of 21 years, when just ripening into manhood, his sun going down ere it was noon,—before the noon of March 30th, a bright and beautiful day, the air vocal with singing birds and fragrant with opening flowers, his remains were borne from the school building to the chapel, and thence to the place chosen for the school cemetery—a pleasant and very appropriate place, adjoining that where sleep some six thousand of the nation's dead. In such a place, at such an hour, under so smiling a sky, it seemed meet to bury one whose joy in life and support in death was faith in the risen Redeemer.

Two beautiful wreaths were placed upon the coffin by loving friends. Each member of the association with which he was connected cast a sprig of evergreen into the grave. A higher and nobler tribute may we all pay to his memory, by consecrating ourselves living sacrifices to the Savior in whom he trusted.

"Asleep in Jesus! far from thee
Thy kindred and their graves may be:
But thine is still a blessed sleep
From which none ever wake to weep."

Virginia Sunday-school Union.

Since the object of this organization is of such vital importance, it has been suggested that some notice of it in our columns might awaken a wider and deeper interest in its behalf.

Missionary work from date of organization, July 1st, 1872, to April 1st, 1873.

No of S. Schools organized in destitute places	15

Sunday-school sermons preached by pastors of churches	120
Sunday-school addresses delivered	137
No of Missionaries under pay	2
Value of books and papers donated to above schools	$379 28

But our work in aiding these schools, uncared for by any existing organization, is only begun. Many of them are without books or papers, too poor to buy them, or ignorant of the best way to obtain them. One thousand Bibles and Testaments are needed today for distribution among them. The field broadens before us. To carry on the work already commenced, we shall need $5,000 the present year.

All communications may be addressed to the General Agent of the Virginia Sunday-school Union, at the office, No. 116 Main street, Norfolk, Virginia.

Hoping to receive from various friends a cup of cold water for these little ones,

Truly yours,

Rev. RICHARD TOLMAN, President,
Gen'l S. C. ARMSTRONG, Fin. Agent,
M. L'HOMMEDIEU, Gen'l Agent.

This and That.

CONSCRIPTIONS.—In a country town many years ago, some children were met for a social evening at an old farm house, and while the sport was at its height, a little boy thought it would be "funny" to draw a chair out from under a little girl and let her sit down on the floor. He watched his opportunity and made the attempt, but the little girl, seeing what he was doing, jumped back into the chair, and, striking her arms upon one of its projections, broke her back. For seven years, from fourteen to twenty-one, she lay upon her bed, and during all that time was carried from her chamber to the parlor but once. Thirty years have passed. I have just returned from a visit to her sick chamber. Thirty years of disability and pain as the consequence of a thoughtless deed by a little boy. A few strangers minister to her daily wants, without whose aid she would be sent to the "poorhouse"; or house for the wretched and homeless poor. Terrible consequences to follow a thoughtless act! Let boys be careful. Let all remember that *consequences* walk hand in hand with every deed, and that "for all our deeds, God will bring unto us judgment."—*Christian Era.*

STOP AND WEIGH.—One morning a countryman came into Mr. M.'s store with very angry looks. He left a team in the street, and had a good stick in his hand. "Mr. M.," says the angry countryman, "I bought a paper of nutmegs here in your store, and when I got home they were more than half walnuts and that's the young villain that I bought 'em of," pointing to John. "John," said Mr. M., "did you sell this man walnuts for nutmegs?" "No, sir," was the ready reply. "You lie, you little villain," said the countryman, still more enraged by his assurance. "Now, look here," said John; "if you had taken the trouble to weigh your nutmegs, you would have found that I put in the walnuts *gratis*." "Oh! you gave them to me, did you?" "Yes, sir." I threw in a handful for the children to crack," said John, laughing at the same time. "Well, now, if that ain't a young scamp!" said the countryman, his features relaxing into grin as he saw through the matter. Much hard talk and bad blood would be saved if people would *stop to weigh things* before they blame others. "Think twice before you speak once," is an excellent motto.

HOW WARS COMMENCE.—A certain king once sent the following note to the king of a neighboring country: "Send me a blue pig with a black tail, or else ——." The other king replied: "I have not got one, and if I had ——." Each king thought himself insulted, called out his armies and a bloody war ensued. After many thousand had been slain on both sides, the kings met to try negotiation. "What did you mean says one, by 'Send me a blue pig with a black tail, or else ——?" "Why" replied the other, "I meant, or else send me one of some other color." "And what did you mean, by 'I have not got one, and if I had ——?" "Why!" said the other, "I meant if I had one I would send him." A little explanation often saves a world of trouble if made in season.

WITHHOLDING CORN.—Between eighty and ninety years ago there lived in the Connecticut River Valley, two farmers, one of whom was named Hunt, and the other Clark.

In the course of a few years, the two farmers were chosen deacons of the church, and they both adorned their profession. About the time of their election a grievous famine prevailed in the valley, and the farmers generally were laying up their corn to plant in ensuing season. A poor man living in the town, went to Deacon Hunt, and said:

"I have come to buy a bushel of corn. Here is the money. It is about all that I can gather."

The deacon told him he could not spare a bushel for love or money. He was keeping double the usual quantity for seed corn the next year, and had to stint his own family. The man urged his suit, but in vain. At last he said:

"Deacon, if you do not let me have the corn, I shall curse you."

"Curse me!" exclaimed the deacon, "how dare you do so?"

"Because," said the man, "the Bible says so."

"Nonsense," exclaimed Deacon Hunt, "there is no such thing in the Bible."

"Yes there is," replied the poor man.

"Well," said the deacon, "If you can find any such text, I'll give you a bushel of corn."

They went into the house, when the man went to the old family Bible, turned to Proverbs, 11:26, and read, "He that withholdeth corn the people shall curse him; but blessings shall be upon the head of him that selleth it."

The deacon was fairly caught. "Come along," said he, "and I will be as good as my word."

He took him to the corn-house and measured out a full bushel of corn, helping the man put it into his bag, assisted him in slinging it upon his shoulder, and, just before his departure, being somewhat of a wag, he said, with a twinkle of the eye, "I say, neighbor, after you have carried this corn home, go up to Deacon Clark; and curse him out of another bushel. —*Brattleboro Phœnix.*

FIVE STEPS TO THE GALLOWS.—A man had committed murder, was tried, found guilty, and condemned to be hanged. A few days before his execution, he drew upon the walls of his prison a gallows with five steps leading up to it. On the first step he wrote, *Disobedience to parents.*

On the second step, *Sabbath breaking.*

On the third step, *Gambling and Drunkenness.*

On the fourth step, *Murder.*

The fifth step was the platform on which the gallows stood.

This poor fellow doubtless wrote the history of many a wasted and lost life.

"To do or not it," says Capt. Hunter, "thousands and tens of thousands are ruined every year in a similar way. I believe that drunkenness ruins more than anything else. That was one of the steps to the gallows which this prisoner had painted; and it made me think of a question and answer of which I once heard:

"'What's whiskey bringing?" inquired a large dealer in that article.

"'Bringing men to the gallows, and women and children to want,' was the reply of a by-stander."

Pretty good, answer, that, though not exactly the one that was wanted. If there is a more wasteful practice in the world than liquor drinking we don't know what it is. It wastes the grain of which it is made; it wastes the mind and body of the drinker; it wastes the property of himself and family, and his neighborhood; and, finally, wastes and ruins his soul. There is no economy in it in any way or shape.

A FORMER subscriber who discontinued the "Republican" because he could not make it say just such things as he thought it ought to say, has, we learn, recently expressed considerable surprise to his friends that the paper should keep running—since he has withdrawn his patronage. It *was* pretty close work for a while, we confess, but by omitting to put sugar in our tea, and by buying a cheaper paper collar and reversing there for a second and third time, managed to run along until a new subscriber came and took the place of our respected but disgruntled friend—and then Richard was himself again. Nothing but rigid economy will carry one safely over such a calamity as the loss of a subscriber.—*Republican, Lyons, N. Y.*

WAS HE A MAN!—In one of the quiet towns of Massachusetts, a young lady who had an accomplished education, and all the charms of modest beauty and noble intellect, went to a remueller, who was daily enticing her father to drink, intending soon to possess his snug little farm. She told him he was not only destroying her father, but bringing ruin and disgrace on her and her mother. O, he said, she would soon be married—she need not trouble herself. She replied she never should; she should never consent to involve in their shame one that she loved; she would never leave her mother. She would work with her own hands, and every day bring him the amount of money he now received of her father if he would sell him no more. She entreated him with tears. With an infernal look he asked the poor girl if he should say to her father that she had *requested* him to sell him no more. Her eye flashed, and reason reeled. "*You are not a man!*" said she. She is now a maniac in the Worcester asylum.—*John B. Gough.*

THE most ingenious, practical sarcasm ever made use of was that of the late Rev. Robert Hall, addressed to a clergyman who had obtained a lucrative living after a change of religious opinions. Mr. Hall had pressed him hard upon the question of Church Reform. The gentleman's constant answer to the arguments addressed to him was: "I can't see it." "I don't see it." "I can't see that at all."

Mr. Hall took a letter from his pocket and wrote on the back of it with his pencil, in small letters, the word God.

"Do you see that?"

"Yes."

He then covered it with a piece of gold.

"Do you see it now?"

"No."

"I must wish you good-morning, sir," said Mr. Hall, and left him to his meditations.

Gems.

LET us not despise even the least of God's dear children. We are too prone to regard our "brethren in the Lord," as not different from the common masses of men. Ah! let us not undervalue them; for it matters not what their station may be—rich or poor, high or low—they are indeed precious treasures—crown jewels that shall some day shine with a glorious radiance in the coronet of the Great King.

MEN may talk as they like of "insufficient evidence," there is no evidence like sitting down under His shadow with great delight and finding His fruit sweet to our taste. We long that others be partakers of the same joy. We cannot give it to them; but we can watch, and strive, and labor in its strength, to live lives worthy of His love, and we can pray that the God who has redeemed us, may extend the same blessings to them.

GOD'S GREAT LOVE.—Some two years ago, two gentlemen were riding together, and, as they were about to separate, one addressed the other thus: "Do you ever read your Bible?" "Yes, but I get no benefit from it, because to tell the truth, I feel I do not love God." "Neither did I," replied the other; "but God loved me." This answer produced such an effect upon his friend that, to use his own words, it was as if one had lifted him off the saddle into the skies. It opened up to his soul at once the great truth that it is not how much I love God, but how much God loves me.

THE creed is important. It helps to mould the character. Hot many a bad man has a correct creed. The Pharisees were orthodox; Judas was not a heretic. The creed alone, therefore, is not a true test of character.

RELIGION refines our moral sentiments, disengages the heart from every vain desire, renders it tranquil under misfortune, humble in the presence of God, and steady in the society of men.

AN external profession may carry a man far, but not through; it may light him along this world, but the damps of the shadow of death will put it out.

OUR fellow-creatures can only judge what we are by what we do, but in the eyes of our Maker what we do is of no worth, except as it follows from what we are.—*Coleridge.*

OFTENTIMES when thy body complains of trouble, it is not so much the greatness of trouble as the littleness of thy spirit that makes thee to complain.—*Jeremy Taylor.*

VALUE the friendship of him who stands by you in the storms; swarms of insects will surround you in the sunshine.

MOST of the shadows that cross our path through life are caused by standing in our own light.

THE beatitude of heaven is not its golden pavement and its crystal sea, but its sinless souls. Heaven begins in every purified heart on earth.—*Edward Garrett.*

Trifles.

A MAN in a neighboring town having heard that the ague could be cured by crawling head first down stairs when the chill is coming on, tried it Friday. He felt the dreaded approach of the shake, and dropping on his hands and knees, started down the front stairs. Just as he started, two old ladies came upon the stoop to consult his wife in regard to shipping seven hundred weight of tow to the poor of New York, and it so happened that the moment they opened the door he lost his balance and came down upon them like an avalanche with spokes in it, and before they could even think of saving themselves the enemy was among them, and the next instant a horrible mixture of humanity and cloth went revolving across the sidewalk and into the street, to the unmixed astonishment of the neighbors, and to the unconceaked disgust of the participants. But it cured him.—*Danbury News.*

IT is said of a certain politician, "that he may not have a finger in every pie, though it is not too much to say, that if he had twenty fingers there would be twenty pies, with a finger in each of them."

IN the Louisiana election, after the result at one voting place was announced, a candidate exclaimed, "Well, is it possible I ain't got one vote out of that box? For heaven, I know I voted for myself!"

WE learn from Mrs. Livermore that the feet of the moving woman are upon the mountain top, and her spirit is in the air. Where's her head, poor thing?

IF a boy makes too much noise, you tell him he mustn't be *boisterous*. So, when a girl makes just as much noise, you ought to tell her not to be *girlsterous*.

WHAT THE TROUBLE WAS.—A wife, whose husband was complaining of the hard times, saying that they were so hard that he could hardly keep his nose above water, retorted: "You can keep your nose above water easy enough, if you have a mind to; but the trouble is, you keep it too much above brandy."

"VEGETABLE PILL!" exclaimed an old lady. Don't talk to me! The best vegetable pill ever made is an apple dumpling. For curing gnawing at the stomach there's nothing like it. It always can be relied on.

AN Atlanta (Ga.) man wants the thief who stole his well-bucket and rope to come back and get the well, as it is of no use now.

A DISTINCTION.—A little boy who had dropped some eggs for which he had been sent, being asked by his mother if he broke any, replied, "No, I did n't break any, but the shells came off from some of them."

MEN are like bugles—the more brass they contain the more noise they make and the farther you can hear them.

A FRENCHMAN has perfected spectacles for near sighted animals. A hen adorned with a pair of spectacles, and engaged in scratching up a bed of early lettuce, would probably furnish all the gravity a small family could use in one day.

A CINCINNATIAN has discovered a plan to thaw out frozen water-pipes. It is by the use of a furnace and boiler, the steam from which is forced into the pipe by a rubber hose. All you want is a small boiler, a few yards of rubber hose, cart load of fuel, and an engineer, and the thing is done. We are growing wiser every generation. A hundred years ago they would have poured hot water from a teakettle on the pipes.

A
National Savings Bank,
OF
THE
FREEDMAN'S
SAVINGS & TRUST
Company,
Chartered by Congress, March, 1865.
PRINCIPAL OFFICE,
WASHINGTON, D. C.
NORFOLK, Va. BRANCH
IS LOCATED AT
NO. 116 MAIN STREET,
Corner of Atlantic Street.
Bank hours, 9 A. M. to 3 P. M. Open also Saturday nights from 5 to 7 o'clock.

SIX PER CENT. INTEREST
is now paid, beginning monthly. Dividend days July 1st, and January 1st. Interest compounded if not drawn. Special arrangements made for receiving accounts payable by Check.
Certificates of deposit, bearing six and four per cent. interest issued.
Deposits of any amount received from any person, and repaid on demand.
J. W. ALVORD, Cashier. H. C. PERCY, President.

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.
The Seventh Annual Report of this Company has been published.
The year has been a prosperous one. The gain in deposits has been $1,282,367.65, being an increase of *fifty per cent.* on the balance due depositors at the close of the preceding year.
There are no stockholders in this Company, and all the profits, over and above expenses, go at each dividend day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $208,815. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is fullest promise. Before the next annual meeting we shall be able to report $2,000,000 due depositors.
The Bank pays six per cent. interest
on Savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.
Special arrangements made for receiving business accounts payable by check, and bearing 5 per cent. interest.
Certificates of deposit issued bearing interest and available anywhere in the United States.
ACCOUNTS TRANSFERRED,
at request of depositors, from Branches where kept to any other Branch without risk or trouble, and *without loss of interest.*
For full information about the Bank address the *Actuary* at Washington, D.C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.
Any information required may be procured by addressing the President, J. W. Alvord, Esq., or D. L. Eaton.

JOHN T. BENTLEY,
WATCHMAKER
AND
JEWELER.
Watches, Clocks, Jewelry, Silver, and Plated Ware Sold and Repaired.
Fancy Goods of all kinds constantly on hand.
Cake, Candy, Confectionery, and General Furnishing Store.
Baltimore Wharf, Fort Monroe, Va.

Withholding Corn—Between eighty and ninety years ago there lived in the Connecticut River Valley, two farmers, one of whom was named Hunt, and the other Clark.

In the course of a few years, the two farmers were chosen deacons of the church, and they both adorned their profession. About the time of their election a grievous famine prevailed in the valley, and the farmers generally were laying up their corn to plant the ensuing season. A poor man living in the town, went to Deacon Hunt, and said:

"I have come to buy a bushel of corn. Here is the money. It is about all that I can gather."

The deacon told him he could not spare a bushel for love or money. He was keeping double the usual quantity for seed corn the next year, and had to stint his own family. The man urged his suit, but in vain. At last he said:

"Deacon, if you do not let me have the corn, I shall curse you."

"Curse me!" exclaimed the deacon, "how dare you do so?"

"Because," said the man, "the Bible says so."

"Nonsense," exclaimed Deacon Hunt, "there is no such thing in the Bible."

"Yes there is," replied the poor man.

"Well," said the deacon, "If you can find any such text, I'll give you a bushel of corn."

They went into the house, when the man went to the old family Bible, turned to Proverbs, 11:26, and read, "He that withholdeth corn the people shall curse him; but blessings shall be upon the head of him that selleth it."

The deacon was fairly caught. "Come along," said he, "and I will be as good as my word."

He took him to the corn-house and measured out a full bushel of corn, helping the man put it into his bag, assisted him in slinging it upon his shoulder, and, just before his departure, and all the charms of modest beauty and noble intellect, went to a counsellor, who was daily enticing her father to drink, intending soon to possess his snug little farm. She told him he was not only destroying her father, but bringing ruin and disgrace on her and her mother. O, he said, she would be married—she need not trouble herself. She replied she never should; she should never consent to involve in their shame one that she loved; she would never leave her mother. She would work with her own hands, and every day bring him the amount of money he now received of her father if he would sell him no more. She entreated him with tears. With an infernal leer he asked the poor girl if he should *say* to her father that she had *requested* him to sell him no more. Her eye flashed, and reason reeled. "*You are not a man!*" said she. She is now a maniac in the Worcester asylum.—*John B. Gough.*

The most ingenious, practical sarcasm ever made use of was that of the late Rev. Robert Hall, addressed to a clergyman who had obtained a lucrative living after a change of religious opinions. Mr. Hall had pressed him hard upon the question of Church Reform. The gentleman's constant answer to the arguments addressed to him was:

"I can't see it." "I don't see it." "I can't see that at all."

Mr. Hall took a letter from his pocket and wrote on the back of it with his pencil, in small letters, the word God.

"Do you see that?"

"Yes."

He then covered it with a piece of gold.

"Do you see it now?"

"No."

"I must wish you good-morning, sir," said Mr. Hall, and left him to his meditations.

Gems.

Let us not despise even the least of God's dear children. We are too prone to regard our "brethren in the Lord," as not different from the common masses of men. Ah! let us not undervalue them; for it matters not what their station may be—rich or poor, high or low —they are indeed precious treasures—crown jewels that shall some day shine with a glorious radiance in the coronet of the Great King.

Men may talk as they like of "insufficient evidence," there is no evidence like "sitting down under His shadow with great delight, and finding His fruit sweet to our taste." We long that shake, and dropping on his hands and knees, started down the front stairs. Just as he started, two old ladies came upon the stoop to consult his wife in regard to shipping seven hundred neckties to the poor of New York, and it so happened that the moment they opened the door he lost his balance and came down upon them like an avalanche with spokes in it, and before they could even think of saving themselves the enemy was among them, and the next instant a horrible mixture of humanity and cloth went revolving across the sidewalk and into the street, to the unmixed astonishment of the neighbors, and to the unconcealed disgust of the participants. But it cured him.—*Danbury News.*

It is said of a certain politician, "that he may not have a finger in every pie, though it is not too much to say, that if he had twenty fingers there would be twenty pies, with a finger in each of them."

We learn from Mrs. Livermore that the feet of the coming woman are upon the mountain top, and her spirit is in the air. Where's her head, poor thing?

If a boy makes too much noise, you tell him he mustn't be *boisterous*. So, when a girl makes just as much noise, you ought to tell her not to be *girlsterous*.

What the Trouble Was.—A wife, whose husband was complaining of the hard times, saying that they were so hard that he could hardly keep his nose above water, retorted: "You can keep your nose above water easy enough, if you have a mind to; but the trouble is, you keep it too much above brandy."

"Vegetable Pill!" exclaimed an old lady. Don't talk to me! The best vegetable pill ever made is an apple dumpling. For curing gnawing at the stomach there's nothing like it. It always can be relied on.

An Atlanta (Ga.) man wants the thief who stole his well-bucket and rope to come back and get the well, as it is of no use now.

A Distinction.—A little boy who had dropped some eggs for which he had been sent, being asked by his mother if he broke any, replied, "No, only one."

The Bank pays six per cent. interest

on savings deposits, compounded in January and July of each year, to be drawn by Pass Book only.

Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED,

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and *without loss of interest.*

For full information about the Bank address the *Actuary* at Washington, D.C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the company is in Washington, directly opposite the U. S. Treasury.

The Moral Warfare.

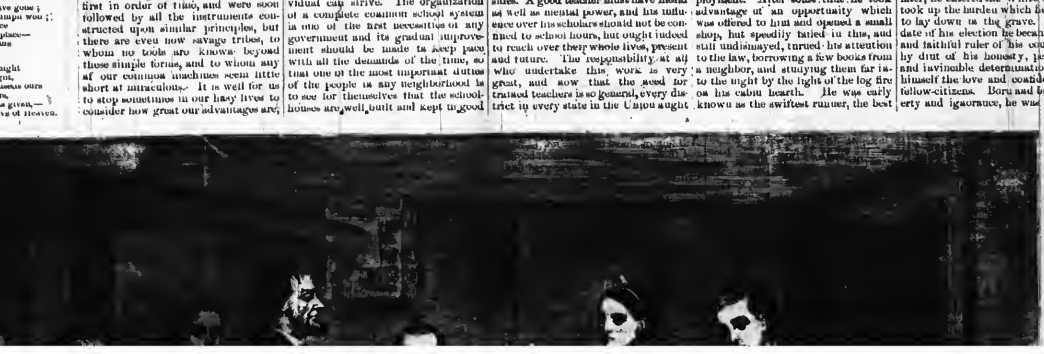
John G. Whittier.

When Freedom, on her natal day,
Within her war-rocked cradle lay,
An iron race around her stood,
Baptized her infant brow in blood
And, through the storm which round her swept,
Their constant ward and watching kept.

There, where our quiet herds repose,
The roar of colonial battle rose,
And lettered as of common tongue
To mortal strife as tigers spring,
And every gift on Freedom's shrine
Was man for beast and blood for wine.

Our fathers to their graves have gone;
Their strife is past—their triumps won;
But stervner trials wait the race
Which rises in their honored place—
A moral warfare with the crime
And folly of an evil time.

So let it be. In God's own might
We gird us for the coming fight,
And strong in Him whose cause is ours
In conflict with unholy powers,
We grasp the weapons He has given,—
The Light and Truth and Love of Heaven.



variety of tools about him, and the ruined cities of Egypt could evidently never have been built without the assistance of machines and mechanical skill. From the Egyptians, the Greeks and Romans learned the use of tools, etc., and from them again the knowledge spread gradually over the European continent, improvements being constantly made, and new laws discovered by sagacious and philosophical minds in all countries. It is probable that the wedge and inclined plane came first in order of time, and were soon followed by all the instruments constructed upon similar principles, but there are even now savage tribes, to whom no tools are known beyond those simple forms, and to whom any of our common machines seem little short of miraculous. It is well for us to stop sometimes in our busy lives to consider how great our advantages are, a "common school," and common schools for the common people are the great safety and great glory of our country. The children who are brought together in these little school-houses all over the land are taught not much perhaps, besides the simplest branches, but this simple teaching provides them with the means to obtain all that lies within the grasp of man, for it lays the foundation for further and higher education, and such education is the most valuable possession for which any individual can strive. The organization of a complete common school system is one of the first necessities of any government and its gradual improvement should be made to keep pace with all the demands of the time, so that one of the most important duties of the people is any neighborhood is to see for themselves that the schoolhouses are well built and kept in good of time; they should be allowed to alternate their lessons with some sort of gentle, physical exercise, such as marching several times around the schoolroom with all the windows and doors open, or practising some light gymnastics for five or ten minutes. More or less vocal exercise is also very desirable, and no small part of a good education consists in watching and caring for the general behavior of the students, so that the thoroughness of their training may show itself on all sides. A good teacher must have moral as well as mental power, and his influence over his scholars should not be confined to school hours, but ought indeed to reach over their whole lives, present and future. The responsibility of all who undertake this work is very great, and now that the seed for trained teachers is so general, every district in every state in the Union ought vigor and perseverance which characterized his manhood. He worked with his father, farming, etc. until the Black Hawk war of 1832 broke out, when he joined a volunteer company, and was elected captain, which success, in connection with his great popularity among his numerous neighbors induced him, on his return from the campaign, to run for the legislature, when he was defeated for the first and only time in his political career, a defeat which left him without means of employment. After some time he took advantage of an opportunity which was offered to him and opened a small shop, but speedily failed in this, and still undismayed, turned his attention to the law, borrowing a few books from a neighbor, and studying them far into the night by the light of the log fire on his cabin hearth. He was early known as the swiftest runner, the best law business for some years, but in 1854 he returned to the political field, and in 1858 the famous Senatorial contest took place in Illinois between him and his rival, Mr. Douglas, during which campaign he showed great power as a debater and an orator. In May, 1860, the Republican National Convention met at Chicago and amid intense excitement nominated Abraham Lincoln for President of the United States, a nomination which was ratified by the people when nearly a year later, he entered the White House and took up the burden which he was only to lay down as the grave. From the date of his election he became the wise and faithful ruler of his country, and by dint of his honesty, perseverance and invincible determination won for himself the love and confidence of his fellow-citizens. Born and bred in poverty and ignorance, he was appointed

pastors or churches	37

Value of books and papers donated to above schools	$379 28

But our work in aiding these schools, unheard for by any existing organization, is only begun. Many of them are without books or papers, too poor to buy them, or ignorant of the best way to obtain them. One thousand Bibles and Testaments are needed today for distribution among them. The field broadens before us. To carry on the work already commenced, we shall need $5,000 the present year.

All communications may be addressed to the General Agent of the Virginia Sunday-school Union, at the office, No. 116 Main street, Norfolk, Virginia.

Hoping to receive from various friends a cup of cold water for these little ones,

Truly yours,

Rev. RICHARD TOLMAN, President,
Gen'l S. C. ARMSTRONG, Fin. Agent,
M. L'HOMMEDIEU, Gen'l Agent.

"Deacon, if you do not let me have the corn, I shall curse you."

"Curse me!" exclaimed the deacon, "how dare you do so?"

"Because," said the man, "the Bible says so."

"Nonsense," exclaimed Deacon Hunt, "there is no such thing in the Bible."

"Yes there is," replied the poor man.

"Well," said the deacon, "If you can find any such text, I'll give you a bushel of corn."

They went into the house, when the man went to the old family Bible, turned to Proverbs, 11:26, and read, "He that withholdeth corn the people shall curse him; but blessings shall be upon the head of him that selleth it."

The deacon was fairly caught. "Come along," said he, "and I will be as good as my word."

He took him to the corn-house and measured out a full bushel of corn, helping the man put it into his bag, assisted him in slinging it upon his shoulder, and, just before his departure, he then covered it with a piece of gold.

"Do you see it now?"

"No."

"I must wish you good-morning, sir," said Mr. Hall, and left him to his meditations.

The Mural Warfare.

JOHN G. WHITTIER.

When Freedom, on her natal day,
Within her war-rocked cradle lay,
An iron race around her stood,
Baptized her infant brow in blood
And, through the storm which round her swept,
Their constant ward and watching kept.

There, where our quiet herds repose,
The roar of battle-hosts rose,
And brethren of a common tongue
To mortal strife as tigers sprang,
And every gift on Freedom's station
Was mail for beast and blood for wine.

Our fathers to their graves have gone;
Their strife is past—their triumph won;
But stormier trials wait the race
Which rises in their honored place—
A moral warfare with the crime
And folly of an evil time.

So let it be! In God's own might
We gird us for the coming fight,
And strong in Him whose cause is ours
In conflict with unholy powers,
We grasp the weapons He has given,—
The Light and Truth and Love of Heaven.

"Because, forsooth, the temple grows
Whose walls the prophet's trumpet knows,
Shall we not smite with Amalek,
And rase Jericho to the beak?
Shall we not, for the homes we build,
Drive out the horde our fathers willed?

Nay, rather in the fear of Him
Who purifies as by fire the dim
And easily tempted souls of men,
Do we not seek the tempter's den
Lest, urged by us to leave his track,
He roam the world to tempt us back.

Evil is good, if thence arise
Occasion for the truth and right
To conquer in the moral fight
Which shakes the world. We know full well
How powerful error strongly dwells
In habit, custom, law, and creed,
And wrongful use of Holy Word,
To sanctify the sin abhorred,
And fence the refuge of the lie
With Scripture and with prophecy;
How, in the state, the church, the home,
Power justifies herself by might,
And Truth and Love are trodden down
Before the brutal sense of wrong,
Which visits with the worst its own.

Hard is the battle we must wage
With the high evil of our age,
Where Slavery, in the Church's name,
Rears altars to the sin of shame,
And thrusts the pure and meek aside
To seek a refuge for its pride.

Not with the weapons of the world
Are battlements of evil hurled;
The wrong we combat can defy
Aught that the sense can see or eye
Or thought of man can grasp or weigh,
Wielding the forces of to-day.
Not by the sword shall we attain
To our high purpose, but by pain,
Self-sacrifice, and daily loss
Of all for which men periled soul
And hope of heaven, counting gain.

Thus shall we learn to overcome
The powers of spiritual wrong,
Thus shall we make our own the tongue
Of fire and power to which belong
The guidance of the cloud by day,
The march of God's strong hosts, the way
Of Israel's light by night, the rod
Which opens for the host of God
A sea-path to the desert land,
And the pursuing hosts o'erwhelm
Where the returning waters foam
And roar above the sunken realm.

Industrial Education.

The following is an abstract of a paper read before the Social Science Association, by Mr. Edward Atkinson, of Boston.

The subject of industrial education is one of the most important that can be brought before the people of this country. The children who are brought together in these little school-houses all over the land are taught not much perhaps, besides the simplest branches, but this simple teaching provides them with the means to obtain all that lies within the grasp of man, for it lays the foundation for further and higher education, and such education is the most valuable possession for which any individual can strive. The organization of a complete common school system is one of the first necessities of any government and its gradual improvement should be made to keep pace with all the demands of the time, so that one of the most important duties of the people in any neighborhood is to see for themselves that the school-houses are well built and kept in good

repair; that a "common school," and common schools for the common people are the great safety and great glory of our country. A DISTRICT SCHOOL.

Mechanical Instruments.

It is difficult for us to realize, in the midst of the wonderful inventions which surround us and make our life so different from the life of the generations that have gone before us, that there was once a time when the simplest tools were unknown, and that the mechanical appliances now so common among us have been the growth not of years, but of centuries. From the testimony of ancient writings, sculptures, and paintings, we can gather some facts in regard to the earliest inventions, and can trace with no little accuracy the development of the mechanical arts. The Egyptians are supposed to have been the first people who used tools or machines, and the carvings and hieroglyphics upon their monuments show that they were acquainted with the use of the axe, handsaw, adze, drill, and chisel. Among the sculptures at Thebes, a city celebrated for its riches and power in days long past, is one dating B. C., 1591, which represents a carpenter at work with a variety of tools about him, and the ruined cities of Egypt could evidently never have been built without the assistance of machines and mechanical skill. From the Egyptians, the Greeks and Romans learned the use of tools, etc., and from them again the knowledge spread gradually over the European continent, improvements being constantly made, and new laws discovered by ingenious and philosophical minds in all countries. It is probable that the wedge and inclined plane came first in order of time, and were soon followed by all the instruments constructed upon similar principles, but there are even now savage tribes, to whom no tools are known beyond these simple forms, and to whom any of our common machines seem little short of miraculous. It is well for us to stop sometimes in our busy lives to consider how great our advantages are, and how marked has been the progress of civilization during the years of which we have authentic history.

Our Schools.

Our illustration for this month furnishes us with a text which can never be exhausted, and the group in the picture, simple as it is, is full of meaning and suggestion, and may well be dwelt upon with thoughtful attention. A score of children of different ages and sexes, are gathered within the walls of a little, rough school-building, with their teacher in their midst, and about them their friends and neighbors, all listening to the examination which is evidently being carried on by the teacher himself, or the committee officially appointed for that purpose. The whole group is plain and homely enough, there are no fine clothes, no evidences of wealth, the picture in all its details presents a common scene, but it is just that which gives it such importance and makes it worthy of more than a passing glance, for it represents a "common school," and common schools for the common people are the great safety and great glory of our country. The children who are brought together in these little school-houses all over the land are taught not much perhaps, besides the simplest branches, but this simple teaching provides them with the means to obtain all that lies within the grasp of man, for it lays the foundation for further and higher education, and such education is the most valuable possession for which any individual can strive. The organization of a complete common school system is one of the first necessities of any government and its gradual improvement should be made to keep pace with all the demands of the time, so that one of the most important duties of the people in any neighborhood is to see for themselves that the school-houses are well built and kept in good order, that teachers as good as can be had are regularly provided, and that last but certainly not least, the children are made to attend unfailingly and punctually. It has been said that education is the cheap defense of nations, and surely in the moral warfare of which the poem selected for this month so earnestly speaks, there can be no weapons stronger than those provided by an intelligent, Christian system of education. Practically, as we have just said, the details of our common schools must be attended to by the people directly interested in them, and there are many points upon which general enlightenment is necessary, not only in regard to the methods of imparting instruction, but also as to the arrangement of the school-rooms, length of study hours, physical exercise, etc. For example, children can never study properly unless they are supplied with plenty of fresh air, and have seats and desks which are moderately comfortable and convenient. Then, too, it is never wise to keep young and growing children in one position for any length of time; they should be allowed to alternate their lessons with some sort of gentle, physical exercise, such as marching several times around the schoolroom with all the windows and doors open, or practicing some light gymnastics for five or ten minutes. More or less vocal exercise is also very desirable, and no small part of a good education consists in watching and caring for the general behavior of the students, so that the thoroughness of their training may show itself on all sides. A good teacher must have moral as well as mental power, and his influence over his scholars should not be confined to school hours, but ought indeed to reach over their whole lives, present and future. The responsibility of all who undertake this work is very great, and now that the need for trained teachers is so general, every district in every state in the Union ought to take measures to supply itself with school-houses and school-teachers, so that the children of the next generation may have no reason to blame their fathers for failing to appreciate the importance of this matter.

Abraham Lincoln.

Abraham Lincoln was born February 12th, 1809, in the State of Kentucky, his father and grandfather being both natives of Rockingham county, Virginia, from whence Thomas Lincoln, the father of Abraham, emigrated in 1784, marrying in 1806, Nancy Hanks, who was also a native of Virginia. The childhood and youth of the boy who was to become the greatest man of his day, were spent in actual poverty, and it is said that the whole of the time during which he went to any regular school, did not amount to twelve months, for he was never inside a college or academy until after he had obtained his license to practice law, but studied English grammar and mathematics unaided, with all the vigor and perseverance which characterized his manhood. He worked with his father, farming, etc. until the Black Hawk war of 1832 broke out, when he joined a volunteer company, and was elected captain, which success, in connection with his great popularity among his immediate neighbors induced him, on his return from the campaign, to run for the legislature, when he was defeated for the first and only time in his political career, a defeat which left him without means or employment. After some time he took advantage of an opportunity which was offered to him and opened a small shop, but speedily failed in this, and still undismayed, turned his attention to the law, borrowing a few books from a neighbor, and studying them far into the night by the light of the log fire in his cabin hearth. He was early known as the swiftest runner, the best jumper, and the strongest wrestler among his companions, and when he reached his full development was pronounced the strongest man in his State, his abstemious habits, and hardy physical discipline giving him, all his life long, an advantage over weaker men. In 1834 he was elected to the legislature, and re-elected for three sessions in succession, during which time, he made his first public protest against slavery, denouncing it in the house as unjust and impolitic, an opinion from which he never varied, and which undoubtedly had much to do with his eventual success. He rose rapidly to distinction in his profession and in 1846 was elected to Congress from the central district of Illinois, and his record during his career there, is, that he was never known to violate any principle to which he had once given his adhesion, no matter how great the temptation or the emergency. He did sometimes waive the assertion of a principle, but he never voted against it, and was eminently a consistent man. After he left Congress he devoted himself to his law business for some years, but in 1854 he returned to the political field and in 1858 the famous Senatorial contest took place in Illinois between him and his rival Mr. Douglas, during which campaign he showed great power as a debater and an orator. In May, 1860, the Republican National Convention met at Chicago and amid immense excitement nominated Abraham Lincoln for President of the United States, a nomination which was ratified by the people when nearly a year later, he entered the White House and took up the burden which he was only to lay down in the grave. From the date of his election he became the wise and faithful ruler of his country, and by dint of his honesty, perseverence, and invincible determination won for himself the love and confidence of his fellow-citizens. Born and bred in poverty and ignorance, he was appointed by the Great Ruler, to a position and a work such as have fallen to the lot of few men, and such as few men could have filled or performed. His life was strong and noble, and the death which closed it, though terrible to his country and his friends, was to him only a quick translation to that perfect peace for which he had ever here a great desire, and the witness of both life and death lifts to a high place upon the roll of fame the name of Abraham Lincoln, who in the fullness of his power, died gloriously for the sake of the freedom that he truly loved.

The exact opposites of the glutton are the hypochondriac men and nervious women who almost starve themselves to death for fear of injuring themselves by eating improper food. To such persons the advice of Sir Richard Jebb may be recommended: "My directions will be few and simple. You must not eat the poker, shovel or tongs, for they are hard of digestion; nor the bellows, because they are windy; but every thing else you please."

THE
Southern Workman,
ISSUED MONTHLY.
S. C. ARMSTRONG, } Editors.
RICHARD TOLMAN, }
J. F. B. MARSHALL, Business Manager.

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every Hamlet and cabin. Agents are wanted, in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

HAMPTON, JUNE, 1873.

"Poverty vs. Education—Dogs—Whiskey."

This is the title of one of the interesting and able articles of the May number of "The Educational Journal of Virginia." The article was written by our accomplished and efficient superintendent of Public Schools—Dr. Ruffner. He has, to such an admirable degree, "the art of putting things," that we give our readers some extracts from his sharp-pubbed pen.

Poverty vs. Education.—Those who urge the plea of poverty against necessary expenditures for education, place our worthy citizens in a predicament. It is pretty well known by the world that the people of Virginia spend about twenty millions a year in whiskey and dogs; whilst only one million is asked for education. Hence those who urge this plea in so many pathetic forms are either telling what is not so, or convicting our people of loving whiskey more than education—and their dogs more than their children. Yes, or preferring to have their children unlettered to giving up one drink and one dog in twenty!

Dogs.—We spend say two millions a year in feeding our 140,000 dogs, and in repairing their damages. This was proved in the Annual Report of 1871, and all the changes were rung upon it in the Richmond newspapers during the succeeding winter.

Besides their annual cost and sheep-killing, it was proved that dogs were in the way of that system of sheep husbandry which is to be the agricultural salvation of Virginia. In this view there is by measuring the evil of the canine possession.

Whiskey.—In the Annual Report of 1871 statistics were given which rendered it probable that the annual consumption of alcoholic drinks in this State was about $19,000,000. Some have regarded this concission as incredible. Although no one that we know of has disproved it, let us throw in for good measure all the tobacco consumed, the confectionery, ornaments, costly furniture, equipage and apparel, also the amount carried off by theatricals, gamblers and swindlers of all sorts. Then we have nineteen millions to spend for whiskey and tobacco, circuses and gimcracks, but too poor to spare one million in order to put the spelling book and the multiplication table into every child in the land! Refuse 85 cents to each head of population for schools, and yet spend sixteen dollars a head for whiskey! Shame on the inane intimation! Our people are not barbarians!

If they want to spend twenty millions—or twice twenty—on dogs, whiskey and tobacco, let them do it; but *if they do*, let us hear no more of this plea of poverty, and be met with no more sour looks when the *comparatively insignificant* sum of one million is asked for education.

We must heartily commend this appeal. We believe that Public Schools are a public benefit. They yield a rich revenue pecuniarily for all the money expended in their improvements. Cheap schools will make cheap land, nor is it too much to say that, for every hundred dollars' worth, by which we increase educational interests of a town, we add two hundred dollars to the value of the houses and the farms. If the owners of real estate would invest property where it will yield a better percentage than in railroad, manufacturing or bank stock, let them invest a due proportion of it in the public schools.

But it is socially and morally, rather than pecuniarily, that good schools chiefly benefit a community. Much as they may increase the value of the land, they increase more the value of the men and women that live upon it. The importance of training good neighbors and good citizens, cannot be estimated in dollars and cents. Besides, it is every way the wisest economy to educate aright the child, rather than punish the man. School-houses are vastly cheaper than court-houses and penitentiaries. To arrest and bring to justice a single offender often costs more than all the money which we annually expend for the education of hundreds of children.

We would not then begrudge the money needed for the proper education of the young; remembering that it is virtue combined with intelligence that most exalts a nation; that that wisdom, of which the fear of the Lord is the beginning, is "the principal thing, more precious than rubies."

The Modoc Tragedy.

We are happy to insert the following communications, because of an article in the editorial columns of our last issue, which seemed unjust toward the peace policy. The editor in charge was so unwell the evening the proof was submitted to him, that he deferred until the next morning the intended correction, when it was too late. We most heartily sympathize with the sentiments now laid before our readers.

LETTER FROM DR. THOMAS' SON.

San Francisco, *April* 14th, 1873.

Hon. A. A. Sargent, United States Senator:

Dear Sir,—It suddenly occurs to me to write you a few words. It was undoubtedly through you that father was appointed upon the commission to the Modocs, and it may be that, in spite of your judgment to the contrary, your feelings may condemn your agency in the matter. Do not reproach yourself; neither for our sakes let the policy of the nation toward the Indians be changed in its spirit—in obedience to the frenzy of the hour. If the severest punishment be visited upon the hostile Indians, let peace and justice and security be still sought for others. Father's heart was in the cause in which he gave his life, and the cause is worthy and must be persevered in. We suffer for the ill deeds of our own race, and must still suffer, perhaps. But we owe it to ourselves and to the Indians to persevere. I hope you are with me still in this. I hope General Grant is. The Indians must know our power, and that our mercy is not cowardice—they must know our word is true.

The Indians are what they are, I believe, because the whites with whom they are in contact have been what they have been. We are to blame; not the poor Modocs; not the rapacious, lawless, perfidious whites are guilty of his blood. We blame no one for his death. Now that the first shock has passed away, we find more to rejoice in than mourn over.

We will pluck up our hearts, and follow on till God grants us the blessing of death.

This flurry will soon pass over. Without saying anything now, let the Government adhere to its grand purpose to be just and true to these children of the land.

Yours, truly,

E. C. Thomas.

The following view of the Indian character, supposed to have been penned by General Sherman, is extracted from a report made by him and three other officers of the U. S. army, to the President, in 1868:

Naturally, the Indian has many noble qualities. He is the very embodiment of courage. Indeed, at times he seems insensible of fear. If he is cruel and revengeful, it is because he is outlawed, and his companion is the wild beast. Let civilized man be his companion, and the association warms into life virtues of the rarest worth. Civilization has driven him back from the graves he loved; it has one-by-one killed, killed him, but it could never make him a slave.

So little accustomed to kindness from others, it may not be strange that he often hesitates to confide. Proud himself, and yet conscious of the contempt of the white man, often suddenly aroused by some new wrong, the remembrance of old ones still stinging his soul, he seems to become, as expressed by himself, blind with rage. He fails to see the olive-branch or flag of truce in the hands of the Peace Commissioner, and in savage ferocity adds one more to his victims, we should remember that for ten years and a half counties he has been driven back from civilization, when his passions might have been subjected to the influence of education and softened by the lesson of Christian charity.

Pictures.

Never count that lost which is expended in making a home pleasant. Pictures, music, flowers, and books, though costing some outlay of money, always render a glorious return in cultivated taste and refinement. Many a man complains of each an outlay, because he does not think "it will pay," as though life's main object was to heap up dollars and cents. No earthly boon is more to be desired than a pleasant, happy home. The quickest and cheapest way to brighten an empty room, is to hang up a pretty picture. How many a home has been brightened by the beautiful chromos which are now so plenty. Works of art are no longer confined to the parlors of the wealthy, since the Oil Chromo process has become a success.

Now we have resolved to help in this good work of refinement. We have made arrangements with different parties in the chromo publishing business, such that we feel we can afford to give to every old subscriber who shall renew his subscription, and to every new subscriber, a beautiful OIL CHROMO, worth from $1.50 to $3.00, each.

Our favorite chromo is entitled "Returning Home," and represents a young girl, with brown hair, blue eyes, and ripe, cherry lips, as she is wending her way home over an old mountain path; her apron is full of wild flowers; she tightly holds it up with her left hand, as the arm of which she carries her lunch-basket; her right hand carries a bundle of fagots. Though evidently tired, she has a sweet, child-like expression that will make her a friend in every home that will receive her. We have ordered quite a quantity, and shall adopt the motto, "First come, first served." Let us hear from you right away, and have we would remind you that we will give this beautiful picture to every one who will get us a new subscriber.

We trust that the article on Fisheulture which appeared in our April number has received the attention that the subject deserves, for it is undoubtedly for the interest of the whole country that the State and National governments should immediately take in hand this matter of special and undeveloped industries. The preservation and increase of fish in our waters and game in our forests are of real importance, and do not come within the province of individual action, the interests involved being too general to admit of their being entrusted to private enterprise. In most of the Southern States no advantage whatever has as yet been taken of the great opportunities which Nature has supplied, and the government of these states ought to lead the van of progress in these particulars. The expense incurred is so small in proportion to the profit, and that profit is so direct and sure, that we ought to consider delay to be as direct and sure a loss.

Books for our Teachers.

Though there are many good ways of helping in the educational work of the South, and many who are helping in this work, still a new way is suggested, by which a little help may be of great use.

The graduates of our Normal School, at Hampton, have but very few books, and those are mostly the school-books they have studied here. One graduate writes, that the only book he has seen to read, has been the Reader he carried from Hampton. If every graduate could be provided with a small library of reference books, say a dozen or more, its usefulness, and certainly its happiness would be greatly augmented. We say this in the hope that some liberal minded person will move in this direction.

The Mother's Work.

Every American mother who has a boy under her care should begin, even during his infancy, to train him up to become in time a *conscientious voter*. Not by political talk, God forbid! not by political passion, God forbid! but by laying the foundation stones of principle in the current of thought and feeling. Teach him to love and honor that which is good, to "*hate* that which is evil," and you are preparing him to be a *conscientious voter* in manhood.

Remember that *conscientious voters* more than it needs soldiers for its army or sailors for its navy. This is now, and ever must be, the one great need of the republic. Teach your boys to love honesty in small things now, and to hate dishonesty, and they will be honest voters twenty years hence. Teach your boys to love frankness and sincerity now, and they will become frank and sincere voters in later years. Teach your boys to speak the truth fearlessly now, and they will rise above the lie political in later life. Teach your boys to be courteous and manly and considerate for the rights of others now, and they will turn aside with disgust from all vulgar political abuse of their opponents in later years. Remember, that a mother may preserve her country in its highest interests. Americans are not likely ever to become cowards and cravens; they are a brave people. They are not likely to grow stupid and short-sighted; they are naturally quick-witted and shrewd. Political corruption is the one great political danger. By striving to give their boys good principles at home, mothers may help to stem the evil tide.—*Susan Fenimore Cooper.*

Cadetship Handsomely Won by a Negro Lad.

Representative James H. Platt, of the Norfolk District of Virginia, has forwarded to the War Department the name of John W. Williams as his appointment for a cadetship at West Point. Finding that there was some feeling between his white and colored constituents as to which race should receive the appointment, he announced that he would give it to the best scholar on competitive examination. Three candidates presented themselves, viz: a son of W. H. Lyons, master mechanic of Norfolk; a white boy, a son of E. Staples of Portsmouth, and John W. Williams, a bright mulatto lad, who was born a slave, and has been for several years past a student of the Hampton Normal and Industrial School. A series of questions in the ordinary English branches were prepared, sixty-six in number, and each boy was examined separately. Out of this number young Williams answered sixty-five promptly, only missing one; Lyons answered sixty-three, while Staples was down in the forties. The examination was conducted in the most impartial manner, and at the conclusion Williams was heartily congratulated on his success.—*Boston Journal.*

Acknowledgements.

We have received from G. W. Semple, M. D. of Hampton, copies of "The Plantation," a weekly Agricultural paper, and pamphlet entitled "Chemical Manures," by George Ville. The latter contains quite valuable information. For all, our sincere thanks.

Chief Justice Chase.

All of our readers, we trust, were interested in the life of Chief Justice Chase and will regret his death. His name is intimately linked with those of Lincoln, Stanton and Seward, all of whom have passed away. He was born in New Hampshire, a graduate of Dartmouth College in that State, and passed his earlier days in Ohio, in which State he was chosen governor for three successive terms, and left this office to take a seat in the Senate of the United States. Just at this time he was called by Lincoln, to the head of the Treasury. His last years have been spent as Chief Justice of the U. S. Supreme Court, an office of the greatest responsibility and trust.

His was probably a painless death, as it was caused, while he was sleeping, by the rupture of the cerebral artery, whence followed a stroke of paralysis on the brain. His funeral took place on Monday, May 12th, at Washington.

It should be mentioned that the chief justice was one of the foremost antislavery men. Among the many eulogies pronounced on his character was one by a former townsman, Hon. Joseph Segar, formerly a representative to Congress from this district. We give below a short extract:

> Although he and the people of my State were as far apart as the poles on the subject of the great blunder of secession—to call it by an harsher name—they had come, since the war was over, to a warm appreciation of his many great virtues, his commanding abilities, and his eminent public services. In this general and unreluctant appreciation of this great and good man my State honors herself, and I declare here to-day to make public to the country that she does so honor herself.
>
> And I hope it will not be amiss to embrace what seems to me an opportune occasion to make a very brief statement in a personal connection, the facts of which are in my own bosom only, and which I venture to disclose now because they are illustrative of the private virtues and worth of the illustrious deceased, and show that he was not only great, but good.
>
> In the early part of the war, early in 1861, it was my fortune to have been much in this city, and I was here because I could not be in Confederate lines in safety. I was in needy circumstances, my whole property having been seized by the United States under the exigencies of actual war. The late chief justice, apprised of my condition, sought me out, and, assuring me of his sympathies, informed me that I could command at his hands an appointment that would yield me a support, but for reasons well known to personal friends, and to Mr. Chase himself, then Secretary of the Treasury. I declined the offer. But this unsought, generously made an impression upon my heart that can never be effaced but by death. It is a green spot in my life which I delight to dwell upon, and I shall ever venerate the man who was as good as he was great.
>
> Mr. President, I am under another obligation to the illustrious dead. I would be the first to shake my old opinions in favor of Negro slavery. Sir, I was brought up, if I may so speak, in the spot of slavery. I was once a slaveholder—a shocking reflection; God forgive me; but it was reserved for Chief Justice Chase, by his clear-headed sense, to appeal to

At Home.

"One Own."

"If I had known in the morning
How wearily all the day
The words unkind
Would trouble my mind
I said when you went away,
I had been more careful, darling,
Nor given you needless pain;
But we was four 'our own'
With look and tone,
We might never take back again.

"For though in the quiet evening
You may give me the kiss of peace,
Yet it might be
That never for me
The pain of the heart should cease.
How many go forth in the morning
That never come home at night,
And hearts have broken,
For harsh words spoken,
That sorrow can never set right.

"We have careful thoughts for the stranger,
And smiles for the sometime guest,
But oft for 'our own'
The bitter tone,
Though we love 'our own' the best.
Ah! lips with the curve impatient,
Ah! brow with that look of scorn,
'Twere a cruel fate,
Were the night too late
To undo the work of morn.

The Daughter at Home.

It is within the power of every young girl who obtains her parents' consent to—a thing usually given before asked—to make her home a beautiful place to the eye, and therefore (other things being equal, such as the kind hearts, the happy atmosphere) attractive to the lingerer. There may be an ingrain carpet on the floor there, or even none at all; there may be wooden chairs and an ugly stove; but on this rude frame her simple efforts can build a world of beauty. Let her begin at the windows of the room, with their plain shades; she suspends a hanging-basket in one of these windows let us suppose. The basket bought at the florist's for five or ten dollars, and stocked with splendid tropical things, but a wooden box filled with earth, and set in one of those little sticks that are usually to be found knocking about every house, and are, at any rate, to be had in the shops for twenty cents; and she lures it by a stout cord twisted from the twines that have come home round the kitchen parcels. Here she plants nasturtiums and the delicate Madeira vine, and any green leaf that will grow, trailing these stems over the cords, and suffering those to droop across the edge, and her window is presently finer than if curtained with pointed lace. Another window she fills by degrees with a double tier of plants, raised from such slips as neighbors give each other—a rose, a geranium, a daphne, a gloxinia rooted from a single leaf, a fuchsia, a jasmine; she gives them such sunshine as she can, chancing warm water, and care, and she soon has a tapestry of blossoms there that rival in brilliancy any tapestry of foreign looms, and an atmosphere of fragrance outdoing that of distillery. If there is a third window, she stands a pot of ivy near it, and winds the branches in and out across it as they grow till it is a lattice-work of greenery, and then the long stems slowly spread their arms about the room and make it a little bower.

In another spot she hangs a wreath of the weird and varied maple leaves of autumn; and perhaps she incloses the little photographs of some friends in frames made of four sticks, and covered by the help of a little putty with the shells that have been in the garret ever since she was born, or with grey winter mosses and scarlet berries. Then she has dealings with the wizard of'clo' man, and certain useless garments of the house turn into vases for the mantle-shelf, which she has already hidden and fringed with knotted ravellings of an old shawl; and in the vases are dried twigs, branches of scarlet elder berries, lovely seed vessels, and tufts of the milkweed, whose frost-split pods look like little white-sailed birds sailing away on the wind And filling it with the dingy, but built a fire beneath it, and one of them retired once more to rast, the other remaining on his knees to watch the mysterious brew. For many days the tradition says, they kept the fire burning day and night, till at last they seemed to think their task complete, and taking off the thick, pungent compound into a large, open vessel, they left it exposed in the air. Then for the first time since their landing, the men broke their rigorously kept silence, and congratulated each other upon the accomplishment of their labors. From their conversation it appeared—though tradition does not tell us to whom—that they were veritable snake-charmers from Farther India who had left their shrines and native cities in search of the pathless forests of the New World for rare plants to perfect a magical compound which, brewed in silence and with strange rites, would protect those who anointed themselves with it from the venom of all deadly reptiles. It only remained to prove the efficacy of the mixture in which they had unbounded faith.

On the following day, they went carefully through their devotions, and, entering their house, laid aside their priestly robes, and anointed themselves thoroughly with the odorous ointment. Then with eager haste they opened the cages one by one, and instantly the room was swarming with hungry, hissing reptiles. The snake-charmers met the assault with enraged the serpents with blows, provoking them to bite. At last an immense cobra, at least six feet long, reared his head in anger, and struck one of the men and then the other with great swiftness and rage. The men only smiled, and continued their gyrations and taunts, till in a few few minutes they had both been bitten several times by the most venomous reptiles in the room.

Suddenly, the man who was first struck, uttered a loud cry, sprang through the door and darted into the forest. He was followed almost immediately by his companion, leaving the door open and the horrid swarm of reptiles at liberty. The ointment had indeed preserved their lives, but the venom had penetrated their brains, and their minds were gone forever.

For "The Southern Workman."

A Snake Story.

BY JACK MURRAY.

There is a small town in Southern New York much infested by venomous serpents, and almost every year there are a number of serious, if not fatal, accidents from the bites of the dangerous reptiles to the neighborhood. An ancient crone who was born there, and whose parents were among the earliest inhabitants has preserved a tradition of this ill-favored spot, which runs on this wise, as nearly as I can recollect.

Shortly after the landing of the *Mayflower*, a small and queerly rigged craft was observed to pass by the little settlement of Manhattan and disappear among the winding hills of the Shatemuc. The boat was apparently manned by but two persons of somewhat outlandish appearance. Their heavy black hair hung in rough masses down their necks; their faces gore that bright brown tint common to the inhabitants of eastern India; their features were regular and rather handsome, but with a sleepy and sinister expression about the eyes; in stature they were both tall and well formed; their dress, though nautical in its cut was of some rich, Oriental material. Upon the whole, they were a very ramackable pair.

They held their course up the river for a long distance, but at last directed their little vessel up one of the small streams which find their way, through darkly wooded cliffs, to the Hudson, adding to the picturesque beauty for which the noble river is so justly celebrated. Choosing at length a nook completely hidden by the encircling forests and sheltering hills, they drew their boat upon the miniature beach, and began to unload it. Drawing out a tent of some peculiar eastern fabric, they set it up on the shore, and carefully shutting the hatchs of their vessel, retired into the tent to sleep.

On the following day, they took out a bamboo frame evidently prepared for the purpose, and set about building a house. So perfectly fitted were all the parts that by evening the curious little structure was finished; but they slept as before in their tent. On the third morning they began some strange ceremonies before the door of their new house, wrapping themselves in long, silken robes, whose blood-red folds were covered with strange devices in gold and silver thread. Among these uncouth designs, serpents of every hideous shape and attitude held the most prominent place. Going then into their vessel, the men brought out a pair of beautifully wrought metal snakes, one of gold, and one of silver, and placing these upon the threshold of their house, prostrated themselves before them with every sign of reverence. Then bringing fruit upon golden plates, and offering the repast to their horrid divinities, they bowed thrice more to the ground before them.

These ceremonies over, the strange pair went once more into their vessel, and brought from it, carefully, a number of light, bamboo cages, which they ranged in front of the door of their house, and taking off the precious coverings which had sheltered them, revealed in each cage a pair of huge and venemous living serpents and a writhing mass of smaller but equally poisonous reptiles. Prominent among the more formidable monsters was the horrible *cobra di capello* or hooded snake of India, venerated to this day by the natives, and called by them the "good serpent" in hope to propitiate the ferocious nature that makes it one of the very few snakes which will attack a man even when it is already gorged with prey. To add to the horrors of the aspect, the cobra is marked upon the back of the neck, which it waves about when angry, with two round spots like great eyes, connected by lines that look like a pair of spectacles, which give it the name also of the spectacled snake. This monster is frequently found represented upon the ruined walls of Egyptian temples, and is supposed to be the serpent which Pharaoh's magicians used in their contest with Moses.

The snake-charmers of India still practice the old Egyptian trick of turning the reptile into a rod, or the semblance of one, grasping it tightly by the neck till it becomes partially strangled and perfectly rigid so that it can be held out horizontally like a stick. The stranger still, it is said to follow the notes of their music in a horrid, undulating dance. But to these performances, the poisonous fangs of the creature must first be carefully extracted. No one ever touched a venemous cobra with impunity.

Having concluded their incantations, and carried the cages of reptiles into the house supposed for fifteen, the devotees proceeded with the unloosing of their vessel. After taking out a large quantity of provisions, they brought up something like the large apparance of a chemist's retort supported upon a bronze tripod of antique form, and with a quantity of peculiarly shaped flasks and jars, filled with variously colored liquors and spices. Setting up the retort in front of their tent, and filling it with the drugs, they built a fire beneath it, and one of them retired once more to rest, the other remaining on his knees to watch the mysterious brew. For many days the tradition says, they kept the fire burning day and night, till at last they seemed to think their task complete, and taking off the thick, pungent compound into a large, open vessel, they left it exposed in the air. Then for the first time since their landing, the men broke their rigorously kept silence, and congratulated each other upon the accomplishment of their labors. From their conversation it appeared—though tradition does not tell us to whom—that they were veritable snake-charmers from Farther India who had left their shrines and native cities in search of the pathless forests of the New World for rare plants to perfect a magical compound which, brewed in silence and with strange rites, would protect those who anointed themselves with it from the venom of all deadly reptiles. It only remained to prove the efficacy of the mixture in which they had unbounded faith.

On the following day, they went carefully through their devotions and, entering their house, laid aside their priestly robes, and anointed themselves thoroughly with the odorous ointment. Then with eager haste they opened the cages one by one, and instantly the room was swarming with hungry, hissing reptiles. The snake-charmers met the assault with enraged the serpents with blows, provoking them to bite. At last an immense cobra, at least six feet long, reared his head in anger, and struck one of the men and then the other with great swiftness and rage. The men only smiled, and continued their gyrations and taunts, till in a few few minutes they had both been bitten several times by the most venomous reptiles in the room.

Suddenly, the man who was first struck, uttered a loud cry, sprang through the door and darted into the forest. He was followed almost immediately by his companion, leaving the door open and the horrid swarm of reptiles at liberty. The ointment had indeed preserved their lives, but the venom had penetrated their brains, and their minds were gone forever.

Years after, a hamlet sprang up in the little valley, but the country was so infested by poisonous serpents that a general hunt was instituted to rid the neighborhood of the terrible pest. On that day, several of the honest farmers saw a couple of men dressed in outlandish rags wandering in the woods, with snakes in their hands, their sleeves, their pockets, and in every place where they could find room to hide. Years later, skeletons were found so covered by swarming serpents that they could hardly be recognized. A firm belief still exists among many of the older inhabitants of the little town, that these two wild men, and make beset bodies were identical with the traced serpent-charmers and responsible for the plague which still afflicts the country side.

Life in the Red Brigade.

Wet, worn and weary,—with water squeaking in his boots, and a mixture of charcoal and water streaking his face to such an extent that his own mother would not have known him—a stout young man walked soberly one morning through the streets of London toward his own home.

He was tall and good looking as well as stout, and, although wet and weary, had a spring in his step which proved beyond all question that he was not worn out. His liberal and belted coat, sailor's cap and small hatchet, with their accoutrements, heading by its chin strap on his left arm, betokened him a member of "The Red Brigade"—a London fireman—one of those daring and manly characters who carry their lives in their hands night and day, Joe, up," she cried, and darted across the room to keep the furious ring of the door bell which would disturb the Rosebud.

At the first word, the bed in the closet groaned and creaked as the fireman bounded from it. Neat moment he appeared buttoning his suspenders, and blinking like an owl in the sunshine. One moment sufficed to pull on each boot. Catching up his half-dried coat in one hand, and flinging on his sailor's cap with the other, he darted from the house, thrust himself into his coat as he ran, and presently found himself in the station just as four of his comrades drew the fire engine up to the door, while two others appeared with three horses, which they harnessed, two abreast, and one in front, with marvellous rapidity. The whole affair had been accomplished in less than five minutes. By that time, Joe and several of his mates stood ready, belted and armed, with brass helmets on their heads which flashed back the light of the street lamps and engine lanterns.

There was wonderfully little noise or fuss, with all the promptness of action. The reason was that all the men were thoroughly drilled, and each had a particular duty to perform, and knew it.

The moment the call was given, Bob, Charlie, having received no telegraphic "stop" had at once run to ring up the men who had, like Joe Dashwood, been sleeping close at hand. He rung up the engine driver first. At the same moment, his comrade on duty had run round to the stable, where the horses stood ready harnessed, and brought them out. The driver, when roused, flung on his coat and helmet and mounted the engine. It was a steam fire engine that is, the pumps were worked by steam instead of by hand. The firing was ready laid, and the water kept ready up on the self-acting by a gas-jet. He had scarcely lighted the fire and blown off the gas, when the engine comsteps as if their bodies were made of cast iron.

Arrived at a small street not far from the Regent Circus, young Dashwood entered a fire station there, and found a comrade in the act of dispersing himself on a narrow trestle bed, on which there was no bedding but one blanket.

THE SNAKE CHARMER.

"Rather. A beer shop in White chapel. House of five rooms burnt out, and the roof off."

"You look tired, Joe," said Mary.

"I on a bit tired, but an hour's rest will put me all to rights. That's the third fire I've been called to to-night, and I got a fall or two that nigh shook the wind out of me. Good-night, Jack, and good morning. I must make the most of my time. Seems as if people were setting their houses afire on purpose to worry us."

Scarcely had Mrs. Dashwood resumed her washing when his regular, heavy breathing proclaimed her weary husband already in the land of Nod.

Quickly and steadily she pursued her work. The gentle noise of the washing, the soft breathing of the sleepers, and the tiny ticking of the clock over the chimney-piece, were the only audible sounds, for London had reached its deadest hour, "twixt night and morning. Rioters had exhausted their spirits, natural and artificial, and few early risers had begun to move.

Presently, to these sounds was added a very distant one which made Mary stop and listen. "A late cab," she muttered to herself. The rumbling grew more distinct and soon proved to be a hurried cab. Mary cast a look of anxiety into the darkness, wiped her hands quickly and taking up a pair of dry boots which had been standing near the fire, placed them beside her husband's coat. The cab had reached the gate of the neighboring fire station. One moment sufficed to pull on each boot. Catching up his half-dried coat in one hand, and flinging on his sailor's cap with the

THE SNAKE CHARMER.

by unremitting vigilance and incessant action that the London fires can be kept within bounds. There are nearly ten thousand fires in a year, in the metropolis, and the heroic little army which keeps these in check numbers only three hundred and seventy-eight men. That is all force much too small for the work to be done is proved by the fact that the same men be so sometimes to turn out four or five times in a night, and a good morning. I must make the most of my time. Seems as if people were setting their houses afire on purpose to worry us."

"Never give in," was the firemen's motto. They would "never say die" till the enemy had left them tired and torn, but victors on the blackened field of battle. Two manual engines had already opened on the foe, and by the time the steamer got into action some little effect was beginning to be produced. Then another steamer dashed round the corner and fell into the ranks, the long charioteers leaped down, the suction-pipe was dipped into the water-trough, and the hose attached, with two engines cannot "drink" at the same plug, a cast-iron trough with an iron frame is put over the plug, having a hole in its bottom which fits tightly around the plug. It quietly fills and then two or more engines may dip in their suction-pipes and "drink" from the same fountain.

"Down with her!" shouts the man who holds the "branch" or nozzle at the end of the hose. A steam whistle gives a shrill reply, the engine is worked under the power of man's greatest servant, and the battery opens on the foe. Through neighboring houses coils of hose are dragged, like horrid water-snakes, through places never meant for them till the men who hold the branches gain points of vantage ne adjoining roofs and fences, till from above, below, in front and rear, cataracts of water dash into the glowing furnace.

The fire escape had been first to reach the spot after the alarm was given. The master of the house had got out from his bed and fled. The cook had rushed shrieking to a window, and a fireman had borne her, kicking, down the ladder and left her in a neighboring house in fits. As she could not answer questions, it could not be ascertained whether there were any more people in the burning house. "Try that window, Dash-wood," said the officer of the station: there is' nt much smoke there." Dashwood, when speaking, had ascended and leaped into the room, but could hardly see for the smoke. Knowing that the air appeared with three horses, which they harnessed, two abreast, and one in front, with would be wonderfully little noise or fuss, with all the promptness of action. The reason was that all the men were thoroughly drilled, and each had a particular duty to perform, and knew it.

The moment the call was given, Bob, Charlie, having received no telegraphic "stop" had at once run to ring up the men who had, like Joe Dashwood, been sleeping close at hand. He rung up the engine driver first. At the same moment, his comrade on duty had run round to the stable, where the horses stood ready harnessed, and brought them out. The driver, when roused, flung on his coat and helmet and mounted the engine. It was a steam fire engine that is, the pumps were worked by steam instead of by hand. The firing was ready laid, and the water kept ready up on the self-acting by a gas-jet. He had scarcely lighted the fire and blown off the gas, when the engine comsteps as if their bodies were made of cast iron.

Arrived at a small street not far from the Regent Circus, young Dashwood entered a fire station there, and found a comrade in the act of dispersing himself on a narrow trestle bed, on which there was no bedding but one blanket.

"Ah, Joe, is that you?" said the comrade, with a violent yawn.

"All that's left of me, anyhow," replied Joe Dashwood, as he hung up his helmet and axe on his own particular peg. "Been much doing, Bob?"

"Not much," growled Bob, "but they don't give a poor fellow much chance with those telegraphs. Roused me four times within the last hour for stops for chimneys.

Just as he spoke, one of the sharp, little telegraphic bells rang viciously. He went to the instrument with sleepy eyes.

"Another stop for a chimney," he muttered with a deprecating growl. By this he meant that the head office in Watling Street had telegraphed that a chimney had caught fire in some part of London, and was being looked after, and that he and his mates were to stop where they were and pay no attention to it, even though some one should rush into the office like a madman, shouting that there was a fire in that particular place!

Having acknowledged the message, Bob lay down once more, gave another expostulatory grunt, and drew his blanket over him while Joe Dashwood went home.

Joe's home consisted of a small apartment round the corner of the street within a few seconds run of the station. Off the small apartment there was a large closet. The small apartment was Dashwood's drawing-room, dining-room, and kitchen; the large closet was his bed-room.

Dashwood had a wife, "as light a little craft with as pretty a figure-head" he used to say, as you could find in a day's walk through London. When Joe entered, intending to go to bed for the night, he found Mary just up for the day.

"Hallo, Joe, up already?" exclaimed the fireman as he entered the room which was a wee bit shrivel of tidiness.

"Yes, Joe, there's plenty to do, and little May don't give me much time to do it," replied Mary, glancing at a crib which little May lay curled up in sheets like a rosebud in snow.

"It's been a bad fire, I think," said Mary, glancing at her husband.

"Rather. A beer shop in White chapel. House of five rooms burnt out, and the roof off."

"You look tired, Joe," said Mary.

"I on a bit tired, but an hour's rest will put me all to rights. That's the third fire I've been called to to-night, and I got a fall or two that nigh shook the wind out of me. Good-night, Jack, and good morning. I must make the most of my time. Seems as if people were setting their houses afire on purpose to worry us."

Scarcely had Mrs. Dashwood resumed her washing when his regular, heavy breathing proclaimed her weary husband already in the land of Nod.

Quickly and steadily she pursued her work. The gentle noise of the washing, the soft breathing of the sleepers, and the tiny ticking of the clock over the chimney-piece, were the only audible sounds, for London had reached its deadest hour, "twixt night and morning. Rioters had exhausted their spirits, natural and artificial, and few early risers had begun to move.

Presently, to these sounds was added a very distant one which made Mary stop and listen. "A late cab," she muttered to herself. The rumbling grew more distinct and soon proved to be a hurried cab. Mary cast a look of anxiety into the darkness, wiped her hands quickly and taking up a pair of dry boots which had been standing near the fire, placed them beside her husband's coat. The cook had rushed shrieking to a window, and a fireman had borne her, kicking, down the ladder and left her in a neighboring house in fits. As she could not answer questions, it could not be ascertained whether there were any more people in the burning house. "Try that window, Dash-wood," said the officer of the station: there is' nt much smoke there." Dashwood, when speaking, had ascended and leaped into the room, but could hardly see for the smoke. Knowing that the air

Joe laid his bundle carefully on the bed, saying, "All right, now," and vanished like a wreath of the smoke into which he plunged again.

In three hours more the fire was smothered, and Joe went home with his gallant comrades. His found Mary ready with a cup of hot coffee, and the Rosebud ready with a kiss. The accepted the kiss, and swallowed the coffee, and in a few minutes after, was snoring profoundly.

The Street of the Idlers.

Translated from the German.

Bremen is at present one of the chief mercantile towns in Germany; but years ago swamds and bogs stretched far and wide where now warehouse stands by warehouse. The idle, humid mist of swamp lived in these swamps; they were content with things just as they found them, and never thought of improving their condition. One of the peasants who possessed most land was nevertheless poorer than the rest, for his cabbage-fields were the most sandy, and his meadows were under water the greatest part of the year. He had seven sons, all strong and well grown. They strolled about all day long, looking into the water, and watched the wind and the weather. They always returned hungry as wolves, for nothing sharpens the appetite like exercise in the open air. They looked a race of giants when seated round the oaken table.

After dinner they retired to the hay-loft and slept for an hour, and when they had rested they strolled leisurely to the banks of the river to watch the fisherman drawing their nets. With the setting sun they returned, had a good supper and then retired to rest, and slept till the sun stood high in the heavens.

Sometimes the father said he was growing old, and required more help; but this seemed ridiculous, for he lounged all day an the bench before the house, like any of the neighbors. The mother mirked the goal, for they could not afford to keep a girl, and prepared the dinner, which consisted chiefly of carrots and cabbage. She fetched the firewood and carried the water; indeed she did all the housekeeping. The neighbors called the seven brothers the seven idlers, for certainly they surpassed all in taking their ease.

Thus years went on. At length the seven brothers thought they would like to earn a livelihood. They went from house to house, offering their services; but the neighbors laughed at them, called them the seven idlers, and sent them away. They returned in the evening dissatisfied and weary. For the first time in their lives they did not relish their supper, nor did they retire to rest as early as usual, but sat up talking till late at night. They came to the conclusion to leave home and seek for work elsewhere. The parents tried to dissuade them, but in vain. The next morning the seven brothers went forth with hoes and spades. Their parents wept all day long, but they did not return.

Month passed after month, and then one year and then another. Their existence seemed almost forgotten in the village, when suddenly the cry was heard, 'The seven idlers are returning! The seven idlers!'

The neighbors rushed to the windows. Yes, there they were, with spades, and hoes, and all kinds of strange implements. They went straight to their father's cottage; no one was admitted that evening, and none knew what they told him.

The next morning at break of day they went with shovels and spades to their father's meadows, and commenced digging a deep ditch that drained the water from the fields, and in a short time the meadows stood free from water. Then they threw up an embankment between the sandhills that bounded their father's land, to keep the water from overflowing in spring.

When the neighbors saw the beautiful rich grass on the meadows they said, 'Oh, the idlers, they do not like standing in the water and fishing for the hay as their father did. They are afraid of work.'

In the autumn the seven brothers carried their stones and wood to build a house near their father's cottage.

'Oh, they think the little cottage too convenient,' said the neighbors again; 'they are afraid of the trouble.'

In the spring the brothers tilled the ground, and, as they had ample time before the harvest, they built another house. At length seven houses stood in a row beside the little cottage, and the seven brothers married, and lived happily near their parents.

'They are afraid of being burdened by their relations,' cried the neighbors who lived with their sons and daughters-in-law in one house.

The seven idlers now built stable and barns opposite their dwellings, and made a pavement of stone.

'They are afraid of cleaning their boots,' whispered the neighbors, who were accustomed to sink ankle deep into the mud of their roads.

They also planted a row of trees on either side of the road.

'It is to save the trouble of a walk into the woods,' thought the neighbors.

The last offense was the greatest of all. The seven brothers dug a well. Then the neighbors shrugged their shoulders higher than ever.

'They are too proud to do as their father did,' said they; 'they are too idle to carry the water from the river in pails.'

Since then many years have passed, the barns and the trees have disappeared. The idle neighbors retired farther into the bogs as industry and civilization advanced. But still it is known as 'The Street of the Idlers,' though warehouse stands by warehouse, and a race of hard-working, industrious men live in those streets, pouring the produce of foreign lands into all the markets of Germany; for not though sloth and indolence, but by labor and diligence, do we improve our condition and force nature into our service.

Our Exchanges.

THE TRUE WOMAN, Baltimore, claims to be the champion of that "large majority" of the women of America who still want the right not to vote. There must be such a majority if Mrs. Stanton, the leader of the Woman Suffrage party is correct in saying that "Whenever the women of the country as a body demand the right of suffrage they will get it." Time will prove whether they will or will not get it ar not. In any case they would be wise to consider the counsel of Jean Ingelow, the sweet English poet, who says in a letter which the "True Woman" publishes: "So long as household work is thought degrading, there never can be anything like universal education." How to keep a house clean, and to assist even in a kitchen, without the least sense of being lowered, or the slightest personal deterioration might surely be managed if women gave their minds to it.

THE SOUTHERN PLANTER AND FARMER. —We notice this able, agricultural publication for the benefit of our readers as well as a compliment to the editor and proprietor. It is a monthly, published at Richmond, Va., in magazine form, and is well filled with invaluable instruction on Agriculture. Price, $1.50 per year. We can honestly say that all our Southero farmers will find their money well expended in subscribing for it.

THE proprietor of a forge, not remarkable for the correctness of language, but who by honest industry had realized a comfortable independence, being called upon at a social meeting, for a toast, gave: "Success to forgery"

THE SOUTHERN WORKMAN.

Never Satisfied.

A man in his carriage was riding along,
A gayly dressed wife by his side;
In satin and lace she looked like a queen,
And he like a king in his pride.

A wood-sawyer stood on the street as he passed:
The carriage and couple he eyed
And said, as he watched with his saw on a log,
"I wish I was rich and could ride."

The man in the carriage remarked to his wife,
"One thing I would do if I could:
I'd give all my wealth for the strength and the health
Of the man who is sawing the wood."

A pretty young maid with a bundle of work,
Whose face as the morning was fair,
Went tripping along with a smile of delight,
While humming a love-breathing air.

She looked in the carriage—the lady she saw,
Arrayed in apparel so fine:
And said in a whisper, "I wish in my heart
Those satins and laces were mine."

The lady looked out on the maid with her work,
So fair in her calico dress;
And said, "I'd relinquish position and wealth
Her beauty and youth to possess."

Thus it is in this world. Whatever our lot,
Our mind and our time we employ
In longing and sighing for what we have not,
Ungrateful for what we enjoy. —*Selected.*

"In Everything give Thanks."

A grateful spirit is most valuable to its possessor, leading him to contemplate life on the sunny side, to dwell upon its privileges, rather than its trials, to bless God for what he has, rather than complain of what he has not; plucking everywhere sweet flowers and pleasant fruits; instead of tormenting himself with thorns.

A gratefel spirit is most happy in its influence on others, as well as upon the person who cherishes it.

Smiling Goodness.

A Sabbath-school superintendent was once asked on what grounds he selected a teacher from a number of young ladies, all of whom were strangers to him. "she looked as though she could smile," was the significant reply. Smiling, rather than long-faced goodness; a cheerful, rather than a sanctimonious face; a thankful, instead of a whining, complaining spirit, is of the highest importance to one's useful ness.

Knowledge and Love.

Said a little fellow to another in his childish way, "My teacher is the lagetest in the Sabbath-school." "But," replied the other, "She don't *know* as much as mine." "Oh," answered the first, "but she *loves* more." This love ing more is indeed the chief thing. Without love, whatever knowledge one possesses, he is comparatively powerless for good, more likely to chill with death than to warm with life.

Worth of Sunshine.

It the aggregate value of the agricultural products of the United States is many hundred millions of dollars a year, the average value of a day's sunshine during the time of the growing and ripening of the crops is estimated at several millions of dollars. Of what untold value then toward producing the fruits of righteousness for which we by Jesus Christ, would be the daily sunshine of peace and joy beaming forth from the lives of his loving, praising disciples,—thus reflecting, as they should, the glory of the Sun of Righteousness.

Some Blessing Left.

A Christian sailor who lost one of his legs at the Battle of Trafalgar, said that he could very often measure the faith of the people who conversed with him, by the way in which they alluded to his misfortune. Nine out of ten would exclaim, "What a pity that you lost your leg;" and only one in ten, "What a blessing that the other was preserved!"

When God comes into the family and takes away one child, instead of complaining because He has taken one, it would be wise to thank Him that He left the rest. Or He may crush a man's business, and strip him of all his worldly wealth, and yet leave untouched and uninvaded what is dearer than all—the cradle of his only child. Would it not be nobler for such a man to be thankful for what God left, than to murmur to what He took away?

"The Lord giveth and the Lord taketh away," but He always gives more than He takes away. If God robs a man of his riches, He leaves him his health, which is better than riches. If He takes health, He leaves wealth. If He takes both, he leaves friends. And if he takes all these—house and horse and worldly goods—God's providence is not yet exhausted, and He can make blessings out of other things which remain. He never strips a man entirely bare. A man may be left a beggar upon the highway, and yet be able to give increasing testimony to God's goodness and grace.—*Beecher.*

Thundergust.

Don't come down into the breakfast room of a morning with a thunderclond over your pitiful phiz. What are you mad at? Have you a note to pay in bank and not a dime to meet it? Have you the headache? Did the baby wake you from a sound sleep? Has the newsman failed to leave you the morning paper; or has a bill been presented at your door bright and early, which you know very well ought to have been paid long ago to the patient baker, the needy dressmaker or the begrimmed mechanic? Maybe you out your face while shaving, or stumped your toe against the cat, or broke your watch-spring in winding it up. Indeed because you have suddenly remembered that you failed to meet a business engagement yesterday; or took a short turn on a friend, or cheated somebody, and that it is about being found out,—what then? you would not have cared otherwise you would not have cared the snap of your finger about it; perhaps as you entered the door and scanned the breakfast table, you missed some favorite dish. But does one of all these occurrences justify you in clouding the whole household, in hurtling the feelings of your children, in discouraging the servants, and outraging the guests at your table? The man or woman who comes to the family table with a scowl is a brute in nature, and only wants opportunity to bring out his hatefulness and his meanness. If, when you come to the breakfast room, you are sad from discouragement, from fatigue, from illness, or from losses, you are excusable, and you have our sympathy; but to meet the family with a frown, and cast a gloom over the whole household, simply because everything has not gone exactly according to your sovereign pleasure, you, a poor pitiful worm of the dust; why, it is so supremely ridiculous, that anything else than contempt for it is simply impossible.

He came into the breakfast room one morning, and in a moment it was seen that a cloud was on his brow. There sat the ladylike wife waiting for him; the table fairly groaned, not with plated silver but the solid material. The cloth was white as the snow; the family were seated around in pleasant expectancy; everything was smoking hot, and not an article there but that even a pampered appetite could revel on. But the man's favorite dish was not there. Closer he came to the table, and with the inquiry, "Did you not know that I wanted a shad for breakfast?" he raised his foot and overturned the whole table on the floor.

"It was at the fire being kept warm for you," replied his noble wife in her quiet ladylike, and conquering way. In an instant the haughty husband comprehended the situation; the next, he was on his knees, exclaiming, "Dear wife, you are nothing less than angel born." Not a great while after that he died. His will was opened; his wife was executrix; he left her all his, and two millions of dollars.—*Hall's Journal of Health.*

Take Care of Your Habits.

Horace. B. Claflin, n prominent merchant of New York, is as quaint and humorous as he is keen-witted and rich. They tell the following good story about him:

On the 15th of February, about five o'clock, Claflin was sitting alone in his private office, when a young man, pale and care-worn, timidly knocked and entered. "Mr. Claflin," said he "I have been unable to meet certain payments because certain parties have not done as they agreed by me, and I would like to have $10,000. I come to you because you were a friend to my father, and might be a friend to me.

"Come in," said Claflin, "come in and have a glass of wine." "No," said the young man, "I don't drink." "Have a cigar, then?" "No—I never smoke." "Well," said the joker, "I would like to accommodate you, but I don't think I can." "Very well," said the young man as he was about to leave the room, "I thought perhaps you might. Good-day sir!" "Hold on," said Mr. Claflin; "you don't drink?" "No." "Nor smoke nor gamble nor anything of the kind?" "No, sir! I am superintendent of the same Sunday-school.

"Well," said Claflin, with tears in his voice and his eyes, too, "you shall have it, and three times the amount, if you wish. Your father let me have $5,000 once, and saved me the same questions. No thanks—I owe it to you for your father's trust."

The Friend of Sinners.

One of the sweetest and most attractive titles of our Lord Jesus Christ is "the Friend of sinners." He was in His manner so gentle toward offenders, so graciously did He seek out the lost, and so tenderly did He invite the erring to pardon and reconciliation, that it was slanderously said of Him, that He was the Friend of sin as well as of sinners. This was the old heathen slander of the days of Celsus. Philosophy and Pharisaism sneeringly asserted that Jesus treated iniquity so lightly, and made it so easy a matter to escape from its consequences, that He was rather the aider and abettor of sin than its destroyer; and they blasphemously declared that His apostles had preached the doctine of "let us do evil that good may come." My brethren, you know that this charge was utterly and entirely false, and those who uttered the libel knew it to be so too, if they were at all conversant with our Lord's history. In His example evil meets with no encouragement, and for His teaching it finds no excuse. If the most secret and slightest acquaintance with the objects of His life, they must have known that though the Friend of sinners He was emphatically beyond all other public teachers the enemy of sin. His hatred toward it was not a mere passion: it was a principle. It did not flash forth now and then; it was a constant flame. He hated sin, if I may so say, implacably, never making a moment's truce with it; He pursued it by day in His ministry, and by night in His prayers; He lived to smite it, and He died to destroy it; and now in His risen glory it is upon sin as well as upon Satan that He sets His heel. He was manifested that He might destroy the works of the devil; and He never erected a battering engine which will not leave of Satan's stronghold so much as one stone upon another which shall not be thrown down—*Spurgeon.*

Dolph Stearns.

Dolph Stearns was poor and old and wretched. All this could be seen at a glance, as he shambled down the street, his long, unbuttoned coat streaming in the wind, and his bloated hands thrust into his pockets.

Dolph Stearns! Everybody in the town knew him, and everybody had a decided feeling in regard to him. The old remembered him as a school-boy—the smartest, handsomest and bravest of all. His voice was surest in recitation, his step fleetest on the playground, and his hands most willingly extended to a falling comrade. He climbed highest, swam longest, and performed the most marvelous feats of skating.

When he left school and commenced business people said he had lost one fault. He drank of the intoxicating cup, yet he was too good and noble to make a drunkard. So his friends believed, while he never dreamed of danger. But now, by old and wretched, he was that most pitiable of all objects, a slave to the demon of the still.

It was the last day of the year and he was passing the finest house in the village, when its owner called to him from the opposite side. Dolph. My wife wishes me to give you this basket."

"Ah, Tom! it's you, is it, old fellow?" was the response. "Glad to see you looking so comfortable. Tell your wife I'm much obliged to her. She's a good woman, and you're a fortunate fellow, all around. Heard somebody say you got to be judge. When we were boys together, you did n't take all the prizes, Tom."

"No, Dolph, I didn't," but—"

"I know all about it," exclaimed the wretched man, interrupting his friend. "No use talking about it, Tom. It's liquor that's made me what I am. You let it alone, and I didn't. I have it's any boys to follow my example. God took the only one I had, and I'm glad of it. He might have been a drunkard, and that's worse than being dead. If I could get all the boys together, I'd tell them never to taste the first drop of liquor. "I thought—but no matter what I thought. Moderate drinkers make drunkards, and the only safety is in total abstinence." — *The Banner.*

John B. Gough.

BY REV. T. L. CUYLER, D. D.

To John B. Gough belongs the unique distinction of having addressed more human beings than any man now living on our globe. And no man living has been the more innocent occasion of so much hearty laughter and as many honest tears. Spurgeon began ten years later than Gough, and has not spoken more than half as often. Henry Ward Beecher did not rise into celebrity until Gough had been for half a dozen years the prince of platformers. For thirty years no speaker has commanded such crowds who were eager to pay for the privilege of listening to the most exciting of discourses delivered in the most dramatic voice and gesticulation. It may seem presumptuous to say it, but I have often thought that Gough is the only real rival of Garrick. The great English actor recited the brilliant words of Shakespeare and Sheridan, but Gough composed his own oration. Garrick had the best of scenery and companies of fellow-actors. Gough makes his own "scenery" with his tongue, and stands up alone. Garrick had the widest variety of topics, but Gough's most splendid triumphs of speaking and acting have all been achieved on that old, and "thread-bare theme of temperance." Garrick only aimed to produce laughter or tears. Mr. Gough, as a great Christian philanthropist, aims to persuade, to reform, and to convert his fellow-creatures to sobriety and religion. Rarely has a man ever employed his peculiar gifts more nobly than has my well-beloved friend and brother, John B. Gough.

He is a native of Sandgate, in England, and was born in a poor little cottage, on the 22d of August, 1817. His father was a common soldier in the British army. I need not recount his familiar history, how he came to America with but half a dollar in his pocket, how he struggled along in the most bitter poverty, how he was behind the paper's hearse that bore the body of his poor, pious mother to the Potter's Field, how he fell into the most degraded drunkenness, how he was rescued by Joel Stratton, the Worcester shoemaker, and signed the total abstinence pledge with a trembling hand, how he relapsed and signed again, until at last, by God's grace, he stood up as an emancipated and converted man. Mr. Gough's hope of remaining a reformed inebriate, is founded on the "Rock of Ages." His trusts God, and not himself. The most attractive trait in Brother Gough's noble character is his earnest and devout faith in his Redeemer.

Soon after Mr. Gough's reformation he began to lecture in behalf of total abstinence. At first he spoke to a few country-folk in school-houses and churches. Then he went to Boston, where, after three hundred public addresses, he can draw larger audiences than any man alive. Deacon Grant was his early benefactor, and was always proud of having befriended him. For many years Mr. Gough was a member of Dr. Dev. De Kirk's church, but of late has been connected with the Congregational church of Boylston, Mass.

Next to the grace of God, and the prayers of a godly mother, our friend owes most to his faithful Yankee wife. He married Mary Whitcomb, of Worcester county, on the 24th of November, 1843. At the time of their marriage he was worth the cost on his back, and ten silver dollars. The same evening he fulfilled an engagement to talk temperance in a school-house. She took him on trust, and has stood by him until he has risen into a world-wide fame as an orator and philanthropist. When her young husband—still rather "shaky," and in danger of falling—introduced her to Deacon Grant, the shrewd man talked with her a few moments, and then slyly whispered in his ear, "John, she'll do." She has done, and nobly too, for twenty-nine eventful years. During the long period of his public career, Mr. Gough's home has made two visits to Europe, and spoken in every considerable city and town of the British empire. He has had the gifted and the titled among his auditors, yet the common people hear him gladly.

He has delivered over seven thousand public addresses, some of them to audiences of ten thousand people. He has travelled over a sufficient number of miles to have carried him twelve times around the globe. He has secured over two hundred thousand signatures to the pledge. By the help of God he has reformed a large number of those who had sunk into that same abyss of drunkenness from which he himself was rescued. Much of the large amount of money paid him for his addresses, has been generously given away in charity.

As an orator, Mr. Gough reached his climax of power twenty years ago. His voice was then as musical as a flute, with marvelous power in the tender, pathetic passages. Long and hard service has made it somewhat harsh and husky, but it is still an instrument of rare compass and flexibility. Sometimes he overacts, especially when weary. But in the days of his highest glory no man could surpass him in delineation of character and in impersonations of "all sorts and conditions" of humanity. He has often been a mother, a child pleading with a brutal husband, a plantation negro, a Scotch deacon, a Frenchman, a raw Irishman, a pompous coxcomb, and a poor, besotted toper, all in one hour's address. And he excelled in every one character. Truly, God made a wonderful creature when he made John B. Gough. And the grace of the Lord Jesus made a glorious philanthropist and reformer when it converted him to the service of his Divine Master. May he live fifty years longer!—*Christian Weekly.*

An inveterate drunkard once asked a Quaker whether he knew of a method whereby he could cure himself of his dominant vice. "Friend," answered Broadbrim, "it is as easy as keeping a penny." "How can that be?" said the drunkard; "every man can keep his hand open, but as to abstaining from liquor, that's quite a different thing." "Then thee has not gotten a glass of gin in thine hand, and before thee dost raise the tempting liquor to thy lips, open thine hand—and keep it open. Then breakfast the glass, but thee breakest not the laws of sobriety."

Dr. McCosh now president of Princeton College, tells the story of a negro who prayed earnestly that he and his colored brethren might be preserved from what he called their "upestitin' sins."

"Brudder," said one of his friends, at the close of the meeting, "you sint got the hang of dat ar' word. It's bowstin,' not upestitin'."

"Brudder," replied the other, "if dat's so, it's so. But I was prayin' de Lord to save us from the sin of intoxication, and if dat aint a upestitin' sin, I dunno what am."

No coon that the humblest of us has wrought ever dies. There is one long, unerring memory in the universe out of which nothing good ever fades.—*Woolsey.*

Gems.

I DO not want the walls of separation between different orders of Christians to be destroyed, but only lowered, that we may shake hands a little easier over them.—*Rowland Hill.*

LET it be a subject of daily prayer, as well as an object of daily endeavor to do our right work at the right time. God in his providence will never leave you at a loss as to what to do and when to do it, if you will lead you if only you will be led by him. Oh! when will we learn the lesson so essential to our peace —to live well the one hour, and do well the one work which God in that hour gives us?—*Norman McLeod.*

A SKEPTIC who was trying to convince a Christian colored man by the contradictory passages in the Bible, asked him how it could be true that we sing in the Spirit and the Spirit in us. "Oh," replied he, "dar's no puzzle 'bout dat. It's like dat poker; I put it in de fire till it gets red hot—now de poker's in de fire, and de fire's in de poker.

REV. MARK WILKES was, in his day, one of the marked men in the Dissenting ministry of England. He had a quaint mode of telling method of illustrating Scriptural truth. An American minister of our acquaintance once heard him introduce his text in this manner: My hearers! Did you ever see a cat? Did you ever see a cat walk? Did you ever see a cat walk upon the top of a wall? Did you ever see a cat walk upon a wall covered with broken glass? How carefully she lifted each foot! How slowly and cautiously she set it down again! So would the text from which I propose to speak have you act. "See that you walk *circum-spectly.*"

SITUATIONS are like skeins of thread or silk. To make the most of them, we need only to take them by the right end.—*Madam Swetchine.*

THE best rule under persecutions is, if you are unable to suffer for religion, see that religion does not suffer by you.

KEEP your soul in an attitude of heartfelt trust in God, and the more you are encompassed with troubles and infirmities, hope the more steadfastly in him.

A CHRISTIAN has advanced but a little way in religion when he has overcome the love of the world; for he has still more powerful and importunate enemies: self—evil tempers—pride—sinful affections—a stubborn will. It is by the subduing of these adversaries that we must chiefly judge of our growth in grace.—*Cecil.*

IF you intend to do a mean thing, wait till to-morrow. If you are to do a noble thing, do it now.

LET thy thoughts be such to thyself as thou art not ashamed to have them known to them: and that if it should be suddenly asked, "what thou thinkest of," thou might'st not blush to tell.—*Jeremy Taylor.*

IF is the greatest of all sins always to continue in sin. For where the custom of sinning waxeth greater, the conscience for sin grows the less; it is easier to quench a spark than a fire.—*Warwick.*

CHRISTIAN graces, like the stars, shine brightest in the darkest hour.

TO UNDERSTAND truth, one must live it.

OF the hundred good things in this life, ninety-nine are health.

OUR homes should be as holy as our churches, to say the least.

THINGS are not to be done by the effort of the moment, but by the preparation of past moments.—*Cecil.*

LIGHT comes from above; you will get more light on the Scriptures by prayer, than in all other ways. Look up.—*Moses Stuart.*

Trifles.

A WORTHY old farmer, who was being worried in his cross-examination by a lawyer, exclaimed, "Look there, squire, don't you ask a good many foolish questions?"

A BOSTON philosopher thinks it is a good illustration of what men will do for conformity's sake, that there are at any given time twenty-two millions of people, more or less, each wearing a silk hat to please the rest.

A WELL KNOWN German florist related to me the other day, in a high state of irritation his troubles in this way. He said: "I have so much drouble with de ladies of ben dey come to buy mine rose; dey want him hardy, dey wants him doubles, dey wants him mooudly, dey wants him fragrand, dey wants him nice gouler, dey wants him eberydings in one rose. I hopes I am not what you calls one uncallant man, but I have sometimes to say to dat ladies, Madame, I never often sees dat ladies dat was beautiful, dat was not good, dat was good tempers, dat was young, dat was clever, dat was perfection in one ladies. I see her much not!"

THREE Irishmen, who had dug a ditch for four dollars, were quite at a loss to know how to divide the pay "equally." But one of the number had been to school, and reached division in the arithmetic, so it was left to him. He did it at once, saying: "It's aisy enough! Sure, there's two for you two, and two for me, too." The two received their portion with a greatly increased respect for the advantages which learning gives a man.

A LITTLE girl was sent to the pasture to drive home the cow. While thus engaged, she treated herself to climbing an unnecessary fence, from which she fell, and was severely scratched and bruised. On returning home she was asked if she cried when she fell. "Why, no!" she replied; "what would have been the use? There was nobody to hear me!"

TEACHER—Who was the first man? Head boy—Washington; he was first in war, first in—— Teacher—No, no; Adam was the first man. Head boy—Oh! if you 're talking of foreigners, I s'pose he was!

IT seems to be a pretty general opinion that Congressmen are more in need of back-bone than back-pay.

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,107,307.47, being an increase of fifty per cent. on the balance due depositors at the close of the present year.

There are no stockholders in the Company, and all the profits, over and above expenses, go at each interest-day to the credit of the depositors as interest. The rate the last year has been six per cent, and the amount paid since March, 1871, has been $218,311.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report 6% on one dollar deposited.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by Pass Book only.

Special arrangements made for receiving business accounts payable by check, and bearing 6 per cent. interest.

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED,

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and without loss of interest.

For full information about the Bank address the Secretary at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent by mail free on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required may be promptly had on addressing the President, Hon. J. W. Alvord, Esq., or H. C. Parsons.

FOR SALE
IN
YORK COUNTY.
A
SPLENDID FARM

Of one hundred and forty acres, with a large dwelling containing seven rooms, a large barn and all other out-buildings, and in a high state of cultivation. There is abundance of fruit on the farm, consisting of apples, peaches, pears, plums, cherries, &c., and a quarter mile from the farm is a good neighborhood, near church, school, and a large number of mechanics. There is also near the mill, a fine grocery and dry goods store, which is a good business stand. This is an opportunity seldom offered to the public. For further information apply to

For further information address
D. B. BRATTEN,
Hampton, Va.

WANTED.—A lady graduate of a Normal School, three years experience desires a position in a school or family.
Address Miss M. Office "Southern Workman," Hampton, Virginia.

Corner of Princess Anne Street.

Bank hours, 9 A. M. to 3 P. M. Open also Saturday nights from 6 to 9 o'clock.

SIX PER CENT. INTEREST

is now paid upon deposits monthly. Dividend days July 1st and January 1st. Interest compounded if not drawn. Deposits received small or large. Accounts payable by Check.
Certificates of Deposit bearing six and four per cent. interest issued.
Deposits of any amount received from any person, and repaid on demand.

J. W. ALVORD, President. H. C. PARSONS, Cashier.

SOUTHERN WORKMAN

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. 2. HAMPTON, VA., JULY, 1873. NO. 7.

The Star-Spangled Banner.

Oh say, can you see by the dawn's early light,
Whatso proudly we hailed at the twilight's last gleaming?
Whose stripes and bright stars, through the perilous fight
O'er the ramparts we watched were so gallantly streaming;
And the rocket's red glare, the bombs bursting in air,
Gave proof through the night that our flag was still there:
Oh say, does that star spangled banner yet wave
O'er the land of the free and the home of the brave?

On the shore, dimly seen through the mists of the deep,
Where the foe's haughty host in dread silence reposes,
What is that which the breeze, o'er the towering steep,
As it fitfully blows, half conceals half discloses?
Now it catches the gleam of the morning's first beam—
In full glory reflected, now shines in the stream.
'Tis the star spangled banner—oh, long may it wave
O'er the land of the free and the home of the brave.

And where is that band who so vauntingly swore,
'Mid the havoc of war, and the battle's confusion,
A home and a country they'd leave us no more?
Their blood has washed out their foul foot-steps pollution.
No refuge could save the hireling and slave
From the terror of flight or the gloom of the grave.
And the star-spangled banner in triumph doth wave
O'er the land of the free and the home of the brave.

Oh thus be it ever when freemen shall stand
Between their loved homes and war's desolation.
Blessed with victory and peace may the heaven-rescued land
Praise the power that hath made and preserved us a nation.
Then conquer we must, when our cause is in just,
And this be our motto, "In God is our trust."
And the star spangled banner in triumph shall wave
O'er the land of the free and the home of the brave.

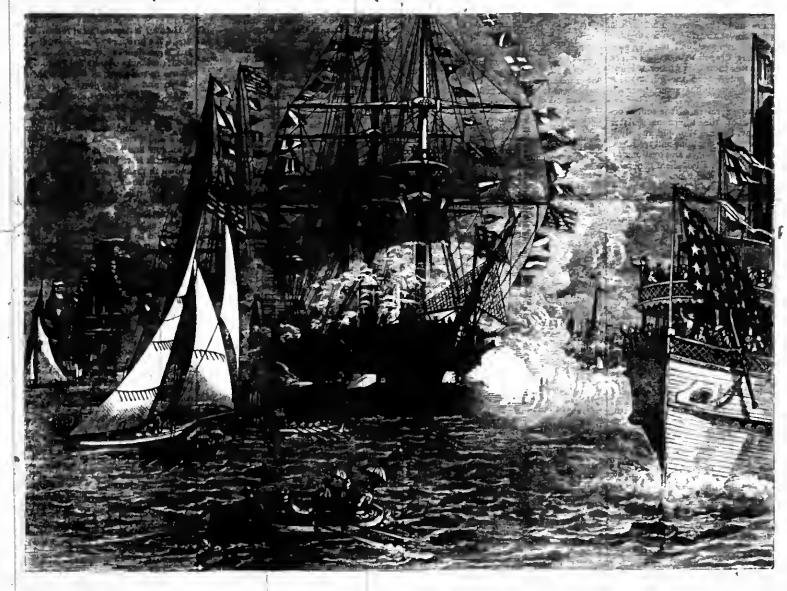
Our National Holiday.

Christmas, which is naturally, to all Christian people, the greatest and holiest of holidays, is the only festival of the year that can compare in its hold upon the hearts of the American nation, with the Fourth of July, the day which nearly a century ago, affirmed and assured our political independence.

There is no state in the Union, and no village in any state, and, it may almost be said, no boy in any village, wherein and by whom, some demonstration of rejoicing is not made in commemoration of the great work that our fathers did for us when in that famous document, our "Declamtion of Independence" they declared us to be a free people and showed the world that they and their fellow-countrymen were able to make their words good. Wherever the American flag waves there are sure to be found some loyal citizens who keep the national holiday with the time-honored ceremonies of speech-making and gatherings together and fire-crackers, and such festivities as the season permits, while in the cities and thickly settled neighborhoods the whole population devote themselves to gayety in one form or another.

Our national poem, the "Star-spangled Banner," which stands at the head of this page, is sung on sea and shore, by old men and little children, and a stranger set down suddenly in the midst of one of our Fourth of July crowds might not unjustly think that the whole country had for the time being gone mad. The illustretinn which accompanies the poem, gives a brilliant picture of the harbor of New York in its Fourth of July dress, and probably the world rarely presents a gayer scene than this. In the centre of the cut, is a great ocean steamer covered from deck to topmast with the signals and pennants and flags of all nations, the American flag holding always of course the prominent place, while the clouds of white smoke wreathing upward from her forward ports, show that u salute has just been fired. To the right is seen one of the numerous swift little steamboats which fly upon the ferries or run up and down the rivers on either side the city, and its deckload of gayly dressed passengers, shows that it has been chartered for n picnic or excursion down the beautiful bay to the sea. The merry excursionists are evidently waving their handkerchiefs, hats and parasols, and hurrahing themselves hoarse in return for the big steamer's salute; and the dinners that they have brought with them in bags and baskets innumerable, will undoubtedly be discussed with the hearty appetites which come with cheerfulness and fresh air. Trim, sharply built yachts, light pleasure boats, square, heavily laden row boats, and here and there a well-manned man-of-war's boat fill up the spaces between the larger craft until it seems that the blue water is literally covered, and that collisions must be the rule, and not the exception.

In the distance is given a glimpse of the city with the spire of old Trinity church rising from the mass of lower buildings, while every public edifice shows some decoration in honor of the day, and the eyes at last get weary with the unvarying brilliancy of color in sky and sea and land. It seems surely that the American people appreciate their great holiday, and that underneath all the superficial rejoicing, there is a real, honest love and respect for the memories and associations which cluster about the Fourth of July and make it a day of thankfulness and hope to all true Americans. Our fathers made us what we are, and now it is well to remember that upon our fidelity and intelligent action as citizens will depend the future of our children and our country. Politically, our responsibilities are serious and in keeping the Fourth of July it is not wise to consider it as a day of mere merry making, but rather to try to keep in mind what is its real meaning as a national festival.



Great Britain.

The little cluster of islands lying in the Atlantic Ocean close to the western shore of the great European continent, claims the honor of having produced the nation from whose healthy growth we Americans have drawn our blood, our language and our main characteristics as a people. It was from Great Britain that the Puritans, driven by religious intolerance, voyaged valiantly to the unknown shore of New England; it was from Great Britain that the ships were sent, whose crews of knights and gentlemen, eager for adventure, settled along the coast of Virginia and her sister States; and it was in short, from Great Britain that the impulse came, whose power colonized our country and opened paths for the men of all nations who have since come to us and helped to make our nation what it is. A little later in our history it was the injustice and shortsightedness of Great Britain's rulers that forced our fathers into that desperate struggle for liberty which resulted in our present republican form of government; and though that struggle cost us a heavy price, yet there is no doubt that the men it produced owed much of their ability and sound political training to the influence of England and the educational advantages that the mother country afforded. In looking back upon our past it is impossible to deny the closeness of our alliance with the transatlantic people whose language is the same as our own, and it is diffienlt to estimate the importance to the world of friendly relations between the two great English-speaking nations. England and America stand nearer to each other to-day than any other two countries which exist; and while they are geographically and politically distinct, yet they are united by a real kinship which should enable them to work together for all good things and cause them to dread nothing so much as any international difficulty. While Great Britain has reason to be proud of the daughter who has grown so grandly and swiftly to the full stature of nations, America on the other hand need never be ashained to remember that English hands and hearts planted the seed and nonrished the young tree of American freedom.

Thomas Jefferson.

On the Fourth of July, 1826, just half a century after the Declaration of Independence was signed, Thomas Jefferson, one of America's greatest statesmen, died, on his estate of Monticello, in the state of Virginia. Eighty-three years before, he was born at Shadwell, now in Albemarle County, and having been educated at William and Mary's College, studied law and commenced practice at the bar when he was twenty-four years old, about two years after the beginning of difficulties between Great Britain and the colonies. His success as a lawyer was already assured when the political excitement preceding the Revolution altered immediately and permanently the course of his life, and he began his career as member of the House of Burgesses. When the Assembly was dissolved in 1769, he with many other members, declared themselves opposed to British legislation, and in 1775, Mr. Jefferson took his seat in the General Congress, as one of the delegates from Virginia, and in this position andoubtedly greatly influenced the action of his fellow-officials. He was governor of Virginia from 1779 to 1781, and although not actively engaged in military movements during that period, he narrowly escaped being taken prisoner by the British in his own house at Monticello. In 1784 he was appointed Minister to France, where he remained five years, laboring zealously for the general interests of his country, and on his return to America was almost immediately appointed Secretary of State, which office he held for three years. In 1797 he was elected Vice President of the United States, and in 1801 was chosen President. Four years after he was re-lected, and at the expiration of his term of eight years he retired to his beloved home at Monticello, where he remained during the rest of his life, occupying himself principally with the foundation and direction of the University of Virginin, which was established by the state of Virginia. It was his unwearied efforts which induced the State Legislature to grant the necessary funds for the endowment of this institution, and he not only succeeded in obtaining ample grants for that purpose, but planned the buildings and superintended their erection himself, and with his own hand drew up a large and valuable catalogue of books for the library. The last letter which was probably ever written by Mr. Jefferson was in reply to an invitation from the citizens of Washingtou to visit that city on the fiftieth aniversary of American independence, and although his health obliged him to decline, yet his letter glows with the same warm admiration for republican institutions which had characterized his whole life, and the inscription upon his tomb undoubtedly includes the acte of his life of which he was especially proud. He is there set down as the author of the Declaration of Independence, of the Statute of Virginia for Religious Freedom, and as the Father of the University of Virginia, while in one of the papers to be found in his printed memoirs is given an epitome of those great political measures which were due mostly or entirely to his firm resolution and remarkable industry. In point of time, the first of these measures was the prohibition of the further importation of slaves by sea or land into the state of Virginia, and was carried without opposition in 1778. This was followed by the abolition of eutails which broke up the hereditary aristocracy and prevented the accumulation of vast masses of property in single lines of families, a state of things which Mr. Jefferson saw would have resulted in the division of the American people into the distinct orders of nobles and plebeians. To this he added the abolition of the principle of primogeniture and drew a law which gave equal inheritance to sons and daughters and became part of the revised code. It was Mr. Jefferson, also, who made the first attack upon the establishment of a dominant religion, and after a severe struggle, succeeded in passtug a bill which secured religious freedom to the people, a privilege of which the value is scarcely appreciated by the fortunate nation that has known nothing of intolerance. Certainly the man, who, dying at eighty-three, can leave such a record as this behind him deserves to be held up to the admiration of his countrymen, and need not fear that time will obliterate his fame.

Thomas Jefferson has many claims upon the remembrances of his fellow-citizens, and especially should his name be held in honor by natives of the state within whose borders he was born, did his greatest work, and forty-seven years ago this Fourth of July, died.

Cleanliness.

The summer heats which are now fairly upon us, bring with them a warning that it is folly to disregard, and the possibilities of disease and death that always surrond us will at this season ripen into certainties unless precautionmy measures are generally and carefully taken.

The numerous diseases, epidemic and otherwise, which prevail during the summer and autumn months, are many of them directly controllable and subject to well-established laws, and the fevers and cholerie affections so common at this time can be prevented much more easily than they can be enred. Attention to the diet is all important. The food should be light, and taken at regular hours, and cold drinks should be used only in moderation. Fruit ought to be eaten principally in the morning, and in very hot weather or during an epidemic should be avoided entirely after the middle of the day. All food whether vegetable or animal, should be perfectly fresh and free from all impurities, and cleanliness in every respect should be made the first consideration. Our houses should not only be kept clean inside hut outside. No manure heaps, or pig pens or open drains or sink leaders should be nllowed, and the cellar should be even more thoroughly looked after than the parlors. All decaying substances should be carefully removed, and where there is any system of sewerage, the pipes and traps should be kept in complete order, for the gases which urise from animal or vegetable decomposition are frequent causes of typhoid and other fevers and dysenteries. Personal cleanliness also should be insisted upon. Frequent bathing of the whole body end change of clothing is necessary, while plenty of pure air is indispensable.

Much of the suffering which humanity undergoes is avoidable, if we will only render nn intelligent obedience to the laws of God, laws which are as wonderful and as unchangeable in the physical world as in the moral, and each individual ought, to feel a personal responsibility in regard to his own and the public health.

Office Seeking.

Of all the appetites that curse young men, the appetite for office seems to me the silliest and the meanest. There is nothing which fills me with greater disgust than to see a young man, eager for the poor distinction which office confers. An office seeker, for the sake of honor, is constitutionally, necessarily, mean. I have seen men begin at twenty-one as prudential committees in small school districts, and stick to office until everybody was sick of them. Whether it rained porridge or potatoes, paving stones or pearls, their dish was always out. They and their families always had to be cared for.

Office always brings obligation and a certain kind of slavery. It brings something more than this—it brings insanity. A young man who allows himself to get a taste of it very rarely recovers. It is like tobacco, or opium, or brandy, producing a morbid appetite, and we need all through the nation, a new society of reform. There should be a pledge circulated and every where signed, promising total abstinence from office seeking. To this every young man should put his name. There are chronic cases that may be considered hopeless, but the young can be saved.

Do not let me be misunderstood; I have spoken of the thirst for office for the sake of office. My belief is that office should neither be sought for nor lightly refused. The curse of our country is that office seekers have made the place so contemptible that good men will not accept it, but so fix keep themselves removed from politics that all the affairs of government fall into unworthy hands. When a young man is sought for to fill a responsible place in public affairs—sought for and selected on the ground of fitness—he should decide whether he owes that duty to the public, and perform it well if he does. Office was properly regarded in the "good old colony times." Then it was considered a hindrance to business, and almost or quite a hardship; so much so that laws were passed, in some instances, compelling men to accept office, or pay a fine. So I would have you to do your duty to the public at all times, and especially in seeing that office seekers, by profession or constant practice, are crowded from the track, and worthy men put on.—*Timothy Titcomb.*

Providences.—People talk about special providences. I believe in the providences, but not in the specialty. I do not believe that God lets the thread of my affairs go for six days, and on the seventh evening takes it up for a moment. The so-called special providences are no exception to the rule—they are common to all men at all moments. But it is a fact that God's care is more in some instances of it than in others, to the dim and often bewildered vision of humanity. Upon such instances men seize them and call them providences. It is well that they can; but it would be gloriously better if they could believe that the whole matter is one grand providence.—*McDonald.*

THE Southern Workman.

ISSUED MONTHLY.

S. C. ARMSTRONG, RICHARD TOLMAN, } *Editors.*
J. H. LARRY,

J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

The Southern Workman.

HAMPTON, JULY, 1873.

Commencement Day at Hampton.

INTERESTING CEREMONY OF LAYING THE CORNER-STONE OF THE NEW HALL.—SPEECHES BY DISTINGUISHED VISITORS FROM THE NORTH AND NORTH OF ENGLAND.

Thursday, the 12th of June, 1873, was a day ever to be remembered in the history of Hampton by all friends of education and liberty and brotherly love. While the day's work is going on it is not easy to see how much is accomplishing, and a backward glance brings grateful surprise to the earnest worker. Such a glance we have taken on the 12th by those who have striven to make Hampton Normal School what it is, and many who sympathize in its success. Our readers who have followed the course of the Hampton Students' Band through our columns, will be glad to learn that the foundations of the new hall they are still working for are already laid, and the walls progressing. The ceremony of laying the corner-stone was made to coincide with the regular Commencement exercises of the school, and the combined attractions brought together a group of guests made up of whose names are known through this and other lands.

The very fact that so many people of social and intellectual position and influence in distant states and countries were drawn together by a common interest to attend the Commencement of a school for freedmen, and to call it one of the rarest enjoyments of their lives, is full of significance, full of thoughtfulness, for our cause and for our country.

Most of the party made the trip together from New York in the steamer Plantor of the Old Hampton Line. The admirable accommodations of this fine steamer, and the polite attentions of its officers combined with the pleasures of informal, social intercourse with cultivated people to make the outside passage a delightful one.

The steamer party were Rev. B. P. Hitchcock, D. D., and wife, New York; Rev. W. J. Buddington, D. D., wife and son, Brooklyn; Rev. Lyman Fay, New York; Rev. T. K. Fessenden, Connecticut; Rev. Dr. Bellows, New York; Rev. Dr. C. S. Robinson, New York; Hon. Alexander Hyde, Massachusetts; Hon. H. C. Dupee, Massachusetts; Dr. T. M. Coan, of the "Independent"; Mrs. Prof. Youmans, New York; Mrs. and Miss Sanford, New York; Mr. Robert C. Ogden and daughter, New York; Mr. Wm. A. Armstrong, New York; Prof. B. J. Northrop, Secretary of the Connecticut Board of Education; Miss Northrop; Mr. Samuel Holmes, New York; Mr. R. C. Smith, of Scribner's Journal, New York; Miss Julia Smith and sister, Connecticut; Miss McCosh, Princeton; Miss Magie and Miss Sloan, New York; Mr. and Mrs. R. B. Eldredge, Hartford; Mr. and Mrs. J. B. Beadle, Brooklyn; Mr. and Mrs. W. Smith, Massachusetts; Mr. J. Boyd, New York; Miss Mary Carpenter, England; Mrs. (Lt.) R. Hubbings, New York; Mr. Ludlow, New York.

Besides this party, there were present, Rev. George Whipple, New York; Rev. E. N. Cravath, New York; Mr. Edgar Ketchum, New York, Mr. Anthony Kimberly, Philadelphia; General Eaton, Washington, D. C.; Rev. Dr. Ruffner, Richmond; Col. Thomas Tabb, Hampton; Rev. Geo. F. Adams, Hampton; Mr. Cesar Perkins, Buckingham Co. Va.; Admiral Davis, Portsmouth; Col. Benjamin, Fort Monroe; Capt. Woodfin, Chesapeake Military Asylum; Mr. and Mrs. George Peabody Russell; Mr. Schafer, of the "Philadelphia Evening Bulletin"; Mr. Pleasant, of the "Richmond Dispatch"; Mr. Armistead, correspondent of the "Norfolk Journal"; and other friends and patrons of the school.

Most of this large party were entertained at the Wythe Hotel, which was opened for the first time on this occasion, and made a new many visitors by the excellence of its table and attendance.

The special thanks of the school and its guests are due to Capt. Woodfin, Governor of the Chesapeake Bay Veterans Asylum for the kindness with which he offered the hospitality of his house to the party, and placed his yacht and horses at their disposal.

The kindness of the Captain of the *Wyanoke* in touching at Old Point for the accommodation of the party, brought them to Hampton in time for the unexpected pleasure of attending the sacramental service at Bethesda Chapel on Wednesday evening, when sixteen of the students made public confession of their faith in Christ. The services were simple and touching. The little band, among whom was one of the graduating class, almost all of whom were already communicants, were received into the fellowship of the church by the Pastor, Rev. Richard Tolman, whose untiring and loving work among the students has been rewarded with many such fruits as this during his three years' pastorate.

Rev. Drs. Buddington and Robinson were invited to officiate in the sacramental services, and made needful addresses full of the emotion with which their hearts were full.

The tender interest of the occasion was felt by many, to be the most fitting preparation possible for the next day's exercises.

Thursday morning dawned under clouds that threatened to destroy much of the day's pleasure, but only increased it by the grateful shade and coolness.

The scholars gathered in their beautiful Assembly-room, marching to their favorite rallying song "Babylon is Falling," and after the opening exercises of prayer and singing, the morning was occupied in the examination of classes. Among the vigorously conducted and wide awake recitations, the senior algebra class deserves special praise, and so indeed do other classes in reading, arithmetic, natural philosophy, book keeping, grammar, and geography. All did well, comparing very favorably with those in Northern schools. But a better testimony than a brief school examination can give to the standard of scholarship in the institute is the fact that Virginia county superintendents have accepted candidates as teachers without question on the strength of a diploma from Hampton, and that a Hampton graduate of last year who has been teaching since his graduation has just passed a competitive examination in his district, and been creditably admitted to West Point.

The industrial department of the school occupied the very special attention of the visitors; the farm with its thrifty orchards loaded with promises for harvest; the girls' industrial room where over thirteen hundred garments have been made during the year, the printing-office with its fine Hoe cylinder press in full operation upon the "Chesapeake Pilot," and its compositors at work on the "Southern Workman," were visited with great interest as well as the little camp where our boys have braved the hardships of winter for the love of learning.

At noon, an elegant lunch was served in the parlors and broad verandah of the Teachers' Home, the weather preventing the use of the pavilion that had been erected and beautifully draped with flags for the purpose. After their own dinner, the fine school band entertained the guests with some of their sweet characteristic melodies.

The closing exercises of the school occupied most of the afternoon. After prayer by Rev. George Whipple, and singing by the school, recitations and readings, and songs, original essays and orations by the seniors followed, all of them generally excellent in quality and tone.

We give the Address of Welcome spoken by Miss Davis of the graduating class, as the specimen of these efforts, all of which would interest our readers, had we space for them. It was, like all the other speeches, strictly original.

ADDRESS OF WELCOME.

"Kind Friends—Ladies and Gentlemen,—We welcome you here to-day and feel ourselves highly honored to be favored with your presence. Welcome, a hearty welcome to you, kind friends, who have journeyed from afar to visit us to-day; welcome, a happy welcome to our Board of Trustees; and again, a cordial welcome to all. Looking over this assemblage I see many persons whose hearts, I believe, glow with brotherly love and sympathy, hoping to bless us in some way or our work. Many before us are some of the noble benefactors who have contributed so liberally to our school, (hear them applaud.) I have been struck with the munificence; Dr. T. M. Coan, of the "Independent"; Mrs. Prof. Youmans, New York; Mrs. and Miss Sanford, New York; Mr. Robert C. Ogden and daughter, New York; Mr. Wm. A. Armstrong, New York; Prof. B. J. Northrop, Secretary of the Connecticut Board of Education; Miss Northrop; Mr. Samuel Holmes, New York; Mr. R. C. Smith, of Scribner's Journal, New York; Miss Julia Smith and sister, Connecticut; Miss McCosh, Princeton; Miss Magie and Miss Sloan, New York; Mr. and Mrs. R. B. Eldredge, Hartford; Mr. and Mrs. J. B. Beadle, Brooklyn; Mr. and Mrs. W. Smith, Massachusetts; Mr. J. Boyd, New York; Miss Mary Carpenter, England; Mrs. (Lt.) R. Hubbings, New York; Mr. Ludlow, New York.

Besides this party, there were present, Rev. George Whipple, New York; Rev. E. N. Cravath, New York; Mr. Edgar Ketchum, New York, Mr. Anthony Kimber, Philadelphia; General Eaton, Washington, D. C.; Rev. Dr. Ruffner, Richmond; Col. Thomas Tabb, Hampton; Rev. Geo. F. Adams, Hampton; Mr. Cesar Perkins, Buckingham Co. Va.; Admiral Davis, Portsmouth; Col. Benjamin, Fort Monroe; Capt. Woodfin, Chesapeake Military Asylum; Mr. and Mrs. George Peabody Russell; Mr. Schafer, of the "Philadelphia Evening Bulletin"; Mr. Pleasant, of the "Richmond Dispatch"; Mr. Armistead, correspondent of the "Norfolk Journal"; and other friends and patrons of the school.

Most of this large party were entertained at the Wythe Hotel, which was opened for the first time on this occasion, and made a new many visitors by the excellence of its table and attendance.

The special thanks of the school and its guests are due to Capt. Woodfin, Governor of the Chesapeake Bay Veterans Asylum for the kindness with which he offered the hospitality of his house to the party, and placed his yacht and horses at their disposal.

The kindness of the Captain of the *Wyanoke* in touching at Old Point for the accommodation of the party, brought them to Hampton in time for the unexpected pleasure of attending the sacramental service at Bethesda Chapel on Wednesday evening, when sixteen of the students made public confession of their faith in Christ. ADDRESS OF WELCOME.

"Kind Friends—Ladies and Gentlemen,—We welcome you here to-day and feel ourselves highly honored to be favored with your presence. Welcome, a hearty welcome to you, kind friends, who have journeyed from afar to visit us to-day; welcome, a happy welcome to our Board of Trustees; and again, a cordial welcome to all. Looking over this assemblage I see many persons whose hearts, I believe, glow with brotherly love and sympathy, hoping to bless us in some way or our work. Many before us are some of the noble benefactors who have contributed so liberally to our school, (hear them applaud.) I have been struck with the munificence of this institution, and by your ample assistance we have been raised to this point and we still look to you for the future, for we want to be, we must be, nor what we want to be. We are still dependent; only making one step towards the point we are striving to reach, and when you see us climbing higher and higher up the hill of science you can but look back upon the past and feel that you have again received your money with usury.

Friends of Virginia, who are present with us to-day, we hope that you will never have cause to regret the building we are to-day receive as the cause of Virginia fluff was founded upon your soil. Your generous gift to us of the College Land Scrip shows that you appreciate the work that has begun here, and we can only acknowledge your magnanimity by using every opportunity given us in Virginia in your State from poverty and ignorance. She has, to-day, many who have enjoyed the advantages of this school, and are striving earnestly and Christian fervor to diffuse knowledge among her illiterate citizens. Let North and South unite their efforts in our work; institutions as this, from whose walls light may beam into all our households, filling us with joy and peace. With unspeakable joy can I welcome, with the rest, those walls light may beam into all our households, filling us with joy and peace. With unspeakable joy can I welcome, with the rest, those whose

lionalities are artificial. They transgress often the natural boundaries and depend upon artificial and arbitrary conditions. The three great races of Europe are the Celtic, the Gothic and the Sclavonic. The newest and most hopeful struggle of the last, now so large upon the horizon, is the strong sense of race. The Celtic and Gothic races war among themselves as often as with each other. Dane pounces on Saxon as fiercely as Goth on Celt. But the Sclavic race has a strong race feeling, and this puts the key to all the countries of Europe into the hand of Russia. Russia is not merely strong as Russia, but as the head and heart of the great Sclavonic race.

Our continent is the rendezvous of the ingatherings. All the races come to us and we shall develop them all into one great nation. We congratulate ourselves as well as them upon this fact.

I remember when the first regiment of black soldiers marched down Broadway, and as I stood watching them the question was asked me, How long shall we have separate cars for colored people—and I said this is a question that will settle itself. It has been said that there is prejudice of color in Boston as well as in Richmond. It is true, but there is in some sense *more* prejudice in Boston than in Richmond. I am glad, young men and women, that you are so thoroughly persuaded that there are not to take this kingdom by force. "The kingdom of heaven suffereth violence," but the dominion of society is not to be enforced differently. No man or woman ought to be willing to take more of it than is more than willingly given.

Many of you all I have been pleased with the religious tone of the students' speeches. While I do not find in my idea of God, the creation of evil, I do find a sorrow and solicitude permitted by Him, and more and more I see the bad and bitter bud of evil bloom into the sweet flower of good as the ages roll on. And the the blessed fact about the colored race is that this strong religious sentiment has been developed by suffering.

My young friends, do not forget God in your prosperity. The God of your fathers will continue to be your God as you continue to be servants of the Most High.

The most hopeful feature of this great movement is the moral rally of the race that we hear of. I believe that they will justify all our hopes.

This building is intended for the use of the girls, as the other is for the boys, and I must be permitted to say a word especially for them. I don't believe myself that girls are flattered as easily as boys, and I must be permitted to say that I have been charmed with the faces of these girls to-day; the sensibility and real beauty which I have seen in them I shall remember and cherish to my dying day.

General Armstrong tells us that this building will require $75,000, and that only about $9,000 are as yet contributed. The balance is surer than the General can believe even with his ardent courage and faith. Providence knows how to move the hearts of good people. While I do not make promises, I am sure that if he will come to New York next autumn, often our people return from the country, we shall get again such a meeting for I want you myself, Bishop Bedell and Dr. Bubbington, and others like them—such a meeting as will put him far on toward the great end of the design, and send this building up as fast as trowels can work."

The beautiful hymn "Angel of Peace" was then sung by the school choir, and prayer by Rev. Dr. C. S. Robinson of New York, and the invention of the divine benediction by Rev. George F. Adams of Hampton closed the exercises of this deeply interesting day—a day to renew our faith in humanity and our gratitude to God.

A Visit to a Hampton Graduate's School.

At the invitation of Miss Julia Rutledge of the class of '73, several of her former teachers paid a visit, on the 11th of June, to the school which she is teaching in Princess Anne County, Va. The bent of the weather and the sad condition of the roads made the long drive from Norfolk very fatiguing, but it was pleasant to notice on the way many indications of reviving prosperity, among which the plank road now in process of construction deserves a passing mention. The new and comfortable school-house in which Miss R. is teaching, is placed in a pleasant grove, and there on our arrival we found a large company of the parents and friends of the scholars assembled to meet us. After we had exchanged cordial greetings, the children were called in and as many of the pupils as the little schoolhouse would accommodate assembled in it to listen to their songs and recitations. About thirty children were present, many of them very young, all apparently greatly interested, and we could detect no flaw in the truly admirable order which reigned among them. The classes were all elementary. We were particularly pleased with the alertness and naturalness of the reading, and with the great progress which had been made by those who last October commenced with the alphabet. A picnic dinner in the woods pleasantly occupied the noon intermission, and at night we enjoyed the hospitality of Mr. Brown and Mr. Simmons. We returned to Norfolk on the 18th, heartily tired, but glad to have seen for ourselves something of the work of our graduates.

Mr. and Mrs. Dixon.

George and Eunice Dixon, members of the Society of Friends in England, and well known in this country, as interested in the education of the colored people, have just returned from England, where they have been raising means, by Readings and otherwise, to educate some of their former pupils at the Hampton Normal School. They have been very successful in a pecuniary way, raising money enough to aid forty-five students through the Normal Course as well as in making many friends for our school, and getting valuable donations of useful apparatus of different kinds.

They will, in the fall, take charge of the Institution known as the "Butler School, making it preparatory to the Normal School.

Donations.

Edward Pease, a well-known English Friend, has made a very valuable present to the Normal School consisting of a large collection of illuminated charts of great size and upon a variety of subjects.

This number of the "Southern Workman" is printed with a fine quality of book ink kindly donated by Chas. E. Johnson of New York City. It speaks for itself and for his kind hearted liberality.

The Hampton Students.

Our paper is so crowded this month with other matter relating to the Normal School, that we must postpone the usual next any extended notice of our Singers, who have spent the month giving concerts in Boston and vicinity with the same success that has attended their efforts hitherto. They leave Boston on the 1st of July, for Stockbridge where they will rest during the hot season and prepare themselves to enter the field fresh for the work in the fall.

At Home.

For "The Southern Workman."

Edith.

MRS. P. C. DOLE

Ankle deep in the blooming clover,
Chasing the pollen dusted bees,
Ripe lips rippling and running over,
With cheerful, chirruping melodies.

Sweet little Edith wanders lightly,
Over the meadows and breezy hill;
Gathering blossoms blooming brightly,
Just as it pleaseth her own sweet will.

Brown eyes beaming with love and gladness!
Dear face shining with tender green,
Angels keep you from care and sadness,
Under the smile of our Father's face!

Babies.

The following schedule of directions has just been drawn up by the most eminent authority on babies in America; has been accepted by the New York Board of Health, and by them distributed through all the tenements, boarding houses, etc., of the city.

Over-feeding does more harm than anything else; nurse a baby of a month or two old every two or three hours; nurse a baby of six months old and over, five times in twenty-four hours and no more.

When a baby gets thirsty in the meantime, give it a drink of water or barley-water. In very hot weather, mix a teaspoonful of whiskey with a tumbler full of water (no sugar).

Boil a tea-spoonful of powdered barley (grind it on the coffee grinder) and a gill of water with salt for fifteen minutes. Strain it and mix it with half as much boiled milk, and a piece of loaf sugar. Give it like warm thrugh a nursing bottle.

Keep the bottle and mouth-piece in water when not in use. Five babies of five or six months half barley-water and half boiled milk with salt and loaf sugar. Give older babies more milk in proportion.

When babies are very costive, take oatmeal instead of barley, but be sure to cook and strain it. When your brown milk is half enough for the baby, alternate with bread and food. In hot summer weather dip a small piece of linnus paper into the food before feeding. If the linnus paper turns red, add a pinch of baking soda to the food. Babies of six months may have beef tea or beef soup once a day, by itself or mixed with other food. Babies of ten or twelve months may have a crust of bread and a piece of rare beefsteak to suck.

No child under two years old ought to eat at your table. The summer complaint comes from over-feeding and hot and foul air. Keep doors and windows open. Wash your children at least twice a day. Ten times are not too many in the hot weather.

When babies throw off and purge, give them nothing to eat for four or six hours, but all the cold air you can. After that you may give a few drops of whiskey in a tea-spoonful of lee water every hour or ten minutes, but no more until the diarrhœa comes. When there is vomiting and purging give no milk.

Give no laudanum, no paragoric, no soothing syrup, no fear.

YESTERDAY, TO-DAY, AND FOREVER.—"A babe is glory is a babe forever.
Perfect as spirits, and able to pour forth
Their glad heart in the tongues which angels use;
These sunbilngs, gathered in God's nursery,
Forever grow in loveliness and love
(Growth is the law of all in Heaven),
Yet cannot pass the limit which defines
Their being. They have never fought the fight,
Nor borne the heat and burden of the day,
Nor staggered underneath the weary cross;
Conceived in sin, they sinned not; though they died,
They never shuddered with the fear of death;
These things they know not and can never know."

A SACRET.—William Wirt's letter to his daughter, on the "small, sweet courtesies of life," contains a passage from which a great deal of happiness might be learned: "I want to tell you a secret. The way to make yourself pleasant to others is to show them attention. The whole world is like the miller at Mansfield, 'who cared for nobody—no, not he, because nobody cared for him.' And the whole world would serve you so if you gave them the cause. Let people see that you do care for them by showing them what Sterne so happily called the small courtesies in which there is no parade, whose voice is too still to tease, and which manifest themselves by tender and affectionate looks and little acts of attention, giving others the preference in every little employment, at the table, in the field, walking, sitting, and standing."

WHEATLETS.—I know of no form of Graham bread sweeter than this. The sweetness comes from scalding the flour. Four upon a quart of Graham flour enough boiling water to make a stiff dough when stirred into it. Knead dry flour into this until you can roll it ont about an inch thick. Cut it into biscuits of any shape you please (but not very large), and bake them upon the clean rack in your oven, which is so hot it needs no greasing to keep the wheatlets from sticking. If you do not succeed with these the first time, try until you do, for no exact recipe can be given. "Use judgment," and cultivate it.

For "The Southern Workman."

Herman Schmitt's Goddess.

BY JACK MURRAY.

Many years ago, during the war of 1812, there lived in the western part of the State of New York, an honest Hollander called Schmitt.

At the opening of the war, he had enlisted in the American army, and was ordered to New York City to report with the regiment to which he belonged. While in the city he purchased of a needy countryman, a small but exquisite ivory carving, representing the goddess of Liberty in much the same attire as that in which she now stands in more colossal proportions upon the proud summit of our National Capitol. A small incident in itself, this purchase is responsible for my story.

Before he had an opportunity of sending this keepsake home to his little "vrow" for whom he intended it, he was transferred to the department of marines, and almost immediately sent out on a small 14 gun cruiser to run along the coast, and intercept all communications between the mainland and the British ships.

About this time, our story, a large British war vessel was lying off the coast of Virginia, endeavoring to establish relations with a line of spies between the coast and Richmond.

One dark night, when the little American cruiser was slowly and carefully working up the mouth of the James River, its silent deck was suddenly illuminated by a signal light burning on a small island in the shadow of the shore. Our friend

Schmitt was on the watch at the time, and reporting the occurrence, had the satisfaction to be sent himself to investigate it. Letting down a small boat, he rowed with muffled oars toward the guiding light that still gleamed and twinkled ominously through the darkness. A short pull brought him within pistol shot of the shore, and as he rested a moment to look round for a place to land, the first object that met his eyes was a large ten-oared boat lying on the beach, apparently just vacated. Our friend Schmitt possessed much of the curiosity native to his adopted land as well as the determination he had brought with him from his own. This slight excited both characteristics, and selecting a spot where the bushes grew thick down to the water's edge, he beached his boat, and concealing it as well as he could, began cautiously to work his way inland. He had gone but a little way when he heard voices, and listening a moment, dropped on his hands and knees, and crawled carefully on in the direction of the sounds. Five minutes of this uncomfortable, progress through the woods brought him to a small opening in the bushes, and the scene met his gaze which made his honest Dutch eyes open to their widest extent.

There in the center of the clearing, burned the small and treacherous fire, and ranged round it sat the familiar citizens from the mainland, and about twenty or thirty British officers and marines. At this sight, our Dutchman's sturdy knees began to tremble, but just at that moment, a naval officer in British uniform, mentioned the name of the very cruiser to which he belonged, and which had deemed the very fact of her existence an undiscovered secret; this arrested his attention and stopped his trembling, and listening with all his ears, he learned in a few minutes that the enemies and traitors were planning together the capture of the little *Wanderer*. Losing his head completely, at this startling intelligence, our hero sprang up and started to run for his boat. The noise brought all the Englishmen to their feet in a moment, and in another, they were pursuing him closely.

The poor Dutchman, frightened out of his senses, and unable to find his boat, was overtaken in a few moments and dragged back to the rendezvous, bound hand and foot. It was at first proposed to take him on board the frigate and there hang him for a spy, but the stupidly honest face of the prisoner, and the offer of one of the civilians to keep him safely at his home on the land in hopes of drawing some information from him, prevailed, and he was sent ashore with the party, and conveyed about ten miles, to the residence of the planter who had taken charge of him. There he was locked up securely in a strong log hut used as a smoke-house.

During the remainder of the night our worthy, collecting his scattered wits, worked away at the rotten logs with such a will and zeal so effectually that by sun rise, he was unbound. In the course of the morning, a slave was sent to him with some breakfast. The boy was extremely astonished and not a little frightened to find the prisoner unchained. Seeing this, the Dutchman whose Dutch wit had been remarkably sharpened by the night's experience, took out of the depth of his capacious breeches' pocket, the little statue of Liberty which he always carried with him, and gave the startled slave to understand that this was his god who had miraculously loosed his bands in the night, adding "If you do not now help me to escape, my little white god will kill you and all your family." The terrified boy, almost speechless with fear, tremblingly promised all he wished.

During the day, all was quiet, but shortly after dark, the Dutchman heard the bolts of his prison moving and then the door opened, and the boy appeared holding the kridles of two magnificent blood horses. The prisoner did not wait further invitation to come out and mount one of them, and they sprang on the other, and they rushed away like the wind in the direction of the sea shore. About half the distance was safely passed when the sound of horses hoofs was heard behind them, coming at a rapid gallop. At the boy's suggestion they drew out of the road into a grove, and waited with held breath the approach of their pursuers. On they came, and as they dashed by, our Dutchman recognized some of the men whose unwilling companion he had been on the way from the island the night before. Concluding that since that time, about to join the party of British in the attack on the *Wanderer*, he directed the boy to lead the shortest way to the shore, and urging their horses to a run, they dashed on toward the water. Once there, the boy, after a few minutes search, drew out from the tangled underbrush a small dugout canoe, and turning loose their tired horses to find their own way home, they sprang in, and exerting all their strength, pulled in the direction where Schmitt hoped to find the croiser.

After an exhausting and anxious search, they reached the little vessel none too soon. Schmitt told his marvelous story with some slight variations in favor of his own reputation for acumen. The captain gave the necessary orders, and waited for event. In a few minutes the lookout reported two boats approaching from the land. The whole crew of the *Wanderer* were called silently to the deck, and, armed to the teeth, threw themselves flat upon it and waited for the watchword of "Liberty!" Silent they lay till the British boats were but about a phantom off, when the captain's voice rang out, and the seven guns sent forth a sheet of flame and a deafening roar.

The smoke slowly lifted and nothing was to be seen of the British boats and their crews, but a few floating splinters and here and there a struggling man. The *Wanderer* immediately set sail and sped away to safer waters.

Only one man was killed on board the cruiser, and that one was the Dutchman Schmitt, whose gun had burst, killing him instantly. The news was carried to his family by the fugitive slave boy, who also conveyed to the widowed "vrow" the little ivory image, and its marvelous story—and over the family tomb was thereon placed, a granite statue of like form, with this inscription beneath it:

"HERMAN SCHMITT, AGED 45 YEARS,

DIED IN THE DEFENSE OF HIS COUNTRY AND LIBERTY."

The Capitol.

The Capitol, as all our young readers know, is the place of meeting for Congress, we might call it the Home of the Union, for under its roof the representatives of all the States come together and from it go out the laws by which all are bound into one nation. It is a vast building, the dome of which, one of the loftiest in the world, is visible far down the Potomac, and may be seen for miles in almost every direction from the city. This dome is of iron, painted white, and is surmounted by a statue of Liberty in bronze. Between the outer and inner walls a staircase leads to a gallery just below the statue, from which one may view the city, and mark the advantages of situation which induced the great man whose name it bears to select this site for the future capitol. From an inner gallery at the base of the dome you look down into the Rotunda, a circular apartment of great size, and wonder to see how small are the people walking about below, and looking at the pictures on its walls. These pictures are very interesting, for many of them, which represent scenes in the Revolutionary war, were painted by a gallant officer, Col. Trumbull, who acted as aid to Gen. Washington, and has preserved for us in them the portraits of his brave friends and fellow-soldiers.

In the wings on each side of the Rotunda are a bewildering number of committee rooms and offices, the walls of most of which are as fine as those of the passages into which they open, are covered with an endless variety of highly colored ornamental paintings of flowers, birds, beasts, and fanciful scroll-work. On the same floor is the old Hall of Representatives, used when the nation was much smaller, but now far outgrown; and here, too, are many other objects of interest, which it would take too long even to mention.

The Senate Chamber and Hall of Representatives, the Supreme Court-room, and the Congressional Library, with their various merchandizers occupy the floor above. Each of these deserves description, and so do the beautiful staircases, the pictures, the statues, and the fan room, with its ingenious arrangements for warming and ventilating the Hall of Congress. But our readers must see these things for themselves; it would take the "Southern Workman" a year, even imperfectly to describe them all.

Liberty.

Our picture this month, for which we are indebted to Messrs. H. O. Houghton & Co., of the Riverside Press, Cambridge, represents the beautiful statue of Liberty that stands high in air upon the dome of the national Capitol at Washington. Is she not a noble and majestic form? The Union stars upon her forehead, our country's shield and laurel wreath in her left hand, and in her right, the sword of its defence, and the old motto under her feet, *E Pluribus Unum*—many in one—our States in one Union—many interests but one brotherhood, bound by the memories we celebrate this month of the noble lives laid down nearly a hundred years ago in the cause of Union and Liberty.

General News.

THE most interesting item of news to us was the laying of the corner-stone of the new building on June 12th. We have given such a full account of it that we have necessarily crowded out other editorial matter.

THE Modoc war is ended, and now a puzzle presents itself. What shall be done with them? We hear that it is proposed to distribute this remnant of a tribe between Indian tribes on the eastern side of the Rocky Mountains, breaking up the entire band into small groups and keeping each in ignorance of the whereabouts of the other.

This is certainly a hard punishment. As to its justice we have nothing to say. The complications of the Indian question are such that a greater wisdom than Solomon's is needed to do full justice.

THE yellow fever is making its appearance in different sections of the country, and a sickly season is somewhat feared. Thus far this vicinity has been spared, though we have heard of cases on vessels lying in quarantine in the river. Cholera-lying in quarantine in the river. Cholera-like troubles are making their annual visitation and have given rise to rumors of the *real* Cholera. Cleanliness should be the order of the day and great care should be exercised in regard to diet, and though we may not entirely avoid disease, we can certainly do much to prevent it.

THE Fire-fiend is again among us, an unwelcome visitor. Boston has again suffered severely by a tremendous fire on Washington Street. That grand structure the Globe Theater was among the many losses. On the 22d a great fire occurred in Pottsville, Pa., involving the loss of nineteen dwellings and several square miles of woodland.

LEWIS TAPPAN, one of the foremost workers in the anti-Slavery movement in its earliest efforts in this city, died, at the age of 85, at his residence, No. 218 Degraw-st., Brooklyn, on Saturday, at 2 o'clock in the afternoon. He was prostrated with a paralytic attack on the preceding Saturday, and his life gradually ebbed out without the confusion of his faculties or the disturbance of his tranquility. He ended a life noble for honorable effort, and distinguished for multifarious work for the good of his fellow-men, with a serene and confident death, strong in his fervent faith. The first shock of the fatal disease was felt on January 2, 1871, but his vigorous constitution, admirable habits, and hereditary tendency to longevity kept back the slow but certain issue. —*N. Y. Tribune.*

IN a base ball match in Boston on the 1st inst., the Boston nine defeated the Resolutes of Portland, 20 to 4, and the Atlantics defeated the Baltimores at Baltimore, 11 to 2.

Agricultural.

HOW I RAISE FODDER-CORN.—I referred in a recent note, to you to the importance of *raising corn for fodder*, and promised to say more upon the subject, which promise I shall now attempt to fulfil.

I put in last year four acres; three acres were plowed in May, well-harrowed, marked off each way 3½ feet, and planted with our northern corn, a small early variety; the manure was chiefly about 400 pounds of super-phosphate in the hill. The hoeing was mostly done with a horse-hoe. The crop was cut and shocked as soon as it became glazed. The results were 50 bushels of good sound corn and two tons of excellent fodder to the acre, worth at least $15 per ton.

The other acre was a piece of ground where I have raised fodder-corn for years in succession, it being near the barn. This piece I plowed in June, harrowed and furrowed out one way, strewed about three cords of manure in the furrows and seed-drop three bushels western corn, and cultivated once. It averaged about eight feet high in August, when a tremendous storm laid it flat. Well, my neighbors laughed in their sleeves, and sometimes out of their sleeves about Potter's fodder-corn. It did look a little discouraging, as the fall was very wet and the prospect for curing it was poor. I took some old barrels into the field and laid poles on them. They were the only such side as much as I could take up without binding. I then bound enough around the lots to completely cap it. It stood up about two months. The outside was pretty black and rotten, but the inside was green and juicy when I moved it into the barn. I kept two oxen, four cows and three young cattle on the corn until the middle of February, and I never had cattle look better. My cows made as nice butter up to that time with the addition of two quarts of corn and cob meal a day. After the corn-fodder was gone, I commenced feeding good early cut hay with the same amount of meal, and my cows began to fall off in their milk. The cows are farrow, and at the present time do not give half the quantity that they did while eating the corn-fodder. The corn more than paid for the cultivation, and the fodder saved me more than one hundred dollars' worth of hay; and instead of fretting and worrying and stinting my cattle on account of being short of hay, they have had all they could eat, and I have sold hay.

Therefore I say, *raise fodder-corn, for it pays.* But some one says, You will soon run your land down with that course. Not so. After the corn is off I cart on about six cords of manure to the acre and plow it in so as to turn it under, and then in the spring as early as possible I seed down with wheat, and get from 20 to 30 bushels to the acre. I go more than with this course than with that usually pursued, consequently my farm is growing better.

There is no reason nor any practice why New England farmers should buy flour. They can raise it for six dollars per barrel, if they will grow a common-sense cultivation and use judging last good seed. Since I have followed this method I have not failed to get a paying crop of grain, even with the poorest kind of land. If I have got to buy anything in the shape of produce, I prefer to buy corn.—*Vermont Telegraph.*

DRAIN OUT YOUR HEALTH.—Judge French, in a paper on "Drainage for Health," shows how wells become impure, and a cause of disease.

"Common soil is one of the best deodorizers. It will absorb and retain a great amount of corrupt and decomposing matter, depending much on the character of the soil. It may, therefore, be a long time before the deposits in the soil, however foul, will extend even twenty or thirty feet. Bearing in mind, however, that the clouds give us three and a half feet in depth of water annually on every foot of our land; that in addition to this, all that falls on our buildings is poured down upon the soil near them, and that all that is used in kitchens and washrooms is added thereto, and we see that there is a flood of water which goes somewhere. The water in the well stands ten to thirty feet below the surface. When that drains in our fields four feet deep and fifty feet apart, it carry off all the water of the heaviest rain in forty-eight hours, merely because the water by gravitation, seeks the lowest outlet. It is a general rule in drainage that drains draw water from distances in proportion to their depth. A well, therefore, operates as a very deep drain. No water will be found near it, without digging to the level of the water in the well. The well drains all the soil in a circle described. Whatever fluid permeates the soil tends toward the well, and the problem is whether the soil through which it passes from cesspools and sinks and stables has capacity to purify it on the way, so that it is fit for daily family use."

No person of any sense will erect a new dwelling without attending to these important matters, and no one ought to occupy an old one, or a single school without making a thorough examination into its sanitary condition, and removing all probable or possible causes of disease. Health is worth a great amount of care for its preservation; and a thorough investigation of the condition of one's house should be made every year. The spring is the time to do it, and to remove all causes of disease. —*Exchange.*

LIME FOR PEACH TREES.—The Hon. John M. Clayton, of Delaware, who was a large and successful peach grower, found that the best manure he ever applied to peach trees. He scraped the dirt off and applied from three to a dozen bushels of lime to the tree, close to the naked roots. It killed the grubs and favored the growth of fruit. The editor of the "Plow" said "certainly we have never seen more healthy looking trees than those of farmer Clayton." Sometimes one can kill the larve of the curculio under peach trees by a heavy dressing of lime recently slaked.

HOW TO CHOOSE A GOOD COW.—A writer in "N. W. Farmer" says: The crumply horn is a good indication; a full eye another. Her head should be small and short. Avoid the Roman nose; this indicates thin milk, and but little of it. See that she is dished in the face—sunk between the eyes. Notice that the thin wiry stock men call a good handler—skin soft and loose, like the skin on a dog. Deep from the loin to the udder, and a very slim tail. A cow with these marks never fails to be a good milker.

CHEAP POULTRY-YARD.—Set posts firmly in the ground, six feet high, eight feet apart. Take No. 9 wire, and stretch from post to post entirely, fastening with staples near the top of wire driven into posts. Place three wires one inch apart, one foot from the ground; another three at three feet ten inches from the ground; another three at the top of posts. Take common laths and weave in, leaving three inches space between sides of each. This makes the fence four feet high. Then take other laths, picket, one end and chamfer the other like a chisel blade, and interweave among the top wires; then shove the chamfered edge down beside the top of the bottom lath, lapping under wires two inches. This makes a cheap, durable, pretty fence, that is seven feet and ten inches high, and fowl-tight. Wires should be left somewhat slack, as interweaving the laths will take it up.—*Poultry World.*

"Love Lightens Labor."

A good wife rose from her bed one morn,
And thought with a nervous dread
Of the piles of clothes to be washed, and more
Of the piles of meals to be fed.
Then a dozen mouths to be fed.
There were the meals to get for the men in the field,
And the children to fix away
To school, and the milk to be skimmed and churned,
And all to be done that day.

It had rained in the night, and all the wood
Was wet as wet could be,
There were puddings and pies to bake, besides
A loaf of cake for tea.
And the day was hot, and her aching head
Throbbed wearily as she said,
"If maidens knew what good wives know,
They would be in no haste to wed!"

"Jennie, what do you think I told Ben Brown?"
Called the farmer from the well,
And a flush crept up to his bronzed brow,
As his eyes met bashfully fell;
"It was this," he said, and coming near,
He smiled—and stooping down,
Kissed her cheek—"'Twas this: that you were
the best
And the dearest wife in town!"

The farmer went to the field, and the wife
In a smiling and absent way,
Hung snatches of tender little songs
Slid'd not sing that day.
And the pain in her head was gone, and the clothes
Were white as the foam of the sea:
Her bread was light, and her butter was sweet,
And as golden as it could be.

"Just think," the children all called in a breath,
"From Wood has come off to seat"
"He would'nt, I know, if he only had
As happy a home as we."
The night came down, and the good wife smiled
To herself as she softly said,
"'Tis no sweet to labor for those we love,
'Tis not strange that maidens will wed!"

—*Journal of Industry.*

"Just For the Good of the House;" or, a Leaf out of David Miller's Book.

Harvey did think over the conversation; and the light in which Miller had put things before him troubled him, but not sufficient to keep him from going to the "Golden Harp" in the evening, or "dropping in" there on two or three evenings of the following week, or duly putting in an appearance at the spoil's match on the next Saturday. The showery April weather had continued throughout the week, and while the quoit playing was proceeding it came on to rain heavily. As the match was nearly finished, however, the players went on, heedless of the wetting to which they exposed themselves by doing so. The result of this, so far as Sam Harvey was concerned, was that, though shortly after the game was over, he felt the same, chilly feeling creepiep over him, that he had experienced the week before when taking shelter in David Miller's house. He now called for brandy, but finding no benefit from it, and remembering how the tea had warmed him upon the previous occasion, he asked the landlord:

"Can you give me a cup of tea?"

"A cup of tea?" exclaimed the publican in surprise; "why, whatever do you want with such old woman's tipple?"

"Well, I feel shivery, and I thought it would warm me."

"Warm a fiddlestick!" exclaimed the landlord, contemptuously; "a good stiff glass of rum is what you want—this is your sort," and suiting the action to the word, he drew a glass of rum, and reached it to Harvey with one hand, while he held out his other for the money. The rum following the brandy did produce a heat, but of a dry, feverish, character, and this feverish feeling increased as the evening advanced. On the Sabbath he felt worse, and lay in bed all day, and by Monday morning was so ill that his wife sent for a doctor, who, on coming, pronounced him to be in a fever. For such a contingency as sickness Sam was very ill prepared. He belonged to no benefit club, had no savings; and before he had been in bed a fortnight there was absolute want in his home. The knowledge of such being the case reaching his shopmates, Miller and another started a subscription on his behalf, and sufficient money was raised to enable his wife to tide over the other three weeks during which his illness lasted. He was very thankful for the substantial help, but at the same time he felt bitterly humiliated at the thought that he had *so soon* become dependent upon *charity*; and in connection with this point, the conversation he had had with Davy Miller was constantly recurring to his mind. Lying on his sick bed he wished most sincerely that he had been more like Davy; and as sincerely resolved within himself that when he once got to work again he *would* be more like him. But sick-bed resolves are proverbially ill-kept; and on the first day that he was able to go out for a walk, Sam, after going a little distance, turned into the "Golden Harp." He had not altogether forgotten his vows of reformation; on the contrary, the remembrance of them gave him a sharp twinge of conscience; but he justified himself to himself by arguing that upon this occasion he would be taking the drink as medicine, as in his present state his short walk had made him feel faint. Sam having been one of the "regular set" using the house, his illness, and the circumstance of a subscription having had to be raised had been freely discussed in the landlord's hearing, and a general opinion had been expressed to the effect that he would lose his work. It had been necessary to put on a man in his place, and Harvey had not been so steady a hand as to favor the supposition that his employers would put themselves to any inconvenience to make room for him again. Remembering this talk, and coupling it with the fact that Sam already owed a "score" for drink, the landlord received him coolly. The coolness was so decided that Sam could not but notice it; but affecting not to see it, and mentally trying to flatter himself that it was only accidental—that he had come upon the landlord at a moment when he was "put out" about something—he called for a glass of spirits. The landlord drew it, and placed it upon the counter; but keeping his finger upon the bottom of the glass, he exclaimed as Sam was going to take it up, "Oh, do you want it chalked up?"

As he made the glanced up at a picture which represented a dog lying dead beside a barrel, and bore the explanatory legend: "Poor Trust is dead. Bad Pay killed him." There was no room for any misapprehension of not understanding the full significance of his action this time, and Harvey, his face flushing with anger and shame, answered hotly:

"I *did* want it chalked up, and it wasn't a great deal to want after the pounds and pounds I've spent here, but I won't have it at all now."

"Oh, there is no occasion to get on the high horse," said the landlord; "you can have the glass, as far as that goes, only at the same time, you know"—

"Yes, I do know," interrupted Sam; "I should be blind indeed if I didn't see what you mean now. You think that there will be no more to be got out of me, and so you give me the cold shoulder. As long as I was safe to run there was no hesitation about chalking up anything I liked to call for. Then it was, 'Never mind the money, old boy, any time will do,' and there was no sign of the cold shoulder when I came here on a Saturday to pay my 'shot' with the money I ought to have taken home to my family."

Without waiting to listen to the reply which the landlord was beginning to make, he walked out of the house. In his weak condition the excitement had put him in a tremble, and he had to sit down on a neighboring step, in order to recover himself before turning his steps homeward. He was seated here with his eyes closed, and his head resting between his hands, when he was roused by a hand being placed upon his shoulder, and looking up he beheld his shopmate, Davy Miller.

"Well, Sam, I'm glad to see you out again," was Davy's greeting as he shook him warmly by the hand; "but you mustn't attempt too much at first, you know. You have been over-exerting yourself now, I see."

"Well, I do feel rather knocked up," answered Harvey, who did not care to speak of the humiliation to which he had been subjected; "but how comes it," he went on, giving utterance to the surprise he felt at seeing Miller in the street at that o'clock in the day, "that you are dropping work at this time?"

"Oh, I'm going to indelge in a little holiday to-day," he answered. "The children of the Bethesda school connected with the place of worship that I attend are having their annual tea-party excursion, and, as one of the teachers, I am going to assist in attending to them. It is a nice little 'out' in itself, not to speak of the pleasure of seeing the children thoroughly enjoying themselves. I go every year, and the sight of their happy faces is something to remember."

Sam had risen while the other was speaking, and was turning his eyes homeward, when Miller suddenly putting his hand upon his shoulder again, exclaimed:

"I think that you could not have come into my head before; why, Sam it will be just the thing for you!"

"What will I" asked Harvey, who was not quite sure that he neheeded what the other meant.

"Why, come with me for the day, to be sure!—now that you are so far recovered it will do you more good than medicine."

"I should like to go very well," said Sam, "but"—

"If you would like to go that settles it," interrupted the other good-humoredly; "we won't have any buts, there is no see for them; I have got the matter fairly settled in my mind. Fortunately, as it happens, there is just one vacant seat in the conveyance I am going in, and you'll find there won't be one there that won't do you good to see—you can come with me and have a bit too—and send my boy to tell your wife that you are going, and then away we start for Bexley Heath."

This arrangement was carried out, and the Heath duly reached. Seated in a vehicle drawn by a powerful chump of horses, Harvey was advantageously placed for observing the scene around him. It was a balmy summer's day, and, sheltered from the direct rays of the sun, the air came to him soothingly and refreshingly. Around him was the open heath-land, with its variegated and odorous growths of underwood, in his ears rang the merry, musical laughter of the children joyously at play; while moving about, conversing with the teachers, and evidently respected by them, he could see his shopmate. It was a pleasant contrast indeed, to few people perhaps would have considered it a striking one. To Sam Harvey, however, in the frame of mind he was in, it was a particularly impressive one—one that ever afterwards lived in his memory. He could not but contrast *this* scene of pleasure with the public-house gatherings which up till now had been his chief idea of the pleasures available to a working man. He could not but think how much better—happier, healthier, more respectable—it was to be as he had found Davy Miller than as he (Harvey) had hitherto been; and with this thought came the recollection of the treatment he had received from the publican in the morning. He had his tea in company with a number of the teachers, and all that he saw of them further confirmed him in his conviction that Miller's way of life was by far the happier and wiser choice. They were not solemn or canting; they were sensible and kindly, and showed that they could enjoy a hearty laugh among themselves as well as among the children. Altogether the day with his shopmate gave him abundant food for reflection, and chiefly the drive home he was very quiet and thoughtful; so much so that on their getting down at his house Miller asked:

"Has the 'pull' been too much for you?"

"No, I feel decidedly better for it," he answered; "it has been the most pleasant 'out' I ever had in my life; and I am in hopes that it will prove the most profitable too."

"In what way?" asked Miller.

"Well, because, added to the other things that have happened to me lately, I think it will give me sufficient strength of mind to take a leaf out of your book."

"What, give up drinking?" exclaimed Miller, remembering the conversation that had taken place between them on the occasion of Sam's last visit to his house.

"Yes; I have made up my mind that, with God's help, I will give it up altogether," answered Harvey emphatically.

"Thanks to you, Davy, I know now what a glass or two really means; I know now that your definition of it was the right one; and in future I'll try if I can't abstain for the good of my own household, instead of drinking for the good of the public-house."

Davy Miller and one or two more of the steady set in the shop assisting to the formation, on behalf of Harvey, he was, when strong enough to resume work, taken back, and from the day of this fresh start he was numbered among the steady men. Sam kept to his good resolve. The money that he owed at the "Golden Harp" he sent there; but despite many temptations from his former boon companions, he would not enter a public-house again to himself; and in due time he had his reward in better health, a better home, greater independence, greater self-respect and greater respect from others; and what was of more importance, he attended the house of God, and was mercifully led to repentance and faith in the Lord Jesus Christ.

"If this should meet the eye" of any who take a glass or two for the good of the house, let them, for the good of themselves and those dependent upon them, pause and consider what that phrase really means. Let them ask themselves whether the meaning which Davy Miller attached to it is not the real one. If they will put the question to their conscience *candidly* they will, like Sam Harvey, be convinced that it is; and they cannot do better than he did on being so convinced—take a leaf out of Davy Miller's book, and act upon the simple yet golden advice written upon it, "*Don't drink.*" Still more let them follow his example throughout, so shall they prove by experience that "Godliness is profitable neto all things having promise of the life that now is, and of that which is to come."—*British Workman.*

Hard Work.

"What is your secret of success?" asked a lady of Turner, the distinguished painter. He replied, "I have no secret, madam, but hard work."

Says Dr. Arnold, "The difference between one boy and another is not so much in talent as in energy."

"Nothing," says Reynolds, "is denied well-directed labor, and nothing is to be attained without it."

"Excellence in any department," says Johnson, "can be attained only by the labor of a lifetime; it is not to be purchased at a lesser price."

"There is but one method," said Sydney Smith, "and that is hard labor; and a man who will not pay that price for distinction, had better at once dedicate himself to the pursuit of the fox."

"Step by step," reads the French proverb, "one goes very far."

"Nothing, says Mirabeau, "is impossible to the man who can will. Le faut *dire*! That shall be. The is the only law of success."

"Have you ever entered a cottage, over traveled in a coach, ever talked with a peasant in the field, or loitered with a mechanic at the loom," asks Sir Edward Bulwer Lytton, "and not found that some of those men had a talent you had not, knew something you knew not? The most useless creature that ever yawned at a club, or haunted the vermin on his rags under the sun of Calabria, has no excuse for want of intellect. What men want is not talent, it is purpose; in other words, not the power to achieve, but the will of labor. I am no believer in genius, but I believe that labor, judiciously and continously applied, becomes genius."

AN ALLEGORY.—"Patience! until I become a butterfly, and then I shall laugh at all my enemies." This was a common saying with a caterpillar, while it was yet a caterpillar. At last the moment of its transformation came. On a beautiful summer's morning it arose out of its dark sepulcher, dressed in a rich golden attire, and strong in the strength of a new life. "Yes," said she, as she looked upon herself, "now that I am satisfied with nature! now I am safe!" But alas! she erred. A single leaf could serpen the dark-hued caterpillar from many enemies, even from the sharp-sighted hunter of insects. Now, as a many-colored butterfly, she shone in radjant beauty, drew on her the eyes of a hundred pursuers, and saw only too soon the impossibility of eluding them all. In vain she plied her new-born wings with diligence, in vain she flew fearfully from bough to bough, from flower to flower. The craft of liar enemies surpiaed her after all, and on the third day she was impaled upon the murderous needle of an entomologist. A dazaling glory is often the forerunner of destruction.—*Meissner.*

Gems.

A BEAUTIFUL THOUGHT.—Dickens wrote: "There is nothing—no, nothing beautiful and good, that dies and is forgotten. An infant, a prattling child, dying in its cradle, will live again in the better thoughts of those who loved it, and play its part, though its little span be passed in ashes or drowned in the deepest sea. There is not an angel added to the hosts of heaven but does its blessed work on earth in those that loved it here. Deal it, oh, if the good and the human creatures could be traced to their source, how beautiful could even death appear, for how much charity, mercy and purified affection would be seen to have their growth in dusty graves!"

A BANKRUPT merchant gathered together the fragments of his fortune and went to California. He put all that he had into a mill on the bank of a stream. Just when the mill was finished, there came a great freshet and swept it away. When the waters had subsided the man walked out with heavy heart to look at the ruins. As he walked along the bank he saw something gleaming in the rock. He looked and found gold. The floods which swept away his mill laid bare a mine of wealth. Such was the first discovery of gold in California. So God often sends floods to sweep away something we love that he may reveal something far richer and better.

ALEXANDER THE GREAT, seeing Diogenes looking attectively at a parcel of human bones, asked the philosopher what he was looking for. "That which I cannot find," was the reply; "the difference between your father's bones and those of his slaves." So it is with our religion; when it is reduced to its elements, when the flesh and blood of earthly form, and the accoutrements of culture and taste have disappeared, all Christ's children will be found to have had one faith, one basis of hope, one substructure of doctrine.—*Union Advocate.*

Trifles.

GOOSE-EGGS are four cents apiece in New York, and one grocer announces that one in every dozen he sells contains a gold dollar.

"KNO cos of excion" was the verdict of an Iowa jury.

"How," said Mr. Munsell to Mr. Yates, "do you accomplish so much in so short a time? Have you any particular plan?" "I have; I go and do it."

A WAG lent a clergyman a horse which ran away and threw him, and then claimed credit for "aid in spreading the Gospel."

AN old lady, hearing somebody say that the *mails* were very irregular, said, "It is time I got in my young days—no trusting any of 'em."

AN exchange says: "Marriage makes a man and woman one." Yes, but the trouble is to tell which of them is *the* one.

A HINT TO MILLINERS—enough on that head.

A MAN telling about a wonderful parrot hanging in the cage from the window of a house which he had often passed, said, "It cries 'Stop, thief!' so natural that every time I hear it I *always stop.*"

THE man who attempted to whistle a bar of soap has lejured his voice by trying to sing a cake of it.

IT makes a great difference whether glasses are used over or under the nose.

Scientific and Mechanical.

ACTION OF PLASTER ON SOILS.—Though generally employed by farmers as a fertilizer, the action of plaster (gypsum) on the soil is not well understood. It has been shown, however, by actual experiment, that plaster is capable of absorbing ammonia from the air, and also from decomposing animal and vegetable matter, holding it in the form of sulphide of ammonium. This, again, may be changed into carbonate of ammonia, by absorption of carbonic acid from the air. These changes occur when gypsum is brought in contact with moisture and vegetable matter. Whatever other purpose it may serve, this must be regarded as the most important, as by it plants are supplied with food of the highest value.

From this fact it may be inferred that plaster must prove highly serviceable to moist, mossy hills, and also to meadows that are not too wet. The north side of a hill is sometimes greatly benefited by plaster, when upon a southern exposure it produces no perceptible effect. It may be used with confidence on pastures and fields which are strong enough, and moist enough, to support deciduous trees. A hillside, where moss will grow so as to crowd out good grasses, is, usually, promptly benefited by plaster, white clover quickly following its application.—*Popular Science Monthly.*

PAPER FROM WOOD.—A letter from Berlin, in the "Elberfeld Gazette," represents Prince Hamilkeck in a very light exhibition of a paper maker. The paper manufactory established by the Imperial Chancellor on his estate at Varzin has proved so successful, says the writer, that it is impossible to meet the large orders which come from England. This paper is made of chips of fir—that, at least, is the chief element.—*Popular Science Monthly.*

HINTS ON HOUSE-BUILDING.—The great object of sanitary legislation is to secure for each individual the greatest amount of fresh air, pure water, sunshine, and dryness of soil. Public sanitation in towns should provide for width of streets, paving, the removal of finid and solid nuisances, open places for the circulation of air, and recreative resorts for the inhabitants. The width of streets is important in relation to the height of the houses. The width should never be less than the height. The healthiest sites for dwelling-houses are known to be those on trap, granite, and metamorphic rocks, where water readily escapes, and the soil, and consequently the air, is dry. Cholera is rare in houses on such sites. Permeable limestone, gravel, and chalk, if unmixed with clay, are also healthy. Sands which contain organic matter, clay, and alluvial soils are always to be suspected. Thorough draining, both enbsoil and surface, is a necessary preliminary to building. Dampness of ground necessitates dampness of air and of the walls. This causes chemical alteration in the organic materials in the houses, with absorption of oxygen and discharge of other gases; it favors, too, the growth of low animal and vegetable organisms, which poison the air of the dwellings, and produce disease. The decomposition of the organic contents of the soil is hastened by its dampness and especially by rapid alternations of its hygrometric state. Calcareous stone is best; some sandstone is so porous that, though dry to-day, it may be soaked with damp to-morrow. Houses should never be built on ground filled up with ashes or other *debris*. The large amount of organic matter contained in it, which is freely exposed to the action of the air and moisture, becoming decomposed, must cause poisonous emanations, destructive to those, who living above it must breathe it. The drainage and other pipes laid in this soil are extremely liable to be entered by these poisons, unil thus they are conducted into houses directly. Frequent sweeping and washing are necessary in every house. Dust is not alone unpleasant, but it is a fruitful source of disease—perhaps the most so. The dust of curtains, carpets, papers, and other colored substances, consisting of organic and colorieg matter, being swallowed with the food and inhaled, causes many a doctor's visit. Every house should have a kitchen and washroom distinct from the dwelling-rooms. The letter should be large enough to allow of each inhabitant obtaining 10½ cubic feet of fresh air per hour, when doors and windows are shut. Each house should have a abundance of good water for drinking, cooking and washing, including bathing: five to six pints per day should be allowed for drinking, at least eighteen gallons for washing, and eight to ten should be daily used to flush the sewers. Sick people require more; from forty to fifty gallons daily. Water-closets consume various quantities, according to their construction. The nature of the closet and the method of removing the contents have become one of the most important questions which advancing civilization has created. The dry-earth system is quite inapplicable in large towns; it suits private houses of the rich or jails well. The Goux system is equally unsuitable. The water system, where there is a plentiful supply of water, is infinitely the best and the cheapest. A sufficient fall of ground can nearly always be obtained. The improvement of the dwelling-house and the establishment of comfortable homes, worthy of human beings, is a necessary duty of the state, and a noble work for the philanthropist. These necessary conditions may be advantageously supplemented by a little comfort and elegance. A little garden is a civilizer of great power.—*The Builder.*

GIVEN AWAY!

A BEAUTIFUL

OIL CHROMO

to every NEW SUBSCRIBER to the

"Southern Workman."

We have secured a large invoice of the elegant picture entitled RETRAVING HOME, which sells at retail for $1.50; and we have made such arrangements with the publishere that we can efford to GIVA THEM AWAY to the friends of this paper.

The subscription price is but $1.00 per year. The Chromo will be worth $1.50. Who cannot spare a single dollar for such a good purpose? The paper will pay for itself a hundred times, giving as it does, valuable information on all subjects of general interest, and devoted especially to the interests of our Southern homes. The Picture can hardly be told from an

OIL PAINTING,

and would adorn the walls of the richest. Good pictures are needed almost as much as good reading. They have their influence for good. Everybody *reads them.*

We present one to EVERY NEW SUBSCRIBER; to every old subscriber who renews; to every one who will get us a new subscriber.

NO ONE IS LEFT OUT! THE CHANCE IS OPEN TO ALL!

We dv not know how long we shall be able to supply these pictures free of cost, but certainly for the next three months. Therefore *to not delay* but send your names at once to "Southern Workman," Hampton, Virginia.

Our chromos are already finding their way through the land, and thus far they have given perfect satisfaction, the only wonder expressed being that such pretty presents could be given away with such a low priced periodical. When subscribers desire their pictures mounted, fifteen cents additional should be sent to pay the cost and for mailing. Unless this amount is sent we shall pack them carefully on a wooden roller and send them by mail without extra charge.

We have carefully revised the subscription list of our paper and have made even endeavor to prevent mistakes in mailing, etc. We are not infellible however, and may have dropped some paid-up subscriber by mistake. We are willing to reward any one who will take the trouble to rectify any errors in our new list.

☞ A RED CROSS before this paragraph will indicate to the subscriber that HIS SUBSCRIPTION HAS EXPIRED. He is requested to renew immediately.

INFORMATION WANTED of the following persons, namely, Christiana Thomas, David, Henry, William, sallie and Nellie Brown, who were owned by George Cottman, Louisa County, Va.

FOR SALE

IN

YORK COUNTY.

SPLENDID FARM

Of one hundred and forty acres, with a large dwelling containing seven rooms, a large barn and granary all with new cuild attached. Fruit of all kinds in abundance. This is one of the best working farms on the peninsula. It is located about one and a quarter miles from Grafton Depot, in a good neighborhood, near church, etc. The mill has a large run of custom. There is also a room for mill; a fine grocery and dry goods store, doing a good business. This is an excellent opportunity for settled in those about to engage in a business of the kind.

For further information apply to

D. B. HASTIE,
Hampton, Va.

THE

FREEDMAN'S SAVINGS & TRUST COMPANY.

The Seventh Annual Report of the Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,627,389.72, being an increase of *fifty per cent.* on the balance due depositors at the commencement of the present year.

There are 29 stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors.

The rate the past year has been six per cent. and the amount paid since March, 1871, has been $428,315.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $5,000,000 depositors.

The Bank pays six per cent. interest

on savings deposits, commencing in January and July of each year, to be allowed by Presidents only.

Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.

Certificates of deposits issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED

at request of depositors, from branches where kept to any other branch without risk or trouble, and *without loss of interest.*

For full information about the Bank address the Secretary at Washington, D. C., or Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, and directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, W. Alvord, Esq., or the Secretary, E. Eaton.

JOHN T. BENTLEY,

WATCHMAKER

AND

JEWELER.

Watches, Clocks, Jewelry, Silver, and Plated Ware Sold and Repaired.

Fancy Goods of all kinds constantly on hand.

Cake, Candy, Confectionery, and General Furnishing Store.

Baltimore Wharf, Fort Monroe, Va.

THE

FREEDMAN'S SAVINGS & TRUST Company,

A

National Savings Bank.

Chartered by Congress, March, 1865.

PRINCIPAL OFFICE,

WASHINGTON, D. C.

NORFOLK, Va. BRANCH

IS LOCATED AT

NO. 116 MAIN STREET.

Corner of Atlantic Street.

SIX PER CENT. INTEREST

is now paid, beginning monthly. Dividend days July 1st and January 1st. Interest compounded if not drawn. Special arrangements made for receiving accounts payable by Check.

Certificates of Deposit, bearing six and four per cent. interest issued.

Bank hours, 9 A. M. to 3 P. M. Open also Saturday nights from 6 to 8 o'clock.

Deposits of any amount received from any person, and repaid on demand.

J. W. ALVORD, *President.* H. C. PERUT, *Cashier.*

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH

VOL. 2. HAMPTON, VA., AUGUST, 1873. NO. 8.

A Ballad of Sir John Franklin.

BOREAL.

"O, whither sail you, Sir John Franklin?"
Cried a whaler in Baffin's Bay.
"To know if between the land and the pole
I may find a broad sea-way."

"I charge you back, Sir John Franklin,
As you would live and thrive;
For between the land and the frozen pole
No man may sail alive."

But lightly laughed the stout Sir John,
And spoke unto his men.
"Half England is wrong if he is right;
Bear out to westward then!"

"O, whither sail you brave Englishmen?"
Cried the little Esquimaux.
"Between your land and the polar star,
My goodly vessels go."

"Come down if you would journey there,"
The little Indian said;
"And change your cloth for fur clothing,
Your vessel for a sled."—

But lightly laughed the stout Sir John,
And the crew laughed with him too,
"A sailor to change from ship to sled
I ween were something new."

All through the long, long polar day
The vessels westward spread:
And wherever the sail of Sir John was blown
The ice gave way and fled.

Then way with many a hollow groan
And with many a surly roar;
But it murmured and threatened on every side,
And closed where he sailed before.

"Ho! see ye not, my merry men,
The broad and open sea?
Bethink ye what the whaler said;
Think of the little Indian's sled!"
And the crew laughed out in glee.

"Sir John, Sir John, 'tis bitter cold;
The scud drives on the breeze;
The ice comes foaming from the North
The very sunbeams freeze!"

The drifting icebergs dipped and rose,
And floundered down the gale;
The ships were stayed, the yards were manned,
And furled the useless sail.

"The summer's gone, the winter's come,
We sail not on yonder sea,
Why sail we not, Sir John Franklin?"
A silent man was he.

The cruel ice came floating on
And closed beneath the lee,
Till the shrieking waves drowned in its moan
Twas as around, behind, before,—
"My God! there is no sea!"

"What think you of the whaler now?
And of the Esquimaux?
A sled were better than a ship
To cruise through ice and snow."

The snow came down, storm-driven and fierce,
And on the decks was laid,
Till the weary sailor, sick at heart,
Sank down beside his spade.

"Sir John, the night is black and long
The hissing wind is bleak,
The hard green ice is strong as death.—
I pr'y thee captain, speak"

"The night is neither bright nor short
The howling wind is cold,
The ice is not so strong as hope
The heart of man is bold!"

"Hark! hearkl ye not the noise of guns?
And there—there—there, again!
'Tis some uneasy iceberg's roar,
As he turns in the frozen main.

"Sir John, where are the English fields,
And where are the English trees?
And where are the little English flowers
That open in the breeze?"

"Be still, be still, my brave sailors!
You shall see the fields again,
And smell the scent of the opening flowers—
But when, Sir John, but when?"

"O when shall I see my orphan child?
My Mary that waits for me!
O when shall I see my old mother
And pray at her trembling knee?"

"Be still, be still, my brave sailors!
Think not such thoughts again!"
But a tear froze slowly on his cheek—
He thought of the lady Jane.

Ah! bitter, bitter grows the cold;
The ice grows more and more;
More settled stare the wolf and bear,
More patient than before.

"O think you, good Sir John Franklin,
We'll ever see the land?
'Twas cruel to send us here to starve,
Without even a helping hand—"

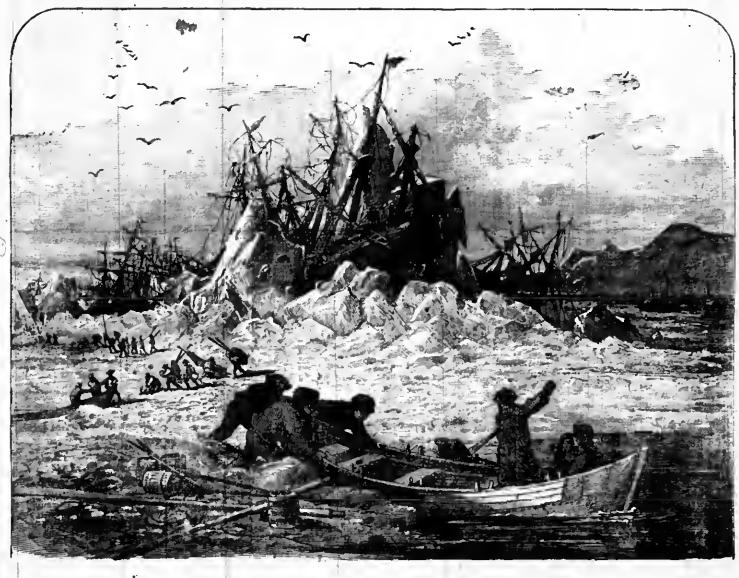
"Twas cruel, Sir John, to send us here
So far from help and home;
To starve and freeze on this lonely sea!
I wonder the lords of the admiralty
Would rather send than come."

"O! whether we starve to death alone
Or sail to our own country;
We have done what man has never done—
The truth is found—the secret won—
We passed the Northern West"

Long years went by—hope died in fear;
But never relented the Frost;
Some letters that stood for the brave and dear
And some scarce mangled bones told the story drear!
Then we knew what the Secret cost!

The Polaris.

No romance has ever been written more thrilling or more strangely improbable than the report received published by the Navy Department of the party belonging to the steamer *Polaris* who were rescued from an icefloe in latitude 59° North, by the British steamer *Tigress*, and we are sure that our readers will be interested in a resumé of the *Polaris* expedition up to present dates, especially as the accompanying picture of the loss of the Arctic whaling fleet, gives a vivid idea of the danger of a Polar voyage. On the 17th of August, 1871, the steamer *Polaris*, under the command of Capt. Hall, left one of the ports of Northern Greenland, fully equipped with dogs, skins, sledges, Esquimaux guides, etc., and steamed northward, with all on board in good hope of finding open water, undiscovered land, and the long sought for North Pole. Pressing on through Smith's Sound, they entered a narrow channel, with high land on either side, hitherto unexplored, and on August 30th, attained the highest northern latitude 82° 16′, where they were met by heavy floating ice, which drove them to the south, until after days of struggle they went into winter quarters on the east side of Polaris Bay in Thank God Harbor. At midnight, on September 3, 1871, Capt. Hall landed with a boat, and in the name of God and in the name of the President of the United States, took possession of the land he had discovered, and then returned to secure his ship in winter quarters and make preparations for a sledge journey northward. On October 10th, he left the *Polaris* with his first mate, the Esquimaux Joe and Hans, fourteen dogs and two sledges, his first step falling upon land more northern than any white man's foot had ever touched, while his last despatch, so singularly preserved, shows that the whole journey was one of discovery, a river, a lake and a large inlet being christened by him, the northern point of the latter, Cape Brevoort, furnishing his last snow encampment wherein he wrote his final despatch to the Secretary of the United States Navy. The condition of the shore was such that he was obliged to give up further exploration, and turning southward, reached the ship on October 24th, to be taken ill the same night, and after a fortaight of suffering to die on November 8th, finding a grave three days later upon the frozen shore of an unknown land. From this date, the crew of the *Polaris* spent the winter as is usual in those regions. Scientific explorations were kept up, the coast examined for over seventy miles, and the monotony of the life diversified by hunting and shooting, for musk oxen, bears, foxes and wolves were plenty, and the health of the entire party continued perfectly good, the comparative mildness of the climate and abundance of food preventing any suffering from disease or exposure. Early in June, before the *Polaris* was released from the ice, Capt. Buddington, the successor of Capt. Hall, despatched two boats with orders to get as far north as possible, but after an absence of six weeks the expedition was obliged to return, and as the ice to the northward proved impassible, the *Polaris* started (in August, 1872) upon her homeward voyage. During this month and the following, she was several times in danger of wreck, and on the night of the 15th of October, in latitude 79° 33′, north, during a violent gale of wind and snow, the ship was so pressed by ice from the southward as to be finally thrown over upon her beam ends, when Capt. Buddington divided the stores and provisions, which for a long time had been kept in readiness to be thrown overboard upon the ice, while half the crew and all the Esquimaux were ordered over to convey them to ice hummocks where they would be comparatively safe. In the midst of the darkness of an Arctic night, made terrible by the fierceness of wind and snow, the hawsers of the *Polaris* parted, she broke completely adrift, and in a few moments was lost to the straining sight of the party at work upon the ice floe. Fortunately they had upon their main icefield two boats which had been lowered from the *Polaris*, and by means of these the whole party were collected upon the largest floe, at that time about five miles in circumference. During the following day, the deserted men made various unsuccessful efforts to reach the shore, and were made desperate by the sight of the *Polaris* which under steam and sail came within four miles of them, and neglecting all their signals, suddenly altered her course, and disappearing behind the shore, left them to the awful uncertainty of their fate. Very soon a heavy gale from the northeast drove the floe with its burden of nineteen human beings far to the southward, and it became evident that all possible preparations must be made for passing the winter upon the ice. Snow huts were built in which the provisions were kept, and duly portioned out to each individual; occasionally the Esquimaux shot a bear and once during the winter a seal; thus renewing their stock of meat, but toward the last of April, they found themselves reduced to less than a biscuit a piece and a mouthful of pemmican



ing already been procured and fitted for a voyage of search after the missing vessel and her crew, and as they had plenty of provisions, ammunition, etc., there is not much doubt of their speedy rescue; indeed, after the escape of the party saved by the *Tigress*, nothing seems impossible, and when we read that a baby of eight months old was among the passengers upon that perilous voyage of nearly fifteen hundred miles, the climax is reached and we are ready to confess that nothing in fiction has ever surpassed the story of this actual experience.

Although, as has so often happened before, the bravery and persistence of these men have been unrewarded by the discovery of what they sought, they have at least made some steps upon the mysterious path to the Northern Sea, and unless history denies herself, expedition will follow expedition until in years to come, the maps of our children or our children's children will show as clear a picture of these unknown Polar regions as to-day our own maps show us of Virginia or New York.

Sir John Franklin.

Sir John Franklin, one of the earliest and most famous Arctic explorers, was the son of a respectable English farmer, and was intended for the clerical profession, though very early in life he showed his fondness for the sea, and finally overcoming all the objections of his friends, entered the British Navy as a midshipman. He fought at Trafalgar, and in our own war of 1812 was wounded at New Orleans, when he was made lieutenant for gallant service. In 1818 he made his first Arctic voyage, in command of the *Trent*, and a year later took charge of an expedition, which traveled overland from Hudson's Bay to the Arctic Ocean for the purpose of exploring the coast. In 1825 he took out a second similar expedition, leaving his wife at the point of death in England, though she refused to allow him to postpone his departure, and gave him as her last gift, a silken flag, to be hoisted when he should reach the Polar Sea. She died the day after he left her, and shortly after his return to England in 1827, he married again, and a year later was knighted. From 1836 to 1843 he was governor of Van Diemen's Land, which position he filled most honorably—founding a college, and a scientific association, and in many ways improving the condition of the colony, so that when he was recalled his virtues were acknowledged by enthusiastic demonstrations on the part of the people.

In 1845 he was appointed to the command of a new expedition to discover the Northwest passage, and fitting out the ships *Erebus and Terror* in the strongest and most complete manner, sailed with a picked crew of one hundred and thirty-eight men, from Sheerness, on May 26, 1845, with orders to return to England in 1847. He was last seen by a whaler who met him in Baffin's Bay in the summer of 1845, and as no later tidings of him reached England, the anxiety of the public was such that in 1848 several expeditions were sent in search of him. After years of exploration and diligent examination of the coast, it was ascertained that in the spring of 1850 a party of forty white men were seen by the Esquimaux on King William's Island, and that a few months later their bodies were found by the savages near the Great Fish River. From articles picked up by the Esquimaux it is certain that these men were a portion, and probably the last, survivors of Franklin's expedition, and there is no doubt that he had himself perished before that time, as there was no man of his age (sixty-four) among the party seen by the Esquimaux.

From the time of his loss, his wife, Lady Jane, has been distinguished for the devotion with which she has labored to rescue her husband, or at least to find his remains, having expended nearly all her own fortune, and large sums received from others, in fitting up new Arctic expeditions in search of the unfortunate *Erebus* and *Terror*, whose fate will probably now remain a secret, until the last great day shall force the cruel frozen seas to give up their dead.

Our Churches.

There are two distinctly opposed theories of church architecture, in favor of each of which something may be said, and which have each affected and do still largely affect the building of churches in our country.

The first of these theories begun with the old Pagan temples, was nourished by Roman Catholicism, and in our own day is carried to an absurd extreme in many wealthy communities, its fundamental idea, namely, that nothing can be too good for God, being often perverted into mere flattery of the vanity of men. The magnificence of the old cathedrals, the money and time that were lavished upon them, and the continued demands which they made upon the purses of those who worshipped within them, were all set down "to the glory of God;" and when nowadays, we hear of grand churches costing a half a million or so of dollars, whose seats are so expensive that nobody but millionaires can occupy them, we are told again, that this lavish outlay is one way of showing our reverence for the Creator of all beauty.

Opposed to this we have the Puritanic idea that the labors of Christians should not be wasted upon decorations of stone and glass and gilding, but that making the places where we meet together as free as possible from the temptations of luxury, we should spend ourselves altogether and entirely upon good works, worshipping Our Father in simplicity and truth.

Now is it not well for all congregations who are about building new churches, or remodeling old ones, to stop and consider the value of these two theories, and if possible, to draw the good from each, and so strike a common-sense medium? In the first place, it seems that God, who has made for us this wonderful world, must Himself love beauty, for surely it is from Him that all beauty comes, and in making our churches beautiful (if we do it from the right motive), we must in a way please Him to whom they are dedicated. But on the other hand it is true that there is something better than beauty, and that is goodness; and if we cannot build grand and beautiful churches without sacrificing our honesty, or our brotherly love, or our strength to do other good works, then our churches had certainly better be of pine and cobble stone. If we are able to help our neighbors, to live together in peace, to make our church societies powers for good, lights shining in dark places, and harbors of refuge for the distressed—then when we want a new building wherein to meet with God, we need not be afraid to adorn it outwardly and inwardly with everything that is truly beautiful, being sure that He, having first searched our hearts and found them swept and garnished for His coming, will bless the building which is a visible symbol of the invisible spirit.

A German naturalist answers the question, how many eggs a hen can possibly lay, as follows: The ovary of a hen contains about six hundred embryo eggs, of which, in the first year, not more than twenty are matured; the second year produces one hundred and twenty; the third, one hundred and thirty-five; the fourth, one hundred and fourteen; and in the following four years the number decreases by twenty yearly. In the ninth year only ten eggs can be expected, and thus it appears that, after the first four years, hens cease to be profitable.

Dr. Agnes Smith gives a good rule for ascertaining the amount of carbonic acid in the air of houses: Let us keep our rooms so that the air does not give a precipitate when a 10½ ounce bottle full is shaken with half an ounce of clear lime-water, a sanatory regulation which can easily be carried out.

THE
Southern Workman,
[POUND MONTHLY.

S. C. ARMSTRONG,
RICHARD TOLMAN, } *Editors.*
J. H. LARRY,
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who add to circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give names in full, and name of Post-office, County, and State to which the papers are to be sent.

The Southern Workman.

HAMPTON, AUGUST, 1873.

Homes for All.

Next to a mansion in Heaven, a pleasant home on earth is desirable. To sit under the vine and shadow of one's own fig tree is one of the prettiest pictures of liberty. A man never feels more independent than at the time he sets foot upon his first purchase of land or moves his family into his own house. We have come to believe it more than a privilege and almost a duty for every man who boasts a wife and perhaps little ones, to provide for them an earthly residence, a tangible home. It gives dignity to the family, manliness to the man, grace to the woman and stability to the children.

Though something more is meant in that good old Saxon word *home* than cottage and house lot, yet these form a definite spot around which these elevating home feelings can twine and flourish. Many young people commence their first married life by boarding, often from a lazy or selfish desire to avoid the labor attendant upon house keeping, but we have yet to see such a couple who have tried two years' of boarding life, who had to start with, any force of character, who were not healthy sick of their choice of existence, for boarding can hardly be called life.

"But a house is costly something, and a house is quite expensive, I never have money enough ahead to purchase" says one. This is all true, perhaps; everything worth having has its cost attached. We say not, however, to overestimate the cost of large blessings as compared with trifles. Just keep account of the money you expend in one year for things you could do without, and there is hardly a doubt but you will find you have expended enough to make the first payment on your house lot; add to this the rent you pay, or the profits in your bond bill and you will find enough to buy a lot of small dimensions in many of the counties in our part of the country. One plan of advice is needed just here however; be sure that you get a clear title to your land, or you may invest your spare cash to no purpose. The mixed state of affairs for years past has rendered it quite important that purchasers of land should look well to the deeds.

Now to save this spare change, put the little sums out of your immediate reach, or at the first desire for some luxury you may expend it. You will find the Savings Bank a good friend in this plan. Even if you don't build or purchase, it is an excellent plan to lay aside your extra change and provide for a rainy day. Your bank book, even if it don't show more than five dollars in your favor, will be one of the most interesting volumes in your possession. When you have paid for your lot and have a little to spare, go to some responsible builder, examine his plans, and see if he will not put you up a neat little cottage, taking a small first payment and the balance in such a manner as you can easily pay, giving him a mortgage upon the whole. I know many will object to this plan and say "pay as you go," etc. Well, debt is a bad thing I admit, but this is not positive debt, it is as much of an investment as money in the bank; it is true you may be laid aside in sickness and some day the mortgage may be fore-closed.

All earthly treasures are uncertain in some degree. When you see the granite walls of so-called fire proof buildings, with their iron shutters, melt and run down, and the insurance, though effected in the safest companies, not amount to ten per cent., you may well believe that treasures this side of Heaven are uncertain. Bags of silver buried in the garden may be found by thieves, bank robberies are not uncommon, and dishonest clerks and cashiers are altogether too plenty for our comfort; with all property you must take your risk, and this plan seems to us as safe as any.

Again we believe it encourages habits of economy and thrift. There is many a man who would never save a thousand dollars in his life who would, in a few years, pay for a house worth three times that amount if he could pay in installments. It is an enterprising charity, when the helper and the helped are both profited; and we are glad that men with capital are beginning to see where they can do good with their money, and still have it pay a good per cent., and safe interests. Whole villages are being built in many places in the North on unoccupied land, and we know of one place in this State where the same system is begun with good results.

The quality of the verdicts, which, during the past few months, have been passed throughout our own and other countries, upon criminals charged and practically convicted with murder in the first degree, seems to point without any doubt to gradual abolition of capital punishment. There is an evident desire in these cases, not only among the friends of the accused but as well among the general public, to give all possible weight to extenuating circumstances, and to carry this leniency to almost a ridiculous extent, by getting up extravagant theories of physical disease, insanity, sudden and uncontrollable paroxysms of passion, etc., which are usually unreasonable and tend to weaken the hand of justice. If capital punishment is still to exist among us, there are surely no crimes which deserve it more than some of those recently committed in our large cities; and if the offenders in these cases are to be let off on any plea whatever, then the doom of the scaffold is a term only in name, a bugbear to be used only as a threat, and had best be renounced entirely as soon as possible. The desirability of its abolition is, of course still open to discussion, but it certainly seems that it would be wiser for our laws to be in earnest about such a matter, and for us to confess at once either that a life for a life is the foundation of our criminal legislation, or that such a creed is a thing of the past and is to be buried with other relics of barbarism.

An event of real and general importance to the country has been the issue of Postal Cards by the United States Post-office, a measure which goes a long way toward facilitating that cheap postal communication that in this country is so especially desirable. These cards are simply printed slips costing one cent each, upon which is space for the address, the signature, and a message of the length of an ordinary note, and there are, of course, numberless communications which can be sent in this way at a saving of two cents per card, without risk to the correspondents or temptation to the post-office officials.

The system was first introduced three years ago in Germany and the immense circulation of the cards during the Franco-German war at once established their usefulness. A couple of years since, England followed the example of her German neighbors, and in this country our legislators have now at last waked up to a sense of the importance of the innovation, and have lately issued for the use of the public, twenty-two millions of these convenient cards. A demand has immediately been created for many more, and though they are not yet ready to be supplied to the market, they are in course of preparation, and there is no doubt will speedily take the place of a large number of indorsed letters and probably considerably increase the amount of matter passing through the Post-office.

We published in our last number a set of rules for the care of little children during the summer heats, which hope were generally read and taken to heart, inasmuch as they were prepared, as we mentioned at the time, by the first authorities, and could be safely accepted as guides in all ordinary cases. A very large proportion of the children who die under five years old, die from the carelessness and ignorance of their parents, and this great and shocking loss is directly preventible if those who have charge of these precious little lives will only inform themselves as to the simple laws of nature, and then act conscientiously in accordance with them. Summer is especially a trying season for young children, and of course the difficulty of taking care of them is increased during that time; but in any unusually healthy climate there is no reason for any large increase in the death rate among children. They must be fed regularly and carefully and not allowed to expose themselves to the heat of the sun, while, as we constantly reiterate, "cleanliness" is the foundation of all healthy life. Any community where there is a disproportionate death rate among the children, ought to consider itself disgraced, for there is always some controllable cause; and when we neglect our children we surely need to be reminded Who said, "Inasmuch as ye did it unto one of the least of these ye did unto Me."

The extremity of the drought is beginning to make itself sensibly felt in many parts of the Union, and it is feared will largely affect the prices of food, and the comfort of those who earn their bread by the sweat of their brow. In some of the Northern States no rain has fallen since early spring, and the consequence is that vegetables are an entire failure, berries and other small fruits have dried up on the bushes, grass is burnt to tinder, while trees are hastening to shed their leaves, and the later fruits, apples, pears, plums, etc., are dropping from the branches before ripening, from sheer lack of the nourishment ordinarily obtained from the soil. Fortunately, great heats do not prevail, and in the main the season is a healthy one.

But without desiring a reputation for croaking, we cannot help reminding our readers that during the comparative abundance of summer is the time to provide for the coming scantiness of winter. In households, there are cheap ways of drying and preparing the common fruits and vegetables which are much to be recommended, inasmuch as they supply a wholesome variety of food, and enable families to live comfortably and economically when other sources of supply fail; and we desire to attract the attention of all who are called upon to provide for the wants of others to the fact that next winter is likely to be, in some respects at least, a hard one, and that August is the time wherein to prepare for December.

Fruit Culture.

One of the most neglected branches of Farm Management, is the production of a succession of fruits as a means of health, pleasure and economy. Grapes, peaches, plums and berries, are too commonly regarded as luxuries, and are bought as sparingly as possible. The farmer's wife uses enough of them to flavor her sugars, and in the winter season keeps them for extraordinary occasions. The farmer himself is satisfied with a few peach or apple trees, and knowing or caring to know, that from May to December, there is not a day when ripe fruit cannot be produced in the open air, and that uncooked winter grapes, pears, apples, can be made to complete the circle until strawberries come again. Such a succession would make home a paradise to the little folks, and is adapted to the health of old and young. It is a noteworthy fact that each fruit in most attractive and most wholesome, at the time of year when it ripens. And where ripe fruits are used as daily food their value is well established by medical testimony, especially in sections where malarial fevers prevail. Considerations of economy also favor a free use of fruit as a cheaper food than flour or meat. The amount of ground required to produce a barrel of flour is sufficient for ten apple-trees. A barrel of pork coste eight to ten times as much as a barrel of apples, and furnishes only about six times as much solid food.

Of the two prominent reasons for the neglect of fruit culture, one is that it does not succeed without trouble. To this, I can only say, that care and pains are the prices of everything worth having. Success in wheat growing or stock raising requires attention. All other branches of farming are open to this objection. But to say nothing of the ready cash market for fruit, no one would deliberately affirm that health, pleasure and cheapness of living were not worth some trouble.

The second hinderance to fruit culture, is the expense of buying trees and vines. Though competition has made wholesale prices reasonable, they are still too high for a young farmer who is in debt, and harassed for want of working capital. The ten dollars apiece by which a company of neighbors might obtain a variety sufficient for their families, seem more than can be spared, and frighten the poor man for years from the enjoyment of sitting under his own fruit trees. But like most other difficulties, this would have vanished if resolutely met. A few nurserymen's secrets easily obtained, and an expense of almost nothing but time, would have enabled the farmer to have had every variety for which his climate was suited.

Those who attempt to meet this difficulty of purchasing, by raising their own fruits, often waste much time by neglecting one or two simple principles. One of these is, that seeds of fine varieties seldom produce the same kind. There is no certainty whether a stone of cultivated peaches or plums or the seeds of valuable apples, grapes or berries will produce late or early, sweet or sour, good or bad fruit.

But there is another system of propagation which removes this uncertainty, and is applicable to all kinds of fruit. It is, that every bud or eye contains within it the beginning of a tree or plant like the parent. Thus on a shoot of a harvest apple-tree, are from ten to twelve buds, each of which, if artificially furnished with roots, will produce a harvest apple-tree.

The nurseryman's art may therefore be said to consist in furnishing roots to buds of choice varieties. He depends upon the seed only in a very few exceptional cases.

The various ways in which buds are furnished with roots in the nursery are too numerous for the limits of this essay. I will therefore give only one or two simple methods of propagation for each variety.

Of the berries, the strawberry is rapidly multiplied by planting in rich moist ground, training the runners as far apart as possible, and covering them slightly to prevent the wind from blowing them about. Of the raspberry, there are two families. The black cap kinds are increased by bending the tips of the canes to the ground. On the end of each cane is a bud which sends out roots below and a shoot above.

The other kinds of raspberries, and all kinds of blackberries grow from eyes upon the roots. Cutting circles around the plant in the fall with a spade will cause many little shoots to come up. Or if blackberry roots be divided in the fall into pieces two inches long, buried in moist sand through the winter, and sown in a drill in the spring, every piece will make a plant.

The gooseberry and currant are grown by cutting the shoots of the preceding summer into pieces four to six inches long, burying them in the fall so that the top bud is just even with the surface, and covering them with litter to prevent freezing.

Quince and grape shoots may be rooted in the same way, but both are more successfully treated by layering, that is, covering with dirt while in a growing state, leaving the ends exposed. To layer a grape vine, the canes should be pruned off when four or five feet long and left about two weeks, to throw out side branches. When the cane is buried, the end of each side branch should be left above ground and will make a fine plant by fall.

All of the above kinds of fruiting plants are readily induced to form their own roots, by such methods as I have described. But in growing tree fruits it becomes necessary to supply roots artificially upon which the buds may be placed. These artificial roots are produced by sowing seed from fruits of the same natural family. The seed of any wild plum is good enough to furnish roots for the buds of the choicest green gage tree.

The seeds of the cherry and plum should never be allowed to become dry. When taken from the fruit they should be kept in moist sand and sown in early spring in the open ground. After growing one year they are transplanted into nursery rows, and by the ensuing summer, are strong enough to be entrusted with the bud taken from a tree of the required kind.

Apple and pear seeds may be allowed to become dry, but required to be kept moist for some time before sowing. The young seedlings may be budded like the cherry and plum. The peach seedlings are managed in the same way, excepting that they are seldom transplanted, being large enough the first summer to receive the bud.

The operation of budding is, as you see, applicable to all the common kinds of tree fruits. It is much more certain than grafting in its results, especially when applied to soft wooded trees, such as the peach and cherry. It is also more rapidly performed, does not ruin the stock in case of failure, and requires no tools excepting a sharp knife with a round point. The principles upon which its success depends are as follows:

Most fruit trees increase in thickness by additions to the inside of the sap-wood. These additions appear at first no thicker than water, and are called sap. This fluid has previously gone up through the sap-wood to the leaves. Then it comes flowing down the tree just inside the bark. As it descends, a part of it sticks to the surface of the wood, becomes stiff, and finally, hardens into sap-wood itself. Every year a ring is in this way added to the thickness of the tree.

The nurseryman has found that if he slips in a young bud between the bark and the wood, it will begin growing downward, that the sap sticks to the bud as well as to the tree, and when hardened, forms a bridge of wood by which the upward rent of sap from the roots, passes into the bud and nourishes it. When the bridge is completed and before the next year's growth commences, the nurseryman cuts off the old top, and the sap all goes by the new bridge into the bud, forcing it into a vigorous shoot. The first condition of success in budding is, that the bark shall peel freely, when cut by the knife. This occurs whenever the tree is in active growth.

The second condition is a well ripened bud for insertion. Immature buds become dry too quickly, and before the sap can unite them to the stock.

The third condition is exclusion of the air. This is accomplished by a tight bandage of bass bark or lamp wick.

Grafting should be done before the spring opens. The stock is cut off and split. Into the cleft is set a short twig of the desired kind. The twig must be sharpened to fit the cleft, and be placed so that the inner bark touches the inner bark of the stock. The operation is completed by covering the point of union with grafting wax to keep out the air.

With few exceptions, budding or grafting must be performed upon a seedling of the same kind of fruit as is desired. This is especially true of the apple and cherry. Some trees, however, unite well with the quince, and peaches grow for a while on the plum; but generally the largest and most reliable trees of all kinds are grown by using similar stocks. It makes no important difference however, whether the natural fruit of these stocks be sweet or sour, large or small, late or early. The variety of stock only affects bears in its own character in leaves, color of bark, manner of growth, and in fruit, without much regard to the kind of artificial root with which the nurseryman has provided it. A little experience in the use of these methods will therefore enable any one to make the seed of any crab apple, sour cherry, or choke pear, to produce whatever fine variety he can secure a twig from. Every farmer may thus become his own nurseryman, and though he will have to wait much longer for his fruit, he will realize it more highly when it comes, and in the necessary study of the habits of his trees and vines, will have added a very pleasant variety to the routine of his usual work.

Postage Law—Goes into Effect July 1st.

1. Franking privilege abolished.
2. Postmasters supplied with official stamps.
3. Official stamps must not be used except for official business.
4. Stamp of one department cannot be used for correspondence of another.
5. No matter can pass through the mails free.
6. Postage must be collected on newspapers published in the county where delivered.
7. "Exchanges not free. Publishers must pay postage on each exchange received.
8. Sealed cards manufactured for are not sent to Dead Letter office.
9. Postal cards cannot be used a second time.
10. Ordinary cards can be transmitted through the mails by affixing a one cent stamp, provided the entire message is printed. The address may be written.

POSTAGE.

Letters.—Three cents for each half ounce or fraction thereof.

Drop Letters.—Where delivered by carriers, two cents for each half ounce or fraction thereof. At other offices, one cent for each half ounce or fraction thereof.

Printed Matter.—One cent for each two ounces or fraction thereof. Books, bulbs, cuttings, roots, scions, cravons, and engravings are classed with printed matter.

Merchandize.—Two cents for each two ounces or fraction thereof, limited to twelve ounces. When any of the above matter is mailed wholly sealed, and by inadvertence, in the destination, double rates should be charged and collected.—*Post Office Gazette.*

POSTAL CARDS—PRICES.

Postal cards will be sold for one cent each, neither more nor less, whether in large quantities or in small.

USES.

The object of the postal cards is to facilitate letter correspondence, and provide for the transmission through the mails, at a reduced rate of postage, of short communications, either printed or written with pencil or ink. They may, therefore, be used for orders, invitations, notices, receipts, acknowledgments, and other requirements of business and social life. And the matter desired to be conveyed may be either in writing or in print, or partially in both. In their treatment as mail matter they are to be regarded by postmasters the same as sealed letters and not as printed matter, except that in no case will unsalaried cards be sent to the Dead Letter office.

IRREGULAR CARDS.

An ordinary printed business card may be sent through the mails when prepaid by a one cent postage stamp attached; but such card must contain absolutely *no written matter except the address*, otherwise it will be treated as not fully prepaid, and refused admission into the mails.

COUNTERFEITS.

All cards different from those herein described, bearing embossed or printed postage stamps, and purporting to be United States postal cards, are *counterfeit*; and the manufacturer of such cards, or the attempt to use the same, will subject the offender to a fine of five hundred dollars and imprisonment for five years. (Sec. 178 Postal Code).

SPOILED CARDS.

Postmasters will not, under any circumstances, be permitted to reduce or exchange postal cards that may be defaced, spoiled in printing, or otherwise rendered unfit for use in the hands of private holders.

REQUISITIONS.

The Department will not furnish less than five hundred cards on the order of a postmaster. Individuals desiring postal cards will purchase them of a postmaster, as in no case can they obtain them upon direct application to the Department.

Department of Justice.

In addition to the recent award of $268,000 bounty for the destruction of the enemies' vessels at New Orleans, Admiral Farragut, Judge Humphreys has awarded $900,000 prize money. This decision will have to be further considered by the Supreme Court of the District of Columbia in banc. If then affirmed, the Treasury Department, it is asserted, will appeal to the Supreme Court of the United States.

Cholera Preventives.

CIRCULAR FROM THE AMERICAN PUBLIC HEALTH ASSOCIATION.—WHAT SHOULD BE DONE TO PREVENT THE SPREAD OF THE DISEASE.

In view of the appearance and progress of cholera in the South, and its by no means improbable advance into other parts of the country, the American Public Health Association have prepared a circular concerning the means of combating the dread destroyer, and have issued it for publication. The following are the principal points in this timely and valuable document:

SANITARY CLEANSING.

The local conditions that chiefly promote the outbreaks and propagation of cholera are:

1. Neglected privies.
2. Filth-sodden grounds.
3. Foul cellars and filthy or badly-drained surroundings of dwellings.
4. Foul and obstructed house drains.
5. Decaying animal and putrescent materials, whether animal or vegetable.
6. Unventilated, damp and uncleaned dwellings and apartments.

These localizing causes of cholera should be promptly and very thoroughly removed before a case of the disease appears in the town or district, and if any sources of putrescence or of excessive moisture remain, they should be controlled by the proper cleansing, drying and disinfection.

Thorough scavenging and surface drainage, with the application at the same time of quicklime and coal tar, or crude carbolic acid; whitewashing with fresh quicklime; the cleansing and thorough drying and ventilation of cellars, basements, chambers and closets; and daily care to cleanse, flush, ventilate and purify the sources of defilement about all inhabited premises, will afford a most complete protection. If suitable care is taken of personal health.

The security of personal health requires pure drinking water, fresh and substantial food, temperance and the needed rest and bathing of the body.

DISINFECTION AND DISINFECTANTS.

The principles relating to disinfection as a means of destroying the propagating or infectious cause of cholera and arresting putrefaction are readily understood, and may be so explained to any family that the household may insure its own immunity against the introduction and spread of the disease. For popular use we append a brief statement of these principles at the end of this circular, and we respectfully recommend that the statement and the following schedule of rules and methods be given to the press and to all principals of schools, superintendents of places of public resort, railroad depots, ferries, hotels and public institutions, and to the masters of ships and steamboats and the conductors of passenger trains throughout this Continent, believing, as we do, that by the timely and continued application of these measures, the prevalence of cholera, may be prevented. But let the fact be remembered that there can be no substitutes for thorough cleansing and fresh air.

RULES AND METHODS OF DISINFECTION.

For Privies, Water Closets, Drains and Sewers.—Eight or ten pounds of sulphate of iron (copperas) dissolved in five or six gallons of water, with half a pint of crude carbolic acid added to the solution and briskly stirred, makes the cheapest and best disinfecting fluid for common use. It can be procured in every town and fly any family, and if the carbolic acid is not at hand the solution of copperas may be used without it.

To prevent privies and water closets from becoming infected or offensive, pour a pint of this strong solution into every water closet, pan or privy seat, once or twice a day.

To disinfect masses of filth, privy vaults, sewers and drains, gradually pour in this solution until it reaches and disinfects all the foul material.

For the chamber vessels used by the sick and for the disinfection of ground upon which any excremental matter has been cast away, use the solution of copperas and carbolic acid, and for disinfecting extensive masses or surfaces of putrescent materials, and for drains, sewers and ditches, this disinfecting fluid may be used, or the "dead oil" ("heavy oil") of coction, the coal tar itself; coal tar may be used as a paint upon the walls of cellars, stables and open drains.

Other disinfectants, such as the solutions of sesquichloride of iron or chloride of zinc, are effectual in privies and drains and upon foul surfaces and offensive materials.

Quicklime is useful as an absorbent and dryer upon foul walls and in damp places, and whitewashing with it should be practised in common tenements, factories, basements, closets and garrets.

To disinfect the clothing or bedding defiled in any manner by excremental matters from the sick, throw them into a solution made as follows: One pound of sulphate of zinc to six or eight gallons of water, to which add two or three ounces of pure and strong carbolic acid;—such articles to remain therein at least half an hour; then immediately place them in boiling water, and continue boiling. If the acid is not at hand, then use the solution of zinc in water. The same disinfecting solution is excellent for bedpans and chamber vessels, and for soiled floors and defiled surfaces.

Apartments, bedding and upholstery that have been used by the sick with cholera or diarrhœa should be thoroughly cleansed and disinfected.

PRINCIPLES AND DUTIES TO BE OBSERVED.

1. That thorough cleanliness, domestic and civic, and an abundant supply of pure water are essential means of preventing cholera in any household when the disease is near.

2. That general cleansing, scavenging and disinfection should be attended to in every city and town before cholera makes its appearance; and that wherever it does appear, that house and the exposed premises should be kept constantly disinfected.

3. That, whatever differences of opinion there may be respecting the spidemic phenomena of different periods, the paramount importance of thorough cleanliness and disinfection is to be kept in mind, and that, in the words of the Chief Medical Officer of Great Britian, "It appears to be characteristic of cholera, not only of the disease in its developed and alarming form, but equally of the slightest diarrhœa which this epidemic can produce, that all matters which the patient discharges from his stomach and bowels are infective; that the patient's power of infecting other persons is represented almost or quite exclusively by those discharges; that they are comparatively non-infective at the moment they are discharged, but afterward when undergoing decomposition, acquire their maximum infective power; and that if they be cast a way without previous disinfection, they impart their own infective quality to the excremental matters with which they mingle in filth, sodden earth, or in depositories and conduits of filth, and to the effluvia which those excremental matters evolve; that if the infective material, by leakage or soakage from drains or cesspools or otherwise, gets access, even in the smallest quantity, directly or through porous walls to wells or other sources of drinking water, it can infect, in the most dangerous manner, very large volumes of the water; that the infective influence of the specific discharges attaches to whatever bedding, clothing and like things have been imbued with them, and renders these things, if not disinfected, capable of spreading the disease."

4. Cleansing and purity, skillful disinfection, temperate habite, and wholesome diet, with pure water and fresh air, are the trusted and sure means of health and security in all places and for all classes of people when exposed to the causes of cholera. The watchword against this destructive enemy should be—Remove the local causes that favor the propagation of cholera, and wherever it appears let its germs be quickly stamped out by powerful disinfectants and special cleansing.—*New York Herald.*

INFORMATION received at Washington indicates a bad state of affairs in Alabama. A Washington special says that in some parts of the State the cholera is raging at a fearful rate, the towns are being depopulated, the residents of which are leaving to escape the terrible scourge, and it is reported that in a place containing about one thousand inhabitants, deaths have occurred to the extent of twenty-seven in a day.

THE SOUTHERN WORKMAN.

At Home.

Saturday Night.

Plaiting the little hats all in a row,
Ready for church on the morrow, you know;
Washing wee faces and little brown fists,
Getting them ready and fit to be kissed;
Putting them into clean garments, and white—
This is what mothers are doing to-night.

Spying out holes in the little worn hose,
Laying by shoes that are worn through at the toes,
Looking o'er garments that faded and thin—
Who but a mother knows where to begin?
Changing a Button to make it look right—
That is what mothers are doing to-night.

Calling the little ones all 'round her chair,
Hearing them lisp forth their soft evening prayer,
Telling them stories of days of old,
Who loves to gather the lambs to His fold;
Watching, with tireless and loving delight—
That is what mothers are doing to-night.

Creeping so softly to take a last peep,
After the little ones are all asleep;
Anxious to know if the children are warm,
Tucking the blanket 'round each little form:
Kissing each little face, rosy and bright—
That is what mothers are doing to-night.

Kneeling down gently beside the white bed,
Lowly and meekly she lows down her head,
Praying as only a mother can pray,—
"God guide and keep them from going astray."

Flowers Instead of Doctors.

Modern science teaches us that the fragrant flowers we cultivate around our homes, not only make our houses happy by gladdening the eye and elevating the taste, but have a direct influence upon the health, purifying the air and destroying miasma. Among the best of these flower physicians are the cherry, laurel (poisonous though its leaves and kernels be when eaten), the clove, lavender, mint, fennel, the lemon tree and sweet bay tree: also the narcissus, the heliotrope, the hyacinth and nignonette. And it is impossible, we are told, to find any better purifier than the common sunflower. This cheery friend of the cottage door will purify the atmosphere of unruly grounds from a great deal of malaria, and increase the life giving properties of the air. Scientific men recommend its careful cultivation in all such places. Who would not decide for fragrance against physic?

Remedy for the Cholera.

More than forty years ago, when it was found that prevention for the Asiatic cholera was easier than cure, the learned doctors of both hemispheres drew up a prescription, which was published for working people in the New York "Sun," and took the name of the "Sun Cholera Mixture." Our contemporary never lent its name to a better article. We have seen it in constant use for more than forty years, and found it to be the best remedy for looseness of the bowels ever yet devised. It is to be commended for every household, and not to be mixed with liquor, and therefore will not be used as an alcoholic beverage; its ingredients are well known among all the common people, and it will have no prejudice to combat; each of the materials is in equal proportion to the others, and it may therefore be compounded without professional skill; and, as the dose is so very small, it may be carried in a tiny phial in the waistcoat pocket, and be always at hand. It is:

Tinct. opii,
Capsici,
Rhei co,
Menth pip.,
Camphor.

Mix the above in equal parts; dose ten to thirty drops. In plain terms, take equal parts tincture of opium, red pepper, rhubarb, peppermint and camphor, and mix them for use. In case of diarrhœa take a dose of ten to twenty drops in three or four teaspoonfuls of water. No one who has this by him, and takes it in time, will ever have the cholera. We recommend it to our Western friends, and hope that the recipe will be found valuable. Even when no cholera is anticipated, it is an excellent remedy for ordinary summer complaint.—*New York Journal of Commerce.*

We would duly add to this excellent prescription a caution against taking this or any other medicine habitually without the advice of a physician, or a good druggist. Thorough cleanliness, avoiding unripe or overripe fruit or vegetables, temperate habits, and a trust in God that disarms foolish fears are preventives better than cure.

A PIECE of red pepper the size of your finger nail chopped fine into one or vegetables the first beginning to cook, will aid greatly in killing the unpleasant odor arising therefrom. Remember this for boiled cabbage, green beans, onions, chickens, mutton, etc.

A CORRESPONDENT of the "Scientific American" commends onions as especially against epidemics—not as food, but shred and kept in a sick room, where they will absorb any atmospheric poison. They should be replaced by fresh ones every hour. It is noticed that in the room of a small-pox patient they will blister and decompose very rapidly, but will prevent the spread of the disease. It is said that their application has also proved effective in cases of snake bites.

SUN-BEAMS mark only the bright hours. Would it not be well if more people could imitate them? They would be surprised to find how many there are of these, and how much brightness there is in hours they are accustomed to think dark.

FRUIT ACID.—By this receipt you may make drinks of small fruits, especially raspberries, blackberries, stemmed currants, seeded Morello cherries:

Dissolve ten ounces of tartaric acid in two quarts of cold water. In a large bowl put twelve quarts of berries, well bruised, etc. Pour over them the acidulated water, and let the fruit stand thus undisturbed for forty-eight hours. Then rub the fruit and juice through which let the juice drip without squeezing. When the bag is well drained, measure the juice. To each pint of acidulated juice put one pint of white sugar (coffee sugar, however, No. A, will answer as well.) Allow the sugar and juice to remain together in a large jar until the former is thoroughly dissolved; then bottle. As a slight fermentation may ensue, do not cork at first, but tie the mouths of the bottles up tight at the end of a week. If bottles up tight at the end of a week. If bottles up tight at the end of a week. If

THE SOUTHERN WORKMAN.

Trust.

BY CELIA THAXTER.

See how the wind is hauling point by point to the south,
By the boats in the little harbor, that swing to its lightest touch,
And the coming craft emerge from the far off river's mouth,
And on the rocks the breakers relax their habitual clutch.

At last is the tempest ended, the bitter northwest appeased,
And the world will soon be sparkling in clear white fire and dew,
And the sullen clouds melt swiftly, by the might of warm sunlight assisted,
And the heavens shine in splendor, where brooded the murkiness late.

Carol the birds in chorus, glitters the snow white gull,
Screaming loud in mid air, slow soaring high with delight,
And the roseleafs lessen their petals, the drenched flowers, sodden and dull,
Break out into tints of purple and gold and crimson and white.

Where wert Thou, Spirit of Beauty, while earth lay cold and dark,
And the chill mind struck to our hearts and the sky like an enemy scowled,
And we crept through the mists despondingly, and never a shimmering spark
Shot a ray through the gloom while the storm like a demon growled?

Where art Thou, Heavenly Father, when Thy world seems spoiled with sin,
And darker far than Thy tempest arises the smoke of doubt,
That like here the sky of the soul—for faith is hard to win?
To our finite sight wrong triumphs and noble things die out.

Behind the cloud Thou waitest, bidding, yet very near,
Infinite Spirit of Beauty, Infinite power of Good!
At last Thou wilt scatter the vapors, and all things shall be clear.
And evil shall vanish away like a mist by the wind pursued.

"He being dead, yet speaketh."

Eliot Tolman, a graduate of the Hampton Institute, in the class of 1871, died in Boston, Massachusetts, July 8th, of Typhoid fever, at the age of 24 years. He had been serving as clerk in that city since his graduation. And one of the important lessons which he yet speaketh to us is that

HONESTY PAYS.

It is said that in such a world of knaves and sharpers as this, one cannot be honest and make a living. But he found at first that the business community were so suffering from cheating and dishonesty, that strict uprightness commanded a high price in the market, so that, because of the confidence reposed in his integrity, he could obtain more than ordinary wages. And as soon as by actual trial he had proved himself perfectly trustworthy, he received tempting offers to go elsewhere for higher pay. The reason assigned for being "We want one whom we can trust, and will reward him liberally." But as his first employer dealt honorably with him, with unswerving fidelity he stood by him to the last, confident that, if faithful to his work, he would never lack for place or pay. And let any capable young man show himself of like integrity and fidelity, and he will find that, instead of being compelled to waste his time in seeking a place, places will seek him—that honesty pays.

Another lesson which he being dead, yet speaketh is, that

RELIGION IS OF THE HIGHEST VALUE.

It was this, and this alone that made the gloom of the sick chamber and the darkness of the grave, radiant with heavenly light. The Saviour to whom he gave himself in life, he found to be most precious in death, saying at a brief interval in the delirium of his last sickness, "I trust in Jesus; and if all these young men would trust in Him, it would be a blessed thing, a blessed thing." A more blessed source of peace and joy indeed is this than all the world can give, prompting us to sing at his funeral,

"How blessed the righteous when he dies!"

And one of the richest consolations to his bereaved friends is not in any mere earthly good he may have attained, or earthly reputation he may have won, but the uniform testimony of his associates to his Christian life—furnishing as this does, a far better evidence of union with Christ than any mere words of the dying can afford.

May all our readers so heed the lessons which our departed friend yet speaks, as to know by their own experience the truth of the inspired words: "Godliness is profitable unto all things, having promise of the life which now is, and of that which is to come."

Accept Nothing from Satan.

Accept everything that comes to you from the hand of God; take nothing whatever as a gift from Satan. Admirably was this principle acted upon by one of the best generals whom the British army ever possessed. For many long years Havelock struggled against the arbitrary character of official patronage, and the odious abuses of that system of purchase which has only recently received its death blow; and to who was at length the saviour of the Indian Empire was for a dreary while only a lieutenant. Yet, how did he bear himself under it all? He bore himself as a Christian soldier. After the pattern of the Lord, he placed his allegiance to God uppermost, and he would not renounce that for anything that man could name. Here are his own words: "Would that they might stir every reader up to emulate him in integrity: 'Let me ask, my good friend,' says he in one of his letters, 'what is it you mean by prejudices against me? Tell me plainly. I am not aware of any. Old ——— and others used to tell me that it was believed at the Horse Guards and in other quarters, that I professed to fear God as well as to honor the Queen, and that Lord Hill and others had made up their minds that a man could not be at once a saint and a soldier. Now, I dare say such good authorities must be right, notwithstanding the example of Colonel Gardiner and Cromwell and Gustavus Adolphus; but if so, all I can say is that their bit of red ribbon was very ill bestowed upon me, for I humbly trust that in that great matter I should not change my opinions and practice though it rained garters and coronets as the reward of apostacy." The man who could write and act thus was already a hero, even if no other deed had been performed by him. Yet see how in the end God revealed his greatness, and how his name will be remembered and blessed long after those of the puppets who had snubbed him and the minnies who had purchased over him are buried in deserved oblivion.

Are we prepared, each in his own sphere, to act on these principles? Merchant, wilt thou be true to thy God, even though it should ruin gold around thee, to seduce thee from thy fidelity? Legislator, wilt thou, as in the sight of God, be true to thy country, though liberal largess should be offered thee to win thee from thine integrity? Judge, will thou administer justice with impartial hand, remembering that thou shalt thyself be judged at last, even although the magnificent fortune may be in thy immediate reach if thou wilt favor the powerful suitor? Workman, will thou be true to thy Saviour, even although easy advancement should seem to be the reward of forsaking his ways? Minister of the Gospel, wilt thou preach the preaching which thy Master bids thee, diminishing not a word through fear or flattery, even although popularity and position may appear to be the reward of thy unswerving fidelity? Are not these the questions which we have to face every day? And, as the Devil is thus laying the kingdoms of the world at our feet, on the old condition that we shall worship him, what better answer can we give than this of our Lord Jesus?—"Thou shalt worship the Lord thy God, and Him only shalt thou serve?"—*Independent.*

Singing.

If singing God's praise is to be a prominent exercise of the saints in Heaven, why not cultivate the voice and sing the praise on all proper occasions here on earth? If we truly and ardently desire a home in heaven, why not make our earthly homes as much like heaven as we can? If we feel in our hearts, that to die will be of great gain to us, because we will then enter into the enjoyments of heavenly felicity, where, with the Redeemed, we will be forever praising God, will we not, as it were, naturally delight in those places and in those exercises here that are most like heaven? We believe, all other things being equal, those families that sing God's praise regularly and daily, are most cheerful and happy among themselves, as well as most useful and truly ornamental in the societies in which they move. We pity the man who has no music in his soul." Is not singing too often neglected, even in family worship? In visiting the sick, where the dying one wants to think of heaven and the exercises of the saints above, why is singing the praises of the Most High so often, and we might say, almost universally neglected? I have often thought of this and cannot understand it. Surely, *surely*, if I were hearing my heavenly home, nothing would afford me as much pleasure as to have my friends engage in singing the praises of Him into whose immediate presence I am so soon to enter; and, while I desire this for myself, I feel constrained to ask the same for others.

When I speak of singing, I do not mean discordant mumbling of the voice, but real life-like melody and harmony. It is certainly the duty of everyone to cultivate his voice and then use it to the very best advantage. If through neglect or any other account, we have lost our natural teeth, it is certainly our duty to get a new set, so that we will not only be benefited in a dozen other ways, but that we may be able to read God's Word and sing His praise in the very best manner possible. As every true Christian realizes the great difference between actual *praying* and simple *saying* prayers, so let us cultivate in our hearts the great advantage of singing God's praise, and singing it with a degree of soul in the exercise, that means *substance* instead of shadow.—*Christian Instructor.*

"I Will Try."

There is a society in London, known as the Society of Arts. Its object is the encouragement of talent in the department of arts. Prizes are awarded by the society sometimes to painters for their pictures, and sometimes to humbler artisans for improvements in weaving, or in the manufacture of honnets, lace, etc.

More than a half century ago, a little fellow named William Ross, not twelve years of age, was talking with his mother about an exhibition of paintings at the Society's room. William was very fond of paintings, and could himself draw and color with remarkable skill.

"Look you, William," said his mother, "I saw some paintings in the exhibition, which did not seem to me half as good as some of yours."

"Do you really think so, mother?" asked he.

"I am sure of it," she replied. "I saw some paintings inferior, both in color and drawing, to some that are hanging in your chamber."

William knew that his mother was no flatterer, and he said, "I have a mind to ask permission to hang one or two of my paintings on the walls at the next exhibition."

"Why not try for one of the prizes?" asked his mother.

"Oh, mother, do you think I should stand any chance of success?"

"Nothing venture, nothing have," said his mother; "you can but try."

"And I will try, mother, dear," said William. "I have a historical subject in my head, out of which I think I can make a picture."

"What is it, William?"

"The death of Wat Tyler. You have heard of him? He led a mob in the time of Richard the second. He behaved insolently before the king at Smithfield, and was struck down by Walworth, Mayor of London, and then despatched by the king's attendants."

"It is a bold subject, William: but I will say nothing to deter you from trying it," he said.

"If I fail, mother, where will be the harm? I can try again."

"To be sure you can, William. So we will not be disappointed should you not succeed in winning the silver palette, offered by the society for the best historical painting."

Without more ado, little William went to work. He first acquainted himself with the various costumes of the year 1371; he learned how the king and nobles were used to dress; and what sort of clothes were worn by the poor people and workmen, to which class Wat Tyler belonged. He also learned what sort of weapons were carried in those days.

After having given some time to the study of these things, he acquainted himself thoroughly with the historical incidents attending the death of the bold rioter. He grouped in imagination the persons present at the scene —the king and his attendants; Wat Tyler himself, and in the back-ground some of his ruffinly companions.

The difficulty now was to select that period of the action most fitted for a picture, and to group the figures in attitudes natural and expressive. Many times did little William make a sketch on paper, and obliterate it, dissatisfied with his work. At times, he almost despaired of accomplishing anything that should do justice to the conception in his mind. But after many failures, he completed a sketch which he decided to transfer to canvas.

He now labored diligently at his task, and took every opportunity to improve himself in knowledge of colors and their effects. At length the day for handing in his picture arrived. He then had to wait a month before there was any decision as to its merits.

On the day appointed for the announcing of the decision, many persons of distinction were present, including ladies. The meeting was presided over by the Duke of Norfolk.

William's mother was present, of course. She sat awaiting the result with a beating heart. What a gratified mother she was when, after the transaction of some uninteresting business it was announced that the prize of a silver palette for the best historical painting was awarded to the painter of the picture entitled, "The Death of Wat Tyler."

When it was found that William Ross was the successful artist, the applause of the audience broke forth with enthusiasm. To see such a little fellow gain a prize over competitors of mature age was a novelty and surprise.

William was summoned with his picture, to the Duke's chair, and here he received such encouragement as was of great service to him in his future career. He became at length Sir William Ross, miniature painter to the queen, having risen to fortune and to fame by carrying out, with determination and perseverance, his simple promise to his mother, of "*I will try.*"—*Selected.*

Labor, the Creator of Wealth.

BY WENDALL PHILLIPS.

The man who with his hands digs clams out of the seashore, or climbing a tree gathers apples, or one who has fashioned a hoe out of hard wood, is a pure, simple laborer, and is entitled to what he gains or makes. The man who makes such a hoe one day, and working with it the next day, digs twice as many clams as when he used his hands alone, is capitalist and laborer united. He works with a tool, which is capital, the result of past labor. He, too, is an honest laborer, and entitled to all he gets. The man who works a week and makes ten such hoes, then joins nine less skilled men with himself, and they, the ten, share fairly the result of their hoes and their toil, introduces co-operation, and a just civilization: a system which seems to hold within itself every possible safeguard against misuse, and to be full of the seeds of all good results. The man who, having made such a hoe, lets it to another less skilled man to dig clams, receiving an equivalent for its use, is a capitalist. Such a system has no inherent, essential injustice in it, and if it can be properly arranged and guarded, serves civilization. The difficulty is to guard it from degenerating into despotism and fraud. The man who, getting possession of a thousand such hoes, sits with idle hands, and no mental effort but selfish cunning, and arranges a country-wide work of laws and corporations, banks and currency, interest and "corners," to get seven out of every ten clams that are dug, is a drone. We mean by an honest system to starve him out and compel him to work. The man who sits in Wall street, and, by means of bank-credit, buys up all this year's clams to raise the price—who, taking fifty thousand honestly earned dollars, makes a "Clam Digging Company"—bribes newspapers to lie about it,—creates ten banks and locks up gold, or arranges a corner, to depress its stock,—then buys up every share;—makes ten more banks, and floods the land with paper, and sells out;—retiring after a week of *such labor* with a fortune, is a THIEF. The thieves of the past we propose to leave undisturbed. Our plan is to make such thieves impossible in the future.

It is Better.

Better to wear a calico dress without trimmings, if it be paid for, than to owe the shopkeeper for the most elegant silk, cut and trimmed in the most bewitching manner.

Better to live in a log cabin all your own, than a brown-stone mansion belonging to somebody else.

Better walk forever than run into debt for a horse and carriage.

Better to sit by the pine table, for which you paid only a few dollars ten years ago, than send home a new extension, black walnut top, and promise to pay for it next week.

Better to use the old cane-seated chairs, and faded two-ply carpet, than tremble at the bills sent in from fashionable cabinet's for the most elegant parlor set ever made.

Better to meet your business acquaintances with a "free" don't owe you a cent" smile, than to dodge around the corner to escape a dun.

Better to do without organ-grinder two cents for music, if you must have it, than to owe for a grand piano.

Better to gaze upon bare walls than pictures unpaid for.

Better to eat thin soup from earthenware, if you owe for neither nothing, than to dine off lamb and roast beef and know that it does not belong to you.

Better to let your wife have a bit of hysterics than to run in debt for nice new furniture, or clothes, or jewelry. —*Christian Advocate.*

Curiosities of the Bible.

A man who was condemned to solitary confinement for life in prison, relieved the tediousness of the years by ascertaining the followiog facts:

The Bible contains 3,586,489 letters, 773,692 words, 31,173 verses, 1,189 chapters, and 66 books. The word "and" occurs 46,277 times; the word "Lord" occurs 1,855 times; the word "reverend" occurs but once, which is in the 9th verse of the 111th Psalm. The middle verse is the 8th verse of the 11th Psalm. The 21st verse of the 7th chapter of Ezra contains all the letters in the alphabet except the J. The finest chapter to read is the 26th chapter of the Acts of Apostles. The 19th chapter of II. Kings and the 37th chapter of Isaiah are alike. The longest verse is the 9th verse of the 8th chapter of Esther. The shortest verse is the 35th verse of the 11th chapter of St. John. The 8th, 15th, 21st and 31st verses of the 109th Psalm are alike. All the verses of the 136th Psalm are the same, no words or names of more than six syllables.

Elegant Language.

The proper use of words in expressing thoughts is language—a perfect picture of the mind. When the language is perfect the picture is perfect. Bad language is like a distorted photograph, showing only an unsymmetrical shadow of the object; and when we look at it we can scarcely realize that it is intended as an image. Sometimes it is so badly distorted that its very producer would scarcely recognize it as his own. In the English language there are plenty of words for the expression of thoughts in true and bright colors; therefore the artist need not borrow from other tongues. But he must choose judiciously, from among the thousands, the proper one for the place, taking care that his colors are blended in such a manner as to please, and at the same time carry a forcible expression. The word-painter must be very careful that his work be not too highly colored, for by the use of high-sounding, ambiguous words, the strength he may intend to give to the picture is lost, and the image is blurred. The simplest colors applied by the skillful artist make the most life-like picture, and the simplest words, judiciously chosen, are colors that must be used in painting a true picture of the mind.—*Selected.*

Scientific and Mechanical.

PREPARATIONS FOR OBSERVING THE TRANSIT OF VENUS.—The French are making active preparations for observing the approaching transit of Venus, the assembly having voted $20,000 for the construction of instruments, with the promise of $40,000 more during the coming year. Nine stations have been selected for observation, at four of which the entrance and exit of the planet will be visible, while at the other five but one of the two incidents can be observed. French *savants* are now corresponding with the astronomers of England, Germany, Russia, and this country, with a view to parcelling out the stations to the different observers in such a way that all shall be favorably located, and all the useful points of the earth's surface available for these important observations occupied. After use in 1874, the French apparatus will be carefully preserved for observing the transit of 1882, which is followed by a period of one hundred and twenty years, in which no transit occurs.

OLD SHOES.—Most every one wonders what becomes of worn-out materials. We all know that worn-out clothing can be made into paper and shoddy, but few know what is done with the old shoes that are picked up, bought or begged by scavengers through the country.

They are cut up into small pieces and put, for two or three days, in chloride of sulphur. This makes them very brittle. This material is washed in water, dried, ground and mixed in glue, to make the particles adhere. Then it is pressed into moulds, making buttons, knife handles, combs, jewelry, etc. There is hardly a grown person in the country but what has bought old shoes in these latter shapes.

GUANO.—It has ever been supposed that guano was made up exclusively of the excrements of birds, but now the assertion is certainly open to doubt. If not indeed entirely erroneous. Dr. Hallet has been making investigations with the microscope and the retort and has found after treating with acid, the residue is made up of fossil sponges and other marine animals and plants. The fact too that men here bring up guano from the bottom of the ocean, is quite opposed to the prevailing idea. The Dr. says that guano is the accumulation of fossil plants and animals whose organic matter has been transformed into nitrogenous substance, the mineral portion remaining intact.

PERPETUAL PASTE.—The "Journal of Applied Chemistry" says: Dissolve a teaspoonful of alum in ¼ quart of warm water. When cold, stir in as much flour as will give it the consistency of thick cream, being particular to break up all the lumps; stir in as much powdered rosin as will be one dime, and throw in half a dozen cloves to give a pleasant odor. Have on the fire a teacup of boiling water, pour the flour mixture into it, stirring well at the time. In a very few minutes it will be of the consistency of mush. Pour it into an earthen or chim vessel; let it cool; lay a cover on, and put it in a cool place. When needed for use, take out a portion and soften it with warm water.

TEMPER OF TOOLS.—A correspondent of the Detroit "Tribune" says: "If an edge tool is so hard as to crumble, grind it on a dry stone until the edge turns blue; it will then cease to break, and the temper will generally prove to be about right. Scythes and axes are sometimes too hard at the edge, but if treated in this way will give no further trouble."

NON-INFLAMMABLE FABRICS.—Cotton or lined goods may be rendered uninflammable by being dipped in a solution of equal parts of acetate of lime and chloride of calcium dissolved in twice their weight of water.

A hundred thousand young shad have been put into Lake Champlain during the present season, for the purpose of determining whether they will live and multiply when confined exclusively to fresh water.

Publisher's Department.

GIVEN AWAY!

A BEAUTIFUL

OIL CHROMO

to every NEW SUBSCRIBER to the "Southern Workman."

We have secured a large invoice of the elegant picture entitled RETURNING HOME, which sells at retail for $1.50; and we have made such arrangements with the publishers that we can afford to GIVE THEM AWAY to the friends of this paper.

The subscription price is but $1.00 per year. The Chromo will be worth $1.50. Who cannot spare a single dollar for such a good purpose? The paper will pay for itself a hundred times, giving as it does, valuable information on all subjects of general interest, and devoted especially to the interests of our Southern homes. The Picture can hardly be told from an

OIL PAINTING,

and would adorn the walls of the richest. Good pictures are needed almost as much as good reading. They have their influence for good. Everybody *reads them.*

We present one to EVERY NEW SUBSCRIBER; to every old subscriber who renews; to every one who will get us a new subscriber.

No ONE IS LEFT OUT! THE CHANCE IS OPEN TO ALL!

We do not know how long we shall be able to supply these pictures free of cost, but certainly for the next three months. Therefore *do not delay* but send your names at once to "Southern Workman," Hampton, Virginia.

OUR chromos are already finding their way through the land, and thus far they have given perfect satisfaction. the only wonder expressed being that such pretty presents could be given away with such a low priced periodical. When subscribers desire their pictures mounted, fifteen cents additional should be sent to pay the cost and for mailing. Unless this amount is sent we shall pack them carefully on a wooden roller and send them by mail without extra charge.

A RED cross before this paragraph will indicate to the subscriber that his SUBSCRIPTION HAS EXPIRED. He is requested to renew immediately.

THE FREEDMAN'S SAVINGS & TRUST COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain to deposits has been $1,272,827.37, being an increase of *fifty per cent.* on the balance due depositors at the close of the preceding year.

There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $97,382.87. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report six per cent. interest.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by Pass Book only.

Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED

at request, of depositors, from branches where kept to any other Branch or without book or note, and without loss of interest.

For full information about the Bank address the Secretary at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required can be promptly had by addressing the President, J. W. ALVORD, Esq., or D. L. EATON.

JOHN T. BENTLEY

WATCHMAKER AND JEWELER.

Watches, Clocks, Jewelry, Silver, and Plated Ware Sold and Repaired.

Fancy Goods of all kinds constantly on Hand.

Cake, Candy, Confectionery, and General Furnishing Store.

Baltimore Wharf, Fort Monroe, Va.

THE FREEDMAN'S SAVINGS & TRUST Company, A National Savings Bank, Chartered by Congress, March, 1865.

PRINCIPAL OFFICE, WASHINGTON, D. C.

NORFOLK, Va. BRANCH

IS LOCATED AT

NO. 116 MAIN STREET,

Corner of Atlantic Street.

SIX PER CENT. INTEREST

is now paid, beginning monthly. Dividend days July 1st and January 1st. Interest compounded if not drawn. Special arrangements made for receiving accounts payable by check.

Depositors of Deposit, Sub. for six and four per cent. interest issued.

Bank hours, 8 A. M. to 3 P. M. Open also Saturday Nights from 6 to 7 o'clock.

Deposits of any amount received from any person, and repaid on demand.

J. W. ALVORD, *President.* B. C. PEAKE, *Cashier.*

SOUTHERN WORKMAN

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. 2. HAMPTON, VA., SEPTEMBER, 1873. NO. 9.

In the Forest.

[Translated from the German for "The Southern Workman."]

The tender breezes play among
The forest's shady arches,
Sweet rings the little bird's clear song
Amid the bending larches.

The squirrel swings from tree to tree,
Tall grasses hide the fleet deer
And flower and bird and murmuring bee
Rejoice in summer's sweet cheer.

I hear as I roam through the green wood fair
Each tree's voice sparkling,
The chanted joy fills all the air,
Shall I alone cease praising?

Ah no! to Him who made the trees,
Who made the sky's blue beauty,
Who sends the sunbeam and the breeze
All hearts owe love and duty!

September.

The year in its course has come to its third great change of season, and having brought us from Winter to Spring, and so from Spring to Summer, it now, with the opening of this month of September, warns us that Summer is fast hurrying into autumnal coolness and decay. The harvests are not yet gathered in, the boats have not left us, all is still brilliancy and life, not yet we feel that the year is on the wane and that not many weeks can pass before sharp frosts will nip and chill us, and bright hearth-fires will once more attend us within reach of their flames. The beautiful peacefulness of the picture before us brings to mind the still sultriness of many days in early autumn, before the sun has lost anything of its power, and while the still shelter of the shady woods is grateful to the heated blood of man and beast, who linger longingly where leaves are still green and grasses fresh and cool. Over the railing of the rough footbridge hang the school children watching the ripple of the quiet stream, broken as it now and again is by the leaping of some little fish, or the sudden dash of some great, bright dragon fly. The cattle stand knee deep in the cool water lazily lunching from their broad sides the hurrying flies that are the only busy things to be seen in this picture of pleasant idleness, and so real is the scene that we can fancy we hear the droning of the bees, the occasional twitter of some bird high up in the trees, and the rustle of little, warm breezes among the already falling leaves. The grey trunks clad with moss, the green lily pads floating on the quiet water of the brook, the bright autumn flowers scattered thick among the grass, all combine to make a picture which unites the rich luxuriance of summer with that more touching beauty of autumn whose days we know are numbered. What eye can fail to see the liveliness of this earth which God himself has made and called "good," and what heart can fail to appreciate the value of the life that He has given us to be spent in a world so beautiful, so full of wonderful variety, so rich in glories that no mortal hand can copy? Those men and women are ugly to be pitied who are not able to see and enjoy the natural beauty of this world, and it is because the power to enjoy this beauty is greatly a matter of education, that we have lingered in speaking of it. We can teach ourselves to see all these wonders, all this loveliness and to make our lives far happier thereby, if we will only give a little thought to the scenes among which we live, and not walk blindly and stupidly through a daily routine of unimproving toil.

If we can read and study a little about Nature, if we can learn ever so little of her power and mystery, it will help to make us better and happier, and if we study her rightly, every fact that we learn will make us more and more eager for further knowledge, and more and more grateful to the Hand that has created the world and the glory thereof.

Henry Clay.

In the series of brief biographical sketches of American statesmen which we have lately been offering to our readers, the name standing at the head of this article is one of the last which could be omitted, for the remarkable personal power of Henry Clay, and his connection with all the great political events of his day, made him one of the best known, and most beloved among our political leaders. He was born in 1777, not far from Richmond, Virginia, where his father was a Baptist clergyman, poor in this world's goods, and unable, on that account, and by reason of the lack of public schools to give to his children anything more than the rudest education, while his early death and the second marriage of his wife, left their fifth child, Henry, to his own resources at an early age. He went first into a small retail store in Richmond, and thence from one law office to another, until before he was twenty-one he was licensed to practise law, and emigrating to Lexington, Kentucky, opened an office in that town. His unusually winning manners soon brought friends about him, and it was not long before he attracted the attention of the public by taking decided ground in favor of free labor. He advocated gradual emancipation in Kentucky and thirty years afterward avowed that act to have been one of the most satisfactory of his life, although no result was at the time obtained. His reputation was soon established throughout Kentucky, and in 1806, he was chosen to fill a vacancy in the United States Senate, and from that time continued his political career with marked success, until in 1811, he appeared as member of the House, and took an important part in preparing for the war of 1812. This was a time of fierce excitement, and Clay spoke often, and warmly in favor of active prosecution of the war; but the mediation of Russia having been finally accepted, in 1814, he sailed for Europe as a peacemaker, and after months of controversy at last signed the treaty between England and America, which brought hostilities to an end. On his return to America, in 1815, he was re-elected to Congress, and chosen Speaker, continuing to hold that position for nearly all the time that he remained in the House, and never but once being in any danger of losing his seat. In 1824, he became a candidate for the Presidency to which Mr. Adams was elected, and made the mistake of accepting the first place in the cabinet of the latter when it was offered to him, out of which resulted the famous duel with John Randolph, and the enmity which lasted between them until Randolph's death. In 1829, Clay retired from Washington, and was again elected Senator in 1831, and in the following year entered upon his second Presidential contest, being defeated by General Jackson, whose election was followed by the famous connection of South Carolina to nullify the tariff, a threatened danger that was warded off only by Mr. Clay's tariff compromise, a bill which passed both Houses by a large majority and probably saved the country from a fatal struggle. From this time until 1850, he was unintermitting in his political labors, and made his last speech in March of that year, returning after an extra session of the Senate to spend his last summer with his family and friends in Kentucky. At the opening of the next Congress he returned to take his seat, but sunk under his disease until June 29th, 1852, when he died at the age of seventy-five, having been for fifty years a leader in American politics. It has been said of him that he secured the affections of the people because he never deceived them, and it is certain that no man was ever braver in adversity, or more determined in the accomplishment of his purposes, while his faults were overshadowed, to the public eye at least, by the brilliancy of his talents, and his indomitable enthusiasm.

Heat.

Of late years, the subject of Heat, its origin, distribution and qualities have been carefully studied by many eminent men, and the result of their researches has been to greatly increase popular knowledge upon this point. It is of course impossible to condense more than a few facts within our present limits, but just now when we are burning in the rays of an August sun it is interesting to know that it is not to that body alone that we owe our changes of temperature, but that our earthly climate is also largely affected by the moon and stars, which send to our little planet almost as much heat as is supplied by the sun itself. At first this strikes us as strange, for the coolness of night is associated in our minds with the quiet rays of the moon, and the far-off brightness of the stars, but our surprise vanishes when we are told that the sky is so thick with stars, most of them, of course, invisible to the naked eye, that in some places, thousands are crowded together in a space no larger than that occupied by the full moon. Rays of heat from all these bodies are constantly falling upon our earth, and it is our position in relation to them which regulates our changes of climate and variations of temperature. The earth being a globe in shape, and turning round every day, presents different parts of its surface to the sun at different times, so that we get more heat during the day than at night, more at the equator than at the poles, more in summer than in winter, and it is this which in the main controls the distribution of animal and vegetable life. Some tribes of plants, for example, can only live in the tropics while others need cooler latitudes, and if we were to pass from the equator to the poles we should find ourselves crossing belts of widely differing vegetation. We should begin in the tropics with the beautiful varieties of palms, bananas and luxuriant vines which make the forests of the equator more brilliant and wildly grand than words can utter, and from their richness we should pass imperceptibly into evergreen woods where the orange and citron fill the air with their perfume, beyond them again, reaching the deciduous trees—the oak, the chestnut and our own common fruit trees—next through a belt of the coniferal, firs, larches, pines, etc., until at last we reach the birches, which, falling away little by little, finally introduce us to a region that has neither tree nor shrub, but is given up to perpetual ice and snow. Just similar to this is the change in animal life from the lion and monkey of the tropics, to the polar bear and the seal of the poles, while it is not for a moment to be supposed that man alone is influenced by the differences of climate. The inhabitant of the torrid zone differs in frame, complexion, character and habits from the Esquimaux of Greenland, as much as a banana tree from a birch, and even in our own experience we must have felt the enervating effects of extreme heat, and the bracing tonic of a cold, clear air, sufficiently contrasted, to understand how great the effect of climate is upon the character of nations, and to have seen for ourselves that the temperate zones where the temperature is neither of one extreme nor the other, produce the most active and highly races of human beings. There are, of course, other minor causes which affect animal and vegetable development, and one of them which we wish specially to mention is the supply of fuel. A scarcity of fuel influences greatly the habits of a people and the danger of any decrease in our supply of material for producing artificial heat should be carefully guarded against, the reckless cutting down of forests being often an actual crime, while systematic planting of trees is as often the duty of a commonwealth. A question must suggest itself with more or less force to almost everyone, as to how we became acquainted with the properties and action of this wonderful power which we call Heat, and the answer is not altogether an easy one when it is necessary to put it in a few words. It is the *motion* of heat, its passage from one body to another that enables us to study its marvels, and no fairy tale has ever been written stranger or more beautiful than the accounts of the experiments which are constantly being made by scientific students in regard to the action of this great force. We all of us, probably know something of the simpler facts connected with it, as, that when it enters into bodies it expands them (water, for example, increasing in bulk by being heated), and *vice versa* leaves them to contract when parted from them, but beyond these we are very ignorant, and understand nothing of the different kinds of heat, the laws of its radiation, or the conditions under which different bodies emit and receive it, its conduction and non-conduction, etc., and we cannot help hoping that even so brief an article as this may arouse here and there a mind to a desire for more information upon this important subject. Heat is one of the great, possibly the greatest power in nature, and the more we learn of it, the better it will be for us even in the practical matters of every-day life.

Glass Spinning.

A recent number of the "Journal of Applied Science" gives an account of some modern improvements in the art of spinning glass. Brunfant, a Viennese manufacturer, to whose perseverance and ingenuity we are indebted for the brilliant results here detailed, spins a thread of glass surpassing in fineness that spun by the silkworm, and almost as soft and elastic. He makes glass flock, cord wrappings for gouty patients, and the same material is used for filters by chemists. The threads are woven into textile fabrics, which are made into cushions, carpets, tablecloths, shawls, neckties, cuffs, collars, etc. As a material for fancy dresses, for tapestry, for covering furniture, for laces, embroidery and the like, the glass tissue will probably at some future time occupy a prominent place. In softness it almost equals silk, and to the touch it is like the finest wool or cotton. It possesses remarkable strength, and remains unchanged in light or warmth, nor is it altered by moisture or acids. Spots may be removed from it by washing.

THE SOUTHERN WORKMAN.

THE
Southern Workman,
ISSUED MONTHLY.
EDITED BY
RICHARD TOLMAN, } *Editors.*
J. H. LARRY,
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. H. LARRY, *Publishing Department.*

The Southern Workman.

HAMPTON, SEPTEMBER, 1873.

Compulsory Education.

Among the many subjects agitating the popular mind, that of compulsory education seems to be quite prominent. It is argued on one side, that the government has no right to dictate to its people what they shall do for their children, and the step is feared, as one that will lead toward centralization, and imperil the grand principle of individual liberty, which lies at the very foundation of our government. It is true, we have need to keep careful watch over those who frame our laws; that the watch-words "Eternal vigilance is the price of liberty" are as good watch-words now, as ever, and it is equally true, that the best way of maintaining our government is by the education of our children. The State has no planet duty than this, to care for those who cannot care for themselves. If a father sees fit to keep his child from school and thus hinder his usefulness as a man; nay, more, thus force him into the company of the ignorant and vicious, the State should here interfere in the child's behalf. Our increase in population is largely from emigration and these immigrants come with ideas of government opposed to ours. We cannot consistently shut our doors to this clamouring crowd, so often woefully ignorant; remove the cause of alarm, we must educate their children, these as soon to become voters and office-holders in our land.

From a fine address by Henry Ward Beecher, given in New York, not long since, we quote the following:

"The great argument of compulsory education is the educating voluntarily of a majority of the State's children; but the people say: 'If the schools are good, may you not safely leave these children to parental affection?' No, no. There is a vast number of uneducated foreigners that bring uneducated children into this land, and they don't understand the necessity and advantages of education until after they have been here a short time, and then they catch the spirit of the thing at once.

"There are a great many bad characters and criminals, people that have no care for the education of their children, and the State can do much for herself in the care of them. There are a great many more of your careless parents, who do not appreciate the necessity of education, and look more to themselves than to the intelligence of the child. When it is the case the State has a right to step in and take care of the children.

"If the parents sacrifice the child's intelligence, then the State is invested with a parent's right, for though all parents have the liberty of doing right, no parent has the right to do wrong; and in this respect the great parent, the State, will not let pass unheard the inarticulate cry of the army of little children that are growing up around us; the State has no right to tamper the feelings of selfishness in the question of educating the minds of the young, or to stint the privileges of a full manhood."

The Pennsylvania "School Journal" argues:

"So as it seems very inconsistent to maintain that a State may force a good citizen from his family, and march him into the jaws of death, in the defence of liberty, and yet may not lead a child to school for the sake of serving the purpose of good government. This talk about tyranny, and Prussia, and nations ruled by kings, emperors and monarchs when a compulsory school law is mentioned, as though it were inconsistent with Republican liberty, seems more the language of prejudice than reason. Every good citizen relinquishes a portion of his property and freedom for the public good; and may not parents be required to place their children, for a limited period, under the control of a teacher for the same great object?"

The May number of the Rhode Island "Schoolmaster" has an able article upon this subject from which we clip the following:

"One State has found out that a certain per cent. of a mixed population must be coerced into propriety, and compelled to be decent, and as a simple matter of economy and humanity, it takes them in childhood to a school where diligence is honorable and proficiency the road to independence and respectability; a school where the virtues are eager to go, and one which the wisest are happy to encourage, and proud to have enjoyed."

In the pages of the "American Educational Monthly," we find the case summed up thus:

"It has been found that the large majority of criminals are ignorant persons. And it is not strange; for while it is not impossible for a child reared in ignorance to be an honest man, the chances are against him. Ignorance and vice are blood relations. Education gives self-respect. It raises a child in his own estimation above the totally ignorant around him, and separates him from them in feeling, if not in fact. As a rule, the vicious man will not have the same influence over a child of some education, as over one totally ignorant; for with the improvement in the child comes the desire to improve more, and a separation, more or less complete, between him and the man below him in mental attainments. It is, to a great extent true that, in proportion as a government extends its system of schools, it may reduce the number of prisons. As a measure, then, of prevention of crime, compulsory instruction has great advantages."

These passages with many others we might quote, show the strong current of opinion flowing in this direction, as well as give indisputable arguments in its favor.

Be Careful About Your Fires.

Our country seems to be destined to be baptized in fire. Chicago, Boston, Baltimore, Portland Me., headed the list and now the namesake of the latter, Portland Oregon, seems to outstrip her in calamity.

Reckoning by proportion, this is the largest fire in America. It occurred on the 2d of August. Just as we write news comes of another fire in Portland, Me., the fire originating near the wharf; three steamers are reported burned. Saddest of all, yes, fearful sad, comes the news of the burning of the steamer Wawasset at Chutterton Pt. near Acquia Creek. These fearful lessons should make us all more careful about handling fire. It is an accommodating servant, but a relentless master.

The Republican Candidate for Governor.

We quote the following in regard to Col. Hughes from the "Boston Daily Traveller" as showing the estimation in which he is held in the North. He has proved himself a friend to our Hampton Institute and is one of the Vice-Presidents of the board of trustees.

"Colonel Hughes, the Republican candidate in Virginia, was a secessionist during the late war, but when the war was brought to a close, he accepted the situation, and ever since has done much to promote the restoration of a sound social state at the South. His local feelings led him to do the best for the South, and he "went with his State," as did thousands upon thousands of Virginians who never desired that the Union should be dissolved. General Lee himself, the ablest man in the Southern Confederacy was at the head of this class of Virginians and Southrops. Colonel Hughes did not think it was wise to be either active or inactive when the sword had been sheathed, and for eight years he has been a reconstructionist of the best kind,—and as such he makes the best of candidates for the Governorship of Virginia. It cannot be said that he is an interloper, and that he knows nothing of Virginia, or that he went there with nothing but a carpet-bag and its meagre contents for his property. Such as he is, he is the production of Southern soil and a Southern sun, and thus is not objectionable on the score of educating the minds of the young, or to stint the privileges of a full manhood."

The Pennsylvania "School Journal" argues:

"To as it seems very inconsistent to maintain that a State may force a good citizen from his family, and march him into the jaws of death, in the defence of liberty, and yet may not lead a child to school for the sake of serving the purpose of good government. This talk about tyranny, and Prussia, and nations ruled by kings, emperors and monarchs when a compulsory school law is mentioned, as though it were inconsistent with Republican liberty, seems more the language of prejudice than reason. Every good citizen relinquishes a portion of his property and freedom for the public good; and may not parents be required to place their children, for a limited period, under the control of a teacher for the same great object?"

The May number of the Rhode Island "Schoolmaster" has an able article upon this subject from which we clip the following:

We see that the Grangers in Kansas condemn the prominence given to horse racing at agricultural fairs. We are glad of so much independence. In this respect, the farmers have, for a long time, been governed by sporting men and gamblers; and these institutions to promote competition among farmers have become schools of dissipation for their sons. We think we are right in saying that more than one half of the money put into agricultural fairs gets into the pockets of sporting men. If horses are not wanted on the farm, they are entirely out of place then. "But racing draws the crowd" says one. "Ay, there's the rub," it says, and this is the argument offered for all our public sins. If the Grangers can reform the fairs they shall have our hearty thanks.

The following articles are extracted from a circular sent to a farmer friend of ours by a commission merchant at Baltimore:

Packing Eggs for Shipment.

"For the benefit of our customers who desire to ship eggs to this market we submit the following directions for packing, assuring them that eggs packed in this manner and handled with ordinary care, can be successfully a long distance:

Eastern shippers generally use boxes, but for long distances, where packages cannot be returned, barrels, if well hooped and not more than sixty or sixty-five dozen are put in, answer every purpose. Although it is not necessary to send eggs so frequently to market during cool weather as in hot days, yet they will sell more readily if shipped when fresh, and will command a better price than stale eggs. Clean, white oats, fine cut straw or hay are good materials, but chaff should not be used. The packing should be perfectly *sweet and dry*, as musty or damp material will impart a bad flavor to eggs that come long distances. Place two or three inches of the material at the bottom of the package, then a layer of eggs with the end toward the side of the package, but not touching the side by an inch or more; then put on several inches of packing pressing down gently with a follower—remove all dust an inch in depth of the packing and put in another layer of eggs in the same way as the first, taking care that the packing is pressed between the ends of the eggs and the side of the package, and so continue until the last layer is in, which should be covered with at least two inches of packing, and an inch of hay, and the cover of the package pressed down closely. Eggs packed in this way can be transported long distances without injury."

Shippers of Southern Produce.

"The value and importance of this market for the disposal of Southern produce increases each year, as it is the source from which all the large manufacturing cities and villages obtain their supplies. Buyers, however, want the best, and it *will pay to ship the best.* It is not the quantity of truck shipped that pays the most, but the *quality and order* in which it is prepared for market. Don't try to pack good and inferior fruit, berries or vegetables in the same package unless you want it sold at the price of poor stuff, as customers are too much smart to be taken in by any such practice—and your mark is sure to get a bad reputation. Assort your produce into two or three grades, having each one of uniform quality and quantity. Send a correct invoice to your commission merchant, and you will receive returns promptly and without any liability of mistakes. Practice these rules and you will never have occasion to complain of your returns, while your careless neighbor will be continually finding fault and think he is being cheated. Shippers should study the Union should be dissolved. General Lee himself, the ablest man in the Southern Confederacy was at the head of this class of Virginians and Southrops. Colonel Hughes did not think it was wise to be either active or inactive when the sword had been sheathed, and for eight years he has been a reconstructionist of the best kind,—and as such he makes the best of candidates for the Governorship of Virginia. It cannot be said that he is an interloper, and that he knows nothing of Virginia, or that he went there with nothing but a carpet-bag and its meagre contents for his property. Such as he is, he is the production of Southern soil and a Southern sun, and thus is not objectionable on the score of educating the minds of the young, or to stint the privileges of a full manhood."

Letter From a Grantee.

MURFREESBORO, N. C., }
August 25, 1873. }

DEAR TEACHER,—It is with much pleasure that I take a few moments to inform you of the condition and the prospects of the school here in Murfreesboro.

I opened a free public school here about three weeks ago with thirty pupils, which number has increased to sixty-eight.

Some of these pupils were pretty well advanced, and their studies so very irregular that I soon found that I was obliged to have an assistant teacher. I therefore prevailed with Mr. J. W. Jones, a young man of this vicinity, to help me, and after being examined he was employed by the school committee to teach in the same school.

The school is now going on finely, and as the pupils seem to be much interested, we conclude that the school will go on smoothly and that our success will reward us for our labor.

I found the Sabbath-school in a flourishing condition, and it afforded me much pleasure to lend it a helping hand.

There are about one hundred and ten pupils in the Sabbath-school, and eight teachers.

Yours, etc.,

JOS. P. WEAVER.

Beneficiary Scholarships for Medical Students.

The trustees of the Louisville (Ky.) Medical College have created a number of Beneficiary Scholarships, for the benefit of poor but deserving young men seeking a first-class medical education. One Beneficiary Student is received from each Senatorial district of any State, and one from each Congressional district of the different States. Sons of physicians and clergymen are not properly recognized Beneficiary scholarships. Each scholarship is worth to the recipient of it $200, and those receiving such aid are known only to the Dean. Mode of obtaining a Beneficiary scholarship learned by applying to DR. E. S. GAILLARD, Dean, Louisville, Kentucky. As the next session begins in September, all young men needing aid should apply as early as possible.

Roads and Road Mending.

This is the season for road-mending, and it makes our very bones ache to see how poorly some of this work is done. The making and repairing of roads is a trade, and not every tyro who can handle a plow, scraper and hoe, understands the art of turnpiking. A great advance has been made in latter years over the practices of our fathers, but there is a margin for improvement of a country, little attention is paid to the location or building of roads. Like cow paths, they are made where convenience demands, with little expense and less engineering skill. As, population and wealth increase, better roads are demanded. Hauling loads over hills and through quagmires is found to be a weariness to horse flesh. Smooth, hard, level roads are appreciated, and the engineer is called upon, who tells us that the ball of the kettle is no longer when laid down thus when raised up, in clear words, that distance around a hill is generally the same as that over it; that the true way to get over an unavoidable hill is by a serpentine path, or grading a straight one that the surface of the soil, abounding in vegetable matter, is poor material for a road bed, that clay is a little better, that the true material is coarse gravel, that all naturally wet land must be drained and filled in with stone before the gravel is put on, and that surface water must be allowed to run off by making the surface of the road convex, with ditches on either side.

These are some of the general principles which engineers have laid down for the construction and repair of roads. In contravention of these, we seldom have a road drained, except by side ditches; stones are too rarely placed for the foundation, the material most commonly used for the road bed is soils and mud, scraped from the ditches and piled up in the form of a hog's back, and, notwithstanding the extreme narrowness and convexity, the swells or breakwaters are put in at short intervals, sometimes diagonally and with unnecessary elevation, so that they greatly impede transit, and rack horse, harness, carriage and passenger.

The most common and obvious defect in the construction of our highways is the use of poor material. Soils and muck make a good base for the compost heap, but were never designed for the base of a road. Surface soil contains too much vegetable matter that a road made of it is not compact and hard in dry weather, and with every rain becomes a slough. The first principle with the road builder is a solid foundation, and this cannot be done by scraping soils and vegetable earth from the side ditches. All this vegetable matter speedily decays, and, absorbing a great amount of moisture makes soft mud, not hard road. Highway surveyors would do well to take lessons from railroad contractors, who reject all mucky soils and go long distances for a gravel pit wherewith to construct the road bed. Possibly scrapers are sometimes used in grading railroads, but we do not remember ever noticing their use for this purpose, and if be employed in repairing highways we should have better roads. We know that the excuse for using scrapers and turf is that gravel does not grow by every roadside, but it is better to be hauled a mile than scrape mud and soils ten feet.

Just here we desire to do the town of Great Barrington the justice to say that she has set her sister towns a good example in repairing roads with gravel drawn by horse carts, and sometimes for a long distance. The horse carts may be a little more expensive than the scraper in the beginning, but it does the work effectually and for a long time. Whoever will traverse Great Barrington from the base of Monument mountain to Egremont will find a road on which there is comfort in traveling. It is made by horses, and for horses, by wheels and for wheels whereas most of our roads are made by oxen and scrapers and are fit to be traversed only by oxen and carts.

One of the most important principles in road building, and one of the least understood and practiced, is the thorough drainage of all materials and places before putting a spoonful of dirt on the track. This building of roads over springs and marshes without previously providing an outlet for the water is as foolish as building one's house in the sand or mud without a foundation. Over all these wet places the ground heaves and quakes each spring, and even with a good superstructure of gravel it is manifest that there is no foundation, and in passing them one is led to fear that he may be swallowed up alive like Korah and his company. On some steep grades, running over springs, we have known regular land slides in the middle of the road, and when a slide does not occur, the shaking indicates that the bottom has fallen out. The simple and cheap remedy for this trouble is to put in a four or six inch tile drain under the road. A judicious expenditure of ten dollars on such a drain will save a hundred in repairs. If laid below the frost it carries off the water when the ground is frozen, and when the frost comes out, there is no breaking up of the bed of the road.

The tile subverts also, which so frequently cross our roads, and are generally made of stone or plank, are constantly getting out of repair, endangering horses' legs and men's lives, and in the long run are very expensive. If made of cement pipe, which can be had of any required size from four inches to two or three feet in diameter, and properly laid, these culverts can be made as secure and permanent as are those of our railroads. The first cost of cement pipe is less than that of a stone culvert, and the pipe does not travel as does stone, but stays put for generations.

One great hindrance to improvement in road building and repairing, is the custom, coming down from feudal times, of allowing every man to work out his road tax. Wherever this practice is adopted—and it is still kept up in nearly a hundred towns in Massachusetts—we may be sure of finding poor roads. We might as well allow every man to work out the minister-tax by preaching occasionally. Road making is as much a trade by itself as is shoemaking, and all those towns that have adopted the system of hiring a competent road master, have secured better roads at less expense. The old feudal system had the advantage of furnishing the farmers with a good social time after doing their planting, as they often came together with their hoes and stood and talked out their tax at a York shilling per hour, doing just work enough to silence the surveyer, if not their conscience.

The prosperity of a country is so intimately connected with the conditions of its roads, that every farmer and every owner of real estate should give this subject a candid consideration, and give aid to every feasible plan for the improvement of the highways. We have all seen how railroads tend to enhance the value of real estate and develop the prosperity of a community, but important as railroads are, highways are still more important. We lived without railroads till within half a century, but common roads are essential to the very existence of a civilized community, and their condition is a pretty good index of the progress of civilization. We have in Massachusetts about nineteen thousand miles of highway, and the annual cost of keeping this extent of road in repair exceeds seventy dollars per mile or about a million and a half in the aggregate. The road tax is therefore no inconsiderable item of expenditure, and every man is interested in placing his money where it will do the most good.—*Berkshire County Eagle.*

The Eastern North Carolina Sabbath School Association.

On Thursday and Friday the 14th and 15th of August, 1873, the above-named Association held its second annual session at Jerusalem church in Northampton Co. N. C.

1ST DAY.

At twelve o'clock, Thursday, August 14th, a call was made by the Superintendent, Rev. Mr. Perry, for all delegates, school teachers and pupils to assemble in the grove.

Opening services: reading a chapter and prayer by the Superintendent, and singing

A procession was then formed, of about five hundred persons. They marched behind their magnificent banner, while their melodious voices were heard ringing "From all the trees, Sweetly freedom sings." It was quite an enchanting scene, which attracted the attention of all upon the church ground.

At two o'clock they took recess for refreshments. Two long tables had been prepared and furnished very luxuriously. Delegates, teachers and all interested persons were invited to partake of the tables luxurious contents.

At four o'clock the marshals formed the people in ranks and marched them in to the seats in the grove, where they were addressed by Rev. Mr. Perry.

He explained the object of the association and the manner in which it is to be conducted.

He was followed by Hon. W. D. Newsome assistant superintendent, the base of whose address was the "important value of knowledge." The congregation was then dismissed to meet the next morning, at ten o'clock.

2D DAY.

At half past ten o'clock, Friday, August, 15th, the congregation was called to order by the superintendent. Singing and prayer. The delegates were then ordered to assemble in the church to attend the business of the association, while the remainder of the congregation would remain to be addressed by Messrs. Rev. J. W. Fatter, L. B. Langford, W. B. Weaver, Preston Newsome and others.

Recess at one o'clock. Free tables as on the day before.

At three o'clock the delegates reassembled and pursued to finish up the business that was pending.

Sermon in the grove by Rev. J. W. Patterson, after which an address was delivered by Mr. L. S Smith of Murfreesboro.

The marshals then formed the congregation in a circular line (about six hundred in number) and after singing they were dismissed by benediction.

About the same time, the delegates adjourned to meet at Zion's Hill at Conrain on Thursday before the third Lord's day in August, 1874.

Total No. of Schools represented		36.
" " Teachers	"	99.
" " Pupils	"	603.

The object of this association is to bring the Sabbath schools of the Eastern part of North Carolina into one united body; to aid schools in procuring books, papers, etc.; but a still grander object is to raise means to establish a Theological and practical institution within the bounds of the association.

This seems to be far off and out of sight to many, who scoff at as for such as this, but we hope to be recognized and helped in this work and we believe that we will meet with success.

REV. D. E. PERRY, *Superintendent,*
Potecasie, Northampton Co., N. C.
J. P. WEAVER, *Secretary,*
Murfreesboro, N. C.

THE steamer Wawasset, running on the Potomac river, between Washington and Portland, took fire about 12 o'clock on Friday, the 15th inst., at Chatston Landing, and was destroyed. She had about 150 passengers on board and more than seventy lives are lost. Capt. Wood did not leave the boat until forced to do so by the flames. The fire, we first discovered in the engine room. It appears that just before reaching Chatterton's Landing, on the Virginia side of the Potomac, about five miles below Acquia creek, and after the whistle of the boat had been blown as a signal of her approach to that landing, the steamer at that time being about a third of a mile from the shore, fire was discovered in the hold, and the boat was stabbed immediately, but before the men could reach it the conflagration became general, and the boat been burning for some time. The fire had been smouldering, it is supposed, for some hours, and, upon opening the hatches, it burst forth with great fury, driving the men from the hold and completely baffling all attempts to subdue it. In less than an instant the wildest confusion prevailed on the vessel, the passengers becoming panic stricken and frantic with fear, very few having presence of mind sufficient to take care of themselves. The steamer was without a second's delay headed for shore, and in a few minutes ran aground about 300 yards from the Virginia side. At this time the flames had spread with fearful rapidity, and the excitement many jumped overboard, several of them jumping into the water before the steamer struck the bottom. She was provided with but two small boats, and in the frenzy of the moment one of these boats was swamped and sunk and of the two passengers, who, uncontrolled were endeavoring to launch her, Captain Wood, of the ill-fated steamer, and his assistants are said to have used every effort to control the passengers, but without avail; and but for this disobedience of orders many who were lost would have been saved.

A COLLISION occurred between a coal train and a passenger train on the Chicago and Alton Railroad, about twenty miles from Chicago, on Saturday night, the 16th inst., by which fifteen persons were killed and thirty-five injured, many fatally. The injured passengers were terribly scalded by escaping steam from the locomotive. Both trains were running at full speed, and the disaster is attributed to the criminal recklessness of the conductor and engineer of the coal train, who should have waited at the next station until the passenger train had passed. Another collision, the result of carelessness, is reported to have occurred on the same road Friday night, by which two cars of an excursion train were wrecked, two men killed and three others seriously injured.

A LETTER to the New York "Herald," from Green Island, Nebraska, dated the 8th inst., gives the following particulars of the recent fight between the Pawnees and the Sioux Indians: "Some two or three weeks ago the Pawnees, numbering some three hundred strong, with one hundred squaws and six hundred ponies, started from their reservation for their annual hunt in the Great Republican Valley. After reaching the hunting grounds and while pursuing their wild yet peaceful avocation, they were suddenly surprised and attacked by some fifteen hundred Sioux under the command of Young Spotted Tail. The fight occurred between the Republican River and Black Wood Creek. It was a long and stubborn fight, but the Pawnees were forced to retreat before a superior number.

The Hampton Normal and Agricultural Institute.

SESSION OF 1873—4,

Opens October 1, 1873, at which time those desirous of admission should be present.

CONDITIONS OF ADMISSION:

1. Sound health and good character.
2. Age not under fourteen and not over twenty-five years.
3. Ability to read and write, and knowledge of Arithmetic through Long Division.

TERMS:

Total charge, ten dollars per month, payable half in labor and half in cash; those eighteen years of age and less are expected to pay six dollars per month cash.

Only the totally destitute are allowed to work out all their expenses.

STUDIES:

The course of study is three years, and embraces the various branches of the study of Language (English), Mathematics, Natural Science, and History.

Instruction is given in the Science of Government and Moral Science and in Practical Agriculture.

Bible Lessons are given weekly.

There are Agricultural, Mechanical, and Commercial Courses, in which instruction is given by experienced teachers in the leading principles of those departments.

For further information, apply to

S. C. ARMSTRONG, *Principal.*

HAMPTON, VA., *August*, 1873.

THE SOUTHERN WORKMAN.

At Home.

Father's Own Home.

When father comes back very tired at night
The room should look pleasant, the hearth should be bright;
However he else where is worn and depressed,
He should find, I am sure, at least, comfort and rest.

In his home—his own home.

There are sounds, there are sorrows, even love cannot cure;
There are burdens to bear, there are griefs to endure;
But, ready and sweet, a good father should find
Smiles and voices to welcome him, cheering and kind,

In his home—his own home.

Home-Made Games.

Boys do not like fun ready-made; they like to manufacture it. Supply them with boards and nails, saw and hatchet—and not be too afraid of "litter" in the back-yard and barn—and with ordinary ingenuity, you will soon see manufactured steamboats (with the aid of the imagination), "bowling-alleys," in fact, enough of everything to keep them happy *at home*.

I visited a family who were supplied with such articles. It was astonishing to see how little it took to make them contented—and not only they, but the playmates who invariably flocked there. Some mothers would prefer less attractions. They would assume the risk of their children being injured morally, by playing elsewhere, rather than have the noise, and "things at loose ends."

In the yard where these boys lived, there was a large tree. From one of the limbs they suspended a ball (no old croquet-ball) by a small rope. This made a platform about two yards square, and with black paint marked spots to place the pins. The ten wooden pins were about a foot in length. A space was left (a foot) on each side of the platform. Four dots on the back, three in front (in front of the spaces) of them, then two, then one.

The ball must be hung just low enough to hit the pins. Stand as far back from the platform as the rope will allow, then drop the ball and knock down the pins. Each one can try three times. The boys made a blackboard, crossed and recrossed it with white paint, and dialled it to the tree "to keep tally." I noticed a block of wood, with a piece of sheepskin (fleece on) nailed on, hanging near the blackboard, to erase chalk marks. The idea was not original, perhaps, but as it was the only home-made game of the kind I had ever seen, I thought it might be new to many of your readers.

Beside the "ten-pin" game, these boys had two swings, one above the other. I call them swings, although there was very little old-fashioned swinging done by the little old-fashioned swinging done by the "go-round" style. The ropes were large, with an iron rod fastened securely across the bottom. They made a large bag, filled it with straw, and kept it under the swing, "in case they did what they did not intend to do."

I wondered then and now why every family did not have more games upon their own premises. Some parents do not like to encourage them; I fear *that* solves the mystery.

It was not "all play" with those boys, neither did the parents mean it should be. "all work." They had their regular hours out of school. They brought in wood, worked in the garden, watered and fed the horse and cow, unpiled and watered the hens, too. They owned the hens; they bought grain for them, and had all they could make (one way to get "pin-money") from the eggs. They worked as they played—with a will. Healthier, happier boys, I never saw.

How they seemed to enjoy my visit. *They* did not know the reason, but *I* did. The reason was this: they tried to make me happy. In fact, they always had that in mind with everybody—at least, it seemed so to me.—*Household Magazine.*

AN EXCELLENT WAY TO COOK TOUGH BEEF.—To eight pounds of beef, put four quarts of water, two tablespoonfuls of salt, half a tea-spoonful of pepper, three tea-spoonfuls of vinegar, and four tea-spoonfuls of sugar. Put it on at eight in the morning, and let it simmer slowly till the water is more than half gone; then skim off the grease, and set it in the stove oven till the water is all gone but about a teacupful, which is for gravy, and may be thickened a little. Add *boiling* water if it goes too fast, (for in some kinds of weather it will boil away much faster than in other days). This dish should be very tender and is excellent cold, especially if pressed under a heavy weight. It was a favorite soldier's dish, and tough meat is as good as tender when thus cooked.

COTTAGE CHEESE.—Heat sour milk with a gentle heat (a good way is to set the pan over a kettle of warm, but not boiling water) until the whey separates from the curd. Pour off the whey with care, put the curd into a bag, and hang it to drip for several hours. Do not squeeze it. Work it with a spoon until it is soft and even, and it, add a little cream or butter, mould it into round balls, or leave it to be served in small sancers. It should be eaten while fresh.

BONNY-CLABBER, OR LOPPERED MILK.—Set a chiua or glass dish of skimmed milk away in a warm place covered. When it turns, that is, becomes a smooth, firm but not tough cake, serve in the same dish. Cut it out carefully with a large spoon, and put it in saucers with cream, powdered sugar and nutmeg to taste. It is better if set out ice for an hour before served. Do not let it stand till the whey separates from the curd. Few people know how delicious this simple and healthful dish is if eaten before it becomes tough and tart with a liberal allowance of cream and sugar.—*Marion Harland.*

Moonlight on the Ruins of Egypt.

The island of Philæ, lying at the head of the cataract of the Nile, is one of the most mild and picturesque spots on the face of the earth. High black rocks heaped up to the sky lie all around it; and from any point of view it is a jewel set in a rough inclosure, to make it the more beautiful by contrast. The entire surface of the island is covered with ruins, the great temple of Isis (goddess of the Nile, whose wifely tears for the slain Osiris have caused the overflow depending to the ancient story) which is the most perfect among them, occupying the western side. It is not of a very ancient period. One learns in Egypt to call everything modern that is not three thousand years old. It is a strange passion, this, that men have for the old. What is it in the intellect of man that makes him do such lounging, great age? Is it because we always admire the inaccessible, and that we whose dust holds together but seventy years therefore admire the dust that has survived the ages? Not so; because rock and hill and mountains of our own country are old enough for all that. It is not age alone. It is something in the fact that human hands wrought on these rocks, that human intellect shaped and planned their order. It is the memorial of dead men's thoughts to which we bow in reverence, and perhaps akin to our own desires after immortality.

Philæ was the most sacred spot in Egypt. Hither, from all directions, men came for worship. But none were admitted to set their feet on the sacred island except by special order. Here was the fabled burial place of Osiris the divinity of Egypt, or near here, for antiquarians dispute much on this point.

But, for the present, I have nothing to do with ancient Philæ. It is only the modern: the palm-trees and the ruins, the fallen altars and columns that I have to speak of. They lay in the utmost beauty of desolateness as the moonlight came over them that night, and we wandered about among their vastes.

Never was such moonlight—certainly never was such a place for moonlight. It fell on the columns of the ancient temple at the upper end of the island, and the small obelisk seemed to grow larger in the silver light. It lingered in the great court of the temple of Isis, as if it loved the memories that lingered there. But purest, holiest of all, it fell in the open temple on the eastern side of the island, where Miriam and I sat silently as the night swept along with its load of glory, while the others wandered up and down the island looking vainly for one spot more beautiful than another.

Our American friends were with us still, and it was now time for them to return to Es Souan. Donkeys had been ordered to be ready for them on the opposite side of the river, and taking them in the small boat, I pulled across to the mainland; I could not permit them to go alone; and unattended through the wildest mountain pass in Egypt, so I accompanied them myself with a six-barrelled Colt and an endless volcanic repertoir. I walked by their side in pleasant talk across the arm of the desert on which stands the village, under a branching sycamore, then grew up from the very inside itself, and then into the wilderness of rocks that lie as the Almighty cast them, here and there and everywhere, on the east bank of the river. It was a strange group that, for such a scene and such a night. Sometimes the donkeys climbed the sides of rocks on which their feet seemed scarcely able to retain foothold; the hills grew higher on the right, the noise of the cataract louder on the left, the scene more wild, the moonlight more beautiful. And so we continued till I had accompanied them beyond the mountain pass and into the more open and safe country, and here I left them and resumed my way southward.

Behind me by Egypt. Close behind me the only two Americans except ourselves within almost a thousand miles, had their faces turned northward, and were leaving us to our lonely journey. Around me was desolation, its very abode where the rock and the desert held everything. What was I, a puny mortal, that I should be walking so carelessly along that mighty river, by the far famed cataract, in that light that had guided the footsteps of kings and priests long ago among those stately rocks that had been the witness bearers of forty centuries? What was I, that I should look with unshrinking eyes on all these ancient memorials, and troll a song—a dashing modern song—as, I walked on among them over sand and stone as millions had walked in the years when there was a shrine for devout worship on the beautiful island, on moonlight pilgrimages to Philæ?

The long, low snarling yell of a wolf startled and stopped me, and was followed by the quick barking of the jackals of whom I saw three or four dusk across the path and disappear in the direction of the island. The silence that followed was as startling as the cry had been. Only the river among the rocks sounded as steadily as it had sounded through the centuries, as it had sounded through the centuries, as it had sounded through the centuries, and a moonlight seemed to be in harmony with the sound.

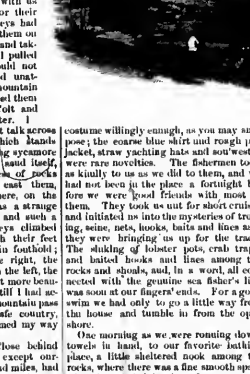
Ten minutes afterward I came out by the village above the pass, and we entered it in search of our new pilot, one of the *Shellaler*, or men of the *Cataract* as they are called, who was to take the boat back to Philæ.

Under a tree, the sycamore fig, in the middle of the village was a curious seat pot uncommon in Nubia. It was circular, made of mud, on a raised platform of the same material. A seat ran round this platform, having a high back, so that a dozen or twenty persons could sit here in a circle all facing the center. It was occupied by women busily talking over the village gossip. They answered pleasantly our inquiries for Hassan. He had gone to the next village which, like this, consisted of two rows of mud houses, a hundred yards apart, with the moonlight on the yellow sand between them. We walked through them, shouting "Hassan! Hassan!" and at length Hassan Shillalee made his appearance accompanied by his mother. She was an old woman, and though it was but a two weeks' parting, she wept bitterly, and embraced him again and again. When we pushed off, she begged me to treat him kindly, and then knelt on the moonlit bank and prayed for him, "God bless him! God keep my son! Allah, Allah, bring him back safe!" and as we crossed we could hear her mournful voice sounding over the river.

We strolled an hour longer on the island. The moonlight was brighter each moment. It was midnight, but still we lingered in front of the temple of Isis; still gazed up the shining river from the corridor near the small obelisk; still sat on the terrace and looked over at Biggeh, and its lofty rocks. Moonlight on Philæ! I dare to say that nowhere on the face of the earth is there a moonlight scene more rich in all that romance and poetry. Not so, because than was that view.—*W. C. Prime—Boat Life in Egypt.*

Too Close to be Pleasant; or, A Good Sight of a Shark.

Considering the fortunate termination of our adventure, those were the jolliest bathing days after all that we ever spent. I have forgotten the name of the little village, but that is of no importance. It was a pleasant, pretty spot with only here and there a house of the better sort, the rest being simple fishermen's huts and cottages. The hamlet stood in the center of a sandy bay on the face of a somewhat precipitous cliff and the narrow street zigzagged from the fishing boats on the shore up to the top of a grassy, well wooded hill, on the highest point of which was the house which my father and Uncle James had taken as a fitting rural retreat for us youngsters to spend our autumn vacation in.



We adopted the life and appropriate costume willingly enough, as you may suppose; the coarse blue shirt and rough pea jacket, straw yachting hats and sou'wester were new novelties. The fishermen took as kindly to us as we did to them, and we had not been in the place a fortnight before we were good friends with most of them. They took us out for short cruises and initiated us into the mysteries of trolling, seine, nets, hooks, baits and lines as if they were bringing us up for the trade. The shifting of lobster pots, crab traps, and baited hooks and lines among the rocks and shoals, and, in a word, all connected with the genuine sea fisher's life, was soon at our fingers' ends. For a good swim we had only to go a little way from the house and tumble in from the open shore.

One morning as we were running down, towels in hand, to our favorite bathing place, a little sheltered nook among the rocks, where there was a fine smooth space of hard sand shelving into deep water, we were met by one of our fisherman friends. He raised his hands as we advanced, and seemed to be waving us back. As we got within sound of his voice, he shouted to us,

"You mustn't go bathing this morning. I reckon I wouldn't have you go in for worlds! There's a great old shark been a-floundering about in the bay ever since sun-down last night. He came close up into the cove here on the top of the tide, and Jack Masters and Tom Harmon both seed 'im this morning a follerin' them up as close as could be; he's an awful great un too, a'most five feet long, I reckon."

"A shark!" said I, "why I didn't know that they ever came to this coast."

"No more they do, very often," replied the man, "but then, you see, there's been a long spell of hot weather draws them in like. The water gets quite warm under the cliffs, warmer may be than 'tis perhaps down to the west and south, where like enough it's been blowin' a bit. I believe it has too, or else we shouldn't have this great ground-swell comin' up so often. Any way, I wouldn't have you young gentlemen go bathing. That beast would snap one of your legs or arms off if he catched sight of you, afore ye knowed where ye was!"

We gave up our bath that morning, but for days we were on the look out for a peep at the monster. We little thought how our curiosity was to be gratified.

The old fisherman was right; the hot weather of which he had had a suspicion came rolling in from the great Atlantic within four days from the time he had spoken of it. The wind shifted suddenly, and by the next morning the whole aspect of the coast was altered. Heavy rain-charged clouds obscured the sky. There was half a gale blowing, and the sea, which a few hours before resembled a silvery lake was now heaved up into a boiling cauldron. We enjoyed the change of course, as we enjoyed any excitement, and it quite put the thought of the shark, for whom we had been vainly watching, out of our heads.

As the tide ebbed, which it began to do about ten o'clock in the morning, we followed it down to look after some books and bait we had sunk on our own account into the holes in a great reef of rocks which, on the eastern side of the bay, ran out and formed a sort of breakwater, never quite covered at their highest points, at high tide, but accessible only by a boat at low tide.

We had been down to this reef and home again to dinner, but we must needs make another expedition to it in the afternoon for some further repairs and arrangements of our fishing tackle. Though not the eldest of the party, I was its leader, as I was in most of our exploits, and my three cousins looked up to me as the strongest and most daring of the set. They tried however to dissuade me from making a second expedition to the rocks when we got down to the shore and began to advance toward them through the little pools, rivulets, wet sands and sea weed left by the receding tide.

"It must be coming in again now," said Jack, "and you won't have time to get there and back before it's up all over this place, and you'll be quite cut off at high water, it is only an island then."

"Yes! and a precious little one too," interposed George, laying hold of my jacket to stop me.

"And its smaller than ever," added Richard, "now the sea is so high; I saw the spray going clean over it early this morning!"

"Pooh!" said I "don't be muffs; we've lots of time, come along!"

And they, of course, were bound to follow me. We had no sooner reached the reef, however, than I began to think it would have been wiser not to come, and after pottering about a minute or two with our lines, we saw that already the smaller waves of the returning tide were beginning to lap round and round the sandy base of the rocks with ever increasing rapidity and strength. At last, just as we were aware that we had no time to lose, and were just about to start again for the mainland, a huge wave, bigger than any which had yet come up to us, burst against the sea front of the crag, twirling round it to such a depth that Richard, as he was about to make off, was, in an instant, up to his middle in water, and seemed to save himself from going right under only by scrambling back on to the rock.

"We're too late!" cried Jack who was always rather inclined to be a little frightened, "we're cut off, no mistake."

Another wave as big as the last, swept up as he spoke, and soon put a mass of broken water between us and the shore which it would have been quite impossible to wade or swim through. It was too deep for wading and not deep enough for swimming, while the uneven character of the bottom, first high, then low, now rock, now sand, and now both, prevented its being walked over unless it could be seen. Here, then was a pretty state of things! We should have to stay on the reef, perhaps, till the tide went down in the evening, and indeed, we soon, saw there would be no other choice, for every moment we were driven higher and higher by the waves.

Now they sprang straight in the air, and fell like a shower bath on our heads; now they would well up and tear away round our feet, almost carrying us off them. There was nothing for it then, but to get up to the top and make the best of our somewhat perilous position. Our friends would see us from the shore, but they would not be able to send any boat out in such a sea, so that though they would know we might, if we liked, take care of ourselves, they would still be very anxious, and we should get a good scolding in addition to our ducking for being so foolhardy.

Of course I undertook to bear all the blame, which indeed all belonged to me, and we settled ourselves to make the best of it.

We had not been on the reef above a quarter of an hour, I suppose, and the tide, though then very high, had yet an hour and more left to flow before it would be at its highest, when suddenly George cried out "Look, what's that?" He pointed to something sticking out of the crest of a great tumbling wave, that seemed at first like a huge cocked hat, but which I recognized instantly to be the tail of some enormous fish. I had no sooner given my opinion than it vanished, but, at the same moment, advancing to a lower ledge of the rocks, the better to see the direction in which it had appeared, I was startled by a glimpse of what I instinctively divined to be the head and shoulders of the much talked of shark.

Yes! there he was, and no mistake, with his flat nose, small eyes and gray back just as I had seen him in pictures. His silver belly gleamed white and ominous as he lay close by me in the sea, he turned it slightly up toward me, showing his enormous mouth, which seemed all ready to grab at me as he swam by. Of course I was very brave. I did not care a bit for him; to be sure not! "I should like to see him come up where I am," I said, as I threw my huge jack-knife and brandished it with a theatrical air, as though I thought we were coming into close quarters. Close enough we were after all, I remember, now that it is all over, and had any of us slipped even as much as a foot over the edge of the rock where he could have got a fair snap at it, it would have gone hard with us, jackknife, or any other weapon, notwithstanding.

Over and over again did the huge brute lash round and round our little island retreat, as close as he dare come, now mounting on the crest of a wave as if he wanted to be carried right up on to the rock, then suddenly twisting off as though he feared being smashed against it, and then, diving out of sight for a second, would appear more than half out of the water, as he suddenly put through or shot across the hollows of the sea. He regularly besieged us, never giving a chance for us to have slipped away had the waves allowed it. Round and round, backward and forward, he swam; dived, disappeared, came up again with the utmost vigilance in the most unexpected quarters, while we all four crept close together and held on desperately upon the highest ledge of rock, half believing that in his rage and hunger he would actually dash himself upon it and attack us where we clung. Over and over again he seemed on the point of doing this, but of course, he never did, and by degrees of course, we saw that he never would, but the excitement which his movements caused, and the anxiety with which we watched him made the time pass very rapidly, and the tide was again on the ebb before we could imagine it possible. He felt this perhaps, before we did, and after a while began to sheer off as he was far too cunning to allow himself to get stranded, for then he would have been more within our power than we had ever really been within his. Gradually he came less and less near, the water sank, a flourish of his great tail, as it had been the first, was the last we saw of him. By that time, indeed, we had seen enough; our curiosity had been gratified in a way we had little expected, and when all was over, and the coast clear, we came ashore, where we warded off a good deal of the scolding in store for us by our vivid account of our adventure. It is not often that four city boys have more a view of a shark, and we thought ourselves lucky, while considering the very perilous foothold we had on the rock, how high the tide was, and how strong the wind, how unsheltered and slippery the narrow ledge on which we crouched, it is with a strong feeling of thankfulness that we look back on our interview with the tiger of the sea.—*W. H. Fenn.*

A Little Recollection of Russia.

Russia is such a very large country, that the manners and customs must be very much in different districts, and so what I give as recollections of Russia may not at all agree with mother person's experience.

What I write is from my own knowledge, but an intelligent young lady one evening so interested our family party with a slight sketch of her life there, that I thought I would write it for other family parties, though of course I must omit much.

"It was near Odessa that we lived," she said, "and very warm in the summer. I came home before the winter." I enjoyed it very much, it was all so gay and so new, but I do not say that I should like to live in Russia long. What most struck me, and what I have never forgot, was the un-European feeling one had. I never felt till we returned to Austria that I could be living in Europe."

"Why?" we asked: "was it the obsequious manners of the people?"

"Yes, partly; and the dress—a sort of loose vest in summer, and I believe sheepskins inside out in winter. Then the preparations when we went out for a visit which we often did! Such packing up for days before: such a turn-out it was! We took servants of all sorts, beds and blankets, and plate and dishes, and all sorts of things. Such a number of carts and carriages to take us!"

"And how many went?"

"Oh, every lady that is, the master and mistress, and my little pupil and I. You could never imagine such a small family could require such a quantity of things and people. But it was all very amusing.

"My first experience of peasant manners was in a walk I took before breakfast about the grounds by myself the first day after we arrived. I was just going to open a small gate when a man rushed forward, seized my hand, kissed it, bowed down to the very ground, and then opened the gate. At breakfast I told them about it, and asked if it was not some poor maniac. "Oh dear, no," said Madame; "you will constantly meet with that."

"Are there not a great many ceremonies at marriages?" we asked.

"Yes, a great many more than I can remember. They were very pretty, and had very pretty and good meanings, if people did but understand them, which, unfortunately, was not often the case. One was, the bride and bridegroom were tied to the priest, and they all walked, I think, three times round the building. This was to signify their union with the Church, begun by holy baptism, and now again renewed. What seemed a very important part was the coming of the wedding party up to the great house—the house of the lord of the estate—to kiss hands. The family assembled, and every one of the wedding folk kissed first our hands, and then went flop on the floor and kissed our feet."

"What, absolutely and really?"

"Yes, absolutely and really they kissed the machine-worked toes of our boots! It was so strange. I did not like it, as I felt and said that it could not be intended for me; I was not one of the family, I was *nobody.* "Oh, but indeed," said Madame, "they would not think it lucky if you were omitted. You must not run away!" On one occasion, however, I did, but I was directly inquired for. "Where is another lady? Where is the other lady?" So I was obliged to come and be salsted.'

The Sheep-Dog.

Whenever I go into a stable and see the horses continue lazily nursing their favorite leg, remaining dozing in their litter, or, if it is feeding-time, answer with a cheerful neigh to the opening of the door, I know what manner of men the grooms are who attend upon them. If I see them all attention, suspiciously watchful, ears in uneasy motion, legs lifted in constant change of position, I also know that one of the most tractable, sensitive, and grateful animals in creation is being shouted at, sworn at, bullied by the man who is paid to treat it well.

A man may feed a horse well, ride a horse well, and yet be a very bad groom, inasmuch as he spoils the animal's temper, to say nothing of the misery and cruelty that he inflicts on his charge.

Is it not the same with man? There are many nurses whose babies look as if they were just turned out of a bandbox, but the after-life of these children shows that there has been mistaken treatment of their *minds* in early life.

What has all this to do with our title and illustration? Why, a great deal, for *like master, like man*; and if I see the sheep not afraid of the dog, but carelessly pressing upon him, in their eagerness to be first in the fresh piece of turnips which his master is hurdling off for them, I know with what sort of a shepherd I have to deal.

Shepherding differs very much according to the country, and a dog that would be a first-rate one on a Scotch hill-side would be of little use in Sussex. The difference between a London drover's dog and a sheep-dog, is almost as great as it is between the hireling shepherd and the true one.

Drover's dogs are generally cross and savage. They do not get attached to the animals they have to drive, for they see new ones every market-day; in fact, they closely resemble their masters. But here, again, we have great differences, which are always reproduced in the dog. I still remember with pleasure a tall drover, with his blue apron on, whom I used to watch quietly coming along St. John's Wood road. The sheep were first, then he came, then the bullocks, last of all his old black collie-dog. There was no shouting, no beating; a wave of the arm sent the dog along to stop or turn, as the case might be, the old dog being as chary of his voice as the man. Yet both could be energetic if need be. He never forgot to let them drink at the trough near the canal.

As I am writing, two striking instances of the cleverness of dogs and sympathy with their masters come into my head. One is of a sheep-dog at a party in Sussex, where a flock of white-faced Cheviots and a flock of Southdowns were kept. Bring me the Downs, Jack," said the master, and away would the dog go at a gentle trot, and appear after a time with the black-faced flock slowly and steadily. But when it was, 'Jack bring the Scotchman?' he first fitted himself on his hind legs for a look-out, then away he tore, soon to appear again with the panting flock, for he knew they were not favorites with his master, and so he was much sharper with them.

One day I was in the park of Knole, Essex, weeding the worst out of a small flock of St Kilda sheep, in which I take a great interest. The shepherd was helping me, but his dog was no use, as he would run right away and chase them wildly about. The shepherd took him up and pretended to punish him, but I could well see, and the dog could no doubt feel, that it was not meant. However, he was shut up for the time. The shepherd assured me, and I saw afterward, that he was perfectly gentle with the common sheep. Now in both cases the dogs found out that they might take liberties with the sheep for which their masters cared *less* than for those of their own country, thereby illustrating the proverb I quoted, 'Like master, like man.'

An Old-Fashioned Mother.

The following touching paragraph appeals with peculiar force to those who mourn with an abiding sorrow the loss of just such a mother as is here described:

Thank God, some of us have an old-fashioned mother—not a woman of the period, enameled and painted, with her great clog-iron, her curls and bottines, whose white, jeweled hands have never felt the clasp of baby fingers, but a dear old-fashioned, sweet-voiced mother, with eyes in whose depths the love-light shone and brown hair threaded with silver, lying smoothly upon her faded cheek. Those dear hands, worn with toil, which folded our little palms in childhood and smoothed our pillow in sickness. Blessed is the memory of an old-fashioned mother. It floats to us now like the beautiful perfume of some wood-land blossoms. The music of other voices may be lost, but the entraneing melody of hers will echo in our souls forever. Other faces will fade away and be forgotten, but hers will shine until the light from heaven's portals shall glorify our own. When in the fitful pauses of busy life our feet wander back to the old homestead, and crossing the well worn threshold, we stand once more in a low, quiet room, so hallowed by her presence, how the feeling of childish innocence and dependence comes over us; and we kneel down in the sunshine, streaming through the western window, just where, long years ago, we kneeled by our mother's knee, lisping "Our Father." How many times, when the tempter lures us on to sin, has the memory of those sacred hours, that mother's words, her faith and prayers, saved us from plunging into the deep abyss of sin! Tears have filled great drifts between her and us, but they have not ridden from our sight the glory of her pure, unselfish love.

What requires more philosophy than taking things as they come? Parting with them as they go.

Nothing to Draw With.

"Nothing to draw with;"—at Samaria's well
One thirsting sat, who all earth's waters
owned;
Yet, lost, His weariness and thirst did tell
To a poor sinner. "Give me drink," He
moaned.

"Nothing to draw with," she replied "save I;
What shall have brought Thee here, Thy
thirst to slake?"
"If thou but knewest," He did quickly cry,
"*The gift of God*, thou would'st with joy partake.

"Nothing to draw with;"—little did she know,
Poor woman! perplexed and unprepared in life,
That by her side the *Living Stream* did flow,
To make the scarlet stain spots white and
clean.

"Nothing to draw with;"—no, all powerless,
weak,
Though very near the broiling waters be;
The chain of self-reliance, farthest, break.
Then will she breathe in deep humility

"Nothing to draw with; *I*, the thirsty one,
Good Master! Thou the Living Water hast:
Give Thee to drink? Yes, asked in honest
To a world-scorned and despised outcast. [bone

"Nothing to draw with, Jesus; deep the well,
And dark;—all fangus-lined with sinful
thought.
I thirst! from whence, then, doth the fountain
swell?
Give me to drink—to draw with I have naught.

"Naught need I, save the grasp of Thy strong
hand;
Naught but Thy robe of righteousness to hide
The filthy rags, that I may spotless stand,
And drink for aye, celestial streams beside.

"Naught need I, save the chain of faith and
hope;
Then shall I draw, nor thirst *forevermore*;
The jewel studded, blest "salvation's cup"
Shall then be filled—yes, more, be running
o'er."
The Christian Press.

How the Blessing Comes.

The subject of prayer is intertwined with our every thought of God, since prayer is the only avenue by which our souls go out to Him. No mood of philosophic contemplation is too high, no thrill before the beauty of nature or of art too vague, no study of the Divine works and words too laborious and methodical, no aspiration too silent and subtle, to be comprehended in the spirit and realm of prayer. The Christian's life is like the palace of Daniel at Babylon, with its council hall for business, and its stately front, maybe, turned toward the world; but its most precious and sacred chamber, with windows always open toward Jerusalem. Shut up the chamber of prayer, and the house is dark, without the vision of the Holy City.

That is a narrow view of prayer which confines it to petition, while, on the other hand, that is an unsatisfactory, incomplete, and unscriptural view which leaves petition out. Nor do we enter the true conception when we make our prayers to consist of alternate bats of heterogeneous moods—a little thanksgiving, a little adoration, a little aspiration, a little confession, a little petition, and a little resignation, with a final doxology of praise. It is true that the language of uttered prayer must pass from one theme to another; but the spirit of prayer perpetually blends them all.

If such is the wide sphere of prayer on our side, shall we limit our conception of God's response? If we can address Him in so many ways, may He not reply through such an innumerable and infinite? Our notion of the Divine expression is often inferior to our knowledge of our own. We approach Him along the wondrous yet familiar lines of human thought and feeling, and forget that all these and the universe of power besides are at His command. Ours are the windows; His are the boundless and luminous deeps of heaven.

When prayer takes the form of a cry for help or outcasty for blessings, temporal or spiritual, we are too apt to look for results in the channels we ourselves have marked out. It is true that we ask in deference to the Divine knowledge of what is best for us, and hold ourselves prepared to find our special wish denied by the Divine wisdom and love. But our thought is often a selfish one, after all. We feel like children, who have sought in vain some hurtful thing, and think our Father's decision was confined to a single choice, and he refused us, because to grant the request would have injured us.

We should realize more deeply the precious promise that all things shall work together for our good, if we love God. That is to say, His Spirit, if we keep our hearts open to it, will transform for us any fate that comes upon us. We are not to look for suspensions of natural forces, to deliver us from natural pains. We are not even to interpret the events of life exclusively as God's dealings with us. There is a terrible form of spiritual selfishness that grows from this narrow view of our relation to our heavenly Father. This was what knew of good people tormenting themselves as to the meaning of a sad bereavement. "When we lost our first child," they said, "we heard in our affliction the voice of God. We had been forgetful of Him. We had idolized our earthly affections. But we turned to Him, and strove to serve Him faithfully. And now we have been called to mourn again without cause."

Ministers sometimes talk in a similar way. They tell the hard-hearted to tremble; God will come to them in sickness; and if that will not do, He will take from them one beloved object after another until they are subdued, and give their hearts to Him. This is so partial a statement of the truth as to be relatively false when preached, exclusively as the explanation of the facts of life. It calls up a picture of Deity, sacrificing one precious life after another, to move the feelings of a comparatively useless old sinner, which would be ludicrous, if it were not dreadful. Yet it is true that every experience bears its special message for us; only we must not interpret it in that light only. In our joy as well as our sorrow, in our daily communities as well as our sudden deliverances, God calls us to give our hearts to Him. And *all* things work together for the good of *all* who love Him.

The fruitful blessing springs, then, within us. As the sun and rain are sent upon all, so the love of the Father yearns over all; but as the sun and rain cannot bring harvests from barren ground, so even omnipotent love is shed in vain upon unloving hearts. They who will not ask, cannot receive, though the hands of the Giver are full. It is in vain that the skies are ablaze with light and glory, while the windows of the chambers are shut.

Why then should we pray? Because if we pray, we cannot help drawing near to God, and if we draw near to God, we cannot help praying. Because we love to ask, and God loves to be asked. Because prayer makes all events blessings to us, and whatever apparent good we might receive, out praying, would be robbed of its deepest beneficence. Because prayer is the highest form of intercourse—pure spirit, face to face with spirit—and out of it comes, in measure unfathomable, the higher life of inspiration and power, the life which is eternal. Because—ah, there are ten thousand reasons that we should pray, and not one that we should cease!—*Christian Union.*

"Honesty is the Best Policy."

BY REV. R. H. CRAIG.

"To-morrow will be my last day in the office at the brick yard," said Willie Jamison to his mother as they sat at supper in their humble, quiet home.

"Why, my son?" said his mother kindly, for she saw by his sad countenance that something was troubling his mind very much; "what is the reason of this, Willie?"

"O, nothing, mother, only the bricks are nearly all gone; there is but one lot left now and they are to be taken away in the morning. I feel really sorry to think that I shall have nothing to do through the winter, and then, of course, there will be no more weekly wages coming to our poor home."

"Well, my dear boy, you need not distress yourself too much about that; I have no doubt but that some other place will open up for you in the winter, and I am certain that Mr. Wood will give you the same situation next spring when their work commences. I was talking to him a few weeks ago, and he said and thankful, too, to hear him speak so well of you. He said that you were in every way reliable, and that he had found you perfectly honest. This is what your mother has always taught you, my dear boy, and I am proud to find that you are an *honest* son, though he may be without a situation to-morrow evening."

"Yes, mother, it is pleasant to be honest, and to be well spoken of, but then it looks to me a terrible thing to be idle, and I cannot bear the thought of lying around home for six long months when I ought to be working for you and myself."

"Keep up heart like a man," kindly answered his mother. How do you think I got along before you were appointed to that office? I had to trust in God and He brought me through; and now you must do the very same, and He will give you enough to do and contentment with it too."

Poor Willie gave a long, deep sigh, but answered not a word; he had not learned to commit his way to God as confidently as his mother had, and could at present see nothing before him but a long, idle winter, and that in his estimation was a thing absolutely intolerable.

He had cheered up somewhat next morning, however, and was promptly in his place at the proper time. Engrossed in checking the books and balancing the different accounts he had entirely forgotten the doleful prospects of the evening before, when his employer suddenly entered the office and, hastily opening his pocket book, said, "Take this ten-dollar bill, Willie, run down to town as quickly as you can, pay two dollars to Smith, and three to Young, and bring back the change to me in single bills. I want to pay it out as soon as you return."

And Willie, cramming the money in his pocket without even looking at it snatched up his hat and was gone in the twinkling of an eye. He had almost reached town when it occurred to him that he had not looked at the money, and pulling it out at the moment, what was his surprise to find, instead of the ten, a hundred-dollar bill. "Ah, he has made a mistake, but it is no matter, I will take it down *to the bank*, and carry back the change," murmured Willie to himself, as he replaced the valuable bill in his pocket, and walked the faster with a proud and dignified step at the recollection of having so much money in his pocket; and then the happy thought flashed upon his mind that he had one more opportunity before he left the employment of Mr. Wood to show him that he was truly *honest*. He had now reached the town, and was walking down the principal street, leading to the bank, when he suddenly met a former schoolmate, Harry Edson. The boys were pleased to see each other, and Willie paused a moment to speak to his old friend.

"Guess how much money I have got," whispered Willie after a minute's conversation.

"I don't know," said Harry. "How much?"

"Only a hundred dollars!" proudly answered Willie.

"All your own? Has Mr. Wood paid you off?"

"No, its a mistake," and Willie told him how he came by so much.

"Surely you don't intend to return it, do you?"

"*Of course* I do!" promptly answered Willie.

"But you say Mr. Wood made a mistake when he gave you so much; if so, I would keep the balance. He may think someone else got it, or perhaps he will never miss it at all; and if he does, you can tell him that he must have given it to someone else."

"But it is not *my* money, Harry, and, besides, I cannot tell him a lie. He often gave me charge of more than this in the office, and I would not take a cent for all the world, and he knows that too."

"Then he will not suspect you, end, besides, you tell me that this is your last day in his office. It may be a long time before you get another situation, and a longer time before you have it in your power again to make ninety dollars so easily; Mr. Wood is rich, and you are poor; and I think you are very foolish if you take it back to him."

Willie's pride was hurt a little at the thought that he was "poor," and he promptly replied: "It's very true I may not get a situation for a long time, but I can't help that, and I have *not earned* ninety dollars; besides I am not so poor but I can get along. Mother and Mr. Wood both think me honest, and I would not deceive them for a thousand dollars."

"I am sorry you are so foolish," Harry answered with a sarcastic smile. "You will probably regret your honesty soon when you find yourself without a situation or a cent. Good-bye."

Now Harry was a boy of seventeen and more than three years Willie's senior, and ought to have known better; but honesty does not always go by age, and *knowing* and *doing* are two different things.

Willie had the money changed at the bank. He rolled up the ninety dollars carefully, and placed it in an inside pocket of his vest, and then walked off to make the required payments. No one else was in the bank at the time, and the banker was not a little surprised to see so small a boy with so much money, and was just on the point of his vest, and then walked off to make the required payments. No one else was in the bank at the time, and the banker was not a little surprised to see so small a boy with so much money, and was just on the point of asking him how he came by it, when Willie himself came to the rescue, and explained the matter.

"Well, you are an honest boy, and I must see Mr. Wood about you," said the banker, as Willie left the bank.

Willie had the money changed at the bank. He rolled up the ninety dollars carefully, and placed it in an inside pocket of his vest, and then walked off to make the required payments. No one else was in the bank at the time, and the banker was not a little surprised to see so small a boy with so much money, and was just on the point of asking him how he came by it, when Willie himself came to the rescue, and explained the matter.

"Well, you are an honest boy, and I must see Mr. Wood about you," said the banker, as Willie left the bank.

Willie's heart was light as he walked back to the brick yard, and he was not long in finding Mr. Wood, who was busily engaged in the office.

"Here is the change, sir," said Willie, as he laid the money on the desk before him.

"Change! what change?" said Mr. Wood, looking up from his writing.

"Why, sir, you gave me a hundred-dollar bill to take down to Smith and Young, and I have brought back the change, ninety dollars, in single bills."

"I gave you a hundred-dollar bill! I gave you a ten-dollar bill, and I have the change of it in my pocket. Are you crazy, boy, or what is the matter with you?"

"Indeed, sir, I am not crazy, but I thought you gave me a hundred-dollar bill, and I have brought back the change, ninety dollars, in single bills."

"Well, this is the strangest affair I ever heard of in my life. Are you sure you have not lost the money?"

"Quite sure, sir; I have it safe in my pocket."

"Let me see it, then," said Mr. Wood, rising from his seat and coming to the desk.

Willie drew out the money, and laid it on the desk before Mr. Wood, who counted it carefully over, and then looked at Willie with a puzzled expression of countenance.

"Well, this is the strangest affair I ever heard of in my life. Are you sure you have not lost the money?"

"Quite sure, sir; I have it safe in my pocket."

"Let me see it, then," said Mr. Wood, rising from his seat and coming to the desk.

Willie drew out the money, and laid it on the desk before Mr. Wood, who counted it carefully over, and then looked at Willie with a puzzled expression of countenance.

"Why, my son?" said his mother kindly, for she saw by his sad countenance that something was troubling his mind very much; "what is the reason of this, Willie?"

"O, nothing, mother, only the bricks are nearly all gone; there is but one lot left now and they are to be taken away in the morning. I feel really sorry to think that I shall have nothing to do through the winter, and then, of course, there will be no more weekly wages coming to our poor home."

"Well, my dear boy, you need not distress yourself too much about that; I have no doubt but that some other place will open up for you in the winter, and I am certain that Mr. Wood will give you the same situation next spring when their work commences. I was talking to him a few weeks ago, and he said and thankful, too, to hear him speak so well of you. He said that you were in every way reliable, and that he had found you perfectly honest. This is what your mother has always taught you, my dear boy, and I am proud to find that you are an *honest* son, though he may be without a situation to-morrow evening."

"Yes, mother, it is pleasant to be honest, and to be well spoken of, but then it looks to me a terrible thing to be idle, and I cannot bear the thought of lying around home for six long months when I ought to be working for you and myself."

"Keep up heart like a man," kindly answered his mother. How do you think I got along before you were appointed to that office? I had to trust in God and He brought me through; and now you must do the very same, and He will give you enough to do and contentment with it too."

Poor Willie gave a long, deep sigh, but answered not a word; he had not learned to commit his way to God as confidently as his mother had, and could at present see nothing before him but a long, idle winter, and that in his estimation was a thing absolutely intolerable.

He had cheered up somewhat next morning, however, and was promptly in his place at the proper time. Engrossed in checking the books and balancing the different accounts he had entirely forgotten the doleful prospects of the evening before, when his employer suddenly entered the office and, hastily opening his pocket book, said, "Take this ten-dollar bill, Willie, run down to town as quickly as you can, pay two dollars to Smith, and three to Young, and bring back the change to me in single bills. I want to pay it out as soon as you return."

And Willie, cramming the money in his pocket without even looking at it snatched up his hat and was gone in the twinkling of an eye. He had almost reached town when it occurred to him that he had not looked at the money, and pulling it out at the moment, what was his surprise to find, instead of the ten, a hundred-dollar bill. "Ah, he has made a mistake, but it is no matter, I will take it down *to the bank*, and carry back the change," murmured Willie to himself, as he replaced the valuable bill in his pocket, and walked the faster with a proud and dignified step at the recollection of having so much money in his pocket; and then the happy thought flashed upon his mind that he had one more opportunity before he left the employment of Mr. Wood to show him that he was truly *honest*. He had now reached the town, and was walking down the principal street, leading to the bank, when he suddenly met a former schoolmate, Harry Edson. The boys were pleased to see each other, and Willie paused a moment to speak to his old friend.

"Guess how much money I have got," whispered Willie after a minute's conversation.

"I don't know," said Harry. "How much?"

"Only a hundred dollars!" proudly answered Willie.

"All your own? Has Mr. Wood paid you off?"

"No, its a mistake," and Willie told him how he came by so much.

"Surely you don't intend to return it, do you?"

"*Of course* I do!" promptly answered Willie.

"But you say Mr. Wood made a mistake when he gave you so much; if so, I would keep the balance. He may think someone else got it, or perhaps he will never miss it at all; and if he does, you can tell him that he must have given it to someone else."

"But it is not *my* money, Harry, and, besides, I cannot tell him a lie. He often gave me charge of more than this in the office, and I would not take a cent for all the world, and he knows that too."

"Then he will not suspect you, end, besides, you tell me that this is your last day in his office. It may be a long time before you get another situation, and a longer time before you have it in your power again to make ninety dollars so easily; Mr. Wood is rich, and you are poor; and I think you are very foolish if you take it back to him."

Willie's pride was hurt a little at the thought that he was "poor," and he promptly replied: "It's very true I may not get a situation for a long time, but I can't help that, and I have *not earned* ninety dollars; besides I am not so poor but I can get along. Mother and Mr. Wood both think me honest, and I would not deceive them for a thousand dollars."

He had almost reached town when it occurred to him that he had not looked at the money, and pulling it out at the moment, what was his surprise to find, instead of the ten, a hundred-dollar bill. "Ah, he has made a mistake,

Our Homes.

In all societies the Home is the foundation upon which every organization must be built, and upon the purity and strength of the family life will depend the life of the nation itself. When we make our homes lovely and pleasant places, and teach our children and our neighbors to feel that order and kindliness reign within our house walls, then we are doing something more than a selfish work, for we are not only educating and making happy ourselves, our children, and our friends, but we are helping to support good government, and to keep just laws justly. In a republican country like our own, the relations between the State and the people are so near that the very children may be made to feel responsible for the good order of their neighborhood, and the beginning of all citizenship must be in the home. Then, too, our church societies are only combinations of families, and must depend upon the home life as the source of their strength, for people whose homes are disorderly and unattractive will very rarely make good church members, and we cannot be certain to carry the same heart into church on Sunday that they wear at home on week days.

Children who have been brought up in the atmosphere of a happy, wisely ordered home, can never lose its influence to the last day of their lives; and the great responsibility of fathers and mothers toward their children is shown in the permanency of the results which they produce. If we could for once understand the great value of our homes, we should be more anxious to make and keep them what they should be, the places where the greatest happiness of each member of the family is found, and to do this we must realize that they are the foundation stones upon which all society and all government is based, and that the homes of a nation furnish the best proof of its civilization and Christianity.

Dress in Japan.

The style of dress in Japan is even more varied than it is on Washington-street or Broadway on a fine Sunday. A japanese lady, thoroughly arrayed, is really an elaborate work of art. A large amount of attention, and no little expense to begin with are devoted to the arrangement of her hair—the common people regularly employing a hairdresser. If they cannot afford the luxury every day, they make it last for two days by sleeping on a wooden pillow placed under the neck. Next in the most importance in a Japanese toilet is her obi, or girdle, which is usually of ladies' bright colors, and arranged behind with great care so as to form the shape of a hump so popular among our ultra-fashionable belles. The Grecian bend is an old institution in Japan. To see one of her dark-skinned ladies, with her extensive back dress, a hump upon her back, and extremely narrow skirt, high, wooden-heeled pattens, her body thrown forward, and as she minces her steps, you would imagine she was contemplating the fashionable promenade in other lands; but she is only dressing as her people have dressed, and walking as they have walked for centuries. The obi serves a purpose, as the Dutch have not been attributed to it elsewhere. When a woman becomes a widow she makes no change in it unless she wishes to announce her purpose never to marry again, in which case she ties the obi in front. How effectual this is to ward off proposals I do not know; but as it is always and everywhere the privilege of a woman to change her mind, it is said the old occasionally in such a case works its way around to its normal position behind.

Diseases of Artisans.

Gilders are subject to mercurial affections. They suffer from giddiness, asthma, and very frequently from partial paralysis, which often becomes a regular kind of stammering. As might be supposed, they frequently suffer from unpleasant bluers in the mouth, which is a true salivation.

Miners in the metalliferous districts suffer from vertigo, palsy and convulsions, and survive generally but a few months.

Pottery glaziers, who use lead largely, suffer a condition very similar to that described above, with the addition of dropsy, loss of teeth and enlarged spleen. Palsy of the limbs, especially of the arms, is a common effect of poison from lead. Consumption is common among these workers.

Glass blowers are the victims of those affections produced by sudden vicissitudes of temperature—rheumatisms and various inflammations. Their eyes are weak while they are generally thin and delicate.

The stone cutters inhale the sharp particles, which are apt to produce disease of the lungs.

Plasterers suffer from the gases disengaged and from excessive moisture. They suffer very much from labored breathing, have wan, pallid visages and they digest badly.

Fliers are short lived. Whether the metal be brass or iron, the fine, sharp particles make their way into the lungs, where they cause deep disease, sometimes asthma, sometimes consumption.

Workers in wool and cotton breathe a close, unchanged atmosphere, while their lungs are filled with the irritating dust of the material upon which they work.

All in-door occupations, with the present imperfect notions about ventilation, are more or less mischievous. Out-door occupations, as farming, gardening and other similar employments—afford, with an intelligent comprehension of the food question, the opportunity for health and long life. Driving stage or express wagon with frequent leaving for the delivery of packages, traveling through the country on foot as a book agent—these and similar employments are perhaps not inferior to farming and gardening.—*To-Day.*

Publisher's Department.

GIVEN AWAY!

A BEAUTIFUL

OIL CHROMO

TO EVERY NEW SUBSCRIBER to the

"Southern Workman."

We have secured a large invoice of the elegant picture entitled RETURNING HOME, which sells at retail for $1.50; and we have made such arrangements with the publishers that we can afford to GIVE THEM AWAY to the friends of this paper.

The subscription price is but $1.00 per year. The Chromo will be worth $1.50. Who cannot spare a single dollar for such a good purpose? The paper will pay for itself a hundred times, giving as it does, valuable information on all subjects of general interest, and devoted especially to the interests of our Southern homes. The Picture can hardly be told from an

OIL PAINTING,

and would adorn the walls of the richest. Good pictures are needed almost as much as good reading. They have their influence for good. Everybody *reads them.*

We present one to EVERY NEW SUBSCRIBER; to every old subscriber who renews; to every one who will get us a new subscriber.

NO ONE IS LEFT OUT! THE CHANCE IS OPEN TO ALL!

We do not know how long we shall be able to supply these pictures free of cost, but certainly for the next three months. Therefore *do not delay* but send your names at once to "Southern Workman," Hampton, Virginia.

OUR chromos are already finding their way through the land, and thus far they have given perfect satisfaction, the only wonder expressed being that such pretty presents could be given away with such a low priced periodical. When subscribers desire their pictures mounted, fifteen cents additional should be sent to pay the cost and for mailing. Unless this amount is sent we shall pack them carefully on a wooden roller and send them by mail without extra charge.

☞ A RED cross before this paragraph will indicate to the subscriber that HIS SUBSCRIPTION HAS EXPIRED. He is requested to renew immediately.

We have carefully revised the subscription list of our paper and have made every endeavor to prevent mistakes in mailing, etc. We are not infallible however, and may have dropped some paid-up subscriber by mistake. We are willing to reward any one who will take the trouble to rectify any errors in our new list.

The Old Oaken Bucket.

BY SAMUEL WOODWORTH.

How dear to my heart are the scenes of my childhood,
When fond recollection presents them to view!
The orchard, the meadow, the deep-tangled wild wood,
And every loved spot which my infancy knew;
The wide spreading pond, and the mill that stood by it;
The bridge and the rock where the cataract fell;
The cot of my father, the dairy-house nigh it,
And e'en the rude bucket which hung in the well.
The old oaken bucket, the iron-bound bucket,
The moss-covered bucket which hung in the well.

That moss covered vessel I hail as a treasure.
For often at noon, when returned from the field,
I found in the source of an exquisite pleasure,
The purest and sweetest that nature can yield.
How ardent I seized it, with hands that were glowing,
And quick to the white pebbled bottom it fell;
Then soon with the emblem of truth overflowing,
And dripping with coolness, it rose from the well.
The old oaken bucket, the iron bound bucket,
The moss-covered bucket arose from the well.

How sweet from the green mossy brim to receive it,
As poised on the curb, it inclines to my lips!
Not a full blushing goblet could help me to relieve it,
Though filled with the nectar that Jupiter sips.
And now, far removed from that loved situation,
The tear of regret will involuntarily swell,
As fancy reverts to my father's plantation,
And sighs for the bucket that hangs in the well.
The old oaken bucket, the iron bound bucket,
The moss-covered bucket that hangs in the well

John Adams.

In a recent number of this paper was given a brief biography of Thomas Jefferson, one of the many famous sons of Virginia, and in the present number we desire to give our readers a sketch of one of his contemporaries, John Adams, who, born in 1735, in the State of Massachusetts, was associated closely, throughout his political career, with Jefferson, and at last, by a strange coincidence died on the same day with him, both leaving this world upon the fiftieth anniversary of American Independence. John Adams was the son of a farmer of English extraction, whose poverty did not prevent him from educating his son at Harvard College, an opportunity of which the young man took advantage to study law, beginning the practice of his profession in 1758 and marrying a few years afterward, the daughter of a neighboring clergyman, who proved a helpmeet in the best sense, through the whole of his long and laborious life. He became interested in politics early in his career, being the chief legal adviser of the patriot party and an active and conspicuous leader among them, and was elected one of the five delegates from Massachusetts to the Congress of 1774. During this time he wrote constantly upon many of the exciting questions which arose from the difficulty with the mother country, and in the Congress of 1775, to which he was also elected, he was one of the foremost in advocating measures for the defence of the colonies. He upheld the Declaration of Independence, as drawn up by Mr. Jefferson and himself, took a prominent share in preparing articles of war, treaties, etc., until in 1777 he was appointed commissioner to France, but as the alliance with that country was completed before his arrival, he returned home at once, and after taking a leading part in the formation of the State constitution of Massachusetts, sailed again in 1779 for minister, to treat with Great Britain for peace and commerce. He remained abroad for ten years, negotiating treaties and loans with various foreign powers, and although the government of Great Britain was extremely unfavorable to the newly established nation which he represented, he nevertheless received from Congress, on his return to America, thanks for his "patriotism, perseverance, integrity and diligence." When Washington was made President, Mr. Adams was chosen Vice-president, and at the second presidential election in 1792 was re-elected, and finally succeeded Washington in the Presidential chair. It is impossible here to go into the details of his Presidency, which was a time crowded with exciting events, but the fact that he barely missed a re-election, shows that he had a strong hold upon the hearts of the people, though he himself felt that he had been deceived by many of his friends and especially by Mr. Jefferson. He retired from public life to spend the remainder of his days in comparative seclusion, his habits of economy and thrift having enabled him to accumulate a comfortable property, and his wife and children being always sources of happiness and pride. At the age of eighty-six he was chosen to assist in revising the constitution of Massachusetts, and down to the last day of his life he exhibited remarkable vitality and power. With all his faults, which were those of an unusually active temperament, he was unelmbtedly a man useful in his generation and worthy to be imitated by younger politicians who desire to tread in the path which led him to so high a place in his fellow countrymen's regard.

The Thermometer.

Although the nature of Heat is so mysterious and even yet so imperfectly understood, yet for many years no instrument has been in use which accurately measures the degrees of heat of various bodies, and is of incalculable assistance, not only to scientific men, but also in every-day life. It is well known to the most careless observer that heat expands solids, liquids and gases, that is the presence of heat produces an increase of bulk, while its absence, or the condition which we call cold, produces a corresponding decrease, and examples of these well-known facts familiar to require mention. One simple fact will serve to illustrate the relation between heat and expansion and we choose one which has probably come under the notice of most housekeepers. If, from one cause or another, the glass stopper of a bottle sticks fast, it can be removed by placing the mouth of the bottle in hot water, when the glass will expand and allow the stopper to be easily withdrawn.

Now different bodies expand in different degrees, liquids varying in bulk more than solids, and gases more than liquids, and this enlargement can be used as a measurement of heat, the thermometer or heat-measurer, being the instrument employed for that purpose. A common thermometer is a small glass tube with a fine aperture or hole like that in a pipe stem, running through it, and a hollow bulb at one end. This bulb and part of the tube are filled with the liquid metal mercury, while by suitable means the air is removed from the upper part of the tube and its open end sealed up. The bulb is then dipped in iced water, and a mark is made upon the glass tube at the top of the column of mercury. The degree of temperature of the melting ice in this same as that at which water freezes, and this mark upon the glass tube of the thermometer is therefore called the *freezing point*. The tube is next dipped into boiling water, and the heat passing rapidly from the water, through the glass to the mercury the latter quickly expands and of course rises up in the narrow tube to what is called the *boiling point*, namely: the point at which the mercury ceases to expand when subjected to a degree of heat sufficient to boil water.

This second point being marked upon the tube, the space between the two points is accurately marked off into 180 spaces which are called degrees, and it is evident that an amount of heat which will run the little column of mercury up from the freezing to the boiling point is exactly the same amount that changed the water from the freezing to the boiling point, so we can say that the water has received 180 degrees of heat, and can measure in the same way any of the intermediate degrees, the mercury being constantly affected by any changes in the air, in any liquid in which it may be dipped, or any substance with which it may come in contact.

Although thermometers are not actually marked in this way, yet the above facts illustrate the principle upon which they work, and we should like our readers to fully appreciate the value of this simple instrument to them in their daily lives. This matter of temperature is one of very great importance, for upon it depends not only our comfort but our health, the temperature of the air in our dwellings having a very great influence upon our physical condition. No room should, in winter, be heated above 68 or 70 degress, and our only means of measurement is the thermometer, so that for this purpose alone, these instruments

simples of all beverages, it seems almost incredible that an adult man takes into his system about three-quarters of a ton of it in a year, and certainly in view of the amount consumed and its direct affect upon our bodies, we cannot be too careful that our supply of water is sufficient in quantity and pure and wholesome in quality. The purest of all water is that which falls at the end of a long storm, in the country, at a distance from houses and all contaminating influences; but as such water cannot usually be transported to our dwellings, the next best source of supply is be found in wells, which should be as far as possible from human habitations, barns, outhouses, etc., (so that no drains or sewerage may soak into them) and should be kept scrupulously clean. Cisterns with carefully arranged pipes, so built as to be easily cleaned, are great additions to the comfort of families, and the water from them (when they are kept in good order) may be safely used for drinking as well as other purposes. In cities and towns water is usually brought from reservoirs filled from some distant river or lake, and the public health in such places is largely dependent upon the purity and abundance of the supply, and indeed too much can scarcely be said in respect to the necessity of the free use of pure water if we desire to keep ourselves clean and strong. The pretty picture of the well and its thirsty visitors may furnish not only the sentiment for a poem, but also the text for a very practical and much-needed lecture, and we wish our readers would lay to heart the suggestions so frequently to be found in the columns of the "Southern Workman," as to the proper use and exceeding value of pure water.

Athens.

The city of Athens was the capital of Attica one of the divisions of ancient Greece, and its history, from the days when pagan mythology ascribed its greatness to the intervention of the gods, down to our own time, when it is scarcely more than a mass of ruins, is full of interest and instruction. The Athenians were famous for their bravery and success in war, and their numerous victories gave them a taste for luxury and an ability to gratify it which led to such embellishment of their city as made it in many respects the most magnificent in the world. Their public buildings were, and even in their ruins, still are without parallel, no architect having yet arisen who could vie with the builder of the Parthenon or the Propylea of the Acropolis, which latter building deserves a brief description, both from its beauty and its importance.

The Acropolis, which is a rock rising abruptly from the plain, was the fortress of Athens, and upon its platform stood numerous edifices, one of the principal of which was the Propylea, a magnificent building of marble serving both as an approach and a military defence to the capital. The front or central part which was flanked by two wings consisted of six fluted columns, about twenty-nine feet high, supporting a pediment and approached by four steps. A vestibule formed by six Ionic columns placed in a double row and parallel to one another, stood behind this portico and led to five openings or doors, which again led to a portico facing the platform of the Acropolis, with a front similar to that already described.

The decoration throughout the building were most exquisite and costly, and the sculptures, from this and other edifices, which still remain, are of wonderful beauty and perfection.

Athens was from various causes, a center of art and literature and a world-renowned school of learning, most of the great minds of the then civilized world receiving their training from one or another of the Athenian philosophers, among whom were numbered such names as Euripides, famous Pericles, Aristotle, Xenophon, etc.

At the present day we can hardly form an idea of the grandeur of some of the streets and buildings of ancient Athens, and it is only from the magnificence of the ruins still left that we can judge what its former glory must have been, and how great was its fall, a fall owing in great measure to the ambition and corruption of its people, who became enervated and depraved by luxury and power, and in losing their original simplicity and hardihood lost all that makes a people capable of greatness.

What shall We Read.

The following is an extract from the remarks of Hon. George S. Hillard at the recent opening of the Roxbury branch of the Boston City Library:—

"I am a member of the board of trustees of the public library as chosen by the city council, who in turn are elected by the people, to superintend not only the parent institution, but its affiliating branches in East Boston, South Boston and now,—as I am too old to learn new things, permit me to call this—the Roxbury branch. We feel its labor and responsibility, and are truly anxious to discharge its trusts as servants of the public. They are our masters, but their influence, like the air we breathe, is hardly felt; but it is capable of being roused like a tornado, and is what is called public opinion, to which we should largely bow. In the selection of books we should not disobey this public sentiment. Yet, on the other hand, should we not strive to elevate the general taste? Our country is one that is, above all others, in the hands of the people. To these its affairs are entrusted, and not to privileged classes. Hence, it is of the first importance that every effort should be made to advance the intellectual education of the masses. And from our early history it has been the aim of our wealthy and favored classes to do all they have been able to foster religion, education and culture among the great masses of the community. With a half century of life behind me, I may be permitted to be garrulous, and pardoned if dull. I look back, and feel almost like a wandering Jew. At that time Boston had only forty thousand people, and Roxbury, half-way between city and country, was indeed a 'rural retreat,' a place where I used to resort for huckleberrying and bird's-nesting. I hope the former is yet practiced and the latter abandoned. In comparison with to-day, it was like canoes among steamboats, and superfinity and abundance where once it was hard to slake the thirst for knowledge. Books, how rare and hard to get: but how deeply then we read them. But all of the good things we now have are not unmixed with evil. Though we have infinitely better schools and a vaster number of books, better than all is the mother's knee, the father's fireside prayers, and the little yet powerful unconscious influence that grows up in a well-ordered home.

Good Dr. Arnold in his excellent remarks on schools, says that they should produce three things: Christians, gentlemen, scholars; that is Christian culture, preference of others over self, and cultivated intellect sufficient to elevate all we can influence, is the thing we should seek to accomplish. We are here in a building, the best in New England, for the purpose, and hope to fill it with books for children to read is a question of much moment. Books are divided into three classes, some good, some bad, and a large number neither good nor bad. To read indifferent books is nothing but a pastime; it does really no good. Bad books of course we shall not have on our shelves, as the pernicious influence of even one bad volume is great beyond calculation. But are there not too many books that are merely sensational works of fiction that stimulate but do not invigorate, and like brandy and confectionery in the body, take the place of honest beef and bread? and what could be thought of those parents who should bring up their children on confectionery alone? From my own observation of the present tendency of literature, reading is too much dependent upon sensation; written as many books are by those of culture and ability, they still give false views of life, and do not represent human affairs and our daily existence to be the serious things they are—of trial, struggle, and Christian endurance—but cast a false, rose-colored view over it all. I never go to a theatre without constantly feeling how unreal it all is. We see no such people in our every-day life, and I never read a novel without the same feeling creeping over me. I am certain the tentative minds of the young receive much injury from too much of that kind of reading. It renders them discontented, unmindful of the realities of life and its duties. What we want is the earnest co-operation of fathers and mothers, that together we may make this Institution to elevate in morals, and a genuine culture which indifferent books can never do. The best influence after all, is the family; to be reared in a virtuous household. And happy are those who can look back upon such a great blessing. Then good books embellish and adorn the character, and literature and reading then attain their true and just position."

A NEW and greater Yosemite than that heretofore known to the world has been discovered. It was penetrated, late last fall, by Galen Clark, State guardian of the great valley, and John Muir, an enthusiastic and devoted geologist, botanist, and mountain explorer. It is situated in the Tuolumne river cañon, seventeen miles north of the Yosemite. The main Tuolumne river, which is a much wider stream than the Merced, runs through the great Tuolumne cañon. The Tuolumne cañon or Yosemite, at its widest part, is only a quarter of a mile wide, while the Merced Yosemite valley is from half a mile to a mile and a quarter wide. The falls in the latter surpass those of the Tuolumne cañon in unbroken volumes of falling water; but in endless variety of cascades and water-shoots the Tuolumne cañon is much the grandest. There is one water-leap one thousand feet high in the latter. One of its waterfalls spreads out at first like a great fan of silvery-threaded water; but, after a descent in this shape of about two hundred feet, it is whirled over, closed up, changed in color, and shot down a narrow groove worn in the rocks like an arrow of steam. There is a greater display and variety of water lines, tints, motions and expressions in the Tuolumne cañon than in Yosemite.

THE

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG,
RICHARD TOLMAN, } *Editors.*
J. H. LARRY,
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. H. LARRY, *Publishing Department.*

The Southern Workman.

HAMPTON, OCTOBER, 1873.

THE notable event of the past month has been the panic in Wall Street, New York. The financial fabric of the whole country has been shaken. The leading American Banking house —Jay Cooke & Co., has failed. Fisk & Hatch of hardly less note have suspended. Forty of the leading Banks in New York have been ruined. The excitement has been extreme. No one knew whom to trust. Government was appealed to, and President Grant and Secretary Richardson went to New York, but decided they had no right to use public funds for the relief of the banks.

The excitement subsided in two or three days, and at this writing the worst seems to be over.

The cause of all this trouble is said to be railroad speculation. Most of our readers are not familiar with the great business operations by means of which railroads are built. It is enough to state that they have been started faster than the country needed them, and have been so managed that a few men made a great deal of money out of them. There has been a vast deal of dishonesty in these enterprises, and the present crash is the result.

Good and bad men have suffered, but most of the loss falls on those who can bear it.

THE Freedman's Savings Bank at Washington was thought to be in danger but passed triumphantly through the ordeal of a "run." The one at Richmond in charge of Charles Reichers remains unshaken, and received many deposits during the most exciting times. It is in excellent condition, and stands high in the business community.

The People's Bank of Petersburg has suspended. It has no connection with the Freedman's Bank, but has many colored depositors who are sorely tried at the prospect of loss. In a few days its prospects will be brighter. The Freedman's Bank of Norfolk, H. C. Perry, Cashier, is in sound condition; but in common with all the branches of the National Savings and Trust Company requires depositors to give sixty days notice of intention to draw.

We have just received the twenty-first Annual Report of the Hawaiian Mission Children's Society. It has a membership of over five hundred, composed chiefly of descendants of missionaries to the Sandwich Islands. Most of them reside in their native country, but a large portion is scattered throughout the world, in the islands of Oceanica, in China and in Spain, as evangelists, in all parts of the United States, and in the Army and Navy.

The society meets monthly in Honolulu, at which time the "Maile Wreath" (a literary journal) is read, varied selections of music are rendered, reports and letters are heard.

At their annual meeting, in connection with the reports, an account is given of each member of their scattered band; the proceedings are published and sent over the world to each "Cousin"—the familiar name being, "Cousins' Society."

Their loyalty to each other and to their island home, is thus kept freshened.

Their work is the support of children of native Hawaiians, who are laboring abroad as evangelists, and the aid of heathen children in Micronesia. For this purpose they raised last year, $1200.

It is a remarkable fact, that not a single descendant of a missionary to these islands has ever gone to the bad.

THE Fall term of the Hampton Normal and Agricultural Institute, opened October 1st. The number of applicants for admission has exceeded one hundred and fifty, many of whom have been rejected for want of room.

Hard working young men have sold their crops and horse, and with their small savings traveled to Hampton only to find that there was no place for them to lay their heads, and have sadly gone back to labor and to wait.

The tents have again been pitched and filled with earnest students. Meanwhile, building is going on rapidly. About six hundred thousand bricks have been laid in the walls of Virginia Hall, and it is expected that the roof will be on by January 1st.

Over a million bricks will be used. Mr. Charles D. Cake, foreman, has done himself great credit by the careful, thorough manner in which the work has been done.

About twenty-five thousand dollars have already been expended for material and labor.

The "Hampton Students" have commenced their singing campaign, and are now giving concerts in Massachusetts. On October 6th and 8th, they sing in Tremont Temple, Boston, and on the 8th of November, in Music Hall. They are expected in Hampton on Christmas day. Early in January they intend to give a concert in Norfolk, in Petersburg and in Richmond. They will proceed thence to Washington, Baltimore, and Philadelphia.

THE Normal School in Richmond, in charge of Rev. R. M. Manly, opened early in September with a full attendance. Mr. Manly is one of the few Northern men who came to aid the South in building up a free school system, who has made a mark. He has demonstrated the ability of colored youth to acquire a wide range of knowledge, and has founded in our State capital as thorough going a training school as can be found in the country.

DR. Ruffner, Superintendent of Public Instruction, has been engaged, of late, in the western part of the State, holding "Teachers' Institutes." He is accompanied by Professor Ladd, late of Providence, Rhode Island, whose removal to Virginia should be hailed most cordially. Professor Ladd has had twenty-five years' experience as a teacher, and, we learn, has been appointed school superintendent of Augusta county.

THE finest achievement of this Commonwealth for many years has been her Free School system. Like other good work, its inspiration is found in one man, whose earnestness and eloquence and energy have given to the children of this State, a gift beyond all value. Dr. Ruffner stands foremost among Southern educators.

Virginia is to-day reconstructed because she has done it herself. Acts of Congress are futile if not fatal to real progress. Real growth is from within outward. The heart and head purposes of the good men of the South, lies the only remedy for the ills and troubles that afflict her.

When her best minds take the lead in the spread of light and of truth and of liberal sentiment, the speculator that vex her will be easily disposed of.

WE call special attention to the article on the Republic of Liberia, on the third page.

We are working, as our readers all know well, for the education and elevation of the colored man in America. The Hampton Normal and Agricultural Institute, is making every effort to meet the pressing need of working teachers, and do the best it can, it cannot supply one quarter of the demand constantly made upon it by Virginia and North Carolina alone. We believe that there is worthy, noble work for educated people of color in this country, and certainly a better chance for their education than in Africa, at present. This is their country; they have just as much right to stay here as white citizens have, and we are glad to know that they can stay and be more and more protected in their rights.

But we should not forget that they have also the right to emigrate if they want to, and that we have no right to oppose merely selfish interest to their going. And they should not forget that, whether they go or stay, it is their duty and privilege to inform themselves thoroughly of what twenty thousand of their brethren are doing to build up in the ancient home of their race, a nation of whom they and the world may well be proud.

WE shall be much obliged to any of the former members of the Normal School, who will send us their address. Graduates are especially requested to do so.

Local Items.

THE Ocean terminus of the Chesapeake and Ohio Railroad is not yet determined, but Newport's News, six miles distant from Hampton, is regarded as the most eligible point owing to the depth of water there and to the good anchorage. All the land in that region has been bought up on speculation and nearly ten hundred thousand dollars' worth of land in this (Elizabeth City) County has been bought up at high prices in the expectation of enhanced value when the railroad shall come.

We regret to learn that the oyster beds in for this year greatly damaged by the spring freshets which destroyed vast quantities of the beds of Lynch River.

Our oystermen have at best a brief time of it with constant exposure in winter, and the steady drag of heavy taxation, but hitherto they have toiled on bravely in spite of storms and taxes. We trust the trade may improve and good prices make up for the small yield of the oyster beds.

A NARROW gauge railroad from Hampton to Old Point has been projected and already about twelve thousand dollars have been subscribed toward it. All the leading citizens of Hampton are contributors. Captain McDevitt is securing additional pledges, and when the sum of twenty thousand dollars has been subscribed, operations will be commenced. This will stimulate trade in this region, improve the value of property and promote the growth of Hampton. The line is, we believe, to run either on the track of the old horse cars used during the war, or along the county road.

Petersburg Notes.

The money order system in Petersburg is appreciated by our poorer citizens. Thousands of dollars in small sums of from five to fifteen dollars are annually sent to and from the city. The principal colored colonies in the North in which our citizens are interested, are in Boston, Massachusetts, in Plainfield and Bergen, New Jersey, and in New York City and Brooklyn. They are composed chiefly of children, whose aged parents reside here, and who send home part of their liberal wages. In some cases parents send funds to their children to bring them home on a visit.

Often Northerners wishing servants, send a month's wages in advance to secure a cook or coachman while many go away of their own accord seeking work.

Sometimes a good domestic revisits her old Petersburg home, but before long a money order comes with a letter, telling her she is wanted. As one letter said "We have had some pretty good servants but none like old Betty."

The tide of emigration flows steadily out and in, and nothing so aids this beneficial movement as the postal money order system.

THE two new public high schools for white and colored are signs of a wonderful progress in the "Cockade City."

Mr. John Warren (colored) has the mason work of the white school in charge and a white mechanic is erecting the building for colored youth. The former will use over a million bricks, the latter about six hundred thousand. The aggregate cost will be about thirty-five thousand dollars.

Senator H. G. Greene, of the City School Board, has planned a four years' course of study for both schools, said to be one of the best and most complete in the country. Nowhere in the United States is there a more wonderful and admirable public sentiment about schools than in Petersburg. The city even now ridden with cannon shot and with the horrid signs of a desperate siege along her borders, has sprung into splendid action in behalf of her people. Her bonds are not for sale in the market since no holder wishes to sell, and her twenty-one policemen (fourteen colored and seven white) have almost nothing to do.

Babbing is very active all over the city.

There is depression at present by reason of several bank failures, but our trade is healthy, and the trouble will pass.

FLOGGING is going out of date in our best schools. The poorer the teacher, the harder and the oftener he uses the whip. Experience shows that in most cases, it is better to send home naughty children.

School should be carried as a privileged place. Mischief makers must stay away. The teacher with the whip in hand means "I'll whip you if I catch you doing wrong." The teacher without the whip says "I believe all my pupils mean to act like ladies and gentlemen. I'll take that for granted." Pupils act according to their treatment. The law of love is the best and strongest law. Love your scholars and they will love you, and try to please you.

Correspondence.

The Shakers.

The Shakers, as they are commonly called, appeared first in England about the year 1770, but are now confined to the United States, where they have about eighteen settlements or societies, and about five thousand members. They were originally an offshoot of the Friends or Quakers, but have little or nothing in common with them. Their religious belief and manner of life are very peculiar. Rejecting the atonement of Christ, they believe that He has already appeared the second time in the form of a woman, Ann Lee, or as they call her, "Mother Ann," who lived in 1770, and brought them, as they believe, a new revelation, proclaiming the doctrines of non-resistance, non-participation in any form of government, and the necessity of a life of celibacy. Believing in a community of goods, and rejecting marriage, they live in households or "families" of from twenty to a hundred members, the men occupying one division and the women the other. They take in children from the "world's people," as they call others, and bring them up to their own faith and practice, their recruits are gained principally in this manner.

Their mode of worship is very peculiar. The two sexes are ranged facing each other. There is usually an intermediate row of the elders upon some doctrinal point, after which they sing a hymn; then they form in circles around a band of male and female singers, and execute a strange sort of dance. Sometimes the excitement becomes very great, and their motions astonishingly rapid.

The chief virtue of the Shakers is industry. Every member who is able to work is employed in some labor for the good of the whole. The societies usually own large gardens, and "Shaker seeds," "Shaker herbs," and dried fruits are generally esteemed and sought after. Their little stores, much patronized by the world's people notwithstanding proverbially high charges, are models of neatness, filled with pretty baskets work, fans, brooms, and other articles, all of their own manufacture.

The growth of the sect is scarcely perceptible, only three new societies having been formed during the last fifty years. It would seem that the adoption of children and the blessing inevitably following the sturdy thrift which is almost its only virtue, are all that keep alive this strange sect in its dreary religion without the sweetness of home, or the consolation of Christ.

We print with pleasure the following interesting account of a visit to the principal communities of this remarkable people:

A VISIT TO THE SHAKERS OF NEW LEBANON.

This peculiar people called Shakers should be carefully distinguished from the religious Society of Friends or Quakers, who recognize the Holy Bible as our ultimate rule of faith and doctrine, and therefore believe that "marriage is honorable to all."

We propose to give some account of two societies of the Shakers as we lately found them, without undertaking anything like a history of the Sect. About two weeks ago we had the privilege (in company with two teachers of the Hampton Normal School) of visiting their principal settlements at New Lebanon, New York and Hancock, Massachusetts. Both of these localities are situated within fifteen miles of Stockbridge, where the "Hampton Students" are spending this summer.

In passing, I would say, that these Singers have been well received by the people generally hereabouts, and their concerts very well attended.

We found everything about the Shakers *apparently* prosperous, in consequence of their industrious and frugal habits.

They are also famous for their neatness and cleanliness. In these respects we may learn a good lesson from this otherwise deluded people, because it is the privilege and duty of Christians to "add to their faith" the knowledge and practice of every virtue.

The Shakers are very averse to wasteful extravagance, and require their people to leave but one or two plates after meals; in which respect they seem to be "more than half right." They handed to us a leaflet called "The Table Monitor" with this excellent text, viz: "Gather up the fragments that remain, that nothing be lost.—*Christ.*"

Then follow eight verses of which these are the first three:

"He who is the pattern
Which Jesus has set;
And a good example
We ought to follow.
We're something to say.

We wish to speak plainly,
And use no deceit;
We think we see fashions
Left unobserved and neat;
To cautions and fashions
We make no pretense;
Yet think we can tell
What belongs to good sense.

What we deem good order
We're willing to state,
Eat hearty and decent
And wipe your plate,
Be thankful to Heaven
For what we receive,
And gather up fragments
Or empty and leave."

Although we cannot commend the poetry of these verses, their sentiments seem to commend themselves to our readers.

We were kindly allowed to visit the schools both at New Lebanon and Hancock; in each of which were fifteen or sixteen small, neatly girls; we were told that the boys generally attended school during the winter season. The scholars are taught by a "Sister" the elements of an English education. We had the opportunity of hearing them read or recite from text books nearly like those used at our Hampton Normal School. The scholars also were allowed to sing for our benefit several of their hymns. Those simple songs were good as far as they went, but seemed lamentably deficient in anything like evangelical faith or earnest religious doctrine. In return, two or three of our party sang a few verses of a Hampton hymn, which seemed to touch their feelings.

An opportunity offered we inquired of their leaders whether we might attend their meeting for worship on the Sabbath day and speak to them if the Holy Spirit should move us to do so. They replied, not to say nay, and rather encouraged us to come early and submit our religious concern to their Elders.

Accordingly, last Sabbath morning a kind friend drove me over from this pleasant place of our sojourn; but owing to some mistake about the hour, the meeting had commenced before we arrived. As we approached the church we were surprised to see a great collection of carriages from the neighborhood, and on entering, to behold several hundred of the "world's people" assembled with about one hundred and fifty Shakers, more than half of whom were women or children. The weather being uncommonly pleasant, every seat in the house was occupied by many standing. Soon, however, the "brothers" kindly brought a bench for us, and placed it providentially, so that we could see and be seen;—the men and women sitting facing each other on the two sides of the house. The center of the large room is vacant for the Shakers to promenade in, according to their peculiar custom of worship.

Frederick W. Evans first addressed the meeting; then another elder read several pages of a good historical account of religious revivals among the Methodists and other Christians of the last century. After one or two other "brothers" had uttered doctrine to me unsound and repulsive, I enjoyed the privilege of proclaiming for fifteen or twenty minutes what Christ our Lord is to us, commencing with the excellent text above quoted from *St. John*, vi: 12. We admitted cheerfully the importance of its direct application to the virtues of the Table Monitor; but urged upon all present the prayerful consideration of the context, reading from the New Testament verses 26 to 30, after paraphrasing the first part of the sixth chapter of the Gospel according to St. John. The most important doctrine of this passage of Holy Scripture was declared to be, not that we should gather up fragments of food which might otherwise be wasted, but that we should labor for the "meat which endureth unto everlasting life" the *gift* of God through Jesus Christ our Saviour. When the unbelieving Jews appeared to be influenced by this teaching of our Lord, so that they said unto Him "What shall we do that we might work the works of God? Jesus answered and said unto them, This is the work of God that ye *believe* on Him whom He hath sent." Brothers and sisters, we read in Holy Scripture that the Lord Jesus was "not ashamed to call us brethren" if we are truly children of our Heavenly Father; and surely we need not be ashamed so to call one another. Do we all really *believe* in Christ as Jesus as our Saviour from the guilt and power of sin? Then we read aloud *St. John*, third chapter, 14-19, showing both sides of this solemn truth. Then we read 1st John ii: 1-6, and 22-25, and 1st John iii: 1-3, and 1st John iv: 1-3, and 1st John v: 1-12, all of which I commented, but let the believeth not is condemned already, *because he hath not believed on* the name of the only begotten son of God." Then I read

The Three Sinners.

AN INCIDENT IN THE LIFE OF ROWLAND HILL.

Will you listen, young friends, for a moment,
While a story I unfold:
A marvellous tale of a wonderful sale
Of a feeble lady of old:—
How hand and heart, at an auction mart,
And soul and body she sold!

'Twas in the broad king's highway,
Near a century ago,
That a preacher stood—though of noble blood—
Telling the fallen sinners
Of a Savior's love, and a home above,
And a peace that they all might know.

All crowded around to listen,
And they wept at the words of love,
That could wash their sin and receive them in
His spotless mansions above:—
While slow, through the crowd, a lady proud
Her gilded chariot drove.

"Make room," cried the haughty outrider,
"You are closing the king's highway;
My lady is late, and their Majesties wait;
Give way there, good people, I pray."
The preacher heard, and his soul was stirred,
And he called to the rider, "Nay."

His eye like the lightning flashes;
His voice like the trumpet rings:
"Your grand fete days, and your fashions and ways,
Are all but perishing things
'Tis the king's highway, but I hold it to-day
In the name of the King of kings."

Then—bending his gaze on the lady,
And marking her soft eye fall—
"And now in His name, a sale I proclaim,
And bids for the fair lady call.
Who will purchase the whole—her body and soul,
Coronet, jewels and all?

"I see already three bidders,—
The world steps up as the first.
'I will give her my pleasures, and all the pleasures
For which my votaries thirst;
She shall dance through the day, more joyous and gay,
With a quiet grave at the worst.'

"But out spake the Devil, boldly:
'The kingdom of earth are mine.
Fair lady, thy sense, with an exiled sense,
On their brightest talents shall shine;
Only give me thy soul, and I give thee the whole,
Their glory and wealth to be thine.'

"And pray what hast Thou to offer,
Thou Man of Sorrows, unknown?
And he gently said, 'My blood I have shed,
To purchase her for mine own.
To conquer the grave, and his sway to save
I trod the wine press, alone.

"'I will give her my cross of suffering,
My cup of sorrow to share;
But with endless love, in my home above,
All shall be righted there:
She shall walk in white, in a robe of light,
And a radiant crown shall wear.'

"Thou hast heard the terms fair lady,
That earth hath offered for thee,
Which will thou choose, and which will thou lose,
This life, or the life to be?
The fable was mine, but the choice is yet thine,
Sweet lady! which of the three?"

Near the stand of the preacher,
The gilded chariot stole;
And each loud was lowed, as over the crowd
The thundering accents roll,
And every word, as the lady heard,
Burned in her very soul.

"Pardon, good people," she whispered,
As she rose from her cushioned seat.
Full well they said, as the crowd made way
You could hear her pulses beat;
And each loud was bare, as the lady fair
Knelt at the preacher's feet.

She took from her hand the jewels,
The coronet from her brow;
"Lord Jesus," she said, as she bowed her head
"The highest bidder art Thou;
Thou guest, for my sake, Thy life, and I take
Thy offering with Thee now."

I know the World and her promises,
At best they last weary and dim;
And the Tempter is bold, but his honors are sold
Power over a fatal decay;
I long for Thy rest—Thy bid is the best;
Lord, I accept it with joy.

"Give me Thy cup of suffering,
Welcome, earth's sorrow and loss,
Let my portion be, be with souls to Thee,
Perish her glittering show, I know
I gladly lay down her coveted crown,
Saviour, to take Thy cross."

"Amen!" said the holy preacher;
And the people wept aloud;
Years have rolled on—and they all have gone
Around the altar who bowed,
Lady and throng have been swept along
On the wind, like a mingling cloud.

But the Saviour has claimed His purchase,
And around His radiant seat,
A mightier throng, in no countless song,
The wondrous story repeat:
And a form more fair is bending there,
Laying her crown at His feet.

So now, in eternal glory,
She rests from her cross and care;
But her spirit above, with a longing love,
Seems calling on you to share
Her endless reward, in the joy of her Lord,
Oh! will you not answer her—there?

—Friends' Review.

The Riverside Press

Our picture this month gives a very good view of a workroom in one of the chief of the great printing houses in this country: The Riverside Press is famous for the fine quality and good taste of its work in all its many departments. It stands about two and a half miles from Boston on the shore of the pretty winding Charles river which flows on at its own sweet wandering will by the quiet shades of Harvard and the noisy city streets to the sea.

In 1852 all that was to be seen of the great pile of buildings now standing was a steep roofed house which now looks like a small addition to the main establishment.

In 1867 the present great edifice was erected in which are all the many busy workrooms necessary for the complete manufacture of a book.

First in order is the "composing room." In this room, ninety feet long, stand rows of type setters at their cases. All day long is heard the rapid click, click, click of the metal letters dropping into place in the "composing stick," while the "proof readers" sit in little offices adjoining and carefully look over the first printed impressions of the sheets, to mark accidental errors and send them back for correction, letters misplaced, or left out and so on. Four or five proofs are often taken, and yet with all their care, there never was more than one book in the world and certainly no newspaper published without a single typographical error. I shouldn't wonder at all if you could find one in this very article by looking, though I know that the expert compositor will do his very best to prove me mistaken. Such is the imperfection of all human work.

The book is then set up in type, but the type is needed for use again, and the book may have to go through many editions. The metal pages must therefore be stereotyped or electrotyped. The former is a solid lead copy of the page taken from a plaster cast first made of it. An electrotype is made by a serious process of electricity which I cannot here describe. A wax mould of the type page is thus covered with a thin sheet of copper which is afterward filled with solid metal. The metal pages thus made can be printed from for years.

Next comes the press room where thirty great steam presses—How, Adams and Campbell—are running off every day printed matter equal to four thousand octavo volumes of five hundred pages each.

Than the various processes of bookbinding must be gone through. The sheets are folded and sewed together by girls, pressed into half their original bulk.

One of the most curious sights is the marbling of the edges of the books. The workman stands by a trough, filled with a mixture of gumtragacanth; over this he sprinkles various colors from brushes dipped in water colors. Then with large combs he combs the floating patches of color into the various streak and waves we see on marbled paper. Into this he dips the edges of the books just enough to take up the pattern from the surface.

Then the covers, of cloth or leather, designed and made by the most skillful workmen, are put on, the bound volumes are shelved in the book room below, and there packed for shipment. A library of first rate books Americanized and English, could be chosen from their shelves.

The "Southern Workman" and its readers are specially indebted to the "Riverside" for many generously given and beautiful electrotype illustrations which have adorned its pages.

The Republic of Liberia.

Just two hundred years after the *Mayflower* had brought the Pilgrim Fathers of America to Plymouth Rock, another pilgrim band with hearts as brave, and love of liberty as strong, sailed away from these shores to seek in distant Africa a land of freedom.

In due time, we are told, the good ship *Elizabeth* landed her eighty-eight emigrants, colored persons, from the States of Pennsylvania, Virginia, Maryland and New York, on the equatorial coast.

These were the Pilgrim Fathers of Liberia. The story of their adventures reads like the pages of our own early history, and is as thrilling as any romance. We hear of hardships and perils, boldly met, wastings by disease and death, fierce encounters with savage foes—albeit their brethren—incited to ignorant malice by the slave traders who saw their traffic doomed; of sturdy struggles with the wilderness, and unconquerable trust in God.

The means for the enterprise were supplied by the American Colonization Society, just then organized, as its constitution explains, "for the purpose of colonizing with their own consent, in Africa, people of color residing in the United States," and by the United States Government which, under the administration of President Monroe, had just divested the return of Africans rescued from the ships of slave traders, to their own country. The Society had sent out two devoted missionaries beforehand to explore the land, one of whom, Samuel J. Mills, one of the founders of American missions, laid down his life on his return voyage.

In January 1822, after several unsuccessful attempts to find a safe and healthful point for their settlement, the colonists reinforced by a second band in the March previous, landed and occupied a little island near the mouth of the Mesurado (now Montserado) River. It still bears the significant name of Providence Island. The natives, excited by the misrepresentations of slave dealers attacked them here and cut off their communication with the mainland from which they got all their fresh water. But He who brought streams from the rock of the desert for the thirsty Israelites sent a friendly chief who brought them water stealthily by night for several weeks. At this critical time their public warehouse with nearly all their stores of provision and merchandize burned down, and utter ruin seemed at last upon them. Again God stretched forth his arm to save them. A Spanish slave schooner in charge of an English prize crew which had captured it, was unaccountably stranded in the harbor, but a short distance from the island, and the English commander readily supplied the colonists from the ship stores with enough for their pressing needs.

At last the natives seemed to be reconciled, and the pilgrims were able, on the 25th of April, 1822, to land on Cape Mesurado (now Montserado) and commence their settlement, called Monrovia after President Monroe, on land that had been already purchased for them. The native agent, threatened them, however, and at last the agents of the Society and Government who had accompanied them, thoroughly discouraged, proposed to return to America

"No," answered sturdily the heroic leader of the little band, Elijah Johnson; "I have been two years searching for a home in Africa, and I have found it. I shall stay here."

And stay they did, in charge of their brave leader, until in August their hearts were cheered by the arrival of another small company with the intrepid and self-sacrificing Jehudi Ashman, who entered immediately on his duties as agent of the Society, increasing the defences of the settlement, and making every possible effort to reconcile the natives. The slave traders, however, would not let go their hopes of gain so easily, and assembling the native chiefs told them so many falsehoods about the colonists that King George, of the Dey tribe resolved to sack the little settlement. Warned in time by a friendly native who risked his life to bring them the news, the pioneers made ready for the defense of their homes, and twice withstood the terrible onset. On the 2d of December, the thirty-five colonists who could bear arms, nerved to superhuman courage and strength, put to flight fifteen hundred savage foes.

A day of thanksgiving to God was proclaimed and strictly observed. Soon after, the most powerful of all the native chiefs, King Boatswain, interfeged for their protection, and compelled King George to give up his persecutions. Thus, with a treaty of thanksgiving, Liberia was founded, and from this time began to advance: Emigration increased, intercourse and trade with the nations were established, The slave traders' forebodings were realized by the suppression of the slave trade, new settlements were formed, and the progress of the colony was established.

Twenty-five years passed, during which the colony had greatly increased in extent, prosperity and in influence, and had assumed most of the details of its own government, though still under the fatherly watch and ward of the Society. Then, political difficulties arising with Great Britain which only sovereign State power could meet—regarding the habit of certain trading vessels of landing goods in Liberia without paying the duties,—the society in America, faithful to the best interest of the colony, gave up all its temporary guardianship, and advised the young nation to assume the responsibility of self government, and declare itself a free and independent State. After deliberation, this great step was taken, a Declaration of Independence was put forth whose noble sentiments command the respect of all nations, and a Constitution framed upon the model of the free institutions which the fathers of the Revolution gave to America, only limiting its citizenship to people of color for obvious reasons of self protection, and to secure the purposes of the experiment to demonstrate the capability of the race for self government. The new nation thus stood forth to the world as the Republic of Liberia.

It is now a little more than fifty years since the pilgrim fathers of Liberia landed on Cape Montserado, and turning our eyes to the young Republic, what do we see?

Seventy-eight years after the settlement of Connecticut, the population amounted to only 17,000. A hundred and twenty years after Maine was colonized, her population was 10,000.

In Liberia, after fifty years, we see a Republic modeled after our own, and recognized by all the great Powers, with a population of 20,000 nominally Christian, and 400,000 natives who are being peacefully civilized and Christianized. The whole number colonized has been 14,975, exclusive of 5,722 Africans rescued from slave ships. The number of emigrants since the war has been 2,987, and 5,000 are at present applying to go from the United States. The Republic has 600 miles sea coast—equal to that of New England—an area three times as large as Massachusetts, which can easily be indefinitely and peacefully extended into the interior, a productive soil, capable of supporting 15,000,000 people, and a climate suited to the colored race. It has a congress, courts, some fifty churches with 15,000 communicants, missions largely supported by the people, schools increasing in number though not yet what they need to be, a college, a free press, an extending commerce whose exports for 1872 amounted to $139,000, and imports, to $118,000. It did more in its infancy to extinguish the slave trade on the Western coast of Africa than the diplomacy and force of two great continents had been able to do, and that work is now completed. Its people are prosperous, and contented in their various pursuits and professions.

Sixty-four years after the founding of Virginia, its governor was not ashamed to write: "I thank God, we have neither free school nor printing press, and I hope shall not for a hundred years to come; for learning has brought disobedience and heresy and sects into the world, and printing has divulged them and libels against the best government. God keep us from both."

The constitution of Liberia specially declares that "the liberty of the press is essential to the security of freedom in a State," and in his annual message of 1872, President Roberts, first and latest President of the Republic, regretting the still inadequate means of supplying the increasing demands for educational facilities, returns thanks to the donor of a foundation from which the Government will receive $300 a year for the use of common schools.

All these striking contrasts and wonderful facts that meet our eyes when we look at Liberia not only prove the advantage of standing on the principle of former generations, and receiving the grander impulses of the nineteenth century. They also prove that here is a race which has been equal to these advantages as soon as it has received them, and has improved them to the utmost of human ability.

An Elephant Ride in China.

U. S. Flag Ship Lackawanna,
Bay of Bengal, *Jan. 10, 1873.*

My Dear M.,—I wrote you a line the day we left Calcutta, and promised to write you a description of our visit by the next mail. This is by no means an easy matter to do, as from the moment we dropped anchor, until we left, we were so busy that I hardly knew what I did and what I *didn't*.

I sent off a letter when we first got in, I finished it on the trip up the river just in time to get on deck and look at the Palace of the King of Oude, on the right bank of the river, going up, and about ten miles from Calcutta. This King was the most powerful Prince in India, and was the chief mover in the great revolt. After that was suppressed, he was taken prisoner and his territory confiscated. He was pensioned off by the English government with the nice little sum of £20,000 per month, allowed to keep his palace and 15000 retainers without arms, and kept a prisoner inside his own palaces and grounds where he lives with every whim his vanity suggests gratified. He has the finest menagerie in the world, and his palace and grounds are said to be a perfect wonder. Had we remained in Calcutta another week or two I have visited his palace. It was undergoing repairs, and not visible until after we left.
